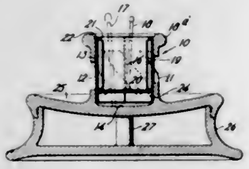
1,506,766. DIFFUSION PUMP. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed Dec. 11, 1922. Serial No. 606,346. 16 Claims. (Cl. 230—13.)

1. The method of increasing the velocity of a vapor arc blast at the entry of a condensation chamber of a vacuum pump, which consists in establishing a voltage drop in said blast.

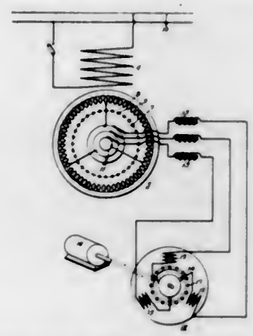


1,506,767. DEVICE FOR GUIDING EXPANSIBLE PACKING RINGS ONTO PISTONS. NELSON W. MCLEOD, St. Louis, Mo., assignor to Walter A. Zelnicker Supply Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 17, 1921. Serial No. 523,231. 6 Claims. (Cl. 29—86.4.)

1. In a device for guiding expansible packing rings onto pistons, a slide comprising a central connection and normally straight resilient legs radiating from and rigidly connected by said central connection, said legs having free outer end portions capable of being bent when the device is in use to positions where they embrace the peripheral

face of a piston and being adapted to return to their original positions after the packing ring has been located on said piston.

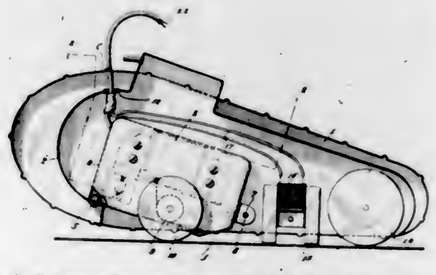
1,506,768. MATCH SAFE. JACOB E. NEAHR, Hartsdale, N. Y. Filed Apr. 6, 1922. Serial No. 549,986. 5 Claims. (Cl. 206—20.)



1. A match-cup or box insertible into a relatively large match-safe to enable the same to accommodate relatively small matches, said insertible box having a floor, and means to support said floor high above the bottom of the match-safe, so that when the small matches are inserted they will rise above the brim of the match-safe, said insertible box being made oversize and slit from top to bottom, so as to have an expanding fit within the match-safe.

1,506,769. THERMOSTAT. GEORGE T. NEWELL, Jr., Beverly, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,745. 6 Claims. (Cl. 297—15.)

1. A thermostat comprising an open-end casing of relatively thin material, a supporting member located at one end thereof and insulated therefrom, a substantially straight bimetallic strip adjustably mounted on said supporting member, a second bimetallic strip having a main portion extending substantially parallel to, coextensive with and spaced from, said first strip and having a return-bent portion, the metals in the main portion of the second strip being oppositely placed to those in the first strip, insulation between said straight bimetallic strip and said return-bent portion, and means for securing said return-bent portion, insulation, straight bimetallic strip, and supporting member in said casing.

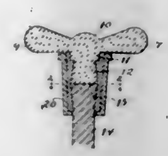


1,506,770. PHASE-MODIFYING SYSTEM. STANLEY G. NOTTAGE, Murraysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 23, 1919. Serial No. 299,162. 14 Claims. (Cl. 172—120.)

1. A dynamo-electric machine of the induction type, including relatively rotating primary and secondary members, means for energizing said primary member in such manner that oppositely rotating component symmetrical fields are produced, whereby high-frequency and low-frequency currents will be generated in said secondary member, means for substantially segregating said secondary currents in different paths, and means for modifying the phase of the low-frequency currents without appreciably modifying the phase of the high-frequency currents.

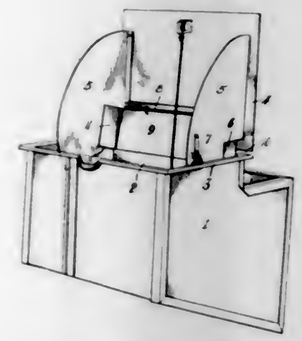
5. The combination with a phase-modifying machine of the commutator type, of means for simultaneously supplying alternating currents of two frequencies to the armature member thereof, and damping means applied to said machine in order to largely suppress the higher-frequency currents.

1,506,771. LOCOMOTIVE TOY AND THE LIKE. WILLIAM J. O'LEARY, Montreal, Canada. Filed May 29, 1920, Serial No. 385,218. Renewed Nov. 10, 1923. 6 Claims. (Cl. 105—49.)



4. A locomotive toy comprising a body portion, driving mechanism comprising a motor and a drive wheel mounted in the forward part of said body portion, a trail wheel adjacent the rear part of said body portion an electric circuit leading to said motor, and electromagnetic means connected with said circuit in such manner as to be energized when said motor is energized and to maintain both wheels in contact with a magnetizable material so as to sustain the toy suspended therefrom while the motor is energized.

1,506,772. DIE-CASTING METAL. CHARLES PACK, Elmhurst, N. Y., assignor to Doehler Die-casting Co., a Corporation of New York. Filed Jan. 25, 1923. Serial No. 615,450. 8 Claims. (Cl. 75—17.)

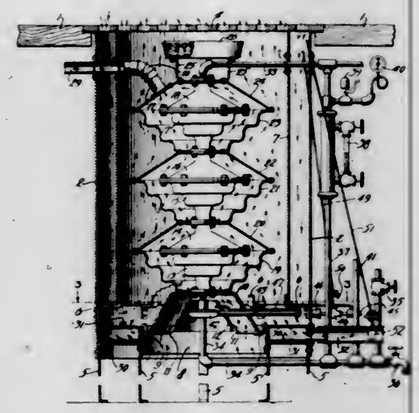


1. The method consisting in mixing a small quantity of chromium and nickel in molten zinc together with a suitable flux.

1,506,773. HANDLE FOR FAUCETS AND MEANS FOR ATTACHING. CHARLES READ, New York, N. Y. Filed May 9, 1923. Serial No. 637,686. 2 Claims. (Cl. 251—150.)

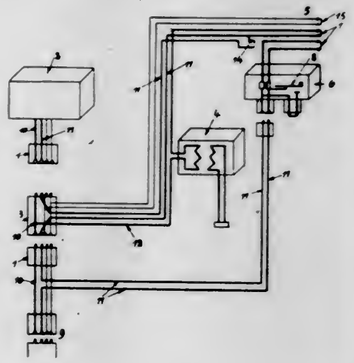
2. A knob for faucets comprising a body member having a tapered extension, a chuck in four parts, the exterior of each being screw-threaded and a screw-threaded shell adapted to engage all said parts, to close said parts upon said extension and said valve stem.

1,506,774. COAL CHUTE. WILLIAM D. REDRUP, Huntington, Ind., assignor to The Majestic Company, Huntington, Ind., a Corporation of Indiana. Filed Apr. 6, 1923. Serial No. 630,196. 4 Claims. (Cl. 193—33.)



1. A chute of the class described, having an upwardly directed top opening, a door hinged to the top at one edge of the said opening and adapted to be raised to upright open position, wings projecting from the inner side of the door adjacent to its side edges and being of a length to project substantially into the chute opening when the door is in raised position, whereby the door and wings form a directing hopper for the chute, one of said wings being capable of inward springing movements, and means carried by said last mentioned wing and adapted to have catch engagement with the chute top to retain the door in open position and to be released by an inward springing of the wing.

1,506,775. HEATER. LESTER CLIFTON ROE, Bayside, N. Y. Filed Sept. 30, 1922. Serial No. 591,458. 4 Claims. (Cl. 126—116.)



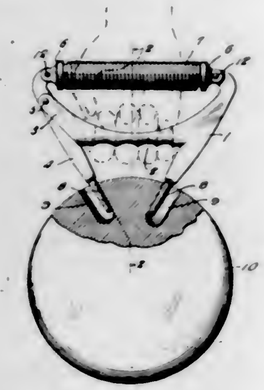
1. A heater comprising a fluid fuel burner, a water compartment formed of a plurality of interchangeable units, a plurality of shells surrounding said water compartment units and conforming in shape thereto and forming a hot gas compartment between said shells and said water compartment units, a cylindrical shell surrounding said last mentioned shells and forming therebetween a hot air compartment, an outer shell

surrounding said cylindrical shell and forming therebetween a cold air compartment, said cold air compartment and said hot air compartment being connected

at the bottom thereof, and a register surmounting said heater connecting said cold and hot air compartments to the room above said heater.

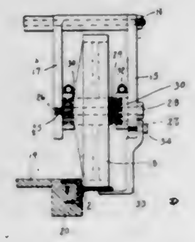
1,506,776. INTERMEDIATE CONNECTION AND SWITCHING DEVICE FOR HEATING DEVICES. BRUNO ROSENBAUM, Berlin, Germany. Filed Sept. 2, 1921. Serial No. 498,180. 3 Claims. (Cl. 171—97.)

1. In a combined radio transmitting and heating system comprising a radio transmitter, a transmitter key, an electrical heater, and a source of electrical energy, means for interrupting the energy supplied to the radio transmitter, and means for simultaneously transferring the power from the wireless transmitter to the heater and rendering said transmitter key inaccessible.



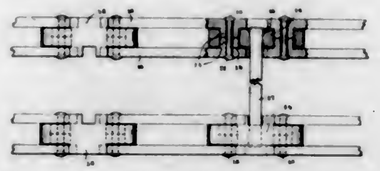
1,506,777. SECTION INSULATOR. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 17, 1920. Serial No. 410,868. 5 Claims. (Cl. 191—39.)

1. A section-break device for trolley conductors comprising three parallel relatively thin spaced plates of insulating material joined, adjacent to their ends, to conductor-receiving members, the central insulating member constituting a trolley runner, transverse bolts ex-



tending through all of the insulating members, and sleeves on the bolts between the central and outer insulating members.

1,506,778. STEEL FINGER DEVICE FOR USE WITH BOWLING BALLS. GEORGE SENN, Green Bay, Wis. Filed Oct. 29, 1923. Serial No. 671,414. 3 Claims. (Cl. 46—66.)

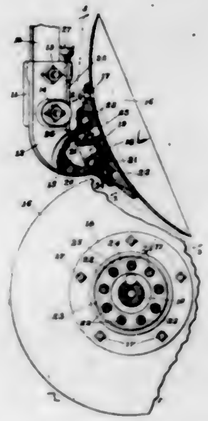


1. In a device of the class described comprising a handle having a finger member formed integrally therewith, a second finger member pivotally mounted to the handle, and resilient means operatively connecting the outer ends of said finger members.

1,506,779. CLOTH-PILING MACHINE, TRACK AND WHEEL MOUNTING. MORRIS L. SHAPERA, Muncie, Ind. Filed Mar. 16, 1923. Serial No. 625,674. 2 Claims. (Cl. 295—44.)

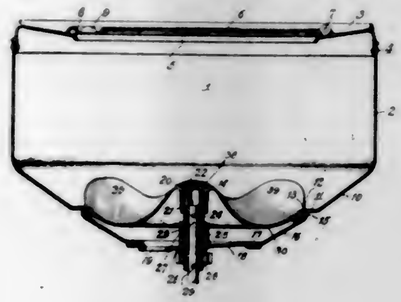
1. A wheel mounting including in combination a pair of spaced supports, an axle supported thereby, a hub rotatably supported upon said axle and having oppositely extending threaded ends, and thrust and locking nuts associated with each end of the hub for adjustably spacing the wheel hub within said supports.

1,506,780. CONVEYER CHAIN. STANLEY B. SHERMAN, Racine, Wis. Filed Mar. 5, 1923. Serial No. 623,049. 4 Claims. (Cl. 198—189.)



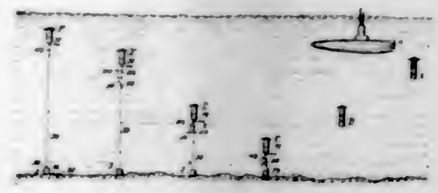
1. In a conveyer chain of the class described, two lines of links, castings connecting the adjacent ends of the links of each line, said castings being provided with tapered openings and cross bars extending between each opposed pair of castings and wedged in said tapered openings.

1,506,781. VARIABLE LEAKY CONDENSER. JAMES E. SHRADER, Edgewood, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,283. 9 Claims. (Cl. 250—41.)



1. A variable leaky condenser comprising a plurality of conductors, dielectric material treated with a conducting material interposed between said conductors and means for varying the distance between said conductors.

1,506,782. MEANS FOR MOUNTING DISKS. WALTER H. SILVER, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 10, 1920. Serial No. 409,427. 16 Claims. (Cl. 64—66.)

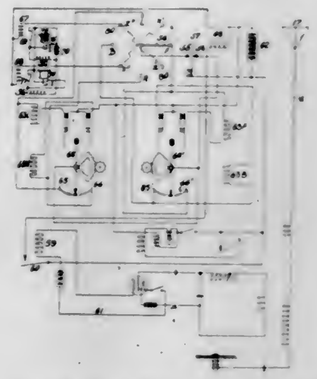


1. In combination, a disk, a standard, two mounting members each supported wholly by one of said parts, and a plurality of anti-friction devices interposed between said mounting members for rotatably securing the disk to the standard.

1,506,783. WASHING-MACHINE TUB. HOWARD F. SNYDER, Newton, Iowa, assignor to The Maytag Company, Newton, Iowa, a Corporation of Iowa. Filed Oct. 23, 1922. Serial No. 596,278. 14 Claims. (Cl. 259—101.)

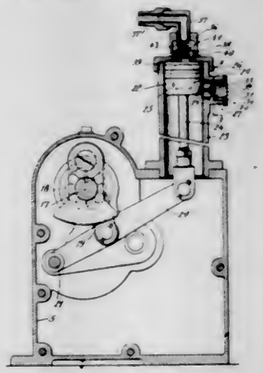
1. In a washing machine, a tub having a bottom, a gyratator operable near said bottom, the top surfaces of said gyratator and said bottom forming a smooth substantially continuous surface.

1,506,784. SUBMARINE MINE. ELMER A. SPERRY, Brooklyn, N. Y. Filed Sept. 21, 1917. Serial No. 192,571. 16 Claims. (Cl. 102—3.)



1. A mine adapted to be launched from a torpedo tube comprising a buoyant top portion adapted to contain an explosive charge, an anchor portion detachably connected therewith, an extensible connection between said two portions, a mass slidably connected to said connection, and means controlled by said mass for arming said mine.

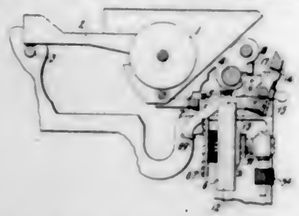
3. In a submarine mine, a buoyant portion adapted to contain an explosive charge, a detachable anchor portion, a cable connecting said portions, and a flat resilient member coiled within said buoyant portion adapted to project outwardly into the water upon separation of said portions.



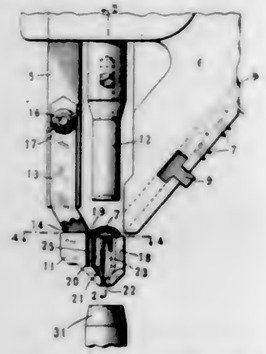
8. In a submarine mine, an anchor portion, a buoyant portion, and an auxiliary anchor attached to said anchor portion for confining the radius of movement of said anchor portion.

1,506,785. GRAVITY BOMB. ELMER A. SPERRY, Brooklyn, N. Y. Filed June 7, 1921. Serial No. 475,640. 20 Claims. (Cl. 102—2.)

16. In combination, a gravity bomb, retarding means attached thereto, means for releasing one portion of the bomb from said retarding means, and means responsive to the release of said portion for destroying the other portion thereof.



1,506,786. PUMP. GREGORY JOHN SPOHRER, East Orange, N. J. Filed July 9, 1919. Serial No. 309,537. 2 Claims. (Cl. 230—27.)



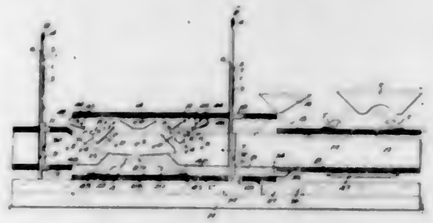
1. In a pump, the combination with the piston rod and the crank shaft, of connections between the piston rod and the crank shaft such that the stroke of the piston is materially lengthened without increase in the throw of the crank, and wherein lateral play of the piston rod is substantially eliminated, said connections comprising a lever pivoted at one end to a fixed support and connected at the other end to the piston rod, and a link pivoted to the lever and operatively connected to the crank shaft whereby in normal operation the lever oscillates and the movement of the end of the lever connected with the piston rod is amplified in the direction of the axis of the piston.

1,506,787. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1921. Serial No. 492,967. 22 Claims. (Cl. 197—64.)

1. In a typewriting machine, a spring-drum having therein a retarding device connected to the drum to rotate in unison therewith in letter-feeding movements, but in the opposite direction during tabulating movements, and a centrifugal governor for pressing the retarding device against the drum and thereby rendering said retarding device effective to prevent excess speed of rotation of the drum.

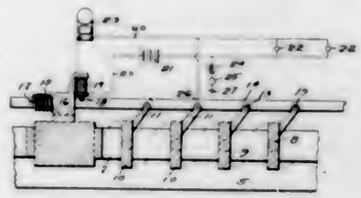
1,506,788. GUIDE FOR RIVETING MACHINES. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed July 19, 1922. Serial No. 575,947. 3 Claims. (Cl. 218—3.)

2. In a riveting machine, a plunger and a cooperating anvil, means for feeding the rivets into position beneath the plunger, cooperating spring pressed rivet guides and the guide having matched cut-away portions defining a lateral opening through which the shank of a rivet may enter between the guide, having a pocket at the top thereof to receive the rivet heads, said guides having a rivet passage between them extending downward from the pocket and contracted toward the lower end thereof, the walls of said passage, including the contracted portions having separated ridges operating as guiding fingers for the rivet heads, and the guide members having matched cutaway portions defining a lateral opening through which the shank of a rivet may enter between the guides.



1,506,789. APPARATUS FOR DRYING PULP PRODUCTS. DANIEL MANSON SUTHERLAND, Jr., Trenton, N. J. Filed May 10, 1923. Serial No. 638,034. 5 Claims. (Cl. 34—16.)

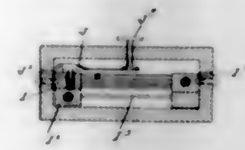
5. In a drying apparatus of the character described, the combination of a main frame; two drying elements mounted in said frame, one movable toward and from



the other; means for effecting such relative movement; rolls rotatably mounted in said frame at opposite ends thereof; an endless woven wire belt having its upper stretch carried between and parallel with the opposing faces of the drying elements and passing about said rolls; means for imparting rotary motion to one of said rolls; and means for starting and stopping such motion at will.

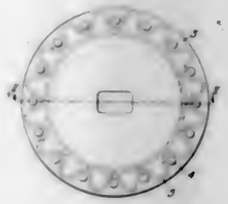
1,506,790. KNITTING MECHANISM. SYDNEY E. TAFT, Framingham, Mass., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Feb. 18, 1920. Serial No. 359,646. 19 Claims. (Cl. 66—24.)

1. Knitting mechanism comprising, in combination, knitting instruments each having two loop forming elements operated independently of each other, means severally to function said elements during the loop forming operations, means separately to withdraw and restore the elements of selected knitting instruments and picker means to operate upon selected remaining instruments.



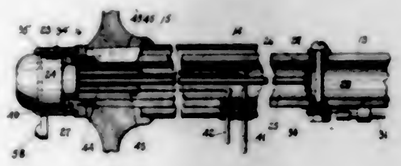
1,506,791. BANK PROTECTING STRUCTURE. CHARLES FRANKLIN TANNEHILL, Girard, Kans. Filed Sept. 16, 1922. Serial No. 588,714. 5 Claims. (Cl. 268—2.)

1. A grill comprising a window consisting of a plurality of vertically-pivoted shutters, the lower portions of said shutters being hinged to swing with respect to the upper portions thereof, to a position where the hinged portions will lie substantially at right angles to said upper portions.



1,506,792. ELECTRICAL TESTING INSTRUMENT. CHARLES W. TERRY, Detroit, Mich., assignor, by mesne assignments, to Hyrate Manufacturing Company, a Corporation of Michigan. Filed Apr. 1, 1920. Serial No. 370,457. 1 Claim. (Cl. 171—95.)

An electrical testing instrument comprising a casing, a pair of terminals in said casings, a metering device connected between said terminals, leads extending from said casing for coupling said terminals into a circuit, a resistor bar extending between said terminals, a third terminal arranged to contact with one of said terminals, a series of resistor bars extending between said third terminal block and the other of said pair of terminals, and manually operable means for electrically disconnecting said third terminal block from said first terminal



thereby disconnecting said series of resistance bars, and resilient means for automatically connecting said third and first terminals upon releasing said manually operable means.

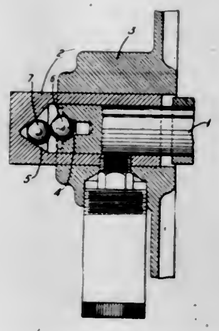
1,506,793. TRANSFORMER GASKET. ARTHUR W. THOMPSON, East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,184. 5 Claims. (Cl. 220—46.)

1. A container, a cover therefor, a sinuous gasket disposed therebetween, and a plurality of clamping devices disposed in spaced relation between two concentric circles defined by the extremities of the gasket convolutions.

1,506,794. VEHICLE CONTROLLING MECHANISM. HENRY A. WAGNER, Toledo, Ohio. Filed Mar. 4, 1920. Serial No. 363,279. 3 Claims. (Cl. 200—59.)

1. In combination, a switch operating push button, and a circuit controlling switch, both contacts of which are mounted within and bodily movable with said push button, said last-named switch having an operating lever extending laterally therefrom movable in a plane at right angles to the direction of movement of said push button.

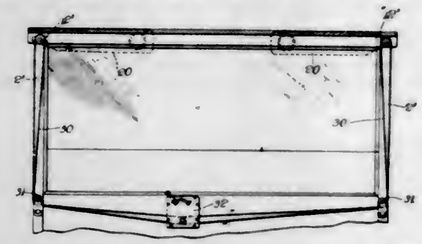
1,506,795. MECHANICAL PENCIL. JOHN C. WAHL, Chicago, Ill., assignor, by mesne assignments, to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 24, 1917. Serial No. 198,294. 7 Claims. (Cl. 120—18.)



1. In a mechanical pencil having means to force a lead through a tip, the combination of a lead provided with a

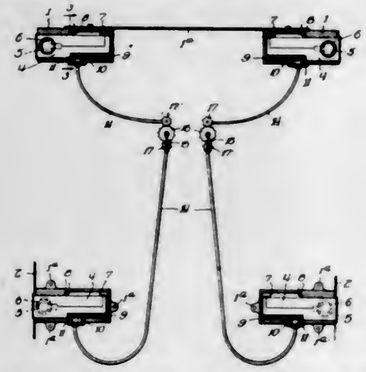
body portion and extending portions adapted to be sheared from said body portion and means to shear said

extended portions from the body of the lead as the same is forced longitudinally through the tip, the tip and lead being held against rotation relative to each other.



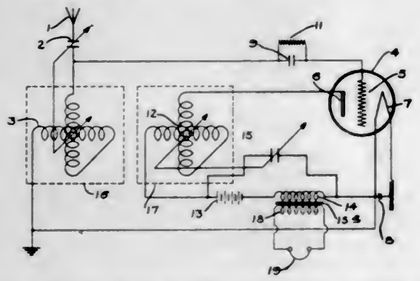
1,506,796. THRUST BEARING. CLIFFORD A. M. WEBER, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,310. 7 Claims. (Cl. 64—25.)

2. A thrust bearing comprising relatively rotatable members, one of said members presenting a substantially convexly spherically curved surface, a sphere disposed intermediate said members and contacting with said substantially convexly spherically curved surface, and means for maintaining said sphere slightly out of alinement with the axis of rotation of the member having the spherically curved surface and for restricting the circular movement of said sphere about said axis of rotation.



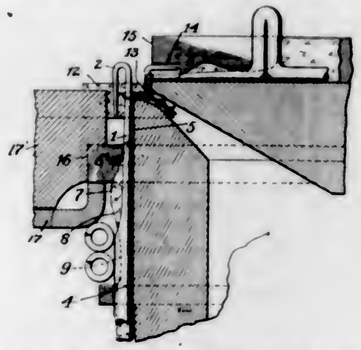
1,506,797. SIGNAL FOR ROAD VEHICLES. AUGUST WESSIG, Chicago, Ill. Filed Oct. 23, 1920. Serial No. 418,954. 2 Claims. (Cl. 116—54.)

1. The combination with a vehicle body, of semaphore arms mounted on portions thereof at opposite sides for swinging movement to laterally extended and depending positions, manipulating means operable within the vehicle body for swing said arms conjointly to extended position



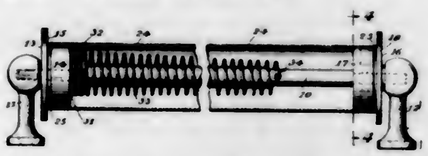
against the influence of gravity, and means effective upon the manipulating means to retain the arms in extended position against the influence of gravity.

1,506,798. SIGNALING DEVICE. AUGUST WESSIG, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,469. 2 Claims. (Cl. 116—50.)



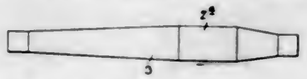
1. The combination with the vehicle body sheathing having an opening therein, of an indicating member housed within the sheathing and operable for projection and retraction through said opening, said indicating member including portions arranged to close said opening in either projected or retracted positions, and means for shifting the indicating member.

1,506,799. WIRELESS TUNING SYSTEM. PARKER E. WIGGIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 9, 1921. Serial No. 483,398. 12 Claims. (Cl. 250—20.)



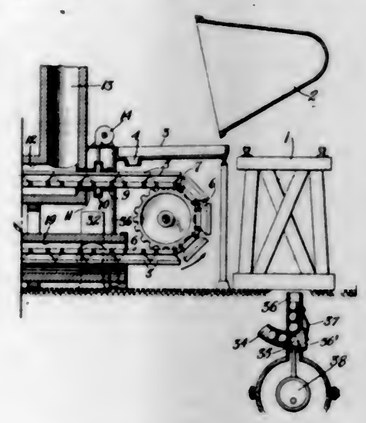
1. In an oscillatory-current system, the combination with a main circuit carrying oscillatory currents of a predetermined frequency, of an amplifier having controlling and controlled circuits, means for coupling one of said amplifier circuits to said main circuit, and means for tuning to resonance the other of said amplifier circuits in such manner that the currents traversing the same increase as the wave length thereof increases.

1,506,800. KNITTING MECHANISM. J. FRANK WILCOMB, Worcester, Mass., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed June 20, 1919. Serial No. 305,473. 2 Claims. (Cl. 66—22.)



1. A rib knitting mechanism comprising two carriers, two rows of instruments for knitting rib fabric, each instrument having an inner element and a channeled element U shaped in cross section, embracing the inner element and in the same grooves therewith, the U shaped elements having throats to hold the two rows of loops definitely separated and instruments arranged opposite the verge of the carrier of one set of instruments to hold the loops to said verge against the thrust of the said channeled elements to lodge the said loops in the throats thereof.

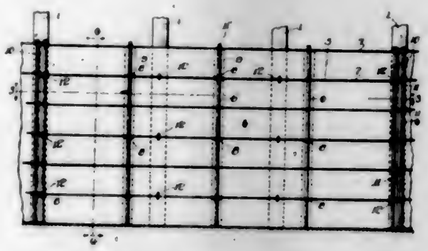
1,506,801. SHADE ROLLER. CLINTON C. WORDEN, Bridgeport, Conn. Filed Jan. 26, 1924. Serial No. 688,667. 3 Claims. (Cl. 156—36.)



2. In a shade roller, a shaft, spaced apart pieces on said shaft, a barrel having its opposite ends rolled into annular grooves in said head pieces, whereby said barrel is secured to said head pieces, and a spring secured to one of said head pieces and to said shaft, the head piece with spring having threads into which said spring is fastened.

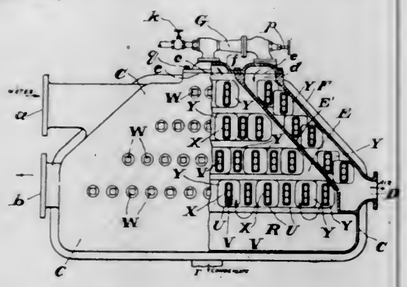
1,506,802. METHOD OF MAKING BRAKE LEVERS. HARRY T. ANDERSON, Butler, Pa., assignor of one half to Soren Hansson, Butler, Pa. Filed May 11, 1922. Serial No. 560,166. 2 Claims. (Cl. 29—164.)

1. The method of manufacturing brake-levers having three longitudinally spaced points of pivotal support which consists in heating a blank of suitable length and thickness, rolling and forging said blank, whereby said blank is elongated and the original thickness of metal is preserved at its intermediate point of pivotal support and the metal tapers from that point toward both ends, and drop forging the elongated blank to form the finished brake-lever.



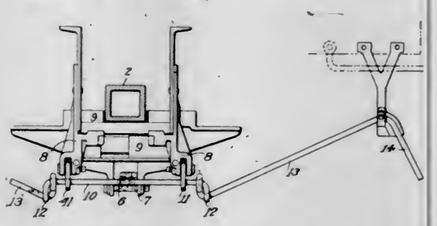
1,506,803. METHOD AND APPARATUS FOR RECOVERING HEAT. CARL P. ASTROM, East Orange, N. J. Filed Mar. 19, 1919. Serial No. 283,611. 20 Claims. (Cl. 49—77.5.)

1. The method of recovering heat consisting in charging a travelling conveyer with heated material, passing said charged conveyer into and through a conduit containing a current of air and sealed against escape of heated air where the conveyer enters and leaves, and discharging the heated air from said conduit to a heat utilizing vice.



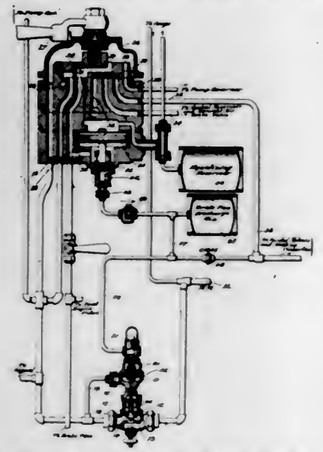
8. The combination with a conduit and means for forcing air therethrough of a conveyer moving through said conduit, means for casting molten material on said conveyer, and an air seal between the casting point and the conduit.

1,506,804. BUILDING MATERIAL. ROY G. BACHMAN, Chicago, Ill., assignor to Amorite Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1922. Serial No. 544,185. 12 Claims. (Cl. 72—116.)



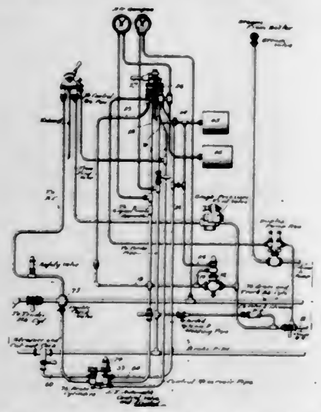
8. Building material comprising a sheet of backing material, said backing material being sufficiently stiff to ing air therethrough, of a conveyer moving through said backing member being provided with lath means having furring functions permanently attached thereto, said building material being imperforate, whereby to have good insulating qualities.

1,506,805. AUGMENTER COOLER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 16, 1921. Serial No. 445,536. 2 Claims. (Cl. 257—24.)



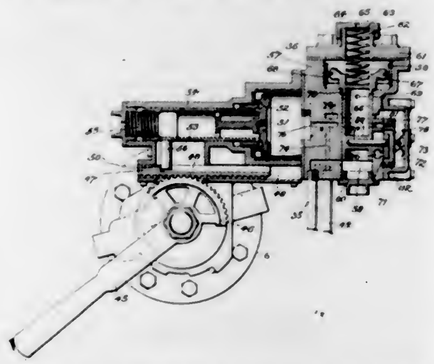
1. An augmenter cooler for devaporizing and cooling a flowing mixture of condensable vapor and gas, said cooler being in the form of a unitary structure comprising a wedge shaped casing larger at the bottom and smaller at the top and including a devaporizer and an intercooler, both having multiple cooling elements and connections for the circulation of cooling fluid, an inclined partition separating the devaporizer and intercooler, the devaporizer having an inlet at the bottom for the mixture of vapor and gas, and a discharge outlet at the top, and said intercooler having an inlet at the top adjacent the outlet of the devaporizer and an outlet at the bottom, said devaporizer outlet and intercooler inlet having a common cover seating surface, the outlet of the intercooler being adapted to be connected to evacuating means, and a cover removably mounted on said seating surface and provided with an augmenter ejector operatively connected between the discharge outlet of the devaporizer and the inlet to the intercooler, for increasing the absolute pressure of said mixture.

1,506,806. UNCOUPLING MECHANISM FOR CAR COUPLERS. ARTHUR J. BAZELEY, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 12, 1921. Serial No. 444,339. 2 Claims. (Cl. 213—169.)



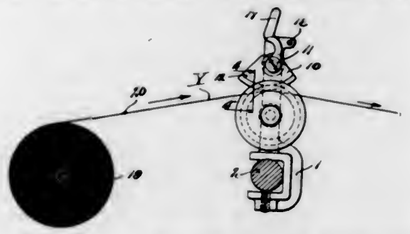
2. An uncoupling mechanism for a coupler mounted for radial movement in a car, comprising a lifting rod member carried loosely in a bracket and engaging the lock operating mechanism of said coupler, a bail-shaped member extending laterally beneath said lifting rod, floating supports depending from the underframing of the car for supporting the bail intermediate its ends, the bail being so mounted on its floating supports that upon actuation it will engage the rod at substantially the same distance from the point of engagement of the rod to the lock operating mechanism during the uncoupling operation, a laterally extending operating rod member having an end connected to an end of the bail, each member at such connection having its end arranged at an angle to its body and one of said ends terminating in a loop taking about the body of the other of the said members, whereby the said operating rod member is flexibly connected to the bail for limited rotation with said bail in one direction but independently of the said bail in the other direction.

1,506,807. METHOD OF CONTROLLING THE RELEASE OF AUTOMATIC AIR BRAKES. HENRY F. BICKEL, Plainfield, N. J., and BLYTHE J. MINNIER, Watertown, N. Y., assignors to The New York Air Brake Company, a Corporation of New York. Filed July 7, 1922. Serial No. 573,326. 5 Claims. (Cl. 303—66.)



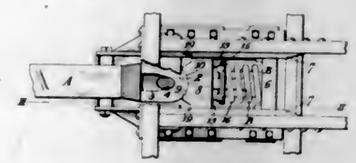
1. That method of controlling the release of automatic air brakes, including a brake pipe and a main reservoir normally charged to a pressure higher than brake pipe pressure, which consists in measuring the quantity of air discharged from the brake pipe in producing a brake application, and thereafter, during the releasing of said application, limiting the duration of flow of air at main reservoir pressure to the brake pipe according to such measurement.

1,506,808. AIR BRAKE. HENRY F. BICKEL, Plainfield, N. J., and BLYTHE J. MINNIER, Watertown, N. Y., assignors to The New York Air Brake Company, a Corporation of New York. Filed Oct. 30, 1922. Serial No. 597,967. 7 Claims. (Cl. 303—66.)



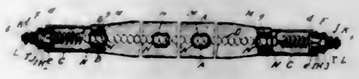
1. The combination with an automatic air brake system including a main reservoir, a brake pipe, an engineer's valve and a pressure reducing feed valve, the engineer's valve serving to control the discharge of the air from the brake pipe, and the feed valve and the engineer's valve serving conjointly to control feed of air from the main reservoir to the brake pipe alternatively with and without pressure reduction; of a mechanism operatively associated with said engineer's valve and said feed valve and conditioned by the release of air from the engineer's valve in applying the brakes, and proportionately to the quantity of air so released, to impose a corresponding time limit on the feed of air without pressure reduction to the brake pipe during the subsequent release of said application.

1,506,809. AIR BRAKE. HENRY F. BICKEL, Plainfield, N. J., and BLYTHE J. MINNIER, Watertown, N. Y., assignors to The New York Air Brake Company, a Corporation of New York. Filed Sept. 29, 1923. Serial No. 665,660. 5 Claims. (Cl. 303—66.)



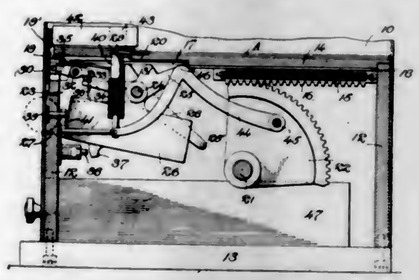
1. The combination with an automatic air brake system including a main reservoir, a brake pipe, a pressure reducing feed valve and an engineer's valve, the engineer's valve having an application position in which it discharges air from the brake pipe, a release position in which it feeds main reservoir air directly to the brake pipe and a running position in which it feeds main reservoir through said feed valve to the brake pipe, of a motor constructed and arranged to shift said engineer's valve from release to running position; and a controlling mechanism for said motor conditioned by the release of air from the brake pipe in the application function of the engineer's valve, in varying degree according to the quantity of air so released, said mechanism being rendered operative by the engineer's valve in release position and serving to actuate said motor after a time interval corresponding to said quantity condition.

1,506,810. YARN CLEARER FOR TEXTILE MACHINES. CHARLES R. BOWER, Methuen, and JOHN FITZPATRICK, Lawrence, Mass., assignors to Acadia Mills, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1923. Serial No. 659,167. 14 Claims. (Cl. 28—64.)



2. A yarn clearer comprising relatively movable parts having a yarn passage of substantially triangular cross section between them, said parts having opposed surfaces defining a flaring entrance to said passage, and being constructed and arranged automatically to approach and restrict the yarn passage when a slub enters said flaring entrance.

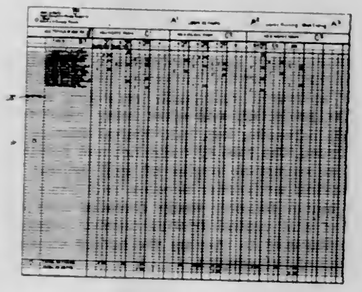
1,506,811. FRICTION DRAFT RIGGING. RALPH A. BROCKELSBY, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1922. Serial No. 537,371. 7 Claims. (Cl. 213—36.)



1. A friction draft gear comprising a central friction member having a forward projection slotted for connection with apertured rearwardly extending arms of a coupler, the projection and arms being connected by a transversely extending key, said central friction member having a broad, flat base of resistance and friction shoes arranged in re-entrant angles of said central friction member, spring mechanism between said shoes and the said base and a follower wedge threaded over the forward end of said central friction member engaging said shoes and arranged to take up the buffing stresses from the rear end of the coupler.

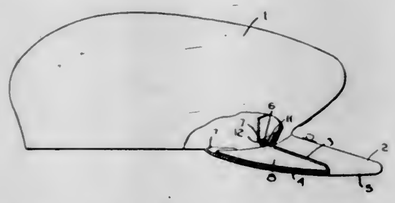
1,506,812. ELECTRIC HEATER. JOHN WILSON BROWN, Jr., Philadelphia, Pa. Filed Mar. 24, 1923. Serial No. 627,256. 13 Claims. (Cl. 219—65.)

1. In an electric heater, an integral casing, permanently fixed means for hermetically sealing same, a resistance within the casing and a liquid filling the casing.



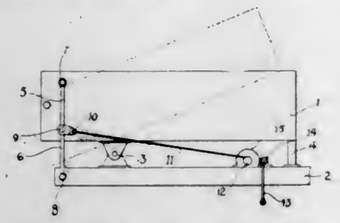
1,506,813. VENDING MACHINE. NICHOLAS CAMELO and THOMAS DOMBROWSKI, Rome, N. Y., assignors to Oneida Sani-Seat Company, Inc., Rome, N. Y., a Corporation of New York. Filed Sept. 6, 1921. Serial No. 498,641. 1 Claim. (Cl. 194—39.)

In a vending machine, a receptacle having a slot therein for the passage of articles to be dispensed, a projectile and retractible plunger operable when projected to effect delivery of an article through said slot, a member within said receptacle movable across said slot to open and close same, said member normally clos-



ing said slot, a pivoted tiltable member one end of which normally engages directly with said projectile and retractible plunger to lock said plunger in a retracted position, said tiltable member being adapted to be tilted and thereby released from locking position with respect to said plunger by the weight of a coin deposited in the machine, and a connection between said tiltable member and said slot closing member whereby the latter is moved to open the slot by said tiltable member in cooperation with said plunger when the locking member is tilted from its normal position and the plunger moved to deliver an article from the receptacle.

1,506,814. BLANK FOR COST-ACCOUNTING SYSTEMS. WILLIAM H. CHASE, Hopedale, Mass. Filed Apr. 5, 1921. Serial No. 458,681. 13 Claims. (Cl. 283—66.)

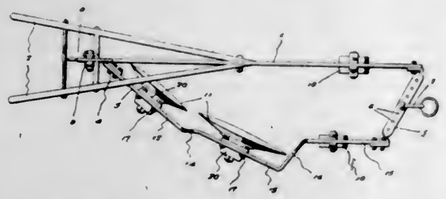


1. A classified blank of original entry for an accounting system showing comparative distributions and costs charged against the respective sections and the respective divisions of a department of an industry, comprising a ruled sheet having a series of parallel lines to receive the designation of entries of various materials, traversed by vertical lines dividing the same into a column for the designation of the materials, followed by a series of comparative data columns which are sub-divided to receive original entries and grouped within minor columns having sectional headings which in turn are grouped within major columns having divisional headings whereby comparative original entries of distribution and data charges will show against the classification of the material distributed and also against the sections and divisions for which the account is carried.

1,506,815. CAP WITH REMOVABLE VISOR. WALTER J. CORMAY, Auburndale, Mass. Filed Dec. 27, 1923. Serial No. 682,912. 4 Claims. (Cl. 2—195.)

2. A cap formed of flexible material having a body provided with a visor having an upper layer and a lower layer presenting a continuous outer edge and separated at their inner edges, a visor stiffener removably inserted through the opening between the inner edges of the visor and a series of snap fasteners for securing the upper and lower layers together at the rear of said visor stiffener.

1,506,816. LIFTING DEVICE. JOHN A. DIENNER, Chicago, Ill. Filed Mar. 30, 1921. Serial No. 457,048. 2 Claims. (Cl. 298—19.)

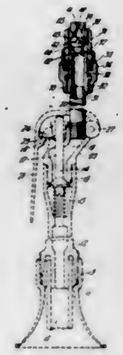


2. In combination, a frame, a load pivoted thereto, a pair of toggle links pivoted to each other and to the frame and load respectively, said links being substantially in line with each other to form a toggle for locking the load to the frame, one of said links having an extending arm to which power is applied for breaking the toggle to raise the load about said pivot.

1,506,817. BEARING PLANE FOR AIRCRAFT. CLAUDIUS DORNIER, Friedrichshafen, Germany, assignor, by mesne assignments, to Dornier-Metallbauten Gesellschaft mit beschränkter Haftung and said Claudius Dornier, both of Friedrichshafen, Germany. Filed Dec. 23, 1921. Serial No. 524,477. 1 Claim. (Cl. 244—31.)

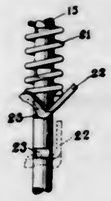
A bearing plane for aircraft having the cross section of a streamlined body with about one fifth of its length cut away at its rear end.

1,506,818. CULTIVATOR. GUSTAV A. MEYERS and FREDERICK J. DUHRSEN, Hukalau, Territory of Hawaii. Filed Apr. 3, 1922. Serial No. 549,301. 2 Claims. (Cl. 97—54.)



1. A cultivator of the class described comprising a main beam, an auxiliary beam having its rear end connected with the rear end of the main beam, a cross bar connecting the front ends of the beams together, a clevis adjustably connected with the cross bar, said auxiliary beam having a portion extending at an angle from the main beam and plows carried by said portion.

1,506,819. VARIABLE-JET LIQUID SPRAYER. ROBERT GORDON EDGELL, Bathurst, New South Wales, Australia. Filed June 20, 1923. Serial No. 646,672. 1 Claim. (Cl. 299—117.)



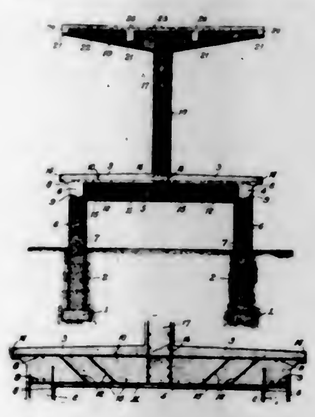
A spray nozzle comprising a tubular stem, the outer end of which is formed with an inwardly extending shoulder while the lower portion is threaded interiorly

for attachment and also threaded exteriorly, a double conical head integral with the shoulder and truncated at the top, water passages provided through the shoulder of the said stem below the head, a sleeve threaded at opposite ends for adjustable engagement with the exterior thread of the stem and provided with a recess, a packing gland arranged in said recess and movable

along the stem on adjustment of the sleeve, a sleeve head adjustably engaged with the outer end of the sleeve and coacting with the gland, a conical based nipple carried on the top of said sleeve, the cone of said nipple corresponding with the cone of the top of said head, and the truncated cone head of the stem being provided with an angularly disposed slot, substantially as and for the purposes set forth.

1,506,820. PRESSURE-REGULATING MECHANISM. THEODORE J. ERDMAN and JOHN SCHAEFFER, Horicon, Wis., assignors to Van Brunt Manufacturing Company, Horicon, Wis., a Corporation of Wisconsin. Filed Apr. 10, 1922. Serial No. 551,382. 11 Claims. (Cl. 261—1.)

1. In a device of the class described, the combination of a rod having a series of notches therein, a spring surrounding the rod, and an adjustable abutment for the spring comprising a clip having a slot, one portion of the slot being larger and one portion smaller than the rod, the smaller portion being adapted to engage a notch in the rod to hold the clip in adjusted position.



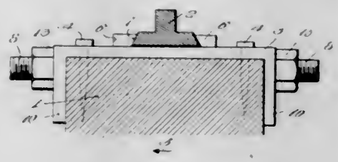
1,506,821. STEERING DEVICE. ANTON FLETTNER, Berlin, Germany. Filed Mar. 25, 1922. Serial No. 546,839. 12 Claims. (Cl. 114—167.)

1. In a steering mechanism in combination, a main rudder, an auxiliary rudder connected with said main rudder, driving means for operating said auxiliary rudder and mechanism inserted between said driving means and

said auxiliary rudder for causing said auxiliary rudder to execute pendulumlike movements of varying angular velocity.

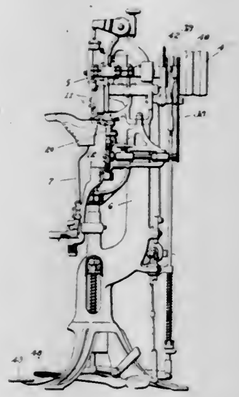
1,506,822. UMBRELLA SHED FOR TRAINS, ETC. CHARLES B. FOSTER, Indianapolis, Ind. Filed Nov. 10, 1919. Serial No. 336,941. 8 Claims. (Cl. 72—1.)

1. A structure of the class described, comprising a platform having supporting pillars, reinforced cross members on the pillars and a floor on the members, an umbrella structure having a rod of columns supported on the cross members, reinforcing members extending into the columns and the cross members, and a roof on the columns.



1,506,823. SPARK PLUG. ALFRED J. FRANCOEUR, Fall River, Mass. Filed May 4, 1923. Serial No. 636,723. 1 Claim. (Cl. 123—169.)

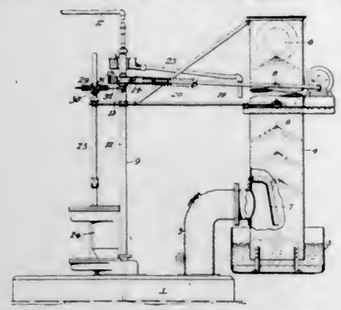
A spark plug comprising a metallic shell, an insulated body arranged therein and having openings arranged one above the other, a main electrode made up of a plurality



of sections having their adjacent ends spaced apart in the respective openings to form gaps, one of said gaps being wider than the other as and for the purpose specified.

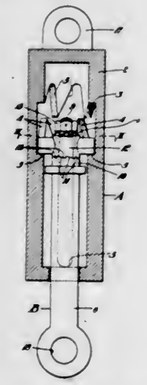
1,506,824. SAWMILL TRACK ADJUSTER. KELLY I. FRANKLIN, Tillamook, Oreg. Filed Nov. 12, 1923. Serial No. 674,272. 2 Claims. (Cl. 238—282.)

1. A track rail adjuster comprising a slotted plate adapted to extend across the upper side of a sill, apertured abutments extending downwardly from the ends of said plate for contact with the vertical sides of the sill, a block slidably received in the slot of said plate and having provision for holding a rail, studs extending oppositely from said block through the aperture of said abutments, and nuts threaded adjustably on said studs in contact with the outer sides of said abutments.



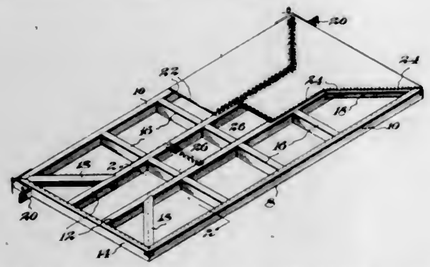
1,506,825. MACHINE FOR OPERATING ON THE SOLES OF BOOTS AND SHOES. FREDERICK M. FURBER, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 23, 1917. Serial No. 198,142. 57 Claims. (Cl. 12—17.)

1. In a shoe machine, means for inserting fasteners successively in the sole of a shoe, means for feeding the shoe intermittently to the fastener inserting means for the insertion of successive fasteners, and means for cutting away a portion of the sole as it is being moved by the feeding means in the intervals between successive fastener inserting operations.



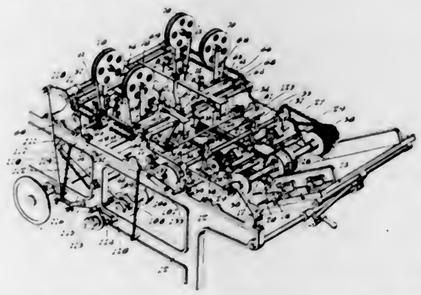
1,506,826. GAS PRODUCER. ALBERT L. GALUSHA, Caldwell, N. J. Filed May 27, 1922. Serial No. 564,092. 13 Claims. (Cl. 48—85.2.)

2. In a gas producer of the kind herein described, the combination with a spindle extending through the fuel bed, a rake carried thereby, a ratchet wheel secured to the spindle, a pawl engaging said ratchet wheel, a longi-



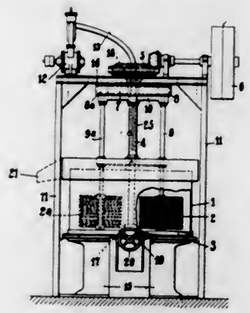
tudinally compressible rod actuating the pawl and a motor for reciprocating said rod.

1,506,827. TONGS AND THE LIKE. ROLPH F. GELLERT, Munhall, Pa. Filed Dec. 22, 1923. Serial No. 682,314. 6 Claims. (Cl. 294—106.)



1. In a lifting device, relatively movable lifting members, a lifting connection for said members, and relatively movable interengaging locking means carried by said lifting connection and said members, respectively, for periodically stopping said members in different relative positions.

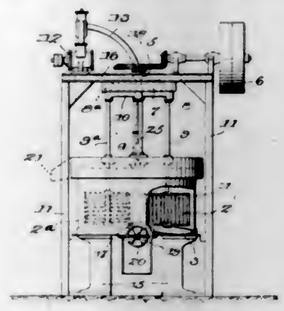
1,506,828. HIDE-STRETCHING APPARATUS. GEORGE GODDU, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 20, 1920. Serial No. 411,370. 20 Claims. (Cl. 149—21.)



10. An apparatus for stretching hides having, in combination, a frame, supporting members on the frame, and hide engaging members secured to the supporting members for engagement with a hide, said hide engaging members being formed with diverging prongs at one end and with a split portion at the other end to secure them to the supporting members.

1,506,829. TABBING MACHINE. HAROLD J. GOSS, Nashua, N. H., assignor, by mesne assignments, to The Lake Erie Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 3, 1923. Serial No. 629,549. 27 Claims. (Cl. 93—56.)

1. A blank tabbing machine having means for applying areas of glue to blanks and means for affixing to the blanks, by said glue areas, tabs of a size larger than the areas of glue.

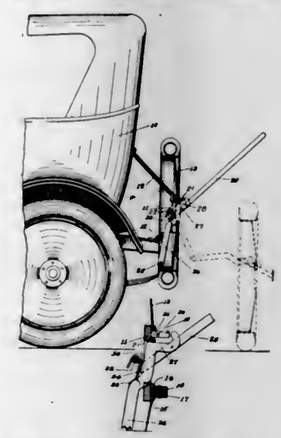


1,506,830. APPARATUS FOR MAKING FOOD PRODUCTS FROM GRAIN. PAUL GROSS, Berlin, Germany, assignor of one-fifth to Peaslee, Brigham and Gennert, New York, N. Y. Filed Aug. 3, 1922. Serial No. 579,525. 10 Claims. (Cl. 83—28.)

1. In an apparatus of the class described, the combination, with a trough adapted to receive the grain, of a rotary beater within said trough comprising a plurality of beating members each separately rotatable and spaced from the axis of the beater and each composed of beating bars, the bars of successive members being disposed at different angles with respect to each other and relatively to the axis of the rotary beater and having paths of movement which intersect.

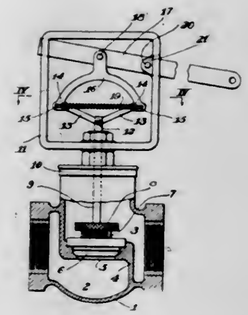
1,506,831. PROCESS FOR THE MANUFACTURE OF WHOLE-GRAIN BREAD. PAUL GROSS, Charlottenburg, near Berlin, Germany, assignor of one-fifth to Peaslee, Brigham and Gennert, New York, N. Y. Original application filed Aug. 3, 1922, Serial No. 579,525. Divided and this application filed Jan. 25, 1924. Serial No. 688,538. 3 Claims. (Cl. 83—29.)

1. The process of treating grain to prepare it for food stuffs, which process comprises subjecting grain in a trough to a combined agitating and washing treatment to remove the husk from the grain, thus forming a dough mass including mashed grain and husk, stopping the agi-



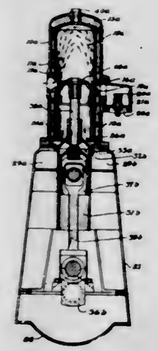
tating treatment, and moving the husk particles from the mass to the upper part thereof by forcing air upwardly through the mass.

1,506,832. ELECTRICAL-CIRCUIT CONTROLLER. CARL A. HELLMANN, Washington, D. C. Filed June 3, 1920. Serial No. 386,198. 7 Claims. (Cl. 200—23.)



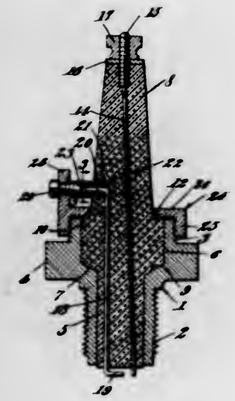
3. In a device of the kind described, periodically movable members carrying electrical contacts, and substantially stationary contacts adjacent the movable contacts, whereby said movable contacts may periodically engage corresponding ones of the stationary contacts, simultaneous engagement of certain of the stationary contacts with their cooperating movable contacts being adapted to control circuits.

1,506,833. LIFTING DEVICE FOR DEMOUNTABLE WHEELS. PAUL R. HIGGINBOTHAM, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1922. Serial No. 542,723. 11 Claims. (Cl. 224—29.)



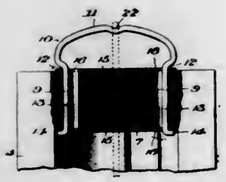
1. A lifting device for demountable wheels comprising a lever insertable through the central aperture of the wheel and means providing a shifting fulcrum for said lever.

1,506,834. CONTROL VALVE. CHARLES HOWARD HOOK, Pittsburgh, Pa. Filed Feb. 14, 1924. Serial No. 692,735. 8 Claims. (Cl. 137—139.)



1. A mechanism for opening and closing a fluid supply main, comprising a casing having a passage therethrough, a valve adapted to close the passage, a stem attached to the valve and extending to the exterior of the casing, a frame rigidly mounted outside the casing, a movable actuating member mounted on the frame, a fork carried by the actuating member inside the frame, a pair of links pivotally attached to the exterior end of the valve stem at their inner ends, and slidably connected to the ends of the said fork at their outer end, and springs constantly urging the outer ends of the links towards each other.

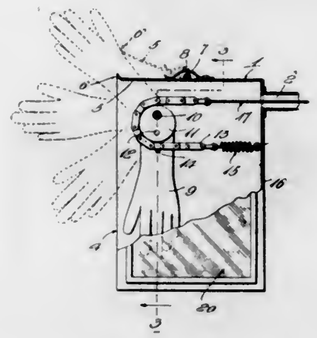
1,506,835. INTERNAL-COMBUSTION ENGINE. LOUIS ILLMER, Cortland, N. Y. Filed Nov. 20, 1920. Serial No. 425,345. 12 Claims. (Cl. 123—59.)



7. In an internal combustion engine, a pair of power cylinders, each provided with an intake valve, a power piston and a piston rod, a frame housing provided with guide bores, a crank mechanism for reciprocating said piston rods in unison, said mechanism comprising a pair of piston crossheads sliding in said guide bores, means serving to separate said guide bore from the bore of said power cylinder into crosshead chambers and into base chambers, respectively, a reservoir formed integral with the frame housing and communicating with both the base chamber of one power cylinder and the crosshead chamber of the second power cylinder, and a suction valve supplying working fluid to the reservoir and means establishing communication between said reservoir and the intake valve of the first named power cylinder.

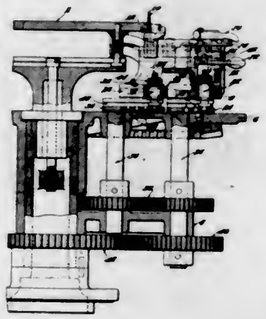
1,506,836. SPARK PLUG. JOHN WILLIAM JACKSON, East Taunton, Mass. Filed Sept. 30, 1921. Serial No. 504,353. 1 Claim. (Cl. 123—169.)

In a device of the class described, a spark plug comprising a body; a core in the body and having a recess; a retainer threaded on the body and engaging the core; a tube extended between a portion of the retainer and the core and received in the recess of the core; a screw threaded into said portion of the retainer and entering the tube; and an electrode in the core and extended into the tube, into jump spark relation with respect to the screw, and another electrode mounted in said core for cooperation with the first mentioned electrode.



1,506,837. BATTERY CONTAINER. ALLAN C. JOHNSON, Akron, Ohio. Filed Jan. 25, 1922. Serial No. 531,671. 5 Claims. (Cl. 180—68.5.)

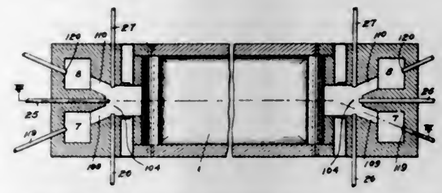
1. A battery container comprising an overhanging ledge adjacent its upper edge said ledge having vertically disposed spaced bores therein of elongate form in cross-section, and a handle constructed to be removably mounted in said bores with a snap action against vertical movement therein, said handle comprising an upwardly bowed resilient bail.



1,506,838. AUTOMOBILE SIGNAL. WILLIAM G. JOHNSON, Guthrie, Okla., assignor of one-half to J. D. Palmer, Purcell, Okla. Filed Dec. 17, 1923. Serial No. 681,256. 3 Claims. (Cl. 116—51.)

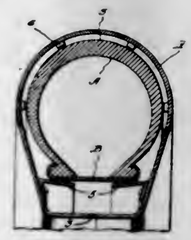
1. An automobile signal comprising a vertically disposed casing having an open outer side and an upwardly movable resiliently pivoted top section whose free end is disposed at said open side, a pivoted signal arm in said casing movable outwardly through said open

side thereof and movable to an upper inclined position at which it raises said resiliently pivoted top section, and means for operating said arm.



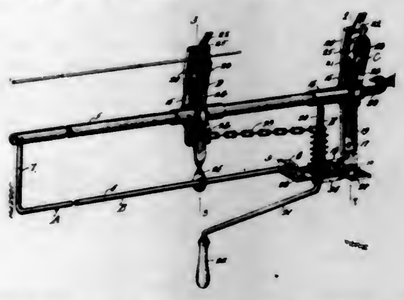
1,506,839. SOLE-ROUNDING MACHINE. GIDEON JULIAN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 19, 1920. Serial No. 359,769. 28 Claims. (Cl. 12—25.)

16. A sole rounding machine having, in combination, a pattern, a knife carrier, a knife movable on the carrier, a spring for pressing the knife against the pattern, a pawl for retaining the knife in position on the carrier, against the action of the spring, mechanism for relatively moving the pattern and knife carrier to transfer the knife around the pattern beyond its starting point and return it to the starting point, and a weighted arm swung in opposite directions by the stopping and starting of the relative forward travel of the knife for rendering the pawl active and inactive.



1,506,840. STRUCTURE AND METHOD OF OPERATION OF HEATING FURNACES. ROBERT B. KERNOHAN, JAMES S. LOCHHEAD, and WILLIBALD TRINKS, Pittsburgh, Pa. Filed Dec. 8, 1921. Serial No. 520,926. 6 Claims. (Cl. 263—15.)

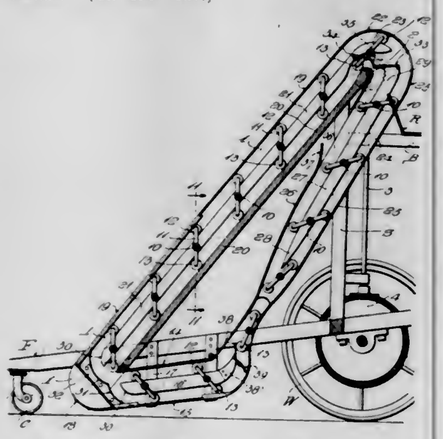
1. In a heating furnace using preheated air for combustion the method of operation herein described which consists in maintaining a passageway for such preheated air leading to the furnace chamber and in projecting



into such passageway a flow-inducing jet of compressed gas at a velocity exceeding that of sound and causing fuel to mingle in the stream.

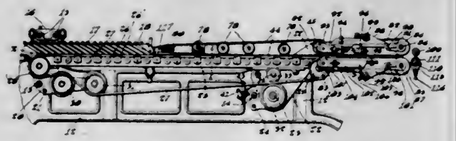
1,506,841. CARRIER. FREDERICK F. KESSEL, Marine City, Mich., and LEONARD L. SCOTT, Martinsburg, W. Va. Filed Jan. 27, 1922. Serial No. 532,325. 1 Claim. (Cl. 229—29.)

A tire carrier comprising a case for receiving the tire, said case being formed of two sections hingedly connected together, an annular supporting member secured to the side wall of each of said sections, said supporting members adapted to have their inner edges spaced apart when the sections of the casing are moved to closed position, said supporting members adapted to engage the inner periphery of a tire rim to support the same and a tire and have the tire valve disposed between their inner edges, and means secured to the inner side of the outer walls of the sections and acting to hold the rim in contact with the supporting means, and against movement relative thereto.



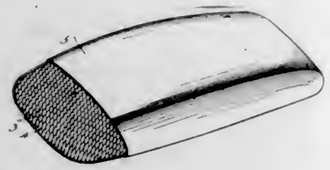
1,506,842. WIRE-STRETCHING DEVICE. JOSEPH KING, Unadilla, N. Y., assignor of one-half to Milo G. Albrecht, Unadilla, N. Y. Filed Apr. 12, 1923. Serial No. 631,662. 2 Claims. (Cl. 254—161.)

1. In a wire fence implement, a frame including a main slide bar and a guide rod disposed in parallel relation to the bar, a stationary clamp at one end of the frame, a sliding clamp including a sleeve slidably mounted on



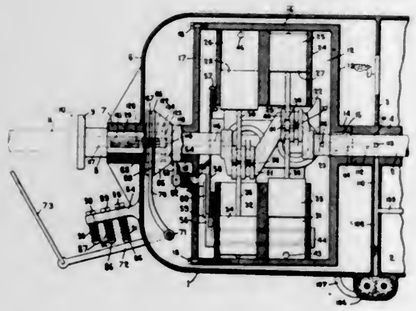
the slide bar, a body plate attached to the sleeve, a stationary jaw formed on the outer end of the body plate, a movable jaw carried by the body plate, a reinforcing plate attached to the body plate and sleeve and having an eye formed on its inner end to receive the guide rod, and means for moving the sliding clamp toward the stationary clamp.

1,506,843. ELEVATOR. JOSEPH KOMARNISKY, Scobey, Mont. Filed Jan. 28, 1924. Serial No. 689,072. 8 Claims. (Cl. 198—137.)



1. An elevator comprising an endless carrier having an upwardly moving reach, a downwardly moving reach and a horizontally moving reach between the lower ends of said upwardly and downwardly moving reaches, said carrier including a pivoted elevating member, and a pair of spaced controlling shoes therefor, substantially horizontal tracks for said shoes to direct said elevating member substantially toward said upwardly moving reach as said member moves horizontally, whereby to permit it to pick up a load, trackage for said shoes when traveling upwardly adapted to hold said elevating member in load-carrying position, substantially vertical tracks for said shoes when traveling downwardly to start said elevating member on its descent in an upstanding load-discharging position, shoe-controlled means for holding one of said shoes against engagement with its respective vertical track until the other shoe is positioned to engage its track, common trackage for both shoes under said vertical tracks to turn said elevating member toward its horizontal load-receiving position, and shoe-controlled switch means for properly guiding said shoes from said common trackage into engagement with said horizontal tracks.

1,506,844. FOLDING MACHINE. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed July 2, 1921. Serial No. 482,034. 20 Claims. (Cl. 93—49.)

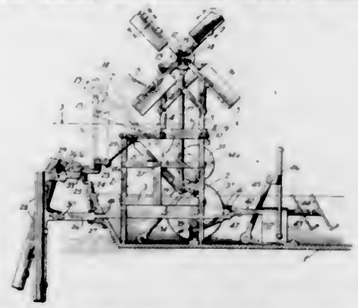


1. A folding machine having a pair of blank-folding belts and pulleys for the ends of said belts, the pulleys for those ends of the belts which first act on the blanks being laterally and vertically adjustable independently of the pulleys at the other ends of the belts.

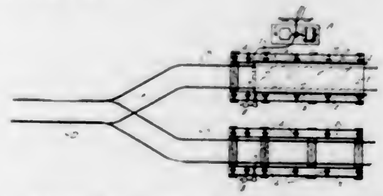
1,506,845. AUTOMOBILE TOP OR ROOF. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1919. Serial No. 295,532. 4 Claims. (Cl. 296—137.)

2. A roof for automobiles and other vehicles comprising a foraminous, reticulated or screen body pressed into the required longitudinal and transverse shape and contour to form a unitary structure, and a cover applied to said structure.

1,506,846. HYDRAULIC CLUTCH. RALPH M. LOVEJOY, Meredith, N. H. Filed Nov. 5, 1919. Serial No. 335,909. 19 Claims. (Cl. 192—60.)



1. A hydraulic clutch comprising a rotatable driving member and a rotatable driven member, one of which constitutes a liquid containing drum, two pairs of diametrically oppositely disposed cylinders connected to said drum and co-operating pairs of pistons connected to the other member, the pistons of each pair being so disposed as to move in opposite directions, means controlled by said pistons for supplying the liquid to said cylinders by centrifugal force and means for regulating the expulsion of fluid from said cylinders to said drum.

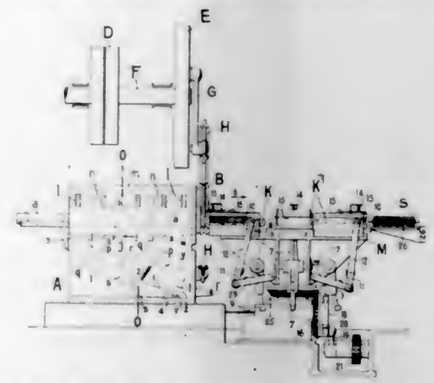


18. In combination with an engine provided with a lubricating system and driving shaft actuated by said engine, a driven shaft, and a hydraulic clutch operable to transmit motion from said driving to said driven shaft, means for supplying oil to said lubricating system and to said hydraulic clutch continuously during the operation of the engine.

1,506,847. BOAT-PROPELLING MECHANISM. OTTO MAKI and KARL ARLIN, Palmer, Mass. Filed Oct. 8, 1921. Serial No. 506,482. 1 Claim. (Cl. 115—28.)

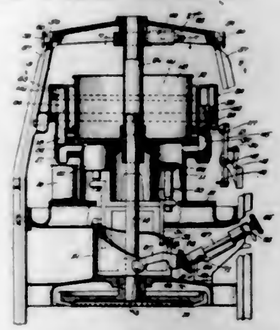
The combination with a boat, of a frame, a wind motor carried thereby, a pair of cooperating propellers, power transmission mechanism releasably connecting said wind motor and propellers, foot-controlled propeller actuating mechanism adapted for connection thereto interchangeably with said wind motor mechanism, said foot-controlled mechanism comprising a pair of slide arms, pedals carried by said arms, and steering means for said boat.

1,506,848. CHARGING STATION FOR STORAGE-BATTERY LOCOMOTIVES. RAYMOND MANCHA, St. Louis, Mo., assignor to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,211. 9 Claims. (Cl. 104—34.)



1. A charging station for storage battery locomotives provided with a plurality of supporting devices on which battery boxes are adapted to be mounted during the operation of re-charging the batteries contained in said boxes, and means whereby a battery box containing discharged batteries will be removed from the chassis of a locomotive and deposited on one of said supports when the locomotive is moved in one direction in proximity to said support and a battery box containing charged batteries will be removed from the other support and deposited on the chassis of the locomotive when the locomotive is moved in the opposite direction in proximity to said other support.

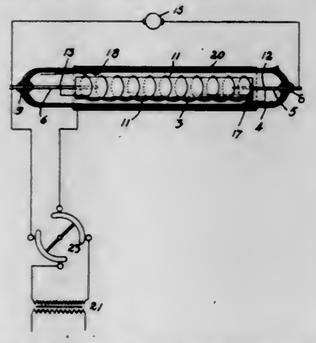
1,506,849. METHOD OF HANDLING STORAGE BATTERIES OF ELECTRIC LOCOMOTIVES. RAYMOND MANCHA, St. Louis, Mo., assignor to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Feb. 11, 1924. Serial No. 692,166. 15 Claims. (Cl. 104—34.)



5. A method of handling the storage batteries of electric locomotives, characterized by moving a locomotive containing a discharged battery into proximity to a supporting structure, using said battery to energize the operating mechanism of the locomotive to move the locomotive relative to said structure, and causing co-operating devices on the supporting structure and the battery box to act while the locomotive is moving relatively to said structure to effect the separation of the battery box from the chassis of the locomotive.

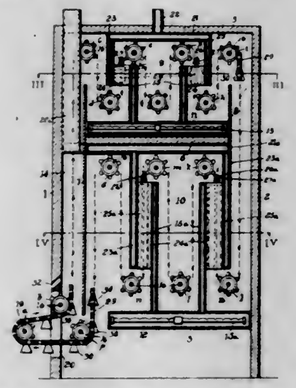
1,506,850. MANUFACTURE OF WOODEN MATCHES. FRÉDÉRIC MANGE, Paris, France. Filed Dec. 9, 1921. Serial No. 521,187. 4 Claims. (Cl. 144—185.)

1. A method for the production of small sticks of wood for the manufacture of matches consisting in first sawing a length of timber across the grain (direction of the fibre) into blocks the length of each of which is equal to the length of the matches to be made, then cutting each of these blocks in the direction of the grain (direction of the fibre) successively into slabs or sheets entirely severed from the said block and having a thickness corresponding to the thickness of the matches to be made, transferring directly the said slices or sheets, successively as they are cut off, into a receiving device in order to range them to a block of vertical slices or sheets, cutting such a block of vertical slices or sheets perpendicularly to the slices or sheets successively into vertical rows of small wooden sticks, completely severed each from the other, which are directly transferred, successively as they are cut from the block of vertical slices or sheets, into a receiving device in order to range them to a rectangular block in which the small wooden sticks are arranged close together side by side with one another without any intervening space, so that the block of vertical small sticks can be easily seized and gripped in its middle part by a clasping frame in which the match sticks can be subjected to a drying process before being impregnated at one end and tipped with the igniting material.



1,506,851. FILLING MACHINE. THOMAS MARTIN and AUGUST HOLMQUIST, Hoopeston, Ill., assignors to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1921. Serial No. 470,985. 4 Claims. (Cl. 226—97.)

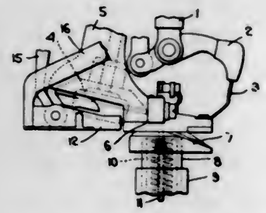
1. A filling machine comprising a rotatable reservoir, a series of cylinders and pistons rotatable with said reservoir, a stationary cut-off plate in said reservoir



for controlling the communication between said reservoir and cylinders, a series of outlet valves, one for each cylinder for controlling the discharge therefrom, an adjustable cam for controlling the movement of said pistons and means for holding said cam in different adjusted positions to vary the amount of fill, said holding means comprising a pin on said cam, and a rotatable shaft having a conical head secured thereto, said conical head having a spiral groove therein for co-operation with said pin.

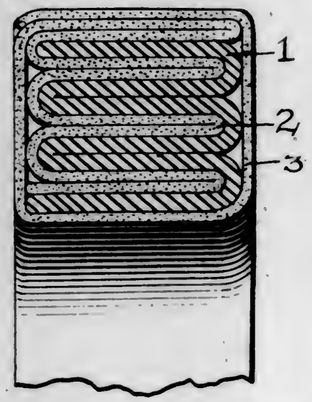
1,506,852. HIGH-RESISTANCE CONDUCTOR AND METHOD OF MAKING THE SAME. MONTFORD MORRISON, New York, N. Y. Filed Apr. 27, 1922. Serial No. 556,976. 20 Claims. (Cl. 219—63.)

1. A high-resistance element comprising a filamentary body of electrically conductive material deposited upon a body of insulating material.



1,506,853. BAKING OVEN. NORMAN R. MOSS, Pittsburgh, Pa. Filed Oct. 28, 1922. Serial No. 597,476. 7 Claims. (Cl. 107—57.)

1. In a baking oven, two baking chambers separated by heat-insulating partitions, a heating chamber in each chamber, an endless conveyer, means carried by the same for supporting articles to be baked, means causing the conveyer to travel back and forth in each chamber, flues in each baking chamber communicating at one end with the heating chamber therein and projecting between adjacent oppositely movable portions of the conveyer, other flues in each chamber projecting oppositely to the direction of the first flues and extending between adjacent oppositely moving portions of the conveyer, outlets for the second flues, and cross-flues out of the path of the conveyer connecting the inner ends of oppositely-projecting flues.

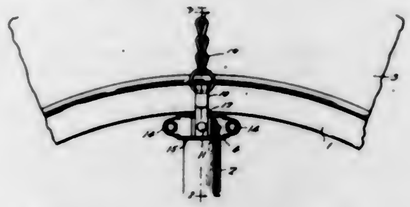


5. In a baking oven, two baking chambers one over the other, having heat-insulating partitions, a heating chamber at the bottom of each baking chamber, a conveyer having a serpentine course in each baking chamber, and heating flues communicating with the heating chambers and projecting downwardly between upwardly-open spaces between adjacent oppositely traveling portions of the conveyer.

1,506,854. BLINDSTITCH FELLING MACHINE. HARLEY C. MOULTON, Dorchester, Mass., assignor, by mesne assignments, to Arbetter Felling Machine Co., Boston, Mass. Filed Mar. 4, 1922. Serial No. 541,220. 37 Claims. (Cl. 112—178.)

1. In a blind stitch sewing machine for felling a superimposed layer upon a base layer of material comprising a work support, a reciprocating needle and complemental stitch forming mechanism; work presenting mechanism including means for turning up the edge portion of the superimposed layer away from the base layer, and guiding said turned-up portion adjacent to the path of reciprocation of the needle, a bender located above the work support engaging said superimposed layer at a distance from the edge thereof, adjacent the stitching point, and acting continuously to deflect said turned-up portion of the superimposed layer into the path of the needle at the stitching point.

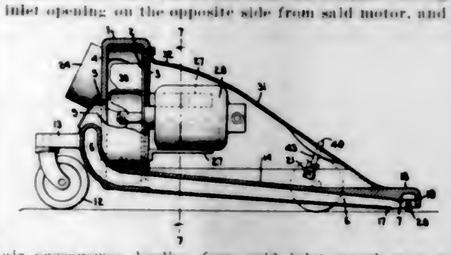
1,506,855. PISTON PACKING. BENJAMIN CARL MCCLURE, Hartsdale, N. Y., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed June 24, 1922. Serial No. 570,534. 2 Claims. (Cl. 154—45.5.)



2. A packing for ammonia pumps and the like apparatus, which comprises a sheet of lead and a sheet of asbestos cloth superposed thereon, the two being folded back and forth to form a core, and a wrapping enclosing said core formed of asbestos cloth comprising an extension of the cloth in the core, the folds of the core material extending crosswise of the core, whereby, when a given length of the completed packing is bent into a circle with the ends of the packing body abutting, a continuous sheet of lead with convolutions extending from the butt joint circumferentially around the circle, is formed in the core.

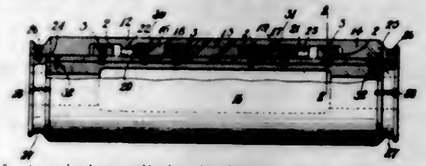
1,506,856. BEARING. THOMAS J. MCCLUSKEY, Gloucester, N. J. Filed Feb. 20, 1923. Serial No. 620,186. 1 Claim. (Cl. 64—36.)

A bearing including an outer ring having a race on its inner side, a ball inlet communicating with the race and keyways, on its outer side at opposite sides of the inlet, disposed transversely to the race; an inner ring having a race on its outer side, a ball inlet communicating with the race and keyways, on its inner side at opposite sides of the ball inlet, disposed transversely to the race; an intermediate ring disposed between the inner and outer ring and having a race on its outer and inner sides; a set of balls in the races between the outer an intermediate ring; a set of balls in the races between the inner and intermediate ring; a block having one of its sides forming a race across each inlet and the other side provided with a keyway disposed transversely to the race, and a key in the keyway of each block extending within the keyway in the ring for locking the block in position.



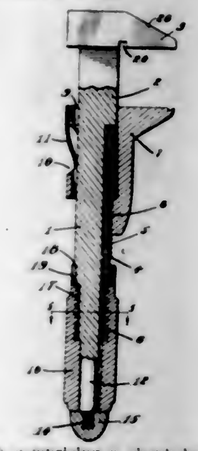
1,506,857. ANTISKID DEVICE. THOMAS E. MCSHAFFREY and CHARLES F. GILBRIDE, Akron, Ohio. Filed Oct. 8, 1921. Serial No. 506,248. 2 Claims. (Cl. 152—14.)

1. A device of the character set forth comprising a pair of substantially semi-cylindrical members adapted to be secured about the spoke of a wheel, lugs projecting from the ends of each of said members, a bolt extending through the corresponding lugs of the opposed members, a nut threaded on each bolt and adapted to draw said members together about said spoke, a projection formed on each member intermediate the lugs thereof, a snap hook extending outwardly from each member and having a shank riveted to said projection, and a traction element engaged over the tread of the wheel and having its ends secured to said snap hooks.



1,506,858. SUCTION CLEANER. WILLIAM V. ORR, Cleveland, Ohio. Filed Aug. 4, 1921. Serial No. 489,680. 11 Claims. (Cl. 15—9.)

1. In a suction cleaner, a casing having a fan chamber, a motor, and a collecting nozzle, carrying wheels supporting said casing with the axis of said fan chamber substantially horizontal and its periphery near the floor, said nozzle having a narrow elongated inlet mouth arranged transversely of that axis, and the bottom of said nozzle slanting gradually upward from said inlet mouth, said motor being located upon the same side of said fan chamber with said nozzle and said fan chamber having an inlet opening on the opposite side from said motor, and an

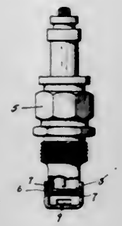


air passageway leading from said inlet mouth past said fan chamber to said inlet opening.

1,506,859. PRINTING CYLINDER. MALCOLM OWEN, London, England. Filed Feb. 12, 1924. Serial No. 692,408. 15 Claims. (Cl. 101—415.1.)

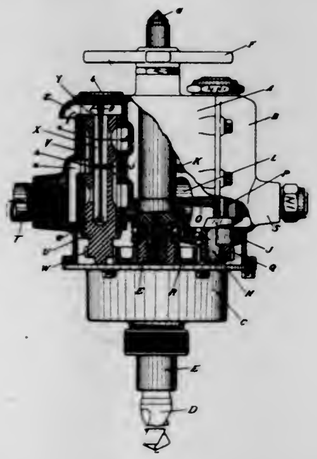
1. A printing cylinder having a gap, a plurality of hook members spaced apart in the gap, and means for securing said members to the bed of the gap, whereby the free end of a sheet, wrapped around the cylinder with its leading end secured in the gap, may be engaged and held down towards the bed of the gap to finally secure the sheet on the cylinder.

1,506,860. WRENCH. PAUL E. PAGE, Montreal, Quebec, Canada. Filed Dec. 13, 1923. Serial No. 680,513. 2 Claims. (Cl. 81—168.)



1. A wrench comprising a shank having a jaw at one end thereof, a rack-bar slidably engaging said shank and obstructed from said jaw, a movable jaw surrounding said shank and bar and having a toothed extension adapted for engagement with said bar, said bar having a threaded portion at its lower end, and a handle surrounding said shank and threaded portion, said handle having internal threads for receiving the threaded portion of the bar.

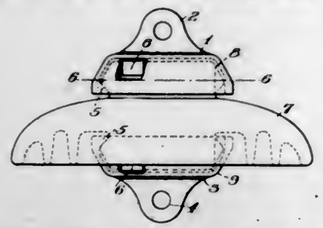
1,506,861. SPARK PLUG. SULLIVAN PALMERI, Plantsville, Conn. Filed Mar. 16, 1923. Serial No. 625,441. 1 Claim. (Cl. 123—169.)



A spark plug provided with a transverse pin-like electrode permanently mounted in the inner end of the

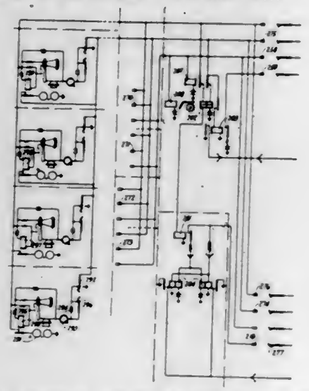
plug and longer than the diameter of the plug, so as to project beyond opposite sides thereof, a housing-cap formed with bayonet slots engaging with the projecting

ends of the said electrodes, whereby the cap is locked in place by said electrode, the said cap also formed on one side with a slot.



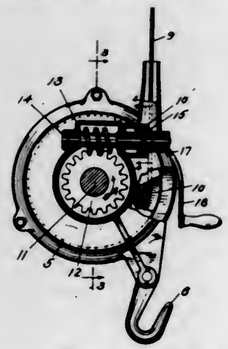
1,506,862. GOVERNOR FOR FLUID-ACTUATED ROTARY TOOLS. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 3, 1921. Serial No. 498,581. 13 Claims. (Cl. 121—33.)

1. In a portable fluid actuated rotary hand tool, the combination of a crank shaft adapted to be actuated by a fluid operated motor, a tool spindle adapted to carry a working tool and connected to be rotated by the said crank shaft, a rotary valve actuated by the said crank shaft for automatically distributing and exhausting motive fluid under pressure in the machine, and a centrifugal governor mounted directly on said valve and adjustable to operate at a pre-determined speed of the valve after maximum power has been developed by the machine for automatically regulating and throttling the exhaust of motive fluid from the machine, whereby overspeeding and racing are prevented upon substantial decrease of resistance to rotation of the working tool.



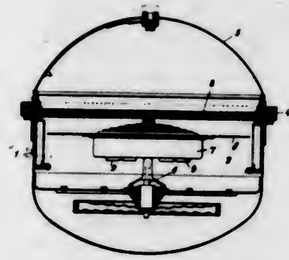
1,506,863. SUSPENSION INSULATOR. BENTLEY A. PLIMPTON, Victor, N. Y. Filed Aug. 26, 1918, Serial No. 251,369. Renewed Jan. 17, 1921. Serial No. 437,963. 4 Claims. (Cl. 173—28.)

1. In a suspension insulator the combination with a metallic suspension socket having spaced interior lugs, of a frangible insulator body having a head adapted to occupy the socket and spaced lugs on the head adapted to interlock with those on the socket by a relative rotary movement of the parts, and a locking member on the



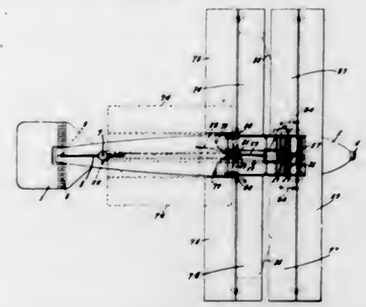
socket independently movable to a position between adjacent lugs on the insulator head.

1,506,864. TELEPHONE-EXCHANGE SYSTEM. LIPA POLINKOWSKY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1919. Serial No. 294,708. 14 Claims. (Cl. 179—77.)



1. In a telephone system, a subscriber's line, a pair of automatic switches having access to said line for establishing telephone connections, two line relays for said line, one of which is differentially wound, said relays being individual respectively to said automatic switches, means at the substation of said line controlled by the subscriber in the act of initiating a call for selectively operating either of said relays, means responsive to one of said relays for operating the corresponding switch, and means responsive to the other relay for operating the other of said switches.

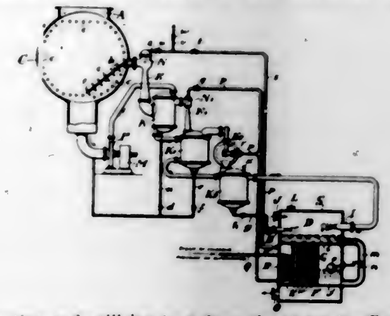
1,506,865. SCAFFOLD HOIST. EARL W. ROBINSON, Minneapolis, Minn. Filed Aug. 16, 1923. Serial No. 657,767. 1 Claim. (Cl. 254—167.)



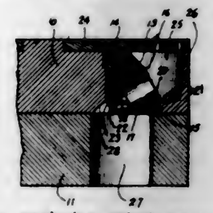
In a scaffold hoist, the combination with a body member, of a drum journaled therein, a cable having its lower end wound upon the drum to carry the weight of the hoist and scaffold, a worm gear for turning the drum, a worm shaft having a worm at one end meshing with said gear, and a crank at the other end to turn the shaft, means for slidably journaling the shaft so that said worm may be moved longitudinally into or out of engagement with the worm gear, a bearing member on the shaft having a peripheral groove, and a pin removably secured in the body member for engagement in said groove.

1,506,866. FLUID COMPASS. MAX ROUX, Berlin-Friedenau, Germany. Filed Jan. 31, 1921. Serial No. 441,519. 2 Claims. (Cl. 33—223.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a fluid compass for use in connection with an aerial vessel or the like, the combination, with the kettle or binnacle of the compass, of a denerated liquid, as compass fluid, for the purpose as described.



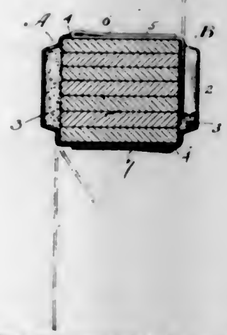
1,506,867. AEROPLANE. JULIUS SCHNEIDER, Fort Wayne, Ind. Filed Feb. 16, 1922. Serial No. 537,001. 5 Claims. (Cl. 244—12.)



1. In an aeroplane the combination with a fuselage, and front and rear sustaining planes, each of said planes having an angularly adjustable portion at the rear edge thereof, of a controlling post mounted for rotation, separate mechanisms for shifting the respective adjustable portions of the front and rear planes, and means under the control of the operator for coupling either or both of said mechanisms to the controlling post.

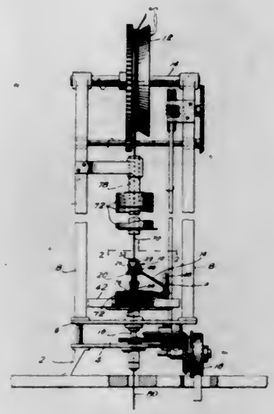
1,506,868. EJECTOR SYSTEM. ROBERT STUCZEK, Philadelphia, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1922. Serial No. 548,369. 72 Claims. (Cl. 230—13.)

21. The combination with an ejector, of a source of live steam, a connection between said source and the nozzle structure of said ejector, and means for reducing the pressure of said steam before reaching said nozzle structure comprising means in said connection for abstracting and utilizing heat from the steam to effect live motive steam for said ejector.



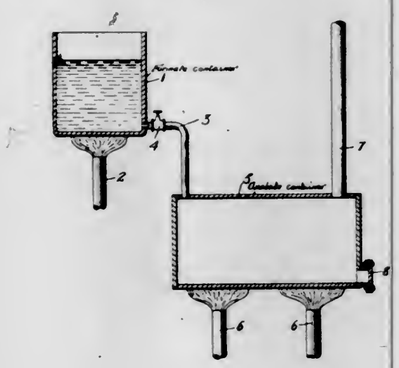
1,506,869. MACARONI DIE. GUIDO TANZI, Long Island City, N. Y. Filed June 30, 1922. Serial No. 571,930. 5 Claims. (Cl. 107—14.)

2. Means for producing spiral macaroni, which consists of a die having a compound opening, said die being provided with a crescent shaped recess for guiding said macaroni.



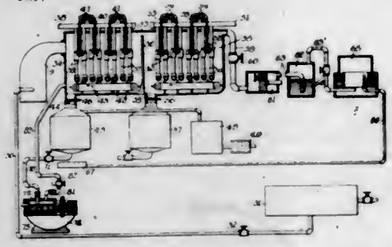
5. A die for producing spiral macaroni having a die plate, a plurality of inserts therein, each said insert being provided with an obliquely disposed perforation in the inner wall thereof and a pin in each said perforation, the outer and inner walls of said die plate being extended upward at an angle to direct material through said perforations.

1,506,870. SPRING LUBRICATOR. GLENN A. TOAZ, Cleveland, Ohio. Filed Apr. 17, 1922. Serial No. 553,992. 6 Claims. (Cl. 184—1.)



1. A lubricating unit comprising a member forming an open sided receptacle, a strap member extending from adjacent one end of said receptacle, and a strap receiving portion adjacent the other end of said receptacle.

1,506,871. MACHINE FOR COVERING WIRE OR OTHER CORES. EDWIN E. WAITE, Framingham, Mass. Filed Apr. 6, 1922. Serial No. 550,216. 6 Claims. (Cl. 117—43.)



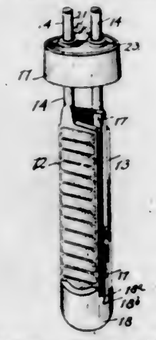
1. A machine for covering a core with roving having, in combination, a rotating winding head, means for feeding the core axially through the head, means mounted on the head for feeding a plurality of parallel rovings to the core whereby they are wound on the core, and a pair of freely rotatable tapering rolls carried by the head and arranged at opposite sides of the core for applying a gradually increasing pressure to the rovings as they are being applied to the core.

1,506,872. PRODUCING OXALATES FROM FORMATES. WALTER WALLACE, La Salle, N. Y., assignor to Oldbury Electro-Chemical Company, Niagara Falls, N. Y., a Corporation of New York. Filed Mar. 23, 1920. Serial No. 368,122. 11 Claims. (Cl. 134—115.)

11. The method of producing sodium oxalate from sodium formate which consists in melting the formate, heating the molten formate to 270° C., pouring the heated molten formate upon a surface heated to between 380° C. and 440° C., to cause a sudden rise in the temperature thereof to between 380° C. and 440° C. and continuing the heating to complete the conversion.

1,506,873. APPARATUS FOR PRODUCING AND SEPARATING CERTAIN SUBSTANCES. VICTOR M. WEAVER, Harrisburg, Pa., assignor to Weaver Company, a Corporation of Wisconsin. Original application filed Jan. 7, 1915, Serial No. 919. Divided and this application filed July 6, 1915. Serial No. 38,386. Renewed Nov. 21, 1919. Serial No. 339,680. 16 Claims. (Cl. 23—13.)

1. In combination, a sealed furnace, a sealed condenser connected therewith and having a manually controlled outlet at the bottom and a valved outlet at the top, and a sealed tank having sealed connection with said manually controlled outlet.

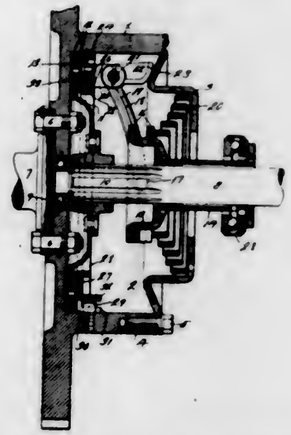


5. In combination, a sealed furnace, a gas storage reservoir having sealed connection with said furnace, said furnace having an inlet adapted to be sealed by the material fed thereto, a sealed condenser connected with said furnace, said condenser having a connection to a pump, and a sealed receiver connected with said condenser.

6. In combination, a sealed furnace, a storage reservoir having sealed connection with said furnace, said furnace having an inlet adapted to be sealed by the material fed thereto, a sealed condenser connected with said furnace, said condenser having an outlet pipe leading to a pump, a sealed tank connected with said condenser, a scrubber to which said pump delivers, a gas receiver communicating with said scrubber, said receiver supplying a pressure feed to a burner, said burner being disposed in proximity to said tank.

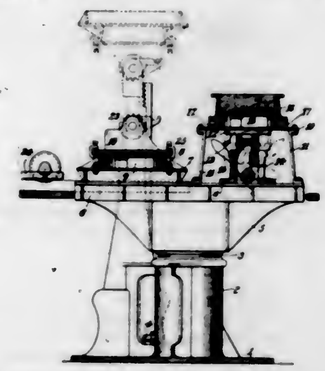
11. In combination, a sealed furnace, a sealed condenser, and a pump in series arrangement, said condenser having a valved outlet at the bottom thereof.

15. In combination, a sealed furnace, a gas storage reservoir having sealed connection with said furnace, said furnace having an inlet adapted to be sealed by the material fed thereto, a sealed condenser connected with said furnace, a tank connected with said condenser, and a burner disposed in proximity to said tank.



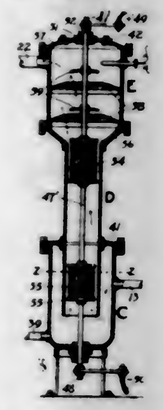
1,506,874. STORAGE BATTERY. THEODORE A. WILLARD, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed May 17, 1922. Serial No 561,616. 13 Claims. (Cl. 204—29.)

1. A storage battery cell comprising a container of insulating material having the top portion round in cross section, flat positive and negative plates in the container,



and a cover for the container having openings through which terminals of the plates extend, said cover and container having interengaging portions whereby said cover is adapted to be fastened to the container or freed therefrom by a rotative movement, said plates being rotatable with the cover to permit the cover to be fastened to or freed from the container.

1,506,875. CLUTCH CLAMPING PLATE. CLARENCE G. WOOD, Muncie, Ind. Filed Oct. 21, 1922. Serial No. 596,079. 1 Claim. (Cl. 192—68.)



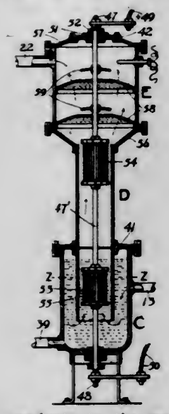
The combination with a disc clutch, of a clamping plate carried by said clutch, lugs engaging recesses in the outer edges of the plate for guiding said plate in its movement, said clamping plate having integral annular flanges at its inner and outer edges, said recesses extending through the outer flange of the plate, guide lugs extending outwardly from the outer flange adjacent the recess sides, and guide lugs extending outwardly from the body of the plate adjacent the inner ends of the recesses, said clamping plate and guide lugs being stamped from a single piece of material.

1,506,876. MOLDING MACHINE. JOHN R. WOOD, Newark, N. J., assignor to New Process Multi-Castings Company, Newark, N. J., a Corporation of New Jersey. Filed July 26, 1922. Serial No. 577,666. 3 Claims. (Cl. 22—32.)

1. In a power or jolt molding machine the combination with a single support or table and means for jolting the same, of a vertically movable drag support mounted thereon and means for inverting the same and a drag carried thereby when raised, a stationary cope support also mounted on the table having a central movable section, and means for lowering said section to withdraw the pattern from the cope.

1,506,877. PROCESS FOR THE CONVERSON AND TRANSFORMATION OF LIQUIDS, FLUIDS, AND OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed Mar. 3, 1919. Serial No. 280,455. 3 Claims. (Cl. 196—48.)

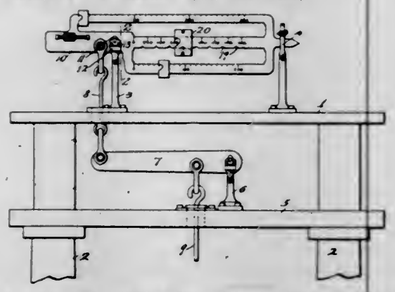
1. A process of cracking hydrocarbon oils that consists in applying heat locally to a body of liquid in a combined cracking and vaporizing chamber, applying a cracking temperature locally to the vapors in said chamber, separating the vapors of the heavier and medium products from the lighter products, condensing the lighter products, returning the heavier products to the body of liquid in the cracking chamber, and returning the medium products to the source of supply.



2. A process of cracking hydrocarbon oil which comprises maintaining a body of liquid oil in a combined vaporizing and cracking chamber, confining a localized portion of said body and effecting its vaporization, subjecting the evolved vapors above said body to a cracking temperature, maintaining superatmospheric pressure on the oil under treatment, and withdrawing the evolved cracked vapors.

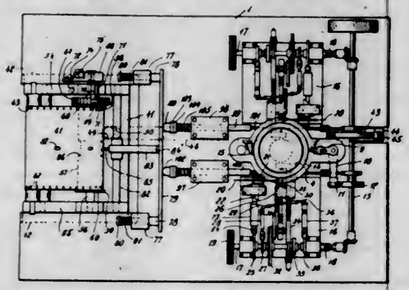
1,506,878. APPARATUS FOR THE CONVERSION AND TRANSFORMATION OF LIQUIDS, FLUIDS, AND OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed Mar. 3, 1919. Serial No. 280,456. 13 Claims. (Cl. 196—99.)

7. Apparatus of the nature disclosed, comprising a receptacle, an electric oil heater in the lower part, and an electric oily vapor heater in the upper part arranged within said receptacle and a heat confining partition, having an oil inlet opening, interposed between said lower heater and the adjacent wall of said receptacle for the purpose of confining heat from the lower heater to a small localized portion of oil contained within the lower part of said receptacle to be volatilized and means for regulating the flow of oil into the lower part of said receptacle and the withdrawal of vapors from the upper part thereof.



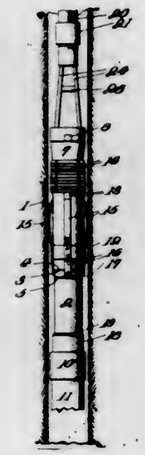
10. Apparatus of the nature described, comprising a combined vaporizing and cracking chamber, means for supplying oil thereto and maintaining a predetermined level therein, means for heating the body of oil in the chamber to effect its vaporization, means for applying a cracking temperature locally to the evolved vapors above said body of oil in said chamber, means for maintaining superatmospheric pressure within said chamber, means for separating out the heavier and medium products

from the lighter products, means for returning the heavier products to the body of liquid in the chamber



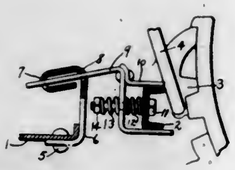
and the medium products to the source of supply, and means for condensing the lighter products of desired volatility.

1,506,879. SCALE. HOLLIS B. BAGG, Watertown, Conn., assignor to Scovill Manufacturing Company, a Corporation of Connecticut. Filed Aug. 7, 1918. Serial No. 248,679. 1 Claim. (Cl. 265—49.)



In a scale, the combination with the beam notched on its under side, of a chambered poise slidable thereon, a plurality of trolley rolls mounted in the chamber of the poise to run on the top of the beam, and a spring roll located in the chamber of the poise for engaging the sides of the notches with which the poise cooperates to hold the poise in position.

1,506,880. MESH MACHINE. RICHARD H. BERKLEY, Plainville, Mass., assignor to Whiting & Davis Company, a Corporation of Massachusetts. Filed July 13, 1923. Serial No. 651,272. 27 Claims. (Cl. 140—3.)

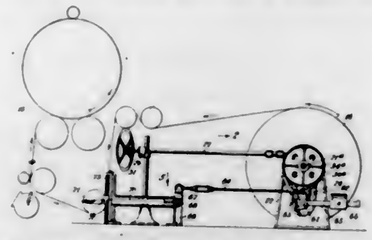


1. A machine for making link mesh fabric comprising means for supporting a piece of mesh, means for adding links successively thereto, and means for acting on certain of the links added to permit their ready removal.

1,506,881. CAVE PACKER. EARL JOHN RHOBERG, Coffeyville, Kans. Filed May 15, 1923. Serial No. 639,112. 6 Claims. (Cl. 166—12.)

1. A cave packer for oil, gas or water wells comprising a body having a conical head, a slip assembly mounted on said body provided with springs for frictional engagement with the wall of the well, means carried by said slip assembly for locking said slip assembly in a predetermined position on said body in respect to the conical head thereof and a sleeve slidably mounted upon said body and adapted to disengage said locking means when said body is moved independently of said slip assembly.

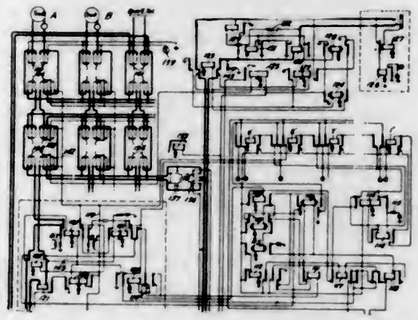
1,506,882. BRAKE-BEAM GUIDE. EDWIN G. BUSSE, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1924. Serial No. 687,666. 16 Claims. (Cl. 188—213.)



8. A brake beam guide and support comprising a fixed truck member having a bracket attached thereto, a brake beam, a guiding and supporting member slidably connected to said bracket and having limited movement relative to said beam.

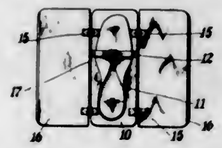
1,506,883. MILL-ROLL STAND. JAMES A. CAMERON and GUSTAF BIRGER BIRCH, Brooklyn, N. Y., assignors to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Original application filed Aug. 25, 1920, Serial No. 405,996. Divided and this application filed June 1, 1923. Serial No. 642,755. 3 Claims. (Cl. 188—83.)

1. A stationary bearing having guides, a sliding member, having a downwardly projecting portion, sliding in said guides, a control shaft carried by said sliding



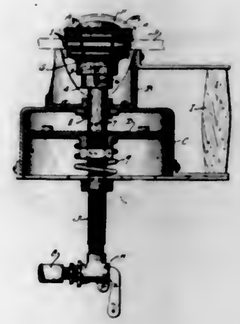
member, a brake drum mounted on said control shaft, a brake band surrounding said drum, a rockshaft mounted

in said downwardly projecting portion, a bell crank, carried by said rockshaft, connected to opposite ends of the brake band



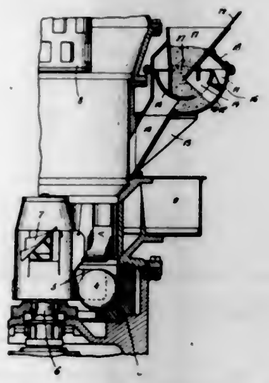
---

1,506,884. TELEPHONE-EXCHANGE SYSTEM. WARREN W. CARPENTER, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 11, 1919. Serial No. 310,068. 7 Claims. (Cl. 179—27.)



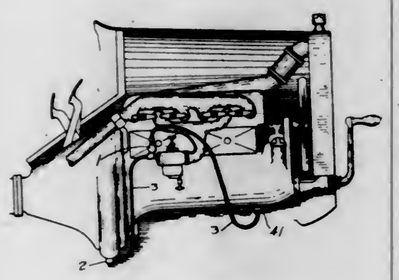
1. In a telephone exchange system, a calling and a called subscriber's line, means for extending said calling line, an impulse controlling mechanism to which said calling line is extended and which is common to said lines, relays simultaneously actuated by said impulse controlling mechanism for connecting said calling line to said called line, and means under the sole control of the calling subscriber for releasing the established connection.

1,506,885. SWIMMING FOOT PADDLE. ANDREW CECH, Niles, Ohio. Filed May 6, 1924. Serial No. 711,323. 5 Claims. (Cl. 9—21.)



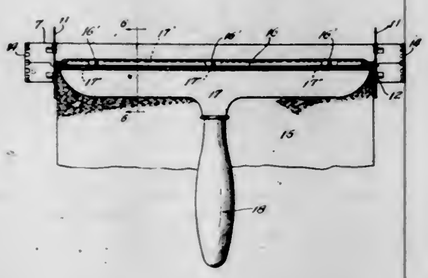
4. A swimmer's foot paddle comprising a central board provided with means for attachment to the foot, and side wings hinged to said central board, straps attached at one end to said wings and at opposite ends to the central board for limiting the forward swinging movement of the wings, and abutment elements hinged to and projecting rearwardly from said central board and having the straps passing thereover, and means engaged with said straps to vary the effective length thereof, comprising screws mounted on said central board for transverse adjustment thereon and having slotted heads through which the said heads pass.

1,506,886. TOOL FOR INSTALLING BOILER HAND-HOLE CAPS. SAMUEL BRAINERD CLAY, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1923. Serial No. 655,674. 10 Claims. (Cl. 29—88.2.)



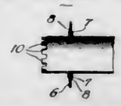
1. A tool for moving an article endwise of a part in which the article is positioned, comprising jaws that are adapted to be engaged with the article, a single valve that governs an operating medium, and means adapted to be actuated by said operating medium for causing said jaws to tightly grip the article and thereafter move the article endwise with relation to the part with which it is positioned, when said valve is opened.

1,506,887. FEEDING APPARATUS. HARRY RAYMOND COLLINS, Allentown, Pa., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Original application filed Nov. 8, 1919, Serial No. 336,571. Divided and this application filed Feb. 7, 1924. Serial No. 691,100. 11 Claims. (Cl. 83—44.)



1. A feeder comprising the combination of a casing provided with an inlet opening, a curved wall and an outlet opening leading from that wall, a reciprocating member comprising a portion lying between the curved wall and the inlet opening, and normally intercepting material entering the casing through the inlet opening and operable to discharge this material upon the curved wall by the reciprocation of said member, and a second portion movable over the curved wall and operable to engage and move toward the outlet opening material discharged upon the curved wall from the first portion, and power devices for actuating the reciprocating member through a range such that the limit of travel toward the outlet opening of the second portion thereof is spaced from said outlet opening.

1,506,888. UNIVERSAL OIL PUMP. SHERMAN E. CROSS, Seattle, Wash., assignor to Universal Automotive Corporation of Seattle, Seattle, Wash. Filed Aug. 14, 1923. Serial No. 657,408. 3 Claims. (Cl. 184—6.)

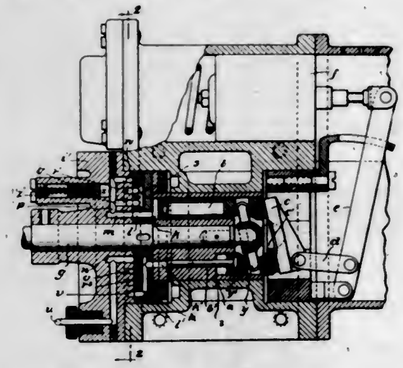


1. A means for conveying oil from the bottom of the crank case at the rear to the forward end, embodying an auxiliary plug that will project up into the crank case, and that will fit the threads of the oil drain plug, said plug having a screen in its upper end, an opening in its side into which a tube may be screwed, and threads in its lower end into which the oil drain plug may be screwed; a pump, to which a tube extending from the plug may be attached, said pump having a cylinder that may be attached to a boss which is placed on the cylinder valve cover, a plunger with a roller pivotally mounted between ears on its outer end, a spring for holding it outward, and a longitudinal slot into which a set screw in the cylinder projects; a tapering sleeve to engage a roller in the end of the plunger which may be placed on the valve stem to replace the sleeve that forms a seat for the spring on the valve stem; and a tube connecting the discharge side of the pump with a plug in the forward end of the crank case, said tube having a check valve in it at the pump end, and said former tube which connects the pump to the oil drain plug, also having a check valve in it at the pump end.

1,506,889. RIBBON SPOOL. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 9, 1922. Serial No. 542,256. 15 Claims. (Cl. 242—74.)

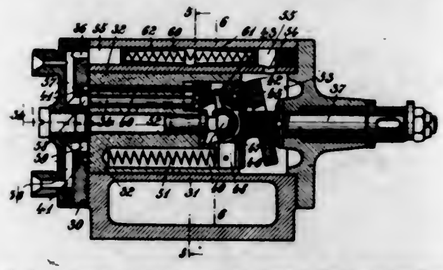
6. A ribbon spool comprising a body made of sheet metal bent to cylindrical form, a disk flange mounted on the body and having openings therein, said flanges being spaced from the ends of the body and lips struck up from the body on one side of the flange and projecting outwardly from the body and extended through the openings in the flange and then bent inwardly against the body to hold the flange in rigid position.

1,506,890. RIBBON SPOOL. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1922. Serial No. 564,340. 1 Claim. (Cl. 242—70.)



A ribbon spool made of sheet metal bent to cylindrical form and having flanges thereon spaced from the ends to form guides for the ribbon, the ends of the spool being open and provided with a plurality of teeth disposed thereabout and extending in the direction of the length of the spool and entirely through the wall thereof to make interlocking engagement with driving means for revolving the spool.

1,506,891. RIBBON-SPOOL MOUNTING. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1922. Serial No. 564,339. 6 Claims. (Cl. 242—68.)

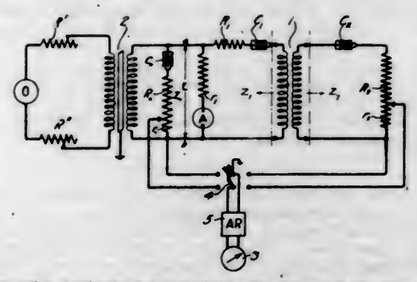


1. The combination of a driving head and a clamping head, means for operating the driving head, a spring pressed rod carrying the clamping head, a ribbon spool, comprising a tubular member, seats in each of said heads to receive the ends of said tubular member, and means on the driving head and on the end of the tubular member engaged therewith for making interlocking driving connection therebetween.

1,506,892. ROTARY PUMP OR BLOWER. FRITZ EGERSDÖRFER, Charlottenburg, Germany. Filed Dec. 13, 1922. Serial No. 606,703. 5 Claims. (Cl. 103—162.)

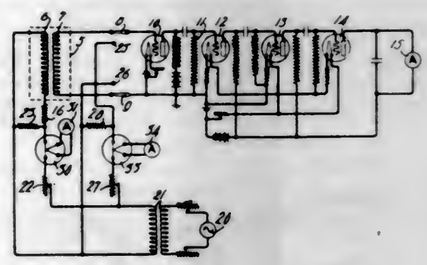
5. In a machine of the class described, the combination with a frame, and drum mounted on said frame and formed with a plurality of eccentric pockets, and means to impart relatively rotary movement to said frame and drum, of a piston having reciprocating movement within each of said pockets, and a plate angularly set with respect to the axis of rotation and connected with said frame, and standing opposite one head of said drum, and adapted when the parts are in relative rotation to effect reciprocation of the pistons, said frame being further provided with a plate standing opposite the other head of said drum, and having formed in it a plurality of suction ducts and a pressure duct, said suction ducts adapted to communicate with different sources of supply, one of said suction ducts and said pressure duct being adapted upon relative rotation of the said frame and drum for alternate communication with one of the said pockets, and the other of said suction ducts and said pressure duct being adapted upon relative rotation of the frame and drum for alternate communication with the other of the said pockets.

1,506,893. PUMP, COMPRESSOR, OR BLOWER. FRITZ EGERSDÖRFER, Charlottenburg, Germany. Filed Dec. 13, 1922. Serial No. 606,704. 4 Claims. (Cl. 103—162.)



4. In a pump, compressor, or blower, the combination, with a frame, a member formed with a cylindrical pocket, a piston within said pocket, means to control the reciprocating movement of the piston within said pocket, a member formed with suction and pressure ducts adapted to be alternately thrown into communication with said pocket, and means to impart relative rotary movement to said member and frame, said frame forming with said member a chamber communicating with said pressure duct through a cylindrical passage and in position to enable the fluid pressure admitted from the pressure duct to said chamber to force said member and frame into engagement for tightening said ducts, a pair of plungers movable within said cylindrical passage, and elastic means tending to push said plungers apart.

1,506,894. ALLOY STEEL AND PROCESS OF MAKING THE SAME. CHARLES TYNDALE EVANS, Titusville, Pa. Filed Apr. 3, 1922. Serial No. 549,210. 8 Claims. (Cl. 45—1.)



1. A ferrous alloy having a carbon content of not more than about 1%, a chromium content of not less than 6% and not more than about 7.53%, and a tungsten content of more than about 4%.

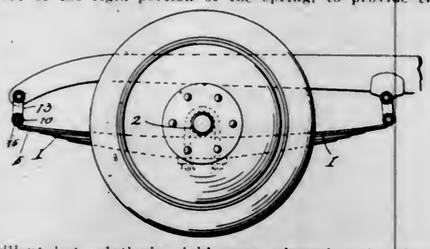
1,506,895. ELECTRICAL MEASURING METHOD AND MEANS. FRANK E. FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 15, 1922. Serial No. 552,879. 6 Claims. (Cl. 175—183.)

1. The method of determining the transmission loss of electrical apparatus to be connected between circuits of different impedances, which comprises supplying input current to the apparatus to produce output current therefrom, producing a third current of a value different from said input current and bearing a predetermined relation to the value that said output current would have if the transmission equivalent of the apparatus were zero, and physically comparing the values of said output current and said third current.

1,506,896. TESTING METHOD AND SYSTEM. FRANK E. FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,822. 6 Claims. (Cl. 175—183.)

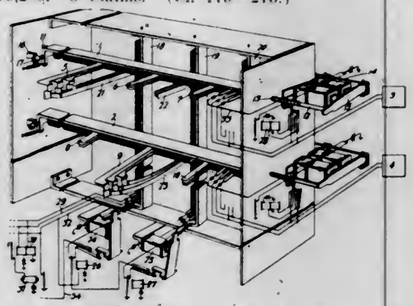
1. The method of determining the voltage ratio of a transformer which comprises connecting the primary winding of the transformer in circuit with an impedance of substantially the same value as the impedance from which it will operate under service conditions, connecting the secondary winding to a load equal to the load under normal service conditions, measuring a given potential applied to the primary winding circuit with the load connected to the secondary winding, measuring the potential which must be applied to the load, with the transformer disconnected, to obtain in the load the same current as when said given potential was applied to the primary winding circuit, and comparing the two measured potentials.

1,506,897. SEPARABLE-BLADE KNIFE. GUSTAV GOLDMAN, Baltimore, Md., assignor of one-half to Reuben Silverman, Baltimore, Md. Filed Dec. 7, 1923. Serial No. 679,093. 6 Claims. (Cl. 30—9.)



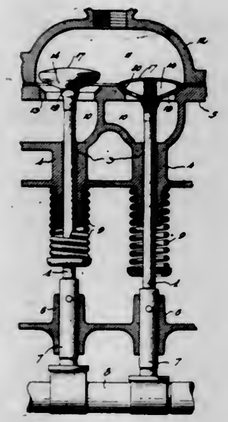
5. A surgical knife having two separable handle members, a separable pointed blade between said handle members, a finger rest integral with one of said handle members extending over the top of the blade substantially opposite the cutting edge, and means for locking the handle members in assembled relation, the finger rest being spaced back from the point of the blade.

1,506,898. VEHICLE SPRING. GILBERT C. GOODE, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 25, 1922. Serial No. 546,581. 2 Claims. (Cl. 267—54.)



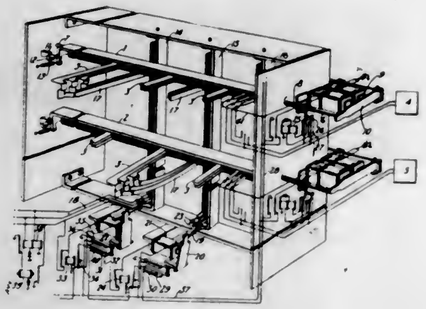
1. A leaf spring for vehicle suspension having a long leaf and superposed progressively shorter leaves forming a flexible end portion and a rigid portion adapted to be attached to a part of the vehicle, said long leaf having a projecting end portion adapted to receive attaching means, said long leaf having a slot extending

longitudinally from the end thereof and terminating short of the rigid portion of the spring, to provide two



resilient but relatively rigid arms adapted to be placed under lateral tension by the attaching means.

1,506,899. TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1920. Serial No. 375,205. 5 Claims. (Cl. 179—275.)



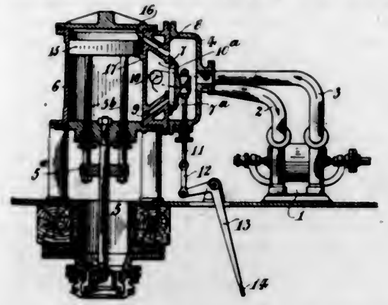
3. In a telephone system, a cross bar switch comprising a plurality of line bar magnets, a plurality of trunk bar magnets, a relay associated with each of said trunk bar magnets, means controlled by said relays for holding a single one of said trunk bar magnets energized, and means controlled by said line bar magnets for energizing said relay associated with said energized trunk bar magnet.

1,506,900. VALVE. ADOLPH GREINER, Detroit, and CORNELIUS J. LONG, Grosse Pointe Shores, Mich. Filed June 29, 1922. Serial No. 571,588. 2 Claims. (Cl. 123—188.)

1. A valve comprising a rod having an end button, a hollow body having a sleeve portion on said rod adjacent the end button thereof, said hollow body having an annular end seat, and a convex closure disk on the annular end seat of said body and fitting about the end button of said rod, said body and rod and said body and disk, and said disk and said rod end button, being integrally connected.

1,506,901. TELEPHONE-EXCHANGE SYSTEM. JOHN A. HALL, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1920. Serial No. 374,587. 6 Claims. (Cl. 179—27.5.)

4. A magnet, a relay associated with said magnet, a second magnet, a relay associated with said second magnet, a circuit controlled by said first relay for controlling said second magnet, a circuit controlled by said second magnet and said first relay for controlling said first magnet, means jointly controlled by said first and second magnets for controlling said second relay, and means controlled by said second relay for further controlling said first circuit.



1,506,902. COLLAR BUTTON. CLARENCE B. HAND, Maplewood, Mo. Filed Feb. 13, 1924. Serial No. 692,537. 2 Claims. (Cl. 24—63.)

1. A collar button comprising a hollow head and a stem detachable therefrom, and a revoluble disc within said head, the bottom wall of said head being provided with a slot and the disc being provided with a recess adapted to register therewith, said stem having a cross-head adapted to enter said slot and recess, means for securing the stem into the head on rotating said disc so that its recess is out of register with the slot in the head, and means for holding the slot and recess in non-registering relation.

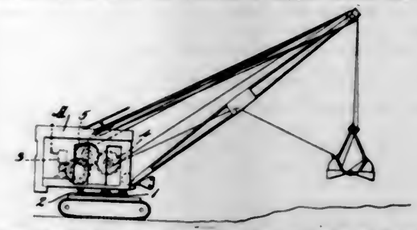
1,506,903. HYDRAULIC PRESS. POUL HANSEN, Hellerup, near Copenhagen, Denmark, assignor to F. L. Smidth & Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 16, 1922. Serial No. 607,462. 2 Claims. (Cl. 138—10.)

1. In a press, the combination of a cylinder, a piston, an hydraulic pump, means whereby the discharge of the pump can be connected to either end of the cylinder, and the suction of the pump can be connected to the other end of the cylinder, and check valves carried by the piston on opposite faces and adapted to cut off com-

munication between the cylinder and the pump at the corresponding end as the piston approaches the limit of its stroke in either direction.

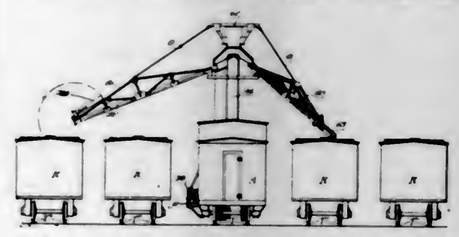
1,506,904. EQUALIZED DISTRIBUTION SYSTEM FOR FLUIDS. BURT S. HARRISON, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 23, 1921. Serial No. 517,308. 10 Claims. (Cl. 98—27.)

1. A duct of the class described uniformly tapered lengthwise and provided with a longitudinal slot for sidewise flow of fluid, and an apron extending along and over said slot, being spaced from the walls of the duct and tapering in width to provide varying local friction complementing the friction in the duct to insure substantially the same sidewise flow of the fluid for the different units of length of the duct.



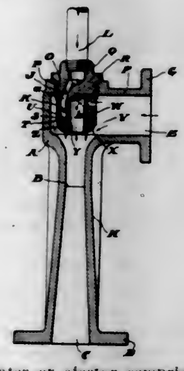
1,506,905. TRACTION ATTACHMENT FOR VEHICLE WHEELS. WILLIAM R. HILLYER, Port Richmond, N. Y. Filed Feb. 12, 1924. Serial No. 692,213. 4 Claims. (Cl. 152—14.)

3. A traction element for vehicle wheels comprising a ground engaging plate, a saddle member on said plate having a portion thereof shaped to fit the vehicle tire, obliquely disposed strut portions at the sides of said saddle member and formed integrally therewith, and chain engaging portions formed in the sides of said saddle member between said strut portions.



1,506,906. CONVERTIBLE CRANE. ALPHEUS E. HOLCOMB and LESLIE A. RUSSELL, Milwaukee, Wis., assignors to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 587,676, filed Sept. 12, 1922. This application filed Dec. 8, 1922. Serial No. 605,750. 12 Claims. (Cl. 219—135.)

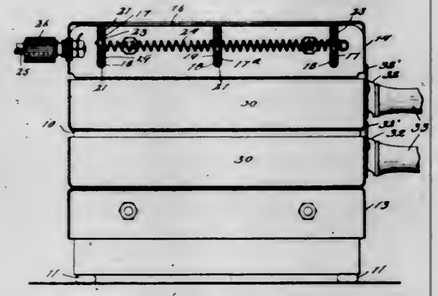
1. In a convertible-type crane, the combination of a car, crane machinery thereon for operating different kinds of boom and bucket equipment and comprising a main operating drum, a shovel boom and dipper stick equipment connected up so the stick may be operated by the said drum, and means for operating the drum in opposite directions and at different speeds including a driving member adapted to operate a driving cable for use with clamshell, dragline, and like equipment, and detachable means to drive the said main operating drum from said driving member in one direction for power shovel work to actuate a dipper stick, the last



means being detached when the shovel boom and dipper stick equipment is to be dispensed with, and the main operating drum being then adapted to receive and operate a cable for controlling clamshell, dragline, or general hoisting operations.

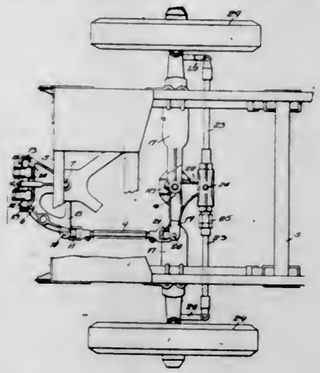
1,506,907. ICE-HANDLING CAR. ANDREW J. JACKSON, Chicago, Ill., assignor to The Allbright-Nell Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1921. Serial No. 474,830. 7 Claims. (Cl. 83—63.)

1. In combination with a car provided with means for crushing and delivering ice to a refrigerator car, of an ice storage car located on the same track, a longitudinally extending conveyor mounted on the side of said storage car for vertically adjustable movement for conveying ice from said storage car to said crushing and delivering car, and means for securing the delivery end of said conveyor to the car containing said crushing and delivering means in adjusted position.



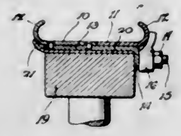
1,506,908. JET AUGMENTER OR EJECTOR. JOHN F. KIRGAN, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 20, 1922. Serial No. 576,303. 2 Claims. (Cl. 230—13.)

1. A jet augmenter or ejector comprising a body portion having a throat and an outlet, an inlet at right angles thereto and a steam nozzle threaded into said



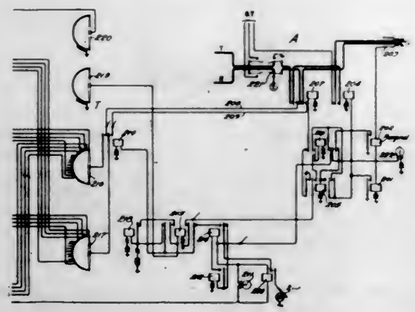
body portion and removable therefrom in alignment with said throat having a central orifice to conduct fluid from said inlet in the direction of said throat and an annular chamber for steam surrounding said orifice and an annular ring threaded into said nozzle and forming an annular passage associated with said annular chamber and adapted to eject a hollow jet of steam surrounding and surrounded by the fluid to be ejected and entrained thereby.

1,506,909. ELECTRIC GRILL. FRANK L. KOHLHASE, Chicago, Ill., assignor to National Stamping & Electric Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1923. Serial No. 671,065. 10 Claims. (Cl. 219—19.)



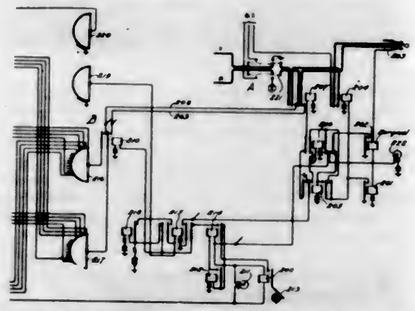
1. A grill comprising an electric heating element, a frame for supporting said element, and a pair of vertically stacked trays slidably supported by said frame beneath said element, said trays, when empty, acting as heat reflectors for said element, and means whereby, when the upper of said trays is withdrawn, the lower is also withdrawn, for the purpose described.

1,506,910. NONWEAVING STEERING MECHANISM. ALBERT P. LEE, Chicago, Ill., assignor to Lee Trailer & Body Co., Chicago, Ill. Filed Dec. 16, 1920. Serial No. 431,115. 2 Claims. (Cl. 280—33.5.)



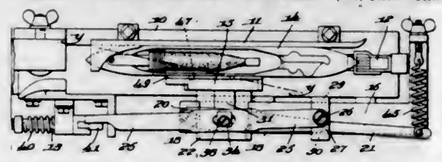
1. In a vehicle of the character described, a framework, an axle, springs interposed between said axle and said framework, radius rods connecting said axle with said framework, steerable wheels mounted on said axle, and means for steering said wheels comprising a bell crank lever pivotally mounted on said axle, a steering member pivoted on said framework and a link extending from said bell crank lever to said steering member, and means for connecting said link with said bell crank lever and said steering member, each comprising a member having spaced horizontal and vertical pivots, the distance between the horizontal pivotal axes of said link and said radius rods at the upper ends thereof being only slightly greater than at the lower ends thereof and the length of said drag link being only slightly greater than the length of said radius rods whereby the horizontal pivot at said bell crank lever will maintain a substantially fixed relationship to said axle within the limits of the normal movements of said axle.

1,506,911. WHEEL RIM. ALBERT E. LOGAN, Brooklyn, N. Y. Filed July 10, 1922. Serial No. 573,948. 1 Claim. (Cl. 301—11.)



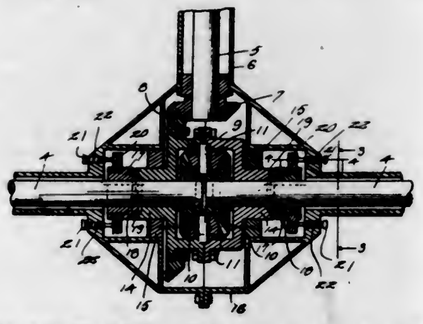
In a demountable rim, the combination of a rim body having side flanges and circumferentially split medially to define mating rim sections of substantially equal width, said sections having straight abutting inner edges forming a smooth closed joint approximately midway between said flanges whereby said joint will be disposed between the beads of a tire upon the rim, transversely disposed cleats secured to the inner face of one of said sections to extend across the inner circumference of the other of said sections in flat contact with the inner face thereof centering the sections in registering relation and provided at their outer ends with inwardly directed radial lugs, studs permanently fixed to said lugs, clamps freely received on said studs to engage the side flange of the latter section, and nuts adjustable upon the studs to coact with the clamps for binding the rim sections together, the cleats extending transversely of the sections throughout the major portion of the combined width thereof for sustaining the rim with respect to a wheel felly.

1,506,912. TELEPHONE SYSTEM. HUGH D. MACPHERSON, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1921. Serial No. 492,228. 35 Claims. (Cl. 179—27.)



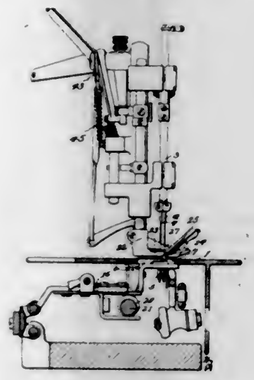
1. In a telephone system, distant offices, a plurality of transmission lines interconnecting said offices, outward operators' positions at one of said offices, means under the control of said positions and operable to automatically select an idle one of said transmission lines, means to indicate such line to an outward operator, signaling paths common to said transmission lines, a signal and a call indicator at one of said offices, and means responsive to the seizure of said idle line by the outward operator for transmitting series of impulses over said signaling paths to operate said signal and said call indicator.

1,506,913. TELEPHONE SYSTEM. HUGH D. MACPHERSON, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 15, 1921. Serial No. 492,229. 16 Claims. (Cl. 179—27.)



1. In a telephone system, two distant offices, a plurality of transmission lines extending between said offices, a signaling path common to said transmission lines and interconnecting said offices, a signal at one of said offices, a call indicator also at said office, and means for transmitting series of impulses over said common signaling path for operating said signal and call indicator.

1,506,914. COMBINED SHUTTLE CHECK, BINDER, AND ROBBIN GUIDE FOR LOOMS. PETER MATHIESON, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 6, 1923. Serial No. 655,860. 15 Claims. (Cl. 139—185.)



15. In a loom, the combination of the lay and shuttle box, a bracket secured to the lay and provided with a guideway, a binder mounted in said guideway for rectilinear movement towards and from the shuttle, a lever pivotally mounted on the bracket at one side of the guideway and connected to the binder, and a spring acting on said lever to force the binder against the shuttle.

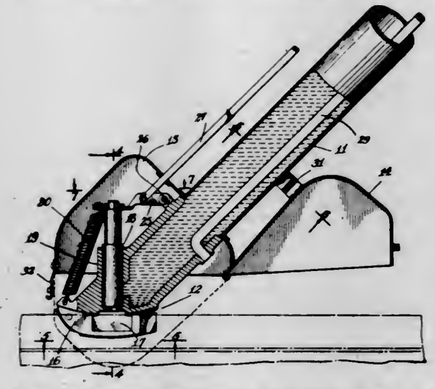
1,506,915. LOCKING DIFFERENTIAL FOR AUTOMOBILES. WALLACE MINTHORN, Millersburg, Mich. Filed July 24, 1922. Serial No. 577,174. 1 Claim. (Cl. 74—100.)

In a locking device, the combination of a divided driven shaft, differential gearing connecting the sections of the driven shaft, including a casing, the latter having hub portions provided on the outer ends thereof, means for rotating said casing, a housing for said casing and said sections of said driven shaft, conical-shaped clutch engaging faces formed on the outer ends of said hub portions, a sliding conical-shaped clutch keyed to each section of the divided driven shaft and adapted for engagement with the conical-shaped face of each of said hub portions, means for actuating said clutches comprising screw threaded levers mounted for rotary movement in said housing, and connected at one end to each of the clutches, the opposite ends being connected to foot pedals.

1,506,916. RUFFLING SEWING MACHINE. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed May 2, 1919. Serial No. 294,157. 3 Claims. (Cl. 112—208.)

2. The combination with a main feeding mechanism including a main feed dog and an auxiliary feeding mechanism including an auxiliary feed dog having a differential movement relative to the main feed dog, of a presser foot having a main section co-operating with the main feed dog and an auxiliary section co-operating with the auxiliary feed dog, an arm carrying said auxiliary section of the presser foot, laterally projecting ears mounted on the main section of the presser foot, a post freely slidable in the ears on which said arm is fixed, a spring normally forcing the post in a downward direction, and cam means for raising the post to lift the auxiliary section of the presser foot.

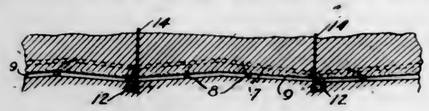
1,506,917. SHOE-TREAD PROTECTOR. LOUIS WILLIAM NIMSCHKE, Old Bridge, N. J. Filed Feb. 9, 1921. Serial No. 443,717. 5 Claims. (Cl. 36—59.)



1. A shoe tread protector of the class described comprising a plate provided with a plurality of pairs of jaw members, a plurality of tread members adapted to be supported in connection with said plate by said jaw members, and means on said plate independent of said jaw members for preventing lateral movement of said tread members.

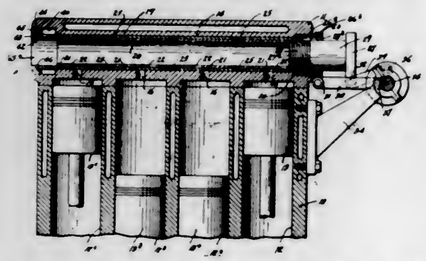
1,506,918. HIGH-SPEED TOOTH GEAR. GRAF ALFRED VON SODEN-FRAUNHOFEN, Friedrichshafen a. B., Germany, assignor, by mesne assignments, to Firm: Zahnradfabrik Aktiengesellschaft, Friedrichshafen a. B., Germany. Filed Oct. 12, 121. Serial No. 507,273. 1 Claim. (Cl. 74—41.)

A toothed gearing comprising teeth whose pitch circle lies outside the active portions of the flanks, the hypocycloid portions being replaced by straight portions and the epi-cycloid portions of the flanks of the co-operating teeth by involutes.



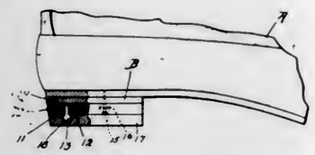
1,506,919. TRACK OILER. CEYLON C. CORKRAN, WILLIAM WALLACE PAYNE, LEO DEUTSCH, and SAMUEL F. LENTZ, Chicago, Ill., assignors to The Texas Company, New York, N. Y., a Corporation of Texas. Filed June 9, 1921. Serial No. 476,146. 6 Claims. (Cl. 221—46.)

2. A track oiler comprising a storage tank, a discharge nozzle adapted to ride on the rail to be lubricated, a control valve at the nozzle, a handle on the storage tank, a control lever associated with the handle for governing the opening of the valve, a casing for the nozzle having a cover or lid, and a vent pipe terminating within the casing at one end and within the storage tank at the opposite end.



1,506,920. OIL MINING AND DRAINAGE SYSTEM. PAUL DE CHAMBRIER, Revaix, Switzerland. Filed Oct. 19, 1921. Serial No. 508,849. 9 Claims. (Cl. 262—1.)

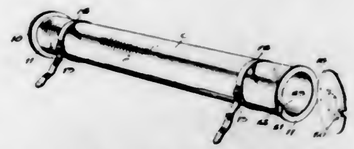
1. The method of recovering the residual oil contents of sands which no longer give up quantities of oil great enough to be worked advantageously by natural flow or direct pumping, which consists in expelling completely the gas and in draining the oil by driving drainage and ventilating galleries in the sand stratum on different



general levels, with inclined connecting galleries between them, each upper level drainage gallery comprising an inclined section opening at its low point into a connecting gallery.

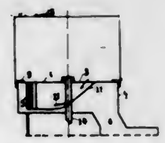
1,506,921. INTERNAL-COMBUSTION ENGINE. JOHN A. DURENZO, Madison, Wis. Filed Mar. 25, 1922. Serial No. 546,838. 8 Claims. (Cl. 123—188.)

1. A valve member formed as a tubular body having a slot therein, a head surrounding one end of the body, a securing element carried by the head and engaging the body, and a spring pressed wedge carried by the head and engaging within said slot for effecting sealing thereof.



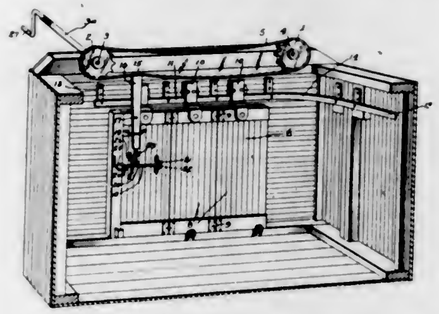
1,506,922. HEEL. WILLIAM H. DOUGHTY, Springvale, Me. Filed Dec. 1, 1923. Serial No. 677,983. 1 Claim. (Cl. 36—36.)

A shoe heel including upper, intermediate and lower sections, snap fastener elements carried by the intermediate section and each including an elongated shank extending entirely through the intermediate section and terminating at its upper end in an enlarged base bearing upon the top surface of the intermediate section, each shank terminating at its lower end in a ball head projecting below the bottom surface of the intermediate section, securing elements fastening the intermediate section to the top section and to the shoe to which the heel is applied, and snap fastener sockets recessed into the lowermost section and coacting with said ball heads for holding the lowermost section onto the intermediate section, the enlarged bases operating to prevent tearing of the first-named fastener elements through the intermediate section.



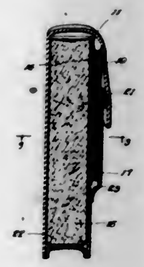
1,506,923. ARTICLE HOLDER. BEN EACHUS, Gallipolis Ohio. Filed May 31, 1923. Serial No. 642,594. 1 Claim. (Cl. 206—1.)

A combined automobile curtain holder and tool and article carrier comprising a cylinder having an outwardly extending annular flange at each end to provide with the comprehended outer periphery of the cylinder, a drum upon which the curtains may be rolled, the interior of the cylinder providing a tool and article receiving space, a partition within the cylinder defining compartments



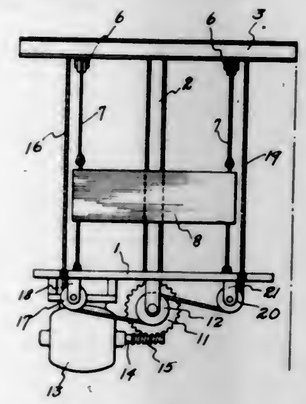
in said tool and article receiving space, a circular closure plate hingedly connected to each annular flange, and releasable fastening means between the closure plates and the flanges.

1,506,924. FUEL-CHARGING DEVICE FOR BRICK-KILNS. JOSEF GAIRING, Riedlingen-on-the-Donau, Germany. Filed Sept. 5, 1923. Serial No. 661,117. 4 Claims. (Cl. 214—35.)



1. A fuel charging device for brick-kilns, comprising, in combination, a fuel receptacle, a rotary fuel receptacle bottom having a discharge opening, a stationary casing with a stationary bottom and a discharge opening therein below said receptacle and its bottom, a sloping guide plate attached to the lower surface of the rotary bottom at the front edge of the opening thereof and extending rearwards down into said casing, a practically vertical wall also attached to the lower surface of the rotatory bottom and extending partly along the inner edge of the said sloping guide plate and terminating horizontally behind the rear edge thereof and at some distance therefrom, and vertically near the bottom of the said stationary casing.

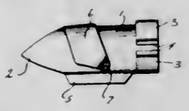
1,506,925. OPERATING MECHANISM FOR GARAGE AND BARN DOORS. GEORGE S. GRAVES and WAYDE H. HOWARD, Sedalia, Mo. Filed Oct. 6, 1922. Serial No. 592,902. 5 Claims. (Cl. 268—8.)



4. The combination with a sliding door, of spaced interiorly arranged sprocket gears located above the door, an interiorly arranged latch, a sprocket chain arranged on the sprocket gears, means for connecting the latch with the sprocket chain for operating the latch when the chain is moved, a shaft connected with one of the sprocket wheels and extending to a point exteriorly of the door and provided at its outer end with an engaging portion, and a removable crank key engaging the outer end of the shaft, one of the parts having a socket receiving the other part and interlocking the key with the shaft for rotating the latter.

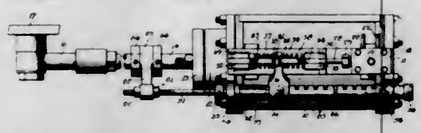
1,506,926. RECEPTACLE FOR TOBACCO AND CIGARETTE PAPERS. CLARKE GUNTER, Gunter, Tex. Filed Oct. 12, 1922. Serial No. 594,072. 1 Claim. (Cl. 150—28.)

A collapsible receptacle of the class described comprising substantially rectangular main front and back elements and a continuous side and bottom element having its edges out-turned and stitched respectively to the edge portions of the back and main front elements to form a pocket with stiff edges therewith, a pocket opening being situated at the short edges, a secondary front element of smaller dimensions than the said main front element and secured in a substantially central position thereon by stitching to form a small pocket therewith spaced away from all four edges of said main front element; a flap formed integral with said back element adapted to fold forwardly over said secondary front element, and means for adjustably securing the flap on said secondary front element, said means being concealed by said flap when in closed position.



1,506,927. ELEVATOR. AUGUST O. W. HANSEN, New York, N. Y. Filed July 8, 1922. Serial No. 573,604. 1 Claim. (Cl. 187—26.)

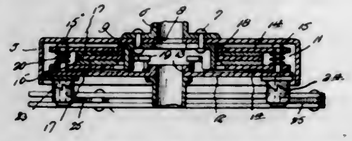
An elevator comprising a vertical movable platform, a well receptive of said platform, brackets on the corners of said platform, pulleys mounted on said brackets, additional brackets between each pair of pulleys, a shaft rotatable in the last-named brackets, grooved drums on



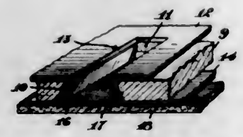
said shaft aligned with the pulleys, cables secured to the upper portions and at each corner of the well, the lower ends of said cables being trained about said pulleys, said pulleys being adapted to divert the course of said cables to the horizontal position, each drum having one pair of cables secured thereto, one cable on each drum entering the same tangential to its upper periphery, the opposite cable being secured tangentially on the lower periphery of the same drum, the cables on each drum being adapted to be wound on the same in opposite directions, a gear on said drum shaft, a motor secured to the movable platform, and a worm shaft engaging the gear for rotating said drum shaft.

1,506,928. KNIFE. PAULINE HANSEN and WALTER E. J. HANSEN, Watts, Calif. Filed Jan. 6, 1923. Serial No. 611,026. 1 Claim. (Cl. 30—9.)

A knife of the class described comprising an elongated body arcuate in cross section, one end portion of said body at opposite sides thereof having arcuately disposed arms terminating in outstanding wings, said wings being in outward diverging relation, a longitudinal marginal portion of the body outwardly of one of the arms being provided with an angularly related cutting blade, the opposite marginal portion of the body adjacent to the end thereof remote from the arcuate arms being provided with an inwardly curved resilient arm overlying the body and having the inner corner of its free end portion disposed slightly outward.



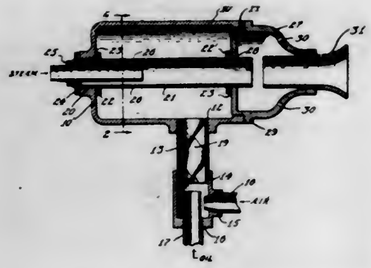
1,506,929. ADJUSTABLE VALVE-OPERATING MECHANISM. FRANK Y. HARRISON, Detroit, Mich., assignor to Murphy Iron Works, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1922. Serial No. 559,168. 4 Claims. (Cl. 121—164.)



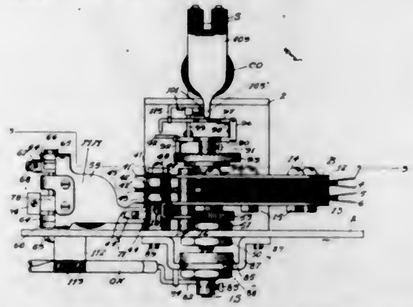
2. In an appliance of the character described, the combination of a cylinder, a reciprocatory piston therein, a valve mechanism controlling the admission of fluid to and its discharge from the ends of the cylinder, and adjustable means to operate said valve-mechanism permitting variation of the length of stroke of said piston, including a reciprocatory sleeve having a plurality of spaced slots, a rod slidable in said sleeve by said piston and having an enlargement in the sleeve, a clip adapted to fit in any of said sleeve slots in the path of travel of said enlargement, other means carried by said sleeve in the path of travel of said enlargement, and means mounted on said sleeve designed to actuate said valve-mechanism.

1,506,930. DISK BRAKE FOR VEHICLE WHEELS. MAURICE R. HASELMAIER, Mount Vernon, Ala. Filed Aug. 30, 1923. Serial No. 660,097. 1 Claim. (Cl. 188—72.)

A friction brake comprising inner and outer flanged members, a flange of the inner member being recessed, a plate having a central opening which receives the inner member, said plate being housed within the outer member, the plate being provided at the edge of the opening therein with radially disposed fingers which extend through the recesses in the flange of the inner member, the plate being provided at the inner edge of its opening and at points between said fingers with angularly disposed lugs which lie at the outer surface of the flange of the inner member, friction disks mounted upon the opposite sides of the said plate beyond the lugs, annular plates disposed at the outer sides of the friction disk, springs interposed between the annular plates and serving to hold them spaced with relation to each other, a disk located within the flange of the outer member and beyond the edge of the flange of the inner member, bolts passing transversely through the last mentioned disk and the friction disk and means mounted upon the last mentioned disk to move the bolts longitudinally and transversely of the friction disks whereby the annular disks are brought into frictional contact with the frictional disks.

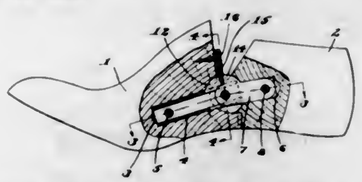


1,506,931. COMBINATION WALL BOARD AND LATH. WILLIAM D. HICKS, Inglewood, Calif. Filed Dec. 31, 1921. Serial No. 526,176. 5 Claims. (Cl. 72—124.)



1. In a composition wall board and lath, a body of hardened plastic material provided with a plurality of apertures that are dove tail shape in cross section, facing sheets applied to the opposite sides of said body, one of said sheets having portions that are bent inwardly against the side faces of the dove tailed apertures, the other of said facing sheets being formed with openings the margins of which terminate at the margins of said apertures and a backing sheet applied to one of said facing sheets and covering said dove tailed apertures.

1,506,932. FUEL BURNER. VESTER L. HUDSON, Atlanta, Tex. Filed June 24, 1922. Serial No. 570,684. 4 Claims. (Cl. 158—74.)

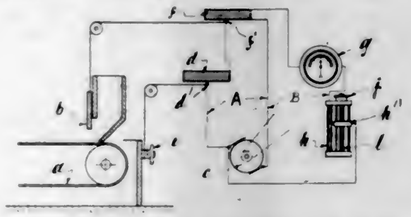


1. A burner of the class described comprising a casing, a mixing tube extending through said casing, a steam jet nozzle extending partially through said tube, said tube having a plurality of openings around said nozzle whereby liquid fuel may be drawn into said tube, a conduit communicating with the interior of said casing, an oil supply pipe communicating with said conduit, a hot air supply pipe connected with the conduit, and means in said conduit for mixing the oil and air as they pass therethrough, the steam jet issuing from said nozzle being adapted to draw the commingled oil and air into said tube through the casing and to mix therewith.

1,506,933. TELEPHONE SYSTEM. LEROY D. KELLOGG, Deerfield, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1919. Serial No. 332,866. 24 Claims. (Cl. 179—27.5.)

1. A telephone system including an automatic switch, a rotatable shaft for said switch, a spring-restored shaft, wipers for said switch adapted to be advanced by said first switch shaft but to remain in their antecedent progressive position when the said second shaft is released, and a motor magnet for operating said first switch shaft.

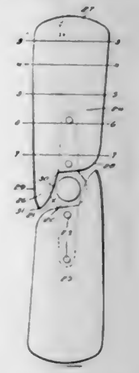
1,506,934. HINGE LAST. WALTER A. KRENTLER, Detroit, Mich., assignor to Krentler-Arnold Hinge Last Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 11, 1922. Serial No. 551,507. 1 Claim. (Cl. 12—136.)



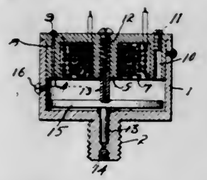
A hinge last of the kind described having a tubular hinge member in one part, a plate hinge member in the other part, a knuckle joint for the last members, the said tubular member being slotted to receive the plate hinge member and united by a pivot at the center of the knuckle joint, a pair of locking ears formed on the tubular member and extending laterally outward at one end thereof, a corresponding locking ear formed on the plate hinge member at the end adjacent to the tubular member, and a wedge-shaped locking member pivotally mounted on the forepart of the last for movement in a plane substantially perpendicular to the axis of the tubular hinge member and movable manually into and out of wedging engagement between the locking ears when the last is in extended position.

1,506,935. HAIR-CURLING DEVICE. JOSEF KRYSZTOFIAK, New York, N. Y., assignor to l'Aureole Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 4, 1923. Serial No. 666,636. 6 Claims. (Cl. 132—34.)

1. A pencil for a hair curling device, comprising a sleeve upon which the hair may be wound, a shaft passing through the sleeve, three ratchet members interposed between the sleeve and the shaft, one ratchet member adapted to be driven by the sleeve, another ratchet member adapted to be driven by the shaft, both of said ratchet members having teeth facing in the same direction, a third ratchet member normally engaging therewith, and resilient means adapted to hold all of the ratchet members in engagement with each other.

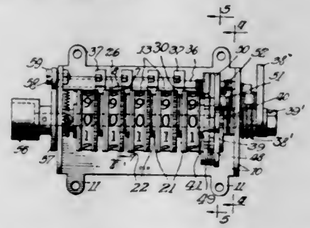


1,506,936. APPARATUS FOR INDICATING AND RECORDING THE RATE OF FEED OF GRANULAR MATERIALS. JAMES EDWARD LEA, Manchester, England. Filed Sept. 25, 1922. Serial No. 590,283. 2 Claims. (Cl. 198—39.)



1. Means for indicating electrically (in terms of weight) the rate of feed of granular material delivered by a conveyor through an orifice, comprising an electric circuit, a generator in said circuit, means in said circuit for varying the current flowing through the circuit proportionately to variations in the rate of flow of material passing through the orifice, and further means in said circuit to vary the current proportionately to the density of the material delivered and a voltmeter in said circuit calibrated in terms of weight, as set forth.

1,506,937. BLADE. JAMES M. MILLER, Washington, D. C., assignor of one-half to Tom Moore, Washington, D. C. Filed Mar. 9, 1923. Serial No. 623,942. 9 Claims. (Cl. 170—159.)

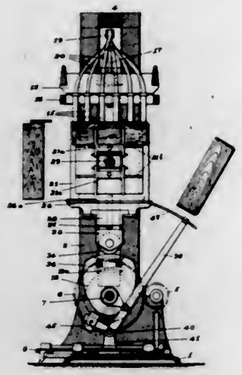


1. In a blade for the purpose set forth a propelling member comprising a body portion torsionally twisted from its outer to its inner end and with the angle of torsion gradually increasing from its outer toward its inner end, said body portion having a forwardly projected inner corner and a forwardly projected lip extended from said inner corner.

1,506,938. ELECTRICALLY-OPERATED OIL CUP. RALPH R. MCCLURE, San Francisco, Calif., assignor of one-third to Dan J. Nee, San Francisco, Calif. Filed Aug. 2, 1920, Serial No. 400,838. Renewed July 1, 1924. 1 Claim. (Cl. 184—67.)

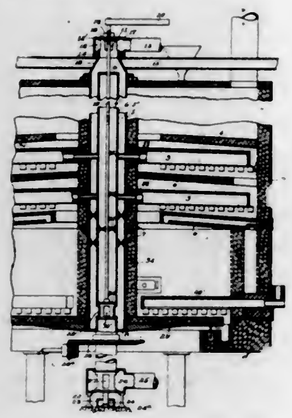
A force feed lubricator, comprising an oil cup, a cover therefor formed with an annular recess, an electro-magnet coil placed in said recess the cover having a central opening and a filling opening, a plunger operated in the central recess of the cover and in a central recess of the oil cup, a disk attached to the plunger, a check valve below the plunger, and a spring to force the plunger away from the electro-magnet after the latter has been once energized to expel oil from the oil cup.

1,506,939. COUNTER. WILLIAM G. PANKONIN, Chicago, Ill. Filed Dec. 21, 1922. Serial No. 608,153. 29 Claims. (Cl. 235—131.)



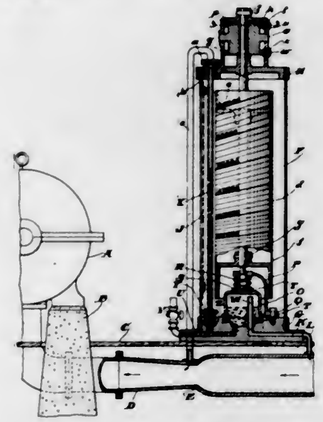
1. In a device of the class described, the combination with a numeral wheel and means for operating same, of means carried by said wheel for preventing overthrow thereof during its step-by-step rotation.

1,506,940. AMUSEMENT APPARATUS. JAMES H PAPPAS, San Francisco, Calif., assignor of one-half to John Boyajian, San Francisco, Calif. Filed Sept. 18, 1922. Serial No. 588,924. 6 Claims. (Cl. 46—71.)



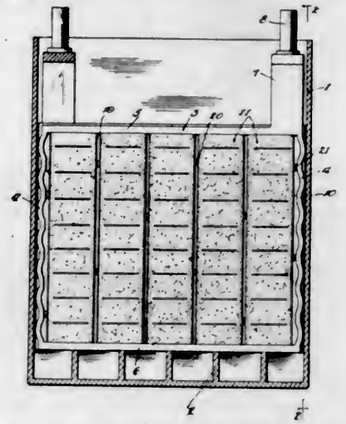
1. Amusement apparatus comprising an upright screen member along opposite sides of which persons are adapted to pass in such manner that the persons on one side of the screen are not visible to the persons on the other side and vice versa, members slidable on the screen with portions of the members disposed on opposite sides thereof in order that they may be grasped or in some manner associated with the persons on opposite sides of said screen to designate, without knowledge of the identity of one another, partners for participation in said amusement and means associated with said members for locking said members to the said persons.

1,506,941. DOUBLE-BOX-MAKING MACHINE. GEORGE D. PARKER, Riverside, Calif. Filed Mar. 27, 1923. Serial No. 627,955. 24 Claims. (Cl. 1—15.)



4. A machine for simultaneously manufacturing a plurality of rectangular boxes from previously cut box parts, comprising box holding forms adapted to hold ununited box parts including a plurality of pairs of ends in assembled relation mounted for rotation on their axes and for reciprocating movement, operative means for giving said box holding forms a partial rotation and a vertical reciprocation during each cycle of operation of the movable parts of said machine, nail driving means for operating on the box parts in said forms during successive cycles until said box parts are united into a plurality of boxes, and means for ejecting one completed box before the completion of the cycle of operation in which the other box is completed.

1,506,942. ROASTING FURNACE. ROBERT D. PIKE, San Francisco, Calif. Filed Nov. 19, 1923. Serial No. 675,447. 2 Claims. (Cl. 257—119.)

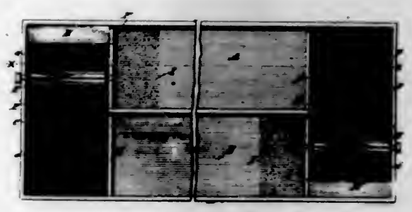


1. In a multiple hearth furnace, a vertical rotating central column, composed of spaced concentric shells providing an inner air duct and an outer annular air duct, means for introducing air into the lower end of the inner air duct and for escape of air from the upper end of the outer annular air duct of the rotating column, hollow rabble arms secured to and carried by the central column, connections for passing cooling air from the inner air duct of the column into the rabble arms and connections for delivering air from the rabble arms into the annular air duct of said column, and means at the approximate lower level of the furnace for passing cooling air direct from the inner air duct of the rotating column into the outer annular air duct thereof.

1,506,943. VOLUME-REGULATOR GAUGE. FORREST C. REED, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 12, 1923. Serial No. 651,098. 6 Claims. (Cl. 73—31.)

1. A volume regulator gauge for constant volume governing of turbo blowers and turbo compressors, comprising a rotatable drum having a scale calibrated in fluid volumes under standard conditions, indicating means adapted to be subjected to the intake pressure of the turbo machine adapted to indicate on the fluid volume scale the fluid volume supplied to the turbo machine, and means for adjusting the drum relative to said indicating means to compensate for changes in barometric conditions, whereby the fluid volume supplied to the turbo machine may be determined at all times.

1,506,944. BATTERY PLATE. CHARLES CLAYTON RICH, Mount Vernon, N. Y., assignor of one-twentieth to Charles Wintermeyer, Mount Vernon, N. Y. Filed Sept. 13, 1922. Serial No. 588,009. 9 Claims. (Cl. 204—29.)

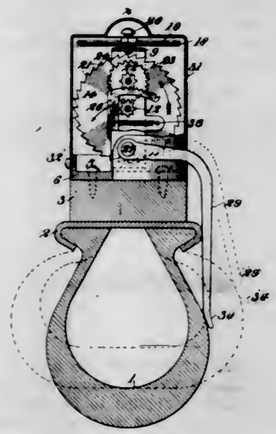


1. A storage battery plate comprising a frame having upper and lower members and side members, the side members being longitudinally expansible and each being of substantially uniform cross sectional dimensions throughout its length, and a plurality of electro-active elements supported within the frame and extending between the upper and lower members thereof and likewise between the said longitudinally expansible side members, the said elements being relatively spaced and bonded at intervals between their opposing portions.

1,506,945. SHOE AND ARCH SUPPORTER. WILLIAM SAKLAD, Dorchester, Mass. Filed Aug. 10, 1921. Serial No. 491,249. 2 Claims. (Cl. 36—71.)

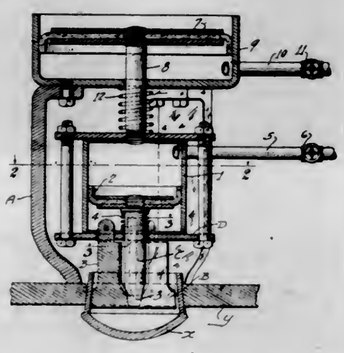
1. As an article of manufacture a shoe, comprising an upper, insole and welt, a supporter for the transverse arch of the foot applied to the shoe between the insole and the outsole, and stitching uniting the outsole, supporter and welt together.

1,506,946. METHOD FOR THE RECOVERY OF SALT. AUGUST SCHILLING, San Francisco, Calif. Filed Jan. 5, 1922. Serial No. 527,221. 1 Claim. (Cl. 159—50.)



The method of recovering salt of substantial purity, which consists in maintaining a brine solution in circulation in shallow layers in a to and fro course exposed to the action of the sun and atmosphere to effect evaporation and crystallization permitting coarse salt granules formed in the brine to settle from the layers and build up, trapping in a body of brine at the end of each to and fro course of travel the floating salt granules formed on the brine in circulation, and separately removing the settled coarse salt granules, and the trapped salt.

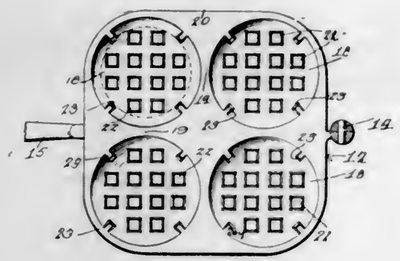
1,506,947. TIRE ALARM. OTTO FRED SCHROEDER, Santa Ana, Calif. Filed Nov. 12, 1921. Serial No. 514,626. 1 Claim. (Cl. 116—34.)



A tire alarm including a base, a substantially U-shaped frame secured at one end thereto and extending outwardly therefrom, said frame provided with an apertured stirrup, a secondary frame carried by the stirrup of the main frame and including a diaphragm mounting ring disposed parallel with the stirrup, a diaphragm peripherally held at substantially right angles to the main frame members, an adjustable contact pin centrally carried by the diaphragm with its end projecting through the aperture in the stirrup of the main frame, a shaft extended transversely between the main frame members, a pawl and ratchet operated toothed wheel

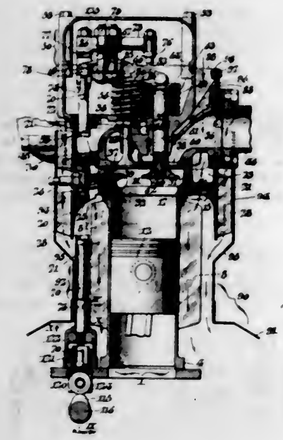
carried by said shaft with its periphery in cooperative relation with the contact pin, a cap for fitting over

said frames to enclose the same and said diaphragm and detachably secured to said base, and a lever secured at one end of the shaft.



1,506,948. TOOL FOR INSTALLING BOILER HAND-HOLE CAPS. WALTER SIEGERIST, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 4, 1923. Serial No. 655,672. 8 Claims. (Cl. 29—88.2.)

1. A tool for the purpose described, comprising jaws adapted to be introduced into a hollow article and thereafter moved into engagement with said article, a piston for moving said jaws in a direction to cause them to exert pressure on said hollow article and shift it relatively to a part in which it is positioned, a cylinder in which said piston is reciprocatingly mounted, and means for supplying an operating medium to said cylinder.

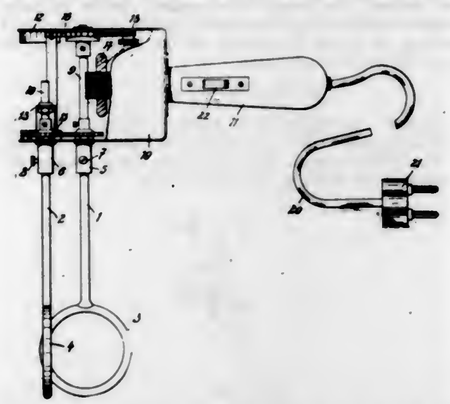


1,506,949. APPARATUS FOR MAKING AN EDIBLE FOOD PRODUCT. JOHN F. G. SMITH, Washington, D. C., assignor of one-third to Winfield Provost, and one-third to Clarence A. Smith, both of Washington, D. C. Filed May 6, 1924. Serial No. 711,492. 2 Claims. (Cl. 107—66.)

1. Apparatus of the character described, comprising a pair of companion iron members, each iron member having a recess formed therein, combined supporting and heat transmitting posts formed upon the bottom of the recess and projecting upwardly therefrom for substan-

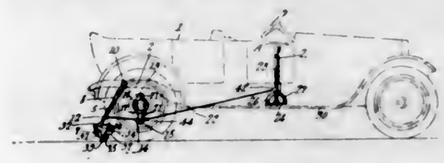
tial distances, and radial lugs formed upon the side walls of the recess and projecting inwardly therefrom to center a meat cake therein.

1,506,950. INTERNAL-COMBUSTION ENGINE. JOHN W. SMITH, Philadelphia, Pa. Filed Nov. 12, 1921. Serial No. 514,598. 26 Claims. (Cl. 123—171.)



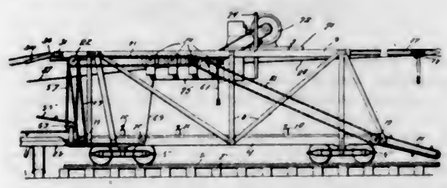
1. A metallic cooling member for an internal combustion engine comprising a row of narrow annuli with interconnecting webs adapted to form the combustion zone walls of the engine cylinders; and wide radiating structures extending along said row of annuli at either side, separated from the annuli to permit access of air between, but connected to said annuli and their interconnecting webs, at isolated points, by heat conducting and radiating members.

1,506,951. EGGBEATER. WENZL SOUKUP, Karlsbad, Czechoslovakia. Filed Jan. 22, 1923. Serial No. 614,310. 2 Claims. (Cl. 259—13.)



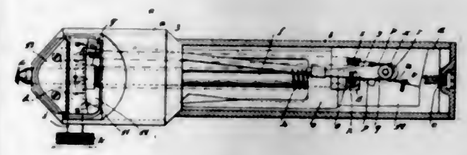
1. In apparatus f the class described in combination, a frame, a pair of parallel shafts rotatably mounted therein, means on each shaft for removably attaching

and wholly supporting a beater element, a driving connection between the shafts, an electric motor in the



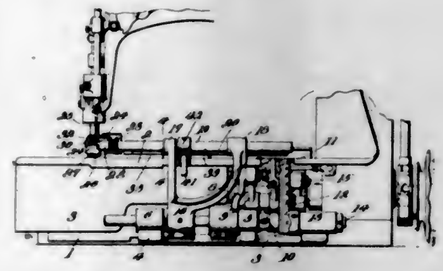
frame, a driving connection between the motor and one of the shafts, a handle secured to the frame, and a single housing enclosing the motor and drive mechanism.

1,506,952. VEHICLE ATTACHMENT. JOHN A. STACKHOUSE, Dover, N. J., assignor of one-half to Josephine King, East Dover, N. J. Filed Apr. 8, 1922. Serial No. 550,911. 2 Claims. (Cl. 180—15.)



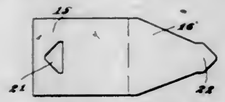
1. The combination with a vehicle including a ground wheel, of an arm mounted to swing on the vehicle, a support, rotatable members journaled on the support, one of said members being a ground-engaging traction member, and the other of said members being adapted for engagement with the ground wheel, intermeshing gears connecting the rotatable members, means for mounting the support on the arm for adjustment along the arm, to secure cooperation between said ground-engaging member and the ground, and between said wheel-engaging member and the wheel, and means under the control of an operator for swinging the arm from a remote point, to cause said rotatable members to exercise their respective functions.

1,506,953. TRACKLAYING MACHINE. ROBERT E. STUBBS, Duluth, Minn. Filed May 3, 1924. Serial No. 710,894. 9 Claims. (Cl. 104—6.)



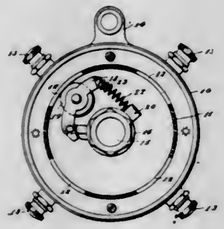
1. A track laying machine comprising a car having a main frame carried by wheeled trucks, a supplemental frame mounted on the forward end of said car, a plurality of the guiding members carried by said supplemental frame, having means in cooperation therewith, for guiding and successively placing ties in proper spaced relation on a road bed, in advance of the car, means for feeding ties along said supplemental frame, rail conveyors carried by the supplemental frame, rail positioning members carried by the supplemental frame, and adapted for positioning track rails on the ties, operating means carried by the main car frame and connected with the tie feeding means of the supplemental frame, for operating said means, tie and rail conveying means mounted in the main frame for delivering ties and rails to said supplemental frame, and means for controlling the operation of the tie and rail feeding means and the tie and rail positioning means of the supplemental frame.

1,506,954. MOVEMENT-MAGNIFYING MECHANISM OF GAUGES AND LIKE MEASURING INSTRUMENTS. WILLIAM TAYLOR, Leicester, England. Filed Jan. 2, 1920. Serial No. 349,111. 16 Claims. (Cl. 33—172.)



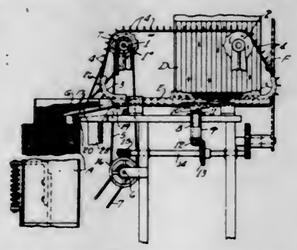
1. Movement magnifying mechanism, comprising the combination with an object the movement of which is to be magnified and a supporting member, of a roller having parts of different diameters, means tending to turn said roller, and flexible bands attached to the roller so as to wind on said parts of different diameter respectively and from opposite directions, the bands being so disposed as to be put in tension by said turning means and being attached, respectively, one to the supporting member, and the other to the object the movement of which is to be magnified.

1,506,955. RUFFLING AND SEWING MACHINE. CHARLIE THEBO, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 8, 1922. Serial No. 550,849. 5 Claims. (Cl. 112—132.)



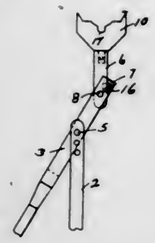
1. A sewing and ruffling machine comprising a work support, a stitching mechanism, feeding mechanism and a ruffling mechanism, said ruffling mechanism including a rock shaft mounted beneath the work support, an arm projecting upward therefrom and carrying a ruffling blade overhanging the work support, a fabric guide cooperating with the ruffling blade, and means whereby said fabric guide and ruffling blade may be simultaneously moved in a straight line transversely of the line of feed to ineffective position.

1,506,956. PINLESS-GRIP TICKET. FRANK H. THOMPSON, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed July 18, 1923. Serial No. 652,294. 14 Claims. (Cl. 40—2.)



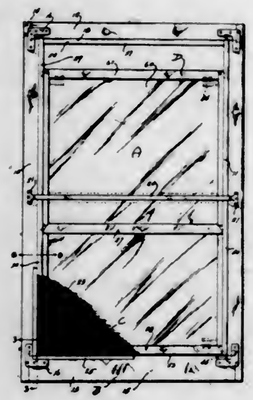
6. A marking ticket comprising a member having an article receiving fold and having integral means on one side of the fold laterally deflecting a contained portion of the article into interlocking relation with integral means on the opposite side of the fold.

1,506,957. TIMER. BENJAMIN LOUIS TOQUET, Westport, Conn., assignor to The Toquet Carburetor Corporation, Westport, Conn., a Corporation of Connecticut. Filed Dec. 15, 1921. Serial No. 522,636. 3 Claims. (Cl. 200—26.)



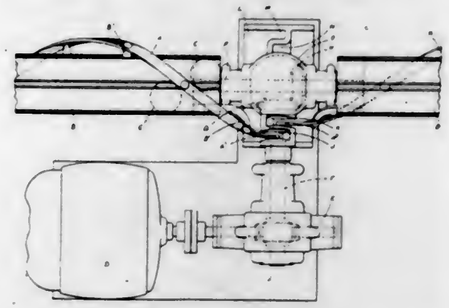
3. A device of the character described, comprising a casing, a race therein and including insulation and contact segments, a contact roller adapted to ride over said race and to alternately engage said insulation and segments, a carrier for the roller, the carrier including side members and the contact roller being mounted in the side members, a sleeve with which the carrier is hingedly associated, a timer shaft projecting into the casing and carrying the sleeve, the contact roller being mounted at an oblique angle with respect to the timer shaft, and means for insuring engagement of the contact roller with the race, whereby the full periphery of the contact roller can engage the race as said roller moves over the insulation and contact segments and the working face of the roller can be obliquely disposed with respect to the direction of movement of said roller over said race for the purpose specified.

1,506,958. MATCHMAKING MACHINE. BERNARD G. VAUGHAN, Joliet, Ill., assignor to National Match Company, Joliet, Ill., a Corporation of Illinois. Filed Dec. 14, 1922. Serial No. 607,000. 7 Claims. (Cl. 144—64.)



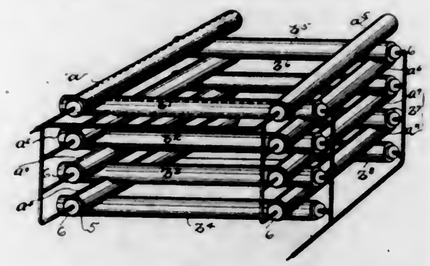
1. A splint feeding mechanism for match making machines, comprising a trough for receiving match splints that are arranged transversely of the trough, means for feeding the splints longitudinally through said trough, an opening in the bottom of the trough for permitting the escape of longitudinally-disposed splints, and means for causing the transversely-disposed splints to move endwise from over said opening so as not to obstruct said opening or retard the escape of the longitudinally-disposed splints through same.

1,506,959. AUTOMOBILE JACK. FRANK WALLACE, Youngstown, Ohio, assignor to Anthony Schiele, Youngstown, Ohio. Filed Sept. 28, 1923. Serial No. 665,400. 2 Claims. (Cl. 254—131.)



1. In a device of the class described a support member, two parallel support standards, bifurcated lever fulcrumed at the upper ends of said parallel supporting standards, an inverted U-shaped member pivotally secured to the upper end of said bifurcated lever, a bearing block pivotally secured upon the upper portion of said inverted U-shaped member, a collapsible lower end to said lever, means for holding parts in a located position, substantially as described for the purpose set forth.

1,506,960. UNITARY SCREEN AND CLOSURE ARRANGEMENT FOR WINDOW OPENINGS. WILLIAM H. WATSON, Wellington, Kans. Filed July 21, 1922. Serial No. 576,523. 4 Claims. (Cl. 20—55.)

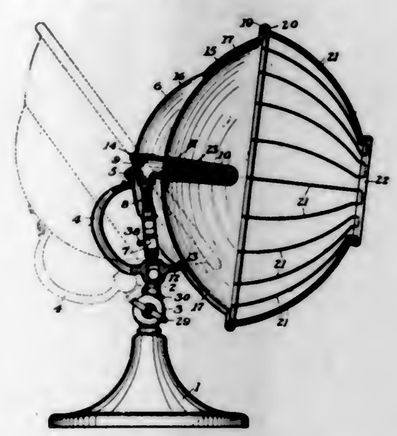


1. A window construction including a frame defining an opening, means upon one side of said frame within said opening providing a pair of parallel grooves facing in the opening of said frame, a member positioned upon the opposite side of said frame providing a flange extending into said frame opening, a detachable member mounted upon the last mentioned side of said frame providing a pair of flanges extending into the opening of said frame cooperating with the first mentioned flange in providing a pair of parallel grooves extending along the side of said frame, and sashes for sliding within the grooves upon the sides of said frame.

1,506,961. CONVEYING APPARATUS. BENJAMIN RATCLIFFE ADKINS, Upper Warlingham, and WILLIAM YORATH LEWIS, Southend-on-Sea, England. Filed Aug. 24, 1923. Serial No. 659,187. 5 Claims. (Cl. 198—203.)

2. In conveying apparatus operated by the rotation of a screw, the combination of the screw thread of which the adjacent ends of two sections overlap so as to present a practically continuous surface, shafting on which each section of the screw thread is carried, an external source of power, a slotted driving shaft driven from the source of power and arranged transversely to the axis of the screw thread, and gearing through which the drive is transmitted from the shaft to the screw-carrying shafting, the gear ratio of this gearing being such that the revolution speeds of the driving shaft and of the shafting are so related that the ends of the sections of the thread pass through the slots in the shaft as they rotate as set forth.

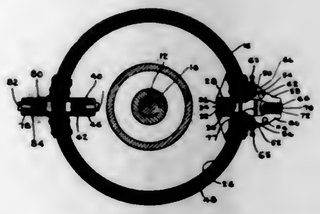
1,506,962. THERMOELECTRIC APPARATUS. FRANK W. ANDREWS, Wapakoneta, Ohio, assignor, by mesne assignments, to The Superior Refrigerating Company, Wapakoneta, Ohio, a Corporation of Ohio. Filed May 14, 1917. Serial No. 168,526. 8 Claims. (Cl. 171—73.)



4. In a construction of the character described, a plurality of intersecting tubular enclosures angularly arranged in relation one with another, and contacting thermo electric elements enclosed within said tubular enclosures.

8. In a construction of the character described, a plurality of nonconductive members having thermo electric cores, said members having interlocking notches wherein the cores are exposed for contact one with another.

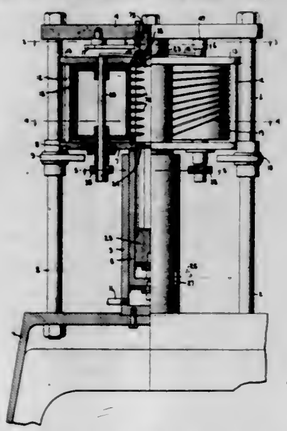
1,506,963. PURIFICATION OF SULPHUR DIOXIDE. FRANK W. ANDREWS, Wapakoneta, Ohio. Filed Aug. 12, 1919. Serial No. 317,016. 2 Claims. Cl. 23—1.)



1. The herein described process of treatment sulphur dioxide and the like, consisting in subjecting a liquified body of commercial sulphur dioxide to a partial vacuum and warming the body to induce vaporization of the more volatile portions, leaving in the container involatilized moisture, sulphur trioxide, oil of vitriol and other impurities, drawing the vapors through a filter by which any entrained particles of moisture, oil of vitriol, sulphur trioxide and impurities are removed, subjecting the resultant vapors to compression, and condensing the compressed vapors to liquification.

1,506,964. HEATER. WILLIAM D. ANTHIM, Gloucester, N. J., assignor to Weisbach Company, Gloucester, N. J., a Corporation of New Jersey. Filed Mar. 28, 1921. Serial No. 456,091. 4 Claims. (Cl. 126—92.)

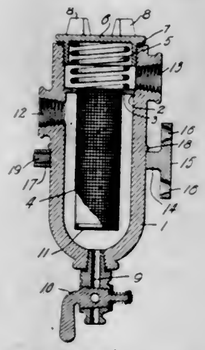
2. A radiating heater comprising a concave casing having portions curved on different radii, a reflector supported by said casing and being curved on the larger of the radii of said casing, thus providing a chamber between said reflector and the casing at its smaller radius and gaseous heating fuel supply means in the chamber thus produced, substantially as described.



1,506,965. BRAKE. JOSEPH T. AUGER, Minneapolis, Minn., assignor of one-half to Robert H. Monahan, Minneapolis, Minn. Filed Dec. 16, 1921. Serial No. 522,760. 1 Claim. (Cl. 188—74.)

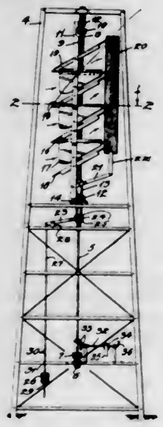
A brake comprising a brake drum, brake band arranged to cooperate therewith, said band extending for nearly a complete circumference, means for resiliently holding the middle portion of said band, said means operating to remove said band from engagement with said drum when the brake is off and to permit said band to move into engagement with said drum when the brake is on, ears secured to the respective ends of said band, pins carried by said ears, levers intermediately pivoted to a fixed support, the inner arms of said levers having slots which receive said pins, a double-ended cam between the outer arms of said levers, a spring for holding said outer

arms in engagement with said cam, said cam having a slot, and an operating member in said slot upon which said cam may slide, said slot and operating member constituting an equalizing device which causes all portions of said band to be applied with equal force to said drum.



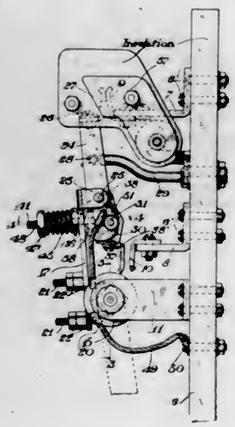
1,506,966. METHOD OF AND APPARATUS FOR MAKING METALLIC WALLS. FRED K. BEZZENBERGER, Cleveland Heights, Ohio. Filed Apr. 17, 1924. Serial No. 707,265. 19 Claims. (Cl. 153—73.)

12. In a method of making corrugated hollow metallic walls, the steps which consist in radially expanding a tube wall between spaced dies into corrugations while simultaneously axially collapsing such tube during such radial expanding operation a distance sufficient to more than compensate in the final length of the tube wall measured along an elemental longitudinal line for the increase in length produced by such radial expansion.



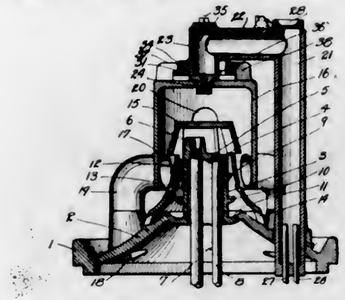
16. In apparatus of the character described, the combination of a plurality of split axially movable forming rings adapted to encircle a tube, and means positively engaging said rings on either side of the split therein, said means acting to simultaneously axially move said rings in either direction.

1,506,967. LIQUID-FUEL STRAINER. ALVAH H. BOSWORTH, Woodhaven, N. Y., assignor to The Bosworth Filter Company, Inc., Long Island City, N. Y. Filed Apr. 11, 1923. Serial No. 631,264. 7 Claims. (Cl. 210—165.)



1. In a fuel straining device for internal combustion engines, a casing forming a trap for impurities, the upper part of the casing being provided with vertically spaced apart inlet and outlet ports, an inwardly extending shoulder formed on the inner surface of the casing between said ports, a filter member having an outwardly extending flange adapted to rest on said shoulder, and spring means directly engaging the flange for normally holding the flange against the shoulder whereby the flange will function as a valve and lift from its seat if the filter becomes clogged.

1,506,968. WINDMILL. WILLIAM H. BOT, Green Valley, Minn. Filed May 24, 1923. Serial No. 641,165. 22 Claims. (Cl. 170—12.)

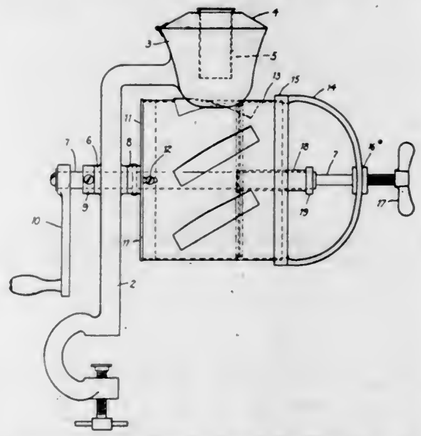


1. The combination with a horizontally disposed wind wheel, of a deflector arranged to deflect wind through the wind wheel, and automatic means for angularly adjusting the deflector in respect to the wind wheel.

1,506,969. MULTIPLE SWITCH. HARRY L. BRADLEY, Milwaukee, Wis. Filed June 6, 1919. Serial No. 302,244. 20 Claims. (Cl. 200—6.)

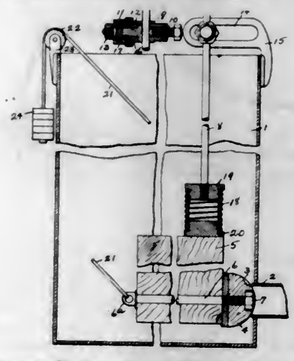
1. In a switch, the combination of a pair of contacts, a movable switch-arm-carrying member, pivoted switch arms operatively connected to said member and provided with contacts, and a pair of contacts engaged by said switch arms, the contact on one switch arm engaging one of said first named contacts and rolling thereon to bring the contact on the other switch arm into engagement with the other first named contact.

1,506,970. OIL BURNER. GEORGE M. BUCEY, Kansas City, Mo. Filed Oct. 10, 1923. Serial No. 667,654. 7 Claims. (Cl. 158—91.)



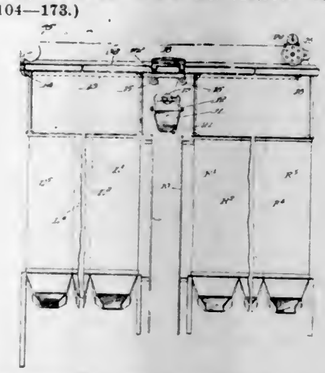
6. An oil burner comprising a pan having a conical bottom provided with openings in the wall thereof, a cylindrical distributor at the top of the conical bottom having circumferential outstanding flanges, a cap on the distributor casing, a ported conical wall opposed about the distributor, a shroud surrounding the casing and having a space above it, air pipes radially disposed about the shroud communicating therewith, a water vapor chamber adjacent to the ported casing communicating with the space within the shroud and an oil pipe discharging at the top of the distributor.

1,506,971. TUBE AND METHOD OF MAKING TUBES. HARRY W. BUNDY, Detroit, Mich. Filed Mar. 5, 1923. Serial No. 622,849. 5 Claims. (Cl. 113—33.)



1. A tube, comprising metal strip stock longitudinally drawn and fashioned into a plural-ply hollow cross-section having a longitudinally running seam, the plies being united by a high fusing point metal material electro-deposited on the surfaces of the ply stock.

1,506,972. SLICING OR GRATING MACHINE. FREDERICK BURGDORF, Elyria, Ohio. Filed June 21, 1920. Serial No. 390,399. 2 Claims. (Cl. 146—91.)



2. In a vegetable slicing machine, a cutting drum on a rotatable shaft, a shuttle rake slidably mounted on the shaft in said drum whereby it may be operated by hand to remove the cut vegetable from the bottom side of the drum, a crank on one end of the shaft, a thread on the other end of the shaft, a spider mounted on said shaft for supporting said drum, and a thumb screw on said shaft for screwing said spider in position.

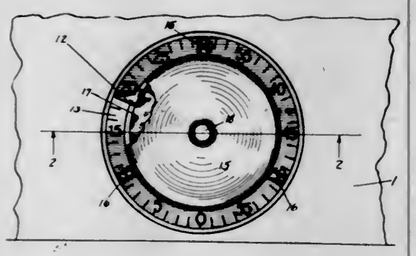
1,506,973. TANK-DISCHARGE-CONTROLLING DEVICE. RUDOLPH CONRADER, Erie, Pa. Filed Aug. 18, 1919. Serial No. 318,124. 7 Claims. (Cl. 137—68.)

1. In a tank discharge controlling device, the combination of a tank having a discharge opening at the side; a closure valve for the opening; a guiding device directing the movement of the valve to the opening comprising a swinging arm having its axis above the valve at the upper part of the tank; and a float carrying the valve.

1,506,974. CONVEYER SYSTEM. LESLIE P. COOLEY, Chicago, Ill., assignor to The Conveyers Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed May 19, 1924. Serial No. 714,259. 15 Claims. (Cl. 104—173.)

1. The combination with a conveyer system having a carrying member, a track therefor, and a cable for moving the member along the track, of indicating means for showing the position of the member along the track, and a sheave having a non-slipping engagement with the cable and driven thereby for moving said indicating means as the cable moves the member along the track.

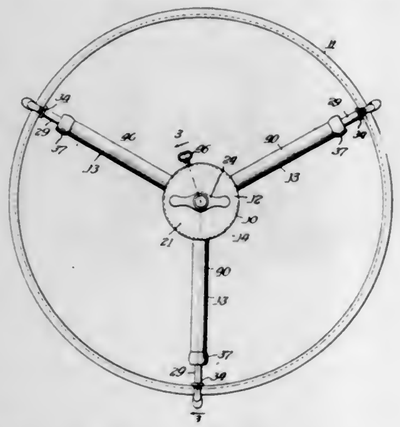
1,506,975. BOOT AND SHOE HAVING INFLATED AIR CUSHION INSERTED IN THE SOLE AND HEEL THEREOF. CHARLES COONEY, Dublin, Ireland. Filed Aug. 21, 1922. Serial No. 583,301. 2 Claims. (Cl. 36—29.)



1. A boot or shoe having a compartment inside its sole, in said compartment on inflatable air cushion, a compartment inside said heel, in the last stated com-

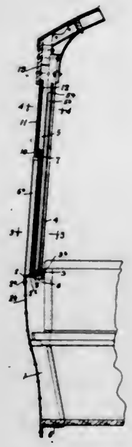
partment an inflatable air cushion, and over said air cushions a thin flexible insole attached to the sole proper and to the shoe, spaced between said inflatable air cushions an intermediate and resilient member under said flexible insole and forming an arched support for the arch of the foot, means to permit inflating said inflatable air cushions in situ, consisting of a stiffening reinforcement plate attached to each inflatable air cushion and being provided with an air pump attachment,

said reinforcement plate being adapted to form a bridge-piece under said insole, and means to permit said inflatable air cushions into their respective compartments and withdrawal therefrom, consisting of a flap-closed opening in said flexible insole over each compartment aforesaid, each opening aforesaid being bridged on its underside by means of a bridge-piece aforesaid and so preventing displacement of said inflatable air cushions through each respective opening in said insole when under air pressure.



1,506,976. ILLUMINATED SPEEDOMETER. JOSEPH H. COPE, Denver, Colo., assignor of one-half to George F. Kern, Windsor, Colo. Filed Jan. 15, 1924. Serial No. 686,451. 3 Claims. (Cl. 264—1.)

1. A speed-indicating device comprising, in combination, a stationary annular scale, a dishlike member mounted so as to rotate about an axis concentric with said scale, said member having its outer edge bent upwardly so as to form a flange, said flange being provided with an opening, a cover over said dishlike member, a lamp located in the chamber formed by the dishlike member and the cover, and speed-responsive means for rotating said member whereby a beam of light will pass through the opening and illuminate a portion of the scale.



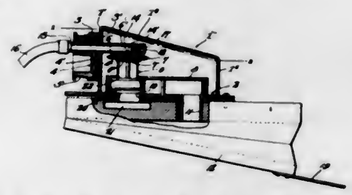
1,506,977. TIRE CARRIER. MAX G. DICHWOLF and CLAYTON E. SCHULTZ, Chicago, Ill. Filed May 31, 1921. Serial No. 474,028. 3 Claims. (Cl. 224—29.)

1. A tire carrier comprising a central portion having a plurality of radially reciprocal arms projecting therefrom; said central portion including a master pinion disposed with its axis perpendicular to the axes of the arms at their central point of intersection, a plurality of pinions each of which is adapted to translate the rotary motion of the master pinion into the reciprocal motion of one of the arms and is arranged about the axis of the master pinion on the side thereof from which the particular arm operated thereby projects from the

central portion of the carrier, and a member providing both a journal bearing for the master pinion and thrust bearings for the pinions connected with the arms.

1,506,978. RAILWAY CAR. THOMAS ELLIOTT, Cincinnati, Ohio, assignor to The Cincinnati Car Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 11, 1922. Serial No. 581,069. 14 Claims. (Cl. 105—399.)

2. In a car body, the combination with ribs built into the lower structure and a belt rail extending over and inward of the ribs and secured, of side posts built into the upper structure and extending from near the belt rail to near the roof, and anchors adapted to secure the posts to the belt rail.

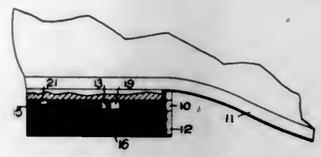


1,506,979. EDUCATIONAL GAME DEVICE. ITHA FOULKS, Chicago, Ill. Filed Oct. 27, 1921. Serial No. 510,701. 1 Claim. (Cl. 35—6.)

An educational game device, comprising a platform having on the upper surface thereof, a map forming a playground, said map corresponding in outline to the geographical outline of a country, said map being composed of a plurality of permanently associated, distinct areas distinguishable in size and outline, each area corresponding in outline to the geographical outline of an actual political sub-division of the country, said map being of a size to accommodate a number of persons

thereon for movement from point to point on the map during play and still be embraced in its entirety within the field of vision of a person thereon, whereby geographical instruction may be imparted to persons thereon while traveling from area to area.

1,506,980. PNEUMATIC ACTION FOR PLAYER PIANOS. GUILLERMO FREUND, Lima, Peru. Filed Mar. 12, 1923. Serial No. 624,616. 9 Claims. (Cl. 84—56.)



1. In a pneumatic action for player pianos and the like, an all-metal action chest embodying a flat base plate forming the bottom of the chest, a sheet bent to form the front and rear walls and the top, and plates forming the end walls, all of said parts being rigidly connected together; and a series of all-metal valve boxes disposed within the chest and mounted on the bottom wall thereof.

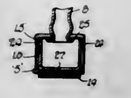
1,506,981. VENDING MACHINE. ALBERT D. GROVER, New York, N. Y., assignor to Autosales Corporation, a Corporation of New York. Original application filed May 8, 1918, Serial No. 233,194. Divided and this application filed June 28, 1921. Serial No. 480,998. 2 Claims. (Cl. 194—97.)

2. In a coin-controlled vending machine, an outer casing, a plate forming part of the front of said casing, said plate being provided with a coin-entrance opening and a separate coin-discharge opening, a hand-operable member for receiving the coin inserted through said coin-entrance opening and carrying the same into operative position, and means provided on said member whereby a coin inserted into said coin-entrance opening when said member is out of normal position is automatically discharged through said coin-discharge opening during the return movement of said member.

1,506,982. DETACHABLE HEEL. WILLIAM A. MALONEY, Needham, Mass. Filed May 24, 1920, Serial No. 383,669. Renewed Jan. 26, 1924. 1 Claim. (Cl. 36—36.)

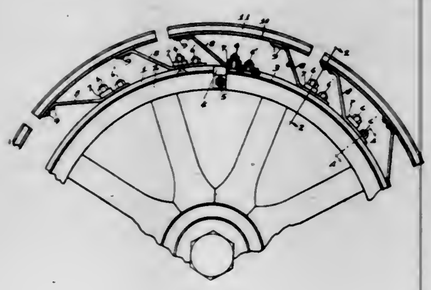
In a shoe, a heel comprising a portion permanently secured to the shoe, and a resilient detachable portion, one of said parts having a locking plate fixed in position therein, and the other part having a headed fastening member formed for locking engagement with said plate, said plate having a slot closely fitting said member below the head thereof but enlarged rearward to permit free passage of said head, one of said portions having projections and the other portion having recesses to receive said projections to prevent relative lateral or longitudinal movement of the parts, certain of said recesses being elongated to permit sliding, locking movement of the detachable heel relatively to the shoe and one of the recesses closely fitting its projection both laterally and longitudinally of the shoe to prevent accidental displacement of the attached heel.

1,506,983. LEATHER-SURFACE-REPAIR COMPOSITION. JAMES S. MARRS and ROBERT M. MORRIS, St. Louis, Mo. Filed Mar. 28, 1921. Serial No. 456,166. 5 Claims. (Cl. 134—9.)



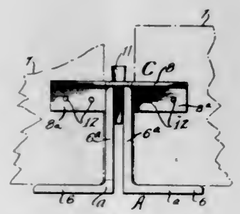
5. A leather surface repair composition, comprising substantially one ounce beeswax, one ounce shellac wax, one ounce dry shellac, one ounce ceresine wax, one ounce turpentine and a color base.

1,506,984. TOWER AND OTHER SIMILAR STRUCTURE. IRA W. MARSHALL, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Apr. 7, 1921. Serial No. 459,329. 7 Claims. (Cl. 189—12.)



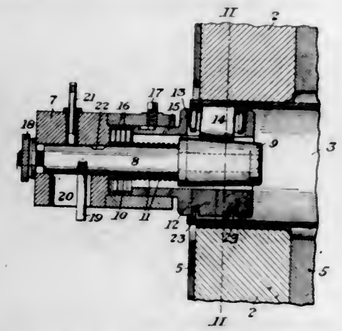
1. A tower having all of the longitudinally extending members of certain of its sides arranged in pairs, the two members of each pair extending obliquely to and crossing each other intermediate their ends, the corresponding ends of the members of each pair being connected by a transversely extending tension member, substantially as described.

1,506,985. RUBBER-STAMP CONSTRUCTION. Louis J. Melind, Chicago, Ill., assignor to Louis Melind Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1922. Serial No. 577,505. 8 Claims. (Cl. 101—405.)



1. In a rubber stamp mounting, the combination of a block constructed of an upper sheet metal stamping and a lower sheet metal stamping, flanges extending from one of said stampings and forming closed sides for the block, a handle extending upwardly from said block, and type carried by said lower stamping.

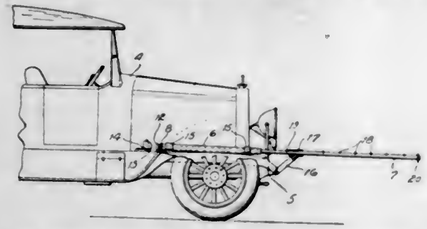
1,506,986. SPRING WHEEL. John E. Miller, Forman, N. Dak. Filed May 14, 1923. Serial No. 638,873. 3 Claims. (Cl. 152—8.)



2. A spring wheel comprising in combination a ring adapted to be mounted on the felly rim of a wheel, a plurality of tread plates for said ring, and two substantially parallel cantilever springs connecting each of said tread plates with said ring.

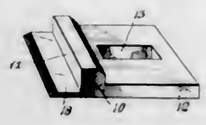
1,506,987. BUILDING CONSTRUCTION. Robert P. Miller, Los Angeles, Calif. Filed Mar. 3, 1921. Serial No. 696,473. 6 Claims. (Cl. 189—35.)

1. A device adapted to be applied to a structural element, comprising a web, spaced members connected by a web and adapted to rest upon such structural element and to receive further structural elements between such members to prevent displacement thereof, and means for preventing displacement of such device; said first named structural element comprising spaced members adapted to receive a wedge constituting such means.



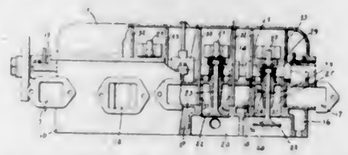
1,506,988. METHOD AND APPARATUS FOR ROUNDING. George F. Mirfield, Youngstown, Ohio. Filed July 11, 1922. Serial No. 574,184. 19 Claims. (Cl. 153—82.)

1. In the method of rounding hollow articles, the steps consisting in initially holding the article at independent points, and then bending successive portions of the wall of the article in a radial direction between said points to round the same, substantially as described.



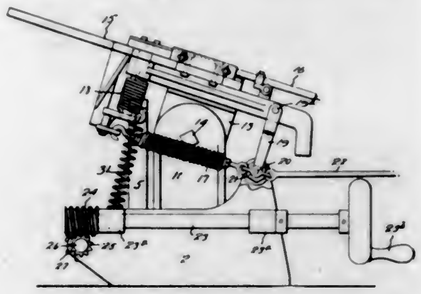
8. In an apparatus for rounding metal articles, means for supporting the article to be rounded at a plurality of spaced points, and means for successively flexing the walls of the pipe intermediate the points of support to round the same, substantially as described.

1,506,989. SAFETY FENDER FOR AUTOMOBILES. William H. Melloy, St. Louis, Mo. Filed Jan. 7, 1924. Serial No. 684,885. 3 Claims. (Cl. 293—26.)



2. A safety fender for automobiles comprising in combination with an auto chassis frame of a sleeve carried by each side of said frame, a second sleeve carried by said frame in longitudinal alinement with said first mentioned sleeve, a rod slidably mounted in each pair of sleeves, a plurality of resilient spaced apart members secured to said rods, shock absorbing means adapted to cushion end thrust of said rods, and pneumatic means for limiting the rearward movement of said rods.

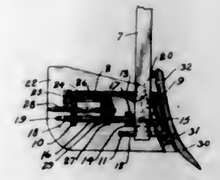
1,506,990. PRINTING-PRESS GUIDE. William Meltaler, Chicago, Ill. Filed Jan. 7, 1922. Serial No. 527,795. 1 Claim. (Cl. 101—415.)



In a guide for positioning sheets upon a tympan sheet, a head portion having an edge surface adapted to engage with edges of the sheets fed on to the tympan sheet, a longitudinally slotted flange extending rearwardly from the base of the head portion, a tongue extending forwardly from the base of the head portion, a plate for insertion beneath the tympan, a threaded stem on the plate for insertion through the slot in the flange, and a nut for clamping the plate to the flange; the under surfaces of the head portion, flange and tongue lying substantially in a common plane at an abrupt angle to the sheet engaging surface of the head portion and being adapted to bear against the tympan sheet with the tongue inserted under the same through a transverse slot therein.

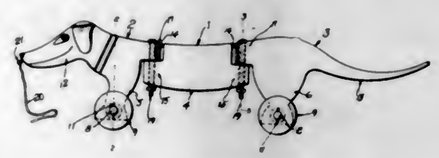
1,506,991. VALVE CONSTRUCTION FOR INTERNAL-COMBUSTION ENGINES. Fred S. Nash, Cincinnati, Ohio, William H. Harris, Indianapolis, Ind., and Constantine P. Schwarz, Cincinnati, Ohio; said Nash and said Schwarz assignors to said Harris. Filed Apr. 1, 1922. Serial No. 548,807. 3 Claims. (Cl. 123—79.)

2. A valve construction for an internal combustion engine having a combustion chamber and a single passage thereto, a poppet valve controlling said single passage, intake and exhaust passages communicating with said passage and extending oppositely from the opposite sides of said common passage, a disk valve positioned at each side of said common passage and controlling the communication thereto with the adjacent passage, means for actuating said poppet valve, and a single cam shaft for rotating said disk valves and having a cam positioned intermediate said disk valves for actuating the poppet valve operating means.



1,506,992. TARGET TRAP. Paul North, Lakewood, Ohio. Filed Oct. 5, 1922. Serial No. 592,474. 2 Claims. (Cl. 124—6.)

1. In a target trap, the combination of a sub-base, a tilting base adjustably mounted upon the sub-base, a complete target throwing mechanism mounted upon the tilting base and comprising a frame additional to such tilting base, and power-operated means for moving the tilting base upon the sub-base and without interruption of the target-throwing operation.



1,506,993. ADJUSTABLE DITCHER FOR CULTIVATORS. Tomotaro Okamoto, Fort Lupton, Colo. Filed Mar. 9, 1922. Serial No. 542,369. 2 Claims. (Cl. 97—198.)

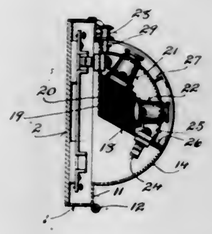
1. In a device of the class described, a body member comprising a bar having a horizontal central section, a downwardly and forwardly inclined part forming the front end thereof, a downwardly projecting section forming the rear end, a vertical bar pivotally connected to the horizontal section of the first named bar, means secured to the lower end of the vertical bar and cooperatively

connected to the rear end of the first named bar for adjusting the relative positions of the same, and a curved plate secured to the downwardly and forwardly inclined part of the first named bar.

1,506,994. TOY. Eulis J. Palmatier, Denver, Colo., assignor to International Toy Manufacturing Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 6, 1920. Serial No. 422,187. 1 Claim. (Cl. 46—45.)

A toy representing a quadruped comprising a section formed to represent a head and having an integral supporting leg, rollers on said leg, said section having the rear portion recessed, a tail section having the representation of a tail extending rearwardly therefrom and having an integral leg, rollers on said leg, said tail section having the front portion recessed, and a middle or body section recessed to engage the recesses in the head and tail section, and pivotally connected to said sections.

1,506,995. AIR SHOTGUN. William Paul, Beecher, Ill. Filed Feb. 9, 1924. Serial No. 691,618. 10 Claims. (Cl. 124—8.)

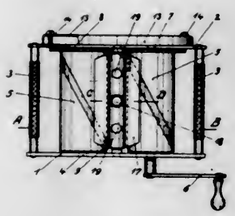


9. In a shot gun the combination with a stock, of a compressed air casing supported thereon, an air pump tube and a barrel projecting into the casing, a control valve for the barrel, a valve for the pump tube, springs for holding the barrel control valve and the pump valve closed, a pair of rods slidable in the casing with one of said rods projecting into said stock, a member pivoted in said casing co-acting with said rods, and means in the stock adapted to operate the projecting rod to cause opening of the barrel valve.

1,506,996. FUSE BOX. Paul F. Picker, Kenosha, Wis. Filed Sept. 6, 1923. Serial No. 661,190. 2 Claims. (Cl. 200—114.)

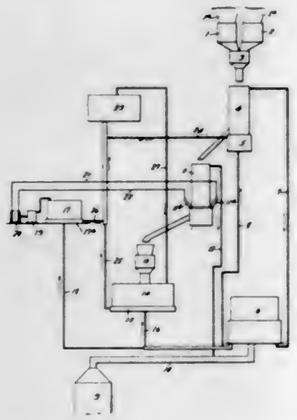
1. A fuse box comprising a casing having an apertured cylindrical portion provided with a slot, a member pivotally mounted within said casing, a handle extending

through said slot and connected with said member, switch mechanism located within said casing and operated by said member, and fuse plugs removably carried by said



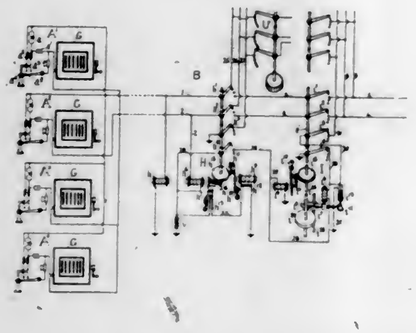
member and adapted to occupy a position beneath said aperture, said fuse plugs being electrically connected to said switch mechanism.

1,506,997. COVER BOARD AND METHOD OF MAKING SAME. WILLIAM P. PITT, Kansas City, Mo., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed Mar. 28, 1921. Serial No. 456,173. 10 Claims. (Cl. 154—41.)



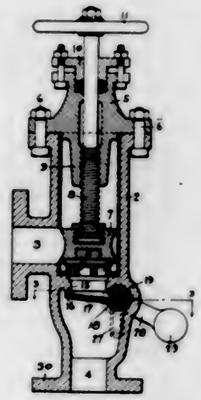
2. A cover board comprising a flat body member, and two relatively hard and rigid enveloping members respectively embracing opposite sides thereof and integral therewith, each enveloping member having marginal portions extending from one side of the body member around the edges thereof to and embracing the other side of the body member, substantially as set forth.

1,506,998. DEVICE FOR GRINDING AND POLISHING RAZOR BLADES. WILLY REICHMANN, Hamburg, Germany. Filed Sept. 1, 1922. Serial No. 585,750. 3 Claims. (Cl. 51—80.)



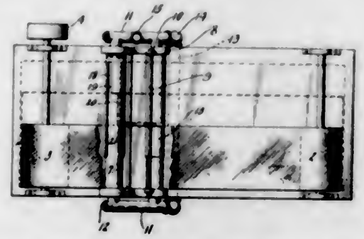
1. A device for grinding and polishing razor-blades, comprising, in combination, rollers having each an oblique groove in a portion of its circumferential surface; a leather covering upon that surface, except said groove; a grindstone shaped correspondingly to the said groove and being located, and radially adjustable, in it; pressure springs arranged in recesses in said rollers below said grindstone; means for pulling the grindstone radially inwards counter to the pressure of said springs; a frame in which the said rollers are supported; means for holding a blade on said frame; and means for rotating the rollers, as set forth.

1,506,999. PROCESS OF PREPARING MATERIAL FOR AND PRODUCING THEREFROM NITRIFIED MATERIAL. JAMES HENRY REID, Readsboro, Vt., assignor to International Nitrogen Company, Cleveland, Ohio, a Corporation of Delaware. Filed Dec. 16, 1920. Serial No. 431,100. 6 Claims. (Cl. 204—63.)



5. The process of making nitrified material which comprises retorting a mixture to form a solid product and a combustible gas, furnacing the solid product to form a product capable of being nitrified and a combustible gas, and using at least a portion of the gases from such heating operations as fuel to heat the retort.

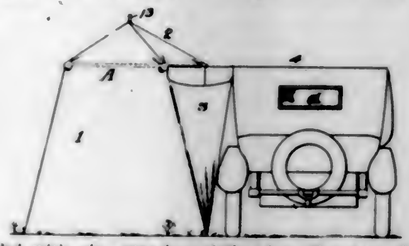
1,507,000. AUTOMATIC TELEPHONE EXCHANGE. JOHN G. ROBERTS, Chicago, Ill., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 10, 1906. Serial No. 305,272. 140 Claims. (Cl. 179—18.)



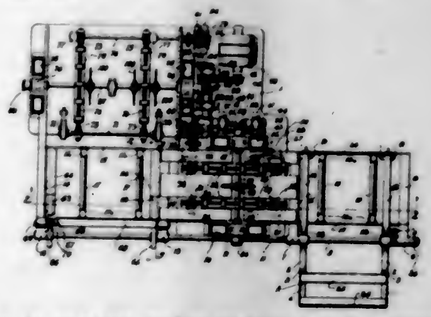
64. Connecting mechanism for a telephone exchange comprising a selecting switch and a motor magnet therefor, of an actuating circuit for said motor magnet and means for producing a plurality of short interruptions of current in said actuating circuit, said motor magnet being responsive upon the closure of one of said interruptions to start the movement of said selecting switch, and upon the occurrence of the next succeeding interruption to stop the movement thereof.

1,507,001. VALVE. JOHN F. ROBERTSON, Bellevue, Pa.; Nellie Eckert Robertson administratrix of said John F. Robertson, deceased. Filed Dec. 13, 1920. Serial No. 430,380. 20 Claims. (Cl. 277—51.)

3. Means for entrapping fluid leaking through a valve and for conducting said fluid to the outer atmosphere.



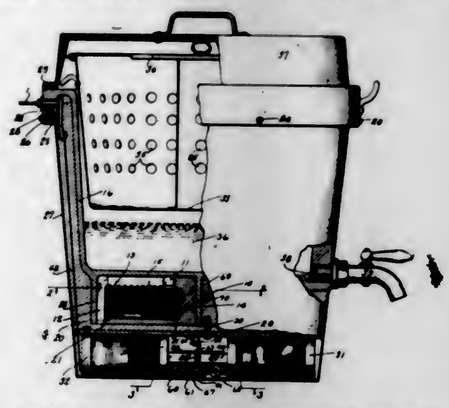
1,507,002. FABRIC-CLEANING APPARATUS. HERBERT C. ROEDER, Cleveland, Ohio, assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 27, 1920. Serial No. 420,066. 4 Claims. (Cl. 15—15.)



1. In an apparatus of the character described, the combination with a tubular member having a longitudinal slot to form a nozzle over which fabric to be cleaned may be passed, a movable member associated with said tubular member, means on said movable member cooperating with said slot whereby, when said movable member is actuated, the effective length of said slot may be varied, and a plurality of locking devices operative upon movement of said movable member and corresponding in number with the number of positions of adjustment of said movable member whereby to locate said movable member with respect to said tubular member, and to secure said movable member in said several positions thereof.

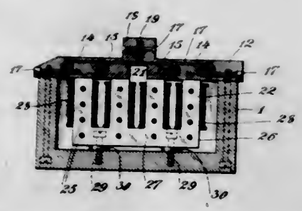
1,507,003. DEVICE FOR STRETCHING THE ROOF OF A TENT. PETER C. SCHAEFER, Denver, Colo. Filed Feb. 11, 1922. Serial No. 535,819. 1 Claim. (Cl. 135—3.)

In a structure of the character described, the combination of a tent provided with side walls and a roof and strips about the tent and providing pockets at the junction of the side walls and roof, and a stretcher frame comprising bars in said pockets having their ends extended beyond the ends of the pockets at the corners of the side walls, caps in threaded engagement with the ends of certain of said bars and their outer ends provided with eyes, and caps in threaded engagement with the ends of the remaining bars having their outer ends provided with pin extensions fitting into the eyes of the first bars to releasably connect the bars in frame forming relation to each other.



1,507,004. ICE KERFING OR SCORING MACHINE. THEODORE A. SCHRAISHUHN, Canton, Ohio. Filed Jan. 19, 1922. Serial No. 530,383. 10 Claims. (Cl. 125—13.)

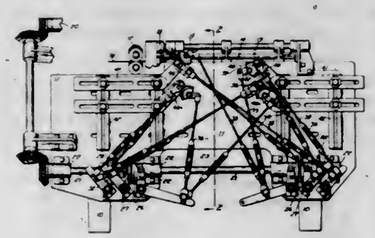
1. An ice kerfing machine including means for conveying a block of ice longitudinally through the machine, means for kerfing the upper and lower surfaces of the ice, a pusher for changing the direction of movement of the block of ice at right angles and means for kerfing the upper and lower surfaces of the block transversely.



1,507,005. ELECTRIC HEATER. DAVID E. SHAW and HAROLD N. SHAW, Milwaukee, Wis.; said David E. Shaw assignor to said Harold N. Shaw. Filed Dec. 29, 1920. Serial No. 433,868. 22 Claims. (Cl. 219—47.)

1. An electrical heating device, comprising a magnetic circuit, a primary coil connectable with a source of electrical supply, and a secondary circuit forming a

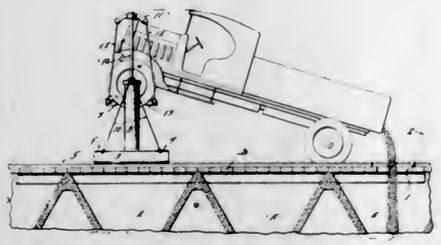
leating element, said heating element substantially presenting a continuous integral surface to and being in direct contact with the magnetic circuit and the substance to be heated.



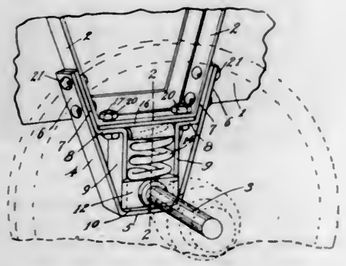
1,507,006. MAGNETIC CHUCK. FRANK L. SIMMONS, Woonsocket, R. I., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Oct. 28, 1918. Serial No. 259,939. 14 Claims. (Cl. 175—367.)

3. A magnetic chuck comprising in combination a housing, a face plate forming the cover for said housing, said face plate comprising a frame, a plurality of pole pieces within said frame, certain of said pole pieces extending upwardly to form a rib integral with said face plate, nonmagnetic material separating said pole pieces one from another and from said frame, and means for energizing said pole pieces.

5. As an article of manufacture a face plate for magnetic chucks and the like comprising in combination a frame, a plurality of pole pieces mounted in said frame, a phenol condensation product separating said pole pieces one from another and from said frame.



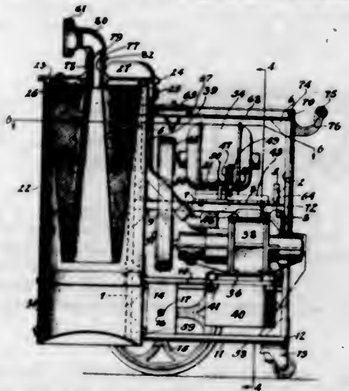
1,507,007. WIRE-FORMING MACHINE. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1923. Serial No. 610,812. 20 Claims. (Cl. 153—16.)



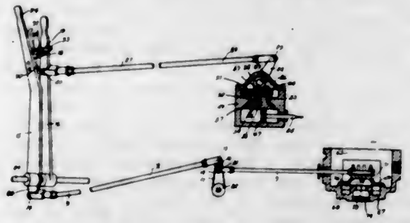
1. In a machine for forming wire, in combination, with means for feeding a length of wire into a certain position, means for releasing the wire, a table located below the holding means in inclined position, and stops located adjacent to the table, whereby when the wire is released it will roll down the table into contact with said stops and will be held thereby in a predetermined definite position on the table.

1,507,008. VEHICLE DUMPING APPARATUS. RICHARD C. STONE, St. Louis, Mo. Filed Mar. 3, 1920. Serial No. 363,362. 4 Claims. (Cl. 187—9.5.)

4. In a vehicle dumping apparatus, a carriage having side members separated from each other to provide a space for the front portion of the vehicle, connecting means whereby said side members are united, wheel-seats for the front wheels of the vehicle, hoisting devices comprising air cylinders one of which is located adjacent to each side member of the carriage, a piston operable in each of said cylinders, each of said pistons being provided with a piston rod, and depending hangers connecting said piston rods and said wheel-seats, vertical guides forming parts of the side members of the carriage, and thrust members connecting said wheel-seats and said vertical guides whereby said carriage may be moved horizontally in response to vertical movements of said wheel-seats, so as to permit said wheel-seats and the vehicle wheels thereon to move upwardly in an arc of a circle.



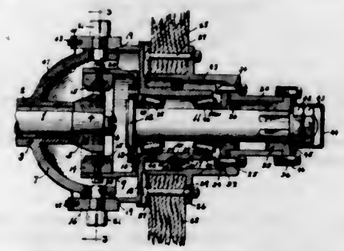
1,507,009. PORTABLE TAR AND ASPHALT HEATER FOR ROAD MAINTENANCE. HERMAN H. STRIETMANN, Cincinnati, Ohio, assignor to Littleford Brothers, Cincinnati, Ohio, a Partnership composed of John S. Littleford, Thomas S. Littleford, Roger S. Littleford, and John S. Littleford, jr. Filed Mar. 5, 1924. Serial No. 697,131. 3 Claims. (Cl. 280—124.)



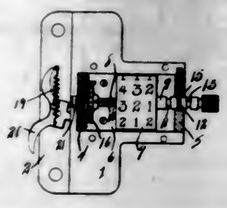
1. In a device of the character specified, the combination with the heater body and carrying axle with axle block, of an outside and inside strap engaging under said block, the inside strap having vertical portions to guide said block, a plate enclosing the inside strap, with a spring interposed between said axle block and said plate and said straps secured together and to the heater body.

1,507,010. VACUUM CLEANER. WILLIAM S. SUTTON, Rockford, Ill., assignor to American Radiator Company, Chicago, Ill.; a Corporation of New Jersey. Filed June 2, 1921. Serial No. 474,422. 2 Claims. (Cl. 183—37.)

1. A machine of the character described comprising a frame, wheels on said frame, wall members detachably secured to said frame, an exhauster and a motor mounted within said frame and operatively associated, a vertical separator secured to one end of said frame and arranged exteriorly with respect thereto, and forming a rigid end wall of said casing, a dust collecting receptacle detachably secured to the base of said separator, and means for operatively connecting said separator with said exhauster, substantially as specified.

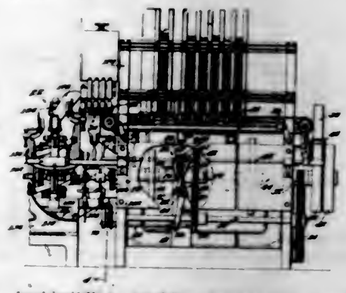


1,507,011. ENGINE AND CLUTCH CONTROLLING MECHANISM. CHARLES A. WEBER, Lorain, Ohio, assignor to The Thew Shovel Company, Lorain, Ohio, a Corporation of Ohio. Filed Mar. 26, 1921. Serial No. 455,889. 11 Claims. (Cl. 74—107.)



1. In combination, an engine, a clutch, a hoist drum, said clutch being adapted to link said engine and said drum, a steam ram, said ram controlling said clutch, an engine controlling valve, a ram controlling valve, separate mechanisms for operating each of said valves including operating levers, and means for coupling said levers together, each of said mechanisms being adapted to be operated by its lever when said levers are uncoupled and to be operated in unison by the actuation of one of said levers when said levers are coupled.

1,507,012. VEHICLE DRIVING AND STEERING MECHANISM. JOHN J. WEIER, Birmingham, Mich. Filed Apr. 8, 1922. Serial No. 550,707. 3 Claims. (Cl. 180—43.)

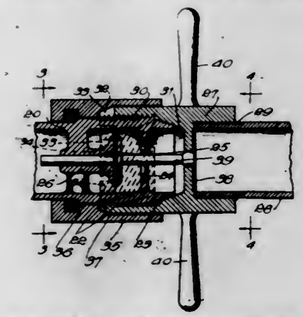


1. A steering and driving mechanism for motor vehicles, comprising a driving shaft and a housing therefor, a head on the end of said housing, a spindle pivotally connected to said housing and comprising a cylindrical outer end, a pair of roller bearings mounted within the cylindrical end of the spindle, a stub-axle journaled in said bearings, a wheel hub extending over the outer end of the stub-axle, a bushing secured within the hub and slidable upon the stub-axle and adapted to engage one of said bearings to adjust said bearings, and means to operatively connect the outer ends of the hub and stub-axle.

1,507,013. INDICATOR FOR LINOTYPE COMPOSITORS. THOMAS E. WINDLE, Fort Worth, Tex. Filed Sept. 11, 1923. Serial No. 662,142. 4 Claims. (Cl. 235—118.)

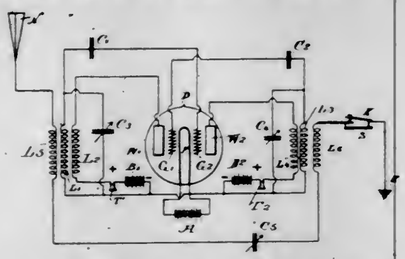
1. An indicator for linotype compositors comprising a casing provided with a port, a cylinder journalled in and axially adjustable therewith and provided with a plurality of rows of digits around the periphery thereof, and actuating means for revolving said cylinder.

1,507,014. HEEL-BUILDING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 1, 1920. Serial No. 362,358. 62 Claims. (Cl. 12—50.)



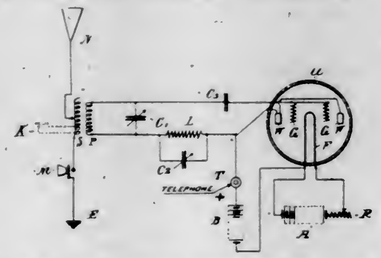
1. A heel-building machine having, in combination, means for periodically delivering successive series of heel lifts in a row, and means for assembling each row of lifts in the form of a heel-pile including a rotatable turret comprising a plurality of lift-receiving devices and rotatable in steps to bring said receiving devices successively into position to receive a series of lifts in a pile as the lifts comprising said series are advanced in succession thereto.

1,507,015. MEANS FOR CONVEYING STEAM AND OTHER FLUIDS UNDER PRESSURE. CHARLES F. ZIMMERMANN, Chicago, Ill., assignor to American Steam Conveyor Corporation, Chicago, Ill., a Corporation of New York. Filed Feb. 13, 1919. Serial No. 276,799. 8 Claims. (Cl. 284—4.)



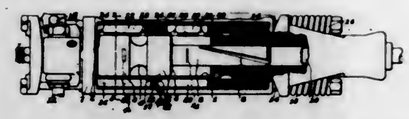
4. Means for conveying steam from the boiler of a locomotive to a steam-consuming device, comprising a conduit having one end adapted to be connected with a locomotive boiler, a second conduit having one end adapted to be secured to the steam-consuming device, a coupling member secured to the free end of said first-named conduit, a second coupling member secured to the free end of said second conduit, the said coupling mem-

bers being provided with co-acting means for yieldingly holding said coupling members together, comprising means for preventing said coupling members from becoming uncoupled by the pressure of the steam in said coupling members, a valve in said first-named coupling



member, and means on said second coupling member for holding said valve open when said coupling members are secured together, said valve being subjected to the pressure of the steam flowing in said first-named conduit, so as to automatically close when said coupling members are separated while steam is flowing therethrough.

1,507,016. RADIOSIGNALING SYSTEM. LEE DE FOREST, New York, N. Y., assignor to De Forest Radio Telephone and Telegraph Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 23, 1915. Serial No. 52,176. 41 Claims. (Cl. 250—8.)



35. A work circuit and means for generating and transmitting the generated oscillations to said work circuit, comprising an audion and its associated circuits.

1,507,017. WIRELESS TELEGRAPH AND TELEPHONE SYSTEM. LEE DE FOREST, New York, N. Y., assignor to Radio Telephone & Telegraph Company, a Corporation of Delaware. Filed Mar. 20, 1914. Serial No. 825,954. 21 Claims. (Cl. 250—9.)

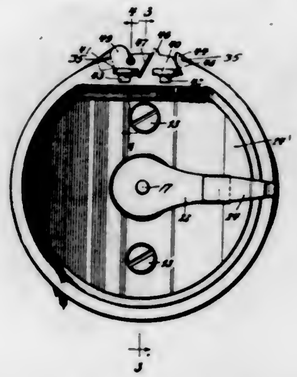
17. In a radio signaling system, an audion including hot and cold electrodes therein, said cold electrodes being located at relatively different distances from said hot electrode, circuits connecting each of said cold electrodes to said hot electrode, and means to cause said circuits to react upon each other.

1,507,018. PRESSURE-FLUID MOTOR. GEORGE H. GILMAN, Boston, Mass., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 31, 1917, Serial No. 209,791. Renewed Nov. 5, 1923. 47 Claims. (Cl. 121—17.)

1. In a pressure fluid motor, a cylinder, a piston therein, and means for effecting reciprocation of said piston including a plurality of fluid pressure supply ports having direct communication with a source of pressure through passages of different flow areas, and means for connecting said supply ports with the ends of the cylinder.

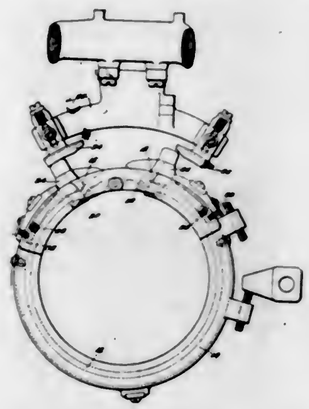
1,507,019. SIGNALING APPARATUS. BOWEN R. GOVER, Detroit, Mich. Filed Sept. 29, 1923. Serial No. 665,558. 1 Claim. (Cl. 200—59.)

A switch of the class described comprising a pair of rigid strips of insulating material, said strips being provided with central transverse grooves for the reception of the spoke of a steering wheel therebetween, bolts adjustably connecting the ends of said insulating strip for clamping the latter to said spoke and for connection with wires of a signal box, one of said strips having the heads of said bolts exposed at the outer side thereof and being provided with a raised portion between the heads of the bolts, a resilient strip secured against said raised portion and having screws extending thru the ends thereof opposed to the heads of the bolts, finger pieces secured upon the ends of said resilient strip by means of said screws, and depending skirts carried by the finger pfeces.



1,507,020. FILM-LUBRICATED BEARING. ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, assignor to Michell Bearings Limited, Westminster, England. Filed Sept. 12, 1922. Serial No. 587,722. 7 Claims. (Cl. 64—25.)

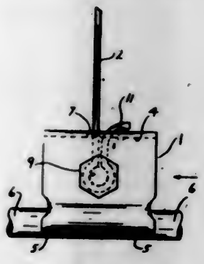
1. In a bearing of the character described, the combination of a rotary shaft, a plurality of bearing shoes each having a leading-in edge opposed to the direction of rotation of the shaft and a leading-out edge of less width transversely than the leading-in edge.



1,507,021. RHEOSTAT. JOHN H. MILLER, Oak Park, Ill. Filed Apr. 28, 1922, Serial No. 557,165. Renewed July 21, 1924. 19 Claims. (Cl. 219—38.)

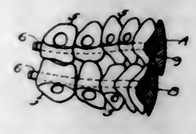
1. In a rheostat, a resistance element, a support therefor having a curved surface about which said element lies, a movable contact member positioned between said surface and said element, and means for adjusting said contact member along said curved surface, said resist-

ance element being maintained by its own tension in engagement with said contact member during the movement thereof.



1,507,022. WEB-HOLDER MECHANISM FOR KNITTING MACHINES. MAX C. MILLER, Cumberland Hill, R. I., assignor to Jenckes Knitting Machine Company, Pawtucket, R. I., a Corporation of Rhode Island. Original application filed Apr. 5, 1921, Serial No. 458,640. Divided and this application filed May 27, 1922. Serial No. 564,211. 7 Claims. (Cl. 66—26.)

1. A knitting machine having, in combination, a needle cylinder, web holders, a web holder cam ring, a cam carrier movable on the ring toward and away from its axis, and a web holder advancing cam and a web holder retracting cam in fixed relation on the carrier, and means for advancing and retracting the carrier during the knitting.



1,507,023. HANGER FOR TROLLEY WIRES AND THE LIKE. WINFORD GLADSTONE MILNE, Hamilton, Ontario, Canada, assignor to The N. Slater Company Limited, Hamilton, Ontario, Canada. Filed June 9, 1924. Serial No. 718,970. 4 Claims. (Cl. 191—43.)

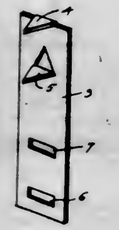
1. In a device of the class described, the combination with an ear, comprising opposed wire gripping jaws and a bolt mounted in the ear and operatively coacting with the jaws, of an ear support comprising a rod extending downwardly and bent backwardly upon itself about the

aforesaid bolt, and means formed on the ear and coacting with the backwardly bent portion of the rod for preventing the straightening out of said bent portion.

1,507,024. ARTIFICIAL TOOTH. CARLTON I. MONSON, Denver, Colo. Filed Jan. 16, 1922. Serial No. 529,611. 4 Claims. (Cl. 32—4.)

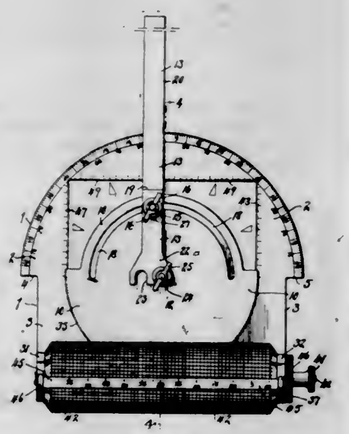
4. As a new article of manufacture, upper and lower sets of artificial teeth adapted to be set in opposed dental mountings, bands tying the teeth of each set together in true anatomical arrangement, and means connecting the two sets in correct occlusion for anatomical articulation.

1,507,025. INDEX BOOK FOR FILING SYSTEMS. CHARLES F. MCBEE, Athens, Ohio, assignor to The McBee Binder Company, Athens, Ohio. Filed Nov. 17, 1921. Serial No. 515,818. 3 Claims. (Cl. 283—36.)



1. An index book for filing systems comprising the embodiment of a group of leaves containing a classified list of allied industries, and an identifying character for each of same with a classified list of subjects pertaining to possible correspondence matters, and an identifying character for each subject with a classified list of keywords pertaining to the subjects and an identifying character for each of the same, referring the operator to the page of the book on which the particular subject is listed.

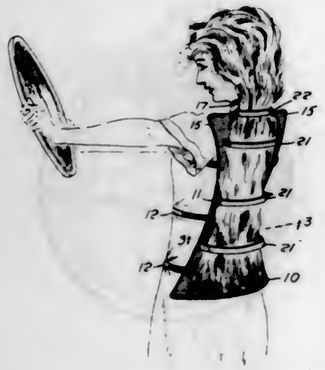
1,507,026. HARNESS-REPAIR DEVICE. GEORGE O. MCKOUN, Elwood, Nebr. Filed July 21, 1922. Serial No. 576,560. 1 Claim. (Cl. 24—265.)



A device of the class described comprising an elongated body member adapted to be folded back upon itself intermediate its ends, one of said folded portions having

tranaversely extending slots formed therein adjacent the free end and folded portion thereof respectively, the other folded portion having a prong formed integrally on the free end thereof, an additional prong struck up from

the body of said last mentioned folded portion, said prongs adapted to extend through a member enclosed between said folded portions and receivable in said slots, the ends of said prongs being adapted to be bent back upon the outer face of said first mentioned folded portion.

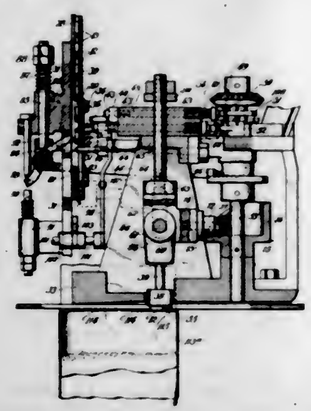


1,507,027. PROTRACTOR. JOHN D. MCLEOD, Oakmont, Pa. Filed June 3, 1922. Serial No. 565,636. 13 Claims. (Cl. 33—75.)

1. A device comprising a base, an arm pivotally mounted upon the base and extending radially therefrom, a cylinder rotatably mounted upon the base, gearing interposed between the arm and the cylinder for communicating a relative motion between the arm, and the cylinder, said cylinder having graduations arranged thereon and a reading bar mounted adjacent to the cylinder.

1,507,028. HAIR DRIER. ROSE M. POTTER, Lakeland, Fla. Filed Apr. 2, 1921. Serial No. 457,848. 2 Claims. (Cl. 34—26.)

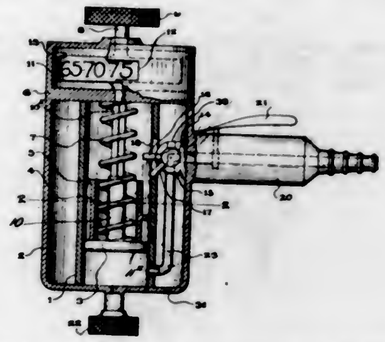
1. A hair drier comprising a flexible sheet of material adapted to overlie the back of a person, body encircling means carried by said sheet at points spaced longitudinally thereof, and hair encircling means carried by the sheet



at points spaced longitudinally thereof for retaining hair extending along and within the lines of said sheet.

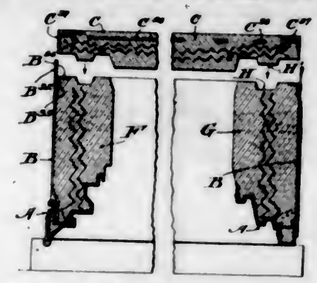
1,507,029. VERMIN EXTERMINATOR. ROBERT W. PRITTIE, Toronto, Ontario, Canada. Filed Dec. 30, 1920. Serial No. 434,171. 2 Claims. (Cl. 167—6.)

1. A compound for exterminating vermin including phosphorus, glycerine, tartar emetic, and a vehicle.



2. A compound for exterminating vermin including phosphorus, glycerine, carbon bisulphide, tartar emetic, caramel and a vehicle.

1,507,030. CARTON-CAPPING MECHANISM. WILLIAM RUSSELL REDD, Oak Park, Ill., assignor to The Morton Salt Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 31, 1921. Serial No. 526,343. 12 Claims. (Cl. 226—92.)

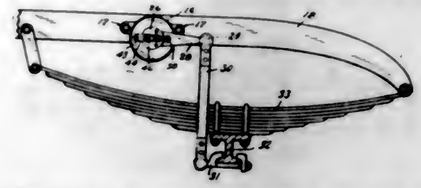


1. A capping machine comprising a chute adapted to receive a column of caps, a capping head mounted to move from the chute to the capping point and convey caps one at a time to the capping point, stop mechanism adapted to arrest the advance of the column of caps during the capping operation, and safety appliances adapted to be actuated by the presence of an undelivered cap to continue the arresting action of the stop mechanism when the capping head returns to receiving position with an undelivered cap, substantially as described.

1,507,031. PRESSURE GAUGE. HAROLD L. SCHIEBER, Caspian, Mich. Filed Oct. 30, 1922. Serial No. 597,960. 4 Claims. (Cl. 50—35.)

3. In a pressure gauge, the combination of a casing, a cylinder in said casing, a spring backed piston contained in said cylinder and movable rectilinearly and about its axis relative thereto, manual means for setting said piston, a pet cock adapted to be connected with a source of fluid pressure supply, and a connection between the said pet cock and said piston cylinder.

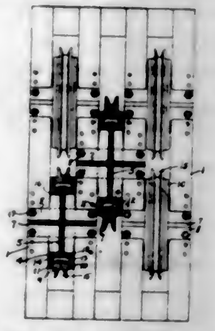
1,507,032. PROCESS OF FABRICATING FIRE-RESISTING SAFES. FRED A. SCHMITZ, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a Corporation of Ohio. Filed Mar. 31, 1923. Serial No. 629,192. 8 Claims. (Cl. 25—130.)



1. A process for making fireproof safes which consists first in preliminarily fabricating the door frame with a reinforcing frame, then forming a mold with said door frame as its bottom and subsequently placing a cementitious substance in the mold on top of the door frame and about the reinforcing frame.

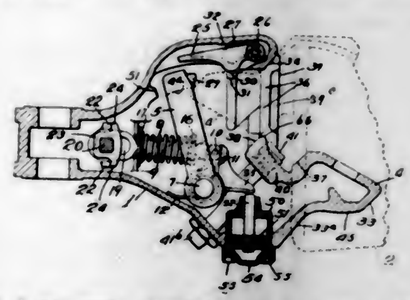
1,507,033. LIQUID LEATHER CLEANER. AARON T. SEARCY, Chicago, Ill. Filed Jan. 30, 1922. Serial No. 532,862. 1 Claim. (Cl. 87—5.)

A liquid leather cleaner consisting of a solution of a mixture of 10 pounds of starch dissolved in 5 quarts of hot water and 10 bars of standard size of soap dissolved in 3 quarts of hot water, a dye, and benzoate of soda, boiled with 18 gallons of hot water.



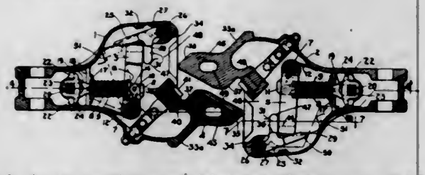
1,507,034. SPRING BRAKE. BENJAMIN F. SHIELDS, CHARLES G. CROMBIE, and GEORGE A. WINDELL, Seattle, Wash. Filed Dec. 20, 1921. Serial No. 523,701. 9 Claims. (Cl. 188—130.)

1. A spring brake for connection to the frame and axle of a spring supported vehicle, embodying brake means, having a constant neutral zone of operation corresponding to a predetermined normal vibratory movement between said frame and axle and in which it offers no resistance



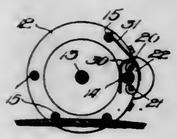
to said vibratory movement, said brake means being arranged to offer resistance to movement in either direction outside of said constant neutral zone.

1,507,035. CROWN BLOCK. WALTER C. TROUT, Lufkin, Tex. Filed Apr. 30, 1923. Serial No. 635,629. 6 Claims. (Cl. 254—190.)



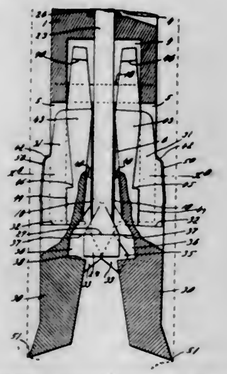
1. A crown block comprising a horizontally disposed frame, a series of pulley bearings on said frame, each bearing comprising an annular vertically arranged track, radially extending marginal flanges on said track forming a channel, a central vertically arranged supporting web for said track, laterally extending plates forming brackets on said web adapted to rest on said frame to support said track, and pulley rings rotatable in said channel on said track.

1,507,036. CAR COUPLER. HERBERT E. VAN DORN, Chicago, Ill. Filed Oct. 17, 1917. Serial No. 197,060. 13 Claims. (Cl. 213—76.)



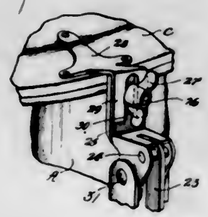
1. A car coupler comprising a hollow coupler head, a coupling part connected therewith, a pivotal locking part contained within said hollow coupler head, said locking part adapted to engage the coupling part of the adjacent coupler head, and a fluid actuated unlocking device for moving said locking part to its unlocked position, said unlocking device contained within said hollow coupler head between said locking part and the front end of the coupler head.

1,507,037. CAR COUPLER. HERBERT E. VAN DORN, Chicago, Ill. Filed Dec. 4, 1915. Serial No. 64,946. 21 Claims. (Cl. 213—76.)



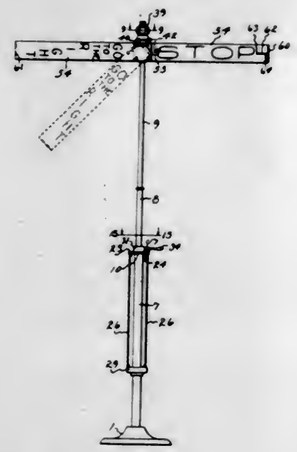
1. A car coupler comprising a hollow coupler head, a coupling part connected therewith, a pivoted locking part contained within said hollow coupler head, said locking part pivoted near one end, the other end being free, said locking part provided with a receiving opening into which the coupling part of the adjacent coupler head is received when the parts are in their coupled position, means for moving said locking part to its unlocked position, and a holding device within the hollow coupler head for holding said locking part in its unlocked position.

1,507,038. FISHING REEL. JOHN T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed July 29, 1922. Serial No. 578,410. 4 Claims. (Cl. 242—84.4.)



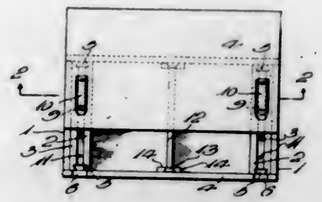
4. In a fishing reel, the combination of a carriage having two parallel holes extended through its body, a pair of guide rods extending through the holes and providing a guide whereon the carriage may freely slide there being also a socket extending into the carriage from one side thereof equidistantly from the two guides, a pawl disposed partly within the socket, means providing a combined retainer for the pawl and a propeller for the carriage consisting of a reversely threaded traversing shaft arranged to one side of the carriage in operative relation to the pawl therein, and a shield extending lengthwise of the traversing shaft and partially overlying the carriage and guiding means therefor, substantially as described.

1,507,039. UNDERREAMER. WILLIAM E. YOULE, Los Angeles, Calif. Filed Aug. 9, 1921. Serial No. 491,017. 25 Claims. (Cl. 255—75.)



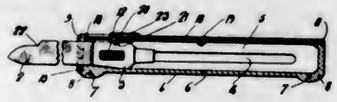
1. An underreamer comprising a body having slideways, cutters slidable therein, and means for translating the cutters, the body and cutters having cooperating surfaces causing an expansion and maintenance of the cutters during their translation, in an intermediate expanded relation, and thereafter in a completely expanded relation.

1,507,040. RECEPTACLE. LOTHAR R. ZIFFERER, Columbia, Pa. Filed May 3, 1923. Serial No. 636,342. 5 Claims. (Cl. 220—36.)



1. In combination with a receptacle, a cover provided with a downwardly depending arm adjacent its periphery, lifting means for the cover including an upwardly extending movable arm adapted to lie adjacent the cover arm, and clamping means rigidly securing the two arms together whereby an operative connection is established between the cover and its lifting means, substantially as described.

1,507,041. TRAFFIC SIGNAL. ORRIN W. BEEHLER, Thompsonville, Conn., and LLOYD B. COGSWELL, Springfield, Mass.; said Cogswell assignor to said Beehler. Filed Mar. 9, 1921. Serial No. 450,911. 24 Claims. (Cl. 116—63.)



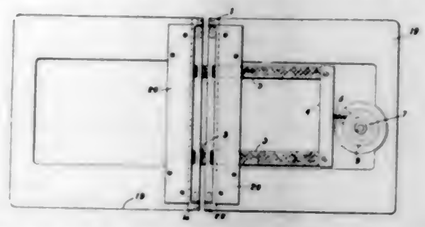
19. In a traffic signal having an extensible support and active and passive signal members, the combination of a signal lantern cooperative with said members and comprising a casing having a plurality of windows, colored panels in said windows with the diametrically opposed windows of the same color, a movable shell having open and colored windows being located in said casing and adapted when moved to juxtapose open or colored windows opposite the windows of said casing for producing active or passive signals, and means for manually moving said shell.

1,507,042. KNOCKDOWN BOX. JOHN LEWIS HINKLEY, Greenville, Ohio. Filed Apr. 16, 1923. Serial No. 632,502. 3 Claims. (Cl. 217—12.)

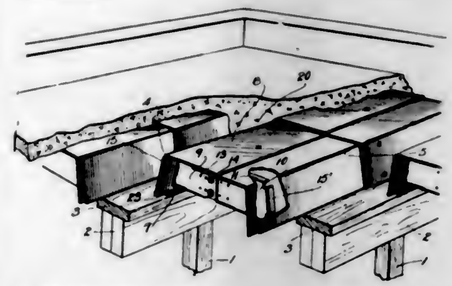
1. A knock-down box comprising a pair of end frames, the side-pieces of which are provided with undercut grooves, and a top, bottom and sides having transversely disposed undercut ribs adapted to be slidably received in said grooves, and ends carried by said frames.

1,507,043. POCKETKNIFE. GEORGE EDWIN BLOW, Stevenage, England. Filed Jan. 15, 1924. Serial No. 686,323. 11 Claims. (Cl. 30—10.)

1. In a pocket knife, a casing, at least one blade slidably mounted therein, sharpening means arranged at the end of the casing to operate on the cutting edge of the blade, spring means to hold the cutting edge of the blade in engagement with the sharpening means and a locking device for securing the blade in the open or closed position.



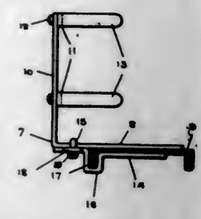
1,507,044. ADVERTISING NOVELTY. SOLOMON BRUCK, Los Angeles, Calif. Filed Sept. 8, 1923. Serial No. 661,640. 8 Claims. (Cl. 40—1.5.)



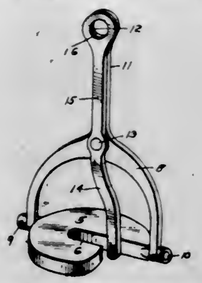
6. An advertising novelty comprising a hollow shell with human features depicted thereon, and having a slit therein and streamers associated with the slit.

1,507,045. LOOSE-LEAF BINDER. HAROLD OSMOND BURROUGHS and ERIC STANLEY BURROUGHS, Liverpool, England. Filed Jan. 15, 1923. Serial No. 612,805. 3 Claims. (Cl. 129—41.)

1. A loose leaf binding mechanism, comprising, binding elements connected to a common yoke, a ratchet disc by the rotation of which the binding elements are tightened, a flexible cord winding on the disc and connected to the yoke, a spring controlled pawl normally engaging the ratchet, a cam surface on the disc, an abutment on the disc, a key for operating the disc, said key having a projection which engages the abutment and rotates the disc when the key is turned one way, but engages the cam and causes the key to disengage the pawl when the key is turned the other way.



1,507,046. ADJUSTABLE FORM. BENJAMIN F. COCKERELL and ALBERT COMER, Kansas City, Mo. Filed Oct. 8, 1923. Serial No. 667,207. 10 Claims. (Cl. 25—131.5.)

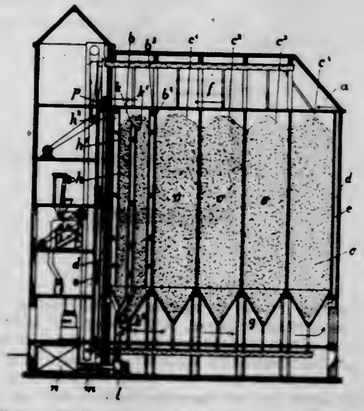


1. An adjustable form for concrete structures comprising two members, each consisting of an angle plate, each plate having an upright portion and a horizontal portion, the upright portions having stiffening members at their lower edges to rest upon soffit boards and pairs of brace members connecting the first two members, one brace member of each pair engaging an upright portion of one of the first two members, the inner ends of the brace members of each pair overlapping one another and means for adjustably connecting the brace members.

1,507,047. LUGGAGE CARRIER. FRANK A. DEGNER, Salem, S. Dak. Filed Apr. 24, 1923. Serial No. 634,308. 7 Claims. (Cl. 224—293.)

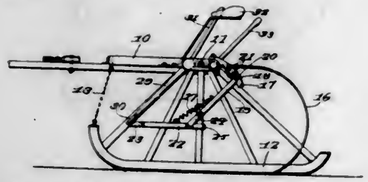
1. A luggage carrier comprising a wall having a foot to bear on a running board, a clamping bar under said foot, one terminal of said bar being arranged to extend under and bear upwardly against said board, the other terminal portion of said bar being substantially flush with said board beyond the edge thereof, and means for clamping said foot on the last named terminal portion of said bar.

1,507,048. ELEVATOR FOR PUMP RODS. JOHN PAUL DEVLIN, Dallas City, Pa. Filed June 4, 1924. Serial No. 717,827. 2 Claims. (Cl. 294—21.)



1. A device of the character described comprising a plate, a bail pivoted thereto and having an eye for engagement by an element of the hoisting tackle, and an element pivoted to said bail and likewise having an eye adapted to be engaged by the said element of the hoisting tackle and comprising a part which lies in a guarding position with respect to the plate whenever said eyes are aligned.

1,507,049. PROCESS OF TREATING AND PRODUCING CORRECTED HALFTONE PLATES OR METALLIC PRINTING PLATES. JULIUS DICKERT, Chicago, Ill. Filed July 24, 1922. Serial No. 576,996. 18 Claims. (Cl. 101—401.3.)

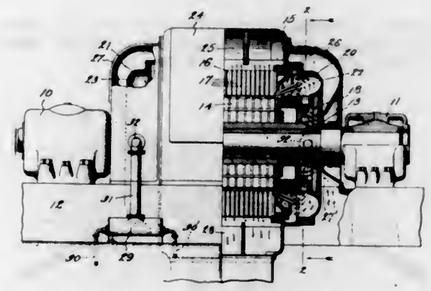


1. A process of treating half-tone plates, electrotype plates and other metallic printing plates which comprises etching an image on the surface of a make-ready sheet corresponding with the image on the printing side of a metallic printing plate to be made ready, then forcing the etched surface of the make-ready sheet against the printing surface of such metallic printing plate by means of pressure, thereby impressing upon the printing surface of the metallic printing plate the image which is etched upon the surface of the make-ready sheet.

1,507,050. PROCESS FOR THE STORAGE OF GRAIN. KARL DIENST, Charlottenburg, near Berlin, Germany. Filed Apr. 19, 1921. Serial No. 462,786. 4 Claims. (Cl. 99—14.)

1. The method of storing grain, which comprises circulating cold air through the grain and then storing the grain while cold without access to the outer air and without circulation through the grain, maintaining the low temperature of the grain during its storage without access to the cooling medium.

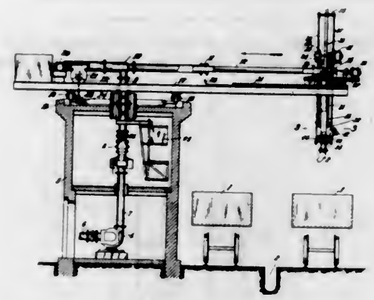
1,507,051. SLED-RUNNER HAYRAKE. GEORGE E. EVEY, Lisco, Nebr. Filed Dec. 29, 1921. Serial No. 525,615. 2 Claims. (Cl. 56—386.)



1. The combination with the frame and rake of a dumping rake, of a rearwardly and downwardly curved arm carried by one end of the rake and movable therewith, an arm pivotally mounted on and extending normally forward from said curved arm, a second arm pivotally connected adjacent one end to the outer end of the last-mentioned pivoted arm, a transverse head on the pivotal end of the second arm for limiting its movement with respect to the first pivoted arm, and an arm carried by the frame arranged to be swung into engagement with the second pivoted arm to engage the free end thereof in the ground whereby to produce the rearward movement of the arms and the lifting of the rake upon forward movement of the dumping rake.

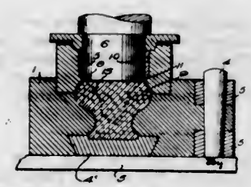
1,507,052. RAILWAY SIGNALING DEVICE. WILLIAM F. FANNON, Uhrichsville, Ohio, assignor of one-fourth to William C. Baker, Port Washington, Ohio. Filed Oct. 30, 1922. Serial No. 597,932. 2 Claims. (Cl. 246—196.)

2. A railway signaling device including electric signal circuits and means for closing said circuits comprising a base plate carried by a locomotive, a plurality of normally depending switch blades pivotally mounted on said base in spaced relation, a resilient member for engagement with each switch blade, a pair of U-shaped contacts arranged one on each side of each switch blade and mounted on the base adapted to receive the respective blade for closing the corresponding circuit, each pair of contacts being connected in the same circuit and each switch blade being adapted to close said circuit when engaging either contact, said resilient member frictionally holding the switch blade, means for operating the switch blades to engage either contact through track mounted instrumentalities, a looped member pivotally mounted adjacent said base and overlying the plate for engagement with the switch blades when in engagement with their contacts, and means for moving said member on its pivot adapted to disengage the switch arms from the contacts and restore them to normal depending position.



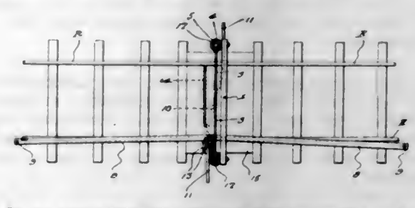
1,507,053. METHOD AND APPARATUS FOR EXTINGUISHING GENERATOR FIRES. CURTIS B. FLORY, Forest Hills, and FRANK A. EPPS, New York, N. Y., assignors to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 5, 1921. Serial No. 505,587. 10 Claims. (Cl. 169—14.)

1. The method of extinguishing fires in electric generators of the type in which a draft or current of air is forced through the generator and through the windings thereof in the normal operation of the same which consists in introducing a fire extinguishing foam compound into the generator in time of fire and introducing the



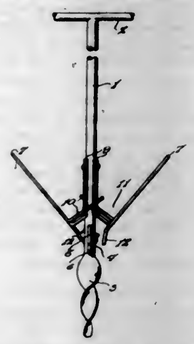
said foam compound into the path of the air current, whereby the foam is carried by the air current through the generator and the windings for extinguishing the fire therein.

1,507,054. HYDRAULIC UNLOADER. KARL FÖLSCHE, Halle-on-the-Saale, Germany. Filed Aug. 15, 1921. Serial No. 492,454. 7 Claims. (Cl. 299—73.)



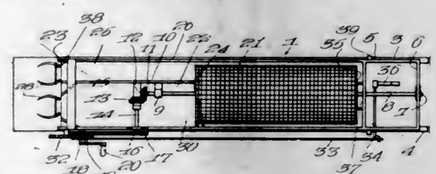
1. In a hydraulic unloading device a nozzle inclined to the horizontal, means to raise and lower the nozzle and means to bodily move said nozzle in a plane without changing its angular relation to the horizontal.

1,507,055. METHODS OF MAKING MOLDED GLASSWARE AND APPARATUS THEREFOR. ALBERT H. FORGER, Los Angeles, Calif. Filed May 11, 1922. Serial No. 560,198. 4 Claims. (Cl. 49—29.)



1. The method of molding solid glassware which comprises placing molten glass in a cup arranged above a mold and forcing said glass downwardly into said mold to form an article, the glass remaining in said cup being connected to said article by a thin ring.

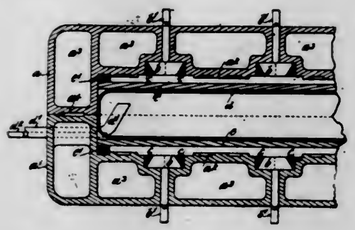
1,507,056. AUTOMATIC MINE DOOR. ANTHONY GODLEY, West Frankfort, Ill. Filed June 4, 1924. Serial No. 717,757. 1 Claim. (Cl. 246—304.)



In an automatic mine door, a supporting frame adapted for transverse disposition across a track, doors having posts at their outer ends pivotally mounted from said frame, pinions rigidly fixed to the lower ends of the door posts, a rack bar extending between said posts, the rack teeth meshing with the teeth of the respective pinions, a return spring attached at one end to the rack bar and anchored at its opposite end to a stationary part of the structure, a supplemental car actuated rail adapted for disposition alongside of a main rail of the track, the supplemental rail being pivoted and anchored at its outer end, and a rigid connection between the inner free end of said rail and said rack bar for imparting movement to the latter when the rail is swung upon its pivot by the car.

1,507,057. POSTHOLE DIGGER. GEORGE M. GRANT, Oakland, Calif. Filed June 15, 1922. Serial No. 568,635. 2 Claims. (Cl. 255—70.)

1. A tool for the purposes set forth comprising a stem, a drill carried by the stem, a radially disposed cutter extending from the stem at the upper end of the drill, and reversely arranged inclined wings secured to the opposite sides of the stem above the cutter and each provided with a guard plate adjacent its lower edge and at one side of the stem.

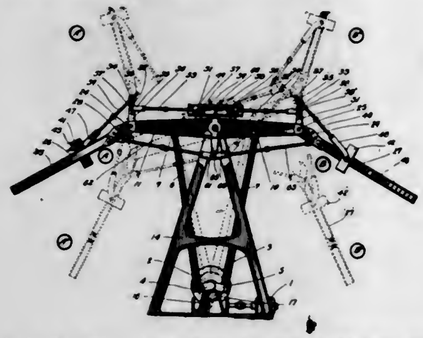


1,507,058. SORTING MACHINE. CARL M. HANNA, Del Norte, Colo. Filed June 2, 1921. Serial No. 474,353. 14 Claims. (Cl. 130—32.)

1. A device of the character described consisting of a trough having an endless conveyor bottom throughout its length, a division wall, a hopper, a shaft parallel

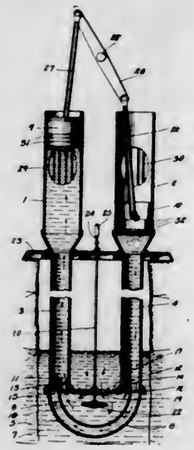
with said conveyor supported by said hopper and division wall forming two passages, a cylindrical screen fixedly mounted upon said shaft to rotate therewith said screen having open ends one of which aligns with said hopper and the other of which aligns with one of said passages.

1,507,059. APPARATUS FOR THE VULCANIZATION OE ARTICLES OF RUBBER, RUBBER SUBSTITUTES, AND THE LIKE. HAROLD HAWTHORN and HARRY AUGUSTUS HUNTLEY, London, England. Filed July 28, 1922. Serial No. 578,224. 1 Claim. (Cl. 18—38.)



A vulcanizing mould for producing simultaneously two separate sheets or articles of india rubber comprising a two part mould, each part of which is the counterpart of the other, each part is provided with an internal recess, the surface of which has the shape, pattern or configuration of the exterior surface of the finished article and is provided with separate steam jacketing to avoid making a fluid tight joint between the meeting edges, removable supports and core pieces for holding adjuncts within the mould which it is desired to incorporate in the finished article, means for securing the two parts of the mould together, a closed resilient receptacle adapted to be contained within the cavity formed by the internal recesses in the two parts when assembled, distance pieces in the edges of the recesses to govern the thickness of the finished sheet, a pair of loose cover plates engaging said distance pieces and between which is placed the resilient receptacle and means for introducing fluid to distend the said receptacle so as to force the rubber mixture into intimate contact with the interior surfaces of the mould and adjuncts temporarily held therein, as set forth.

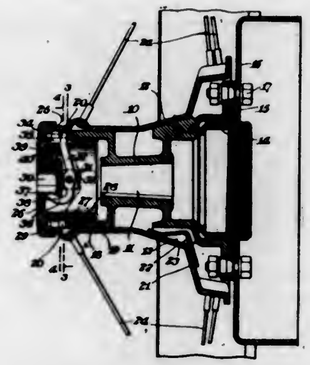
1,507,060. APPARATUS FOR GENERATING GAS. SETH HAYES, Cleveland, Ohio. Filed Aug. 21, 1920. Serial No. 404,988. 5 Claims. (Cl. 48—114.)



1. In apparatus of the class described, the combination of a liquid holder open at its upper end, a bell telescopically fitting said holder and arranged to collect gas in its upper portion, and a detachable device for closing the lower end of said bell and holding material therein, said device being formed with a groove through which the liquid in the holder may flow to permit reactions in said bell.

1,507,061. POWER TRANSMISSION. FRED D. HOFFMAN, Kansas City, Mo. Filed Oct. 8, 1923. Serial No. 667,262. 17 Claims. (Cl. 74—14.)

1. In a power transmission, a frame, a walking beam on the frame, means for actuating the walking beam, pendulum arms carried by the respective ends of the walking beam, weights on the pendulum arms and means for sliding the weights in alternate directions.



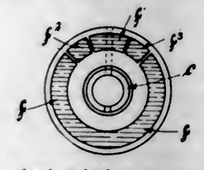
1,507,062. PUMP. FRED D. HOFFMAN, Kansas City, Mo. Filed Oct. 10, 1923. Serial No. 667,646. 12 Claims. (Cl. 103—75.)

1. A pump comprising two cylinders having inlets and outlets, a U-shaped connection between them, the U-shaped connection having inwardly opening valves in the walls thereof, pistons in the cylinders and means for simultaneously operating said pistons in opposite directions.

1,507,063. LOCKING DEVICE FOR THE HUB CAPS OF DEMOUNTABLE WHEELS. EMIL IBACH, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1920. Serial No. 367,463. 8 Claims. (Cl. 301—9.)

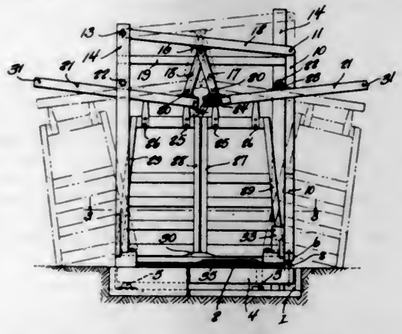
1. A device of the class described comprising the combination with an inner hub and an outer hub removably and non-rotatably mounted thereon, of a hub cap screwed on said inner hub having a socket of non-circular cross section in its face, and a latch pivoted to the base of said socket centrally of the hub cap and lying within the same, said latch having a locking arm extending

to one side of said pivot through the side wall of said hub cap, and an actuating arm extending on the other side of said pivot and curved so that the free end thereof projects through the side wall of said socket.



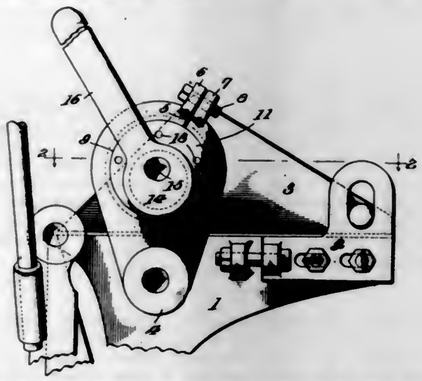
1,507,064. HOIST. JAMES E. JONES and WILHELM OTTO GRUENEWALD, Chicago, Ill.; said Gruenewald assignor of fifty-one per cent to said Jones. Filed May 20, 1922. Serial No. 562,336. 5 Claims. (Cl. 214—130.)

1. In a hoist, the combination with a frame of a pair of hoisting arms pivotally mounted thereon, each of the arms being extended from its pivotal connection first upwardly and rearwardly and then downwardly and rearwardly, whereby a bend is formed intermediate of its ends, means on the free ends of the arms for carrying a load, a connection between the arms in the region of the bend in each, piston mechanism mounted on the frame and adapted to exert an upward and forward force against the connection between the arms, means for admitting fluid pressure to and exhausting the same from the piston mechanism, controlling means therefor, including an inlet valve and an outlet valve, and means for imparting movements to the two valves, having connections, one adapted to be engaged by the load when received on the hoisting arms, whereby the inlet valve is opened to cause said arms to rise, and the other adapted to be engaged by the arms when the same have risen to a desired point whereby the exhaust valve is opened to permit a return movement of the arms, substantially as described.



1,507,065. COMMUTATOR OR ROTARY IGNITION CURRENT DISTRIBUTOR FOR INTERNAL-COMBUSTION ENGINES. JOHN JUDGE, Manchester, England. Filed Aug. 22, 1922. Serial No. 583,583. 2 Claims. (Cl. 200—28.)

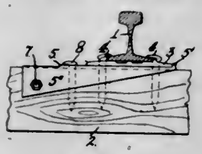
1. Commutators or rotary ignition current distributors comprising an outer casing formed of insulating material recessed to receive a rotary distributor disc, a series of brushes slidably mounted in said recess, a rotary distributor disc, a metal ring formed in segments secured to said disc and with one segment electrically connected



to the source of electrical current, said ring constituting a continuous metal track for the brushes on the casing, substantially as described.

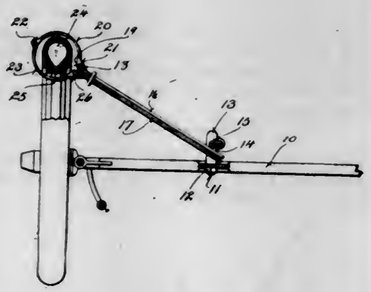
1,507,066. FARM GATE. JOSEPH KAHLE, Tomahawk, Wis. Filed Jan. 27, 1923. Serial No. 615,239. 3 Claims. (Cl. 39—18.)

3. An automatic gate comprising a pivotally mounted platform with the pivot points thereof located adjacent a lateral side of such platform, the other side of said platform being adapted to be depressed, a track pivotally mounted above and transversely of said platform, link mechanism connecting said track to said platform, means adapted to travel upon said track, and a gate suspended from said means.



1,507,067. CORNICE BRAKE. JOHN F. KIDDER, Burlington, Vt. Filed Apr. 19, 1921. Serial No. 462,691. 1 Claim. (Cl. 153—16.)

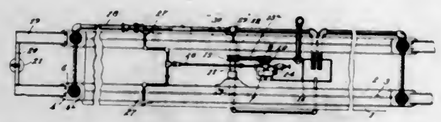
A cornice brake having a bed forming a fixed jaw, an adjustable support carried by said jaw, a movable jaw mounted in said support, said movable jaw being provided with a laterally extending stud pin at one end, a link pivotally connected to the fixed jaw below



said movable jaw and extending upwardly opposite said movable jaw, said link having an opening provided with a concave wall forming an annular groove and provided with a split portion provided with laterally extending ears, a bolt connecting said ears together, an adjustable eccentric arranged within the opening of said link having a peripheral wall corresponding in shape to the wall of said opening, said eccentric having an opening to receive a second eccentric, the last mentioned eccentric being provided with an opening to receive said stud pin and a handle carried by the last mentioned eccentric for operating said movable jaw.

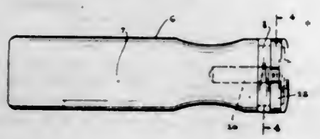
1,507,068. CURVE RAIL PLATE. WALTER H. KIRKBRIDE, Palo Alto, Calif. Filed May 7, 1924. Serial No. 711,623. 6 Claims. (Cl. 238—299.)

1. In a railway-rail fastening, in combination with a rail, a tie, a tie-plate underlying the rail, and spikes engaging the rail and passing through the tie-plate into the tie, a supplementary plate underlying the tie-plate and resting on the tie, the rail engaging spikes passing through said supplementary plate; and means for securing said supplementary plate to the tie independently of the rail-engaging spikes.



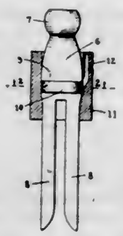
1,507,069. VEHICLE LOCK. JAMES KLAILA, Rio, Wis. Filed May 7, 1923. Serial No. 637,154. 2 Claims. (Cl. 188—31.)

1. The combination of a pin secured to the front axle of an automobile, a link having an opening therein adjacent an end thereof, a second link having an opening therein adjacent the end thereof, said openings being adjacent each other, said pin extending through said opening, means securing the other ends of said links to the wheel and a padlock having the shackle thereof directed through an opening in said pin preventing removal of said links.



1,507,070. PLANER LUBRICATING DEVICE. GEORGE H. LANGEN and CARL E. LINDEN, Cincinnati, Ohio, assignors to The Cincinnati Planer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 9, 1920. Serial No. 429,333. 9 Claims. (Cl. 184—5.)

1. The combination with a planer bed, having interspaced table carrying rails, and a table driving mechanism, of an oil pump mounted on the bed intermediate the rails, connections from the pump to the carrying rails and to an oil supply return oil connections from the carrying rails, said pump and connections being secured to the planer bed and the connections terminating in a series of pipes, located within a defined space, said

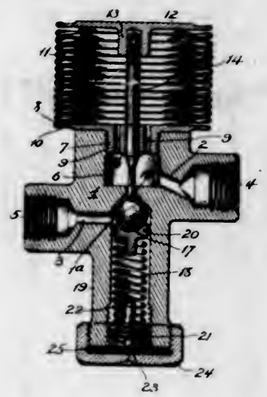


table, pump mechanism and driving mechanism being so arranged that a tank can be inserted between the rails into operative relation with said connections, without dismounting any substantial parts, and a tank adapted to be so set.

1,507,071. TOOL-HANDLE FERRULE. WILLIAM LAUBER, Milwaukee, Wis. Filed Aug. 28, 1922. Serial No. 584,802. 2 Claims. (Cl. 145—61.)

1. A tool handle, comprising a handle member having an annular groove spaced from one end of the handle and longitudinal grooves communicating therewith, and a metallic ferrule member secured on said handle member and entering said grooves and covering one end of said handle member, said ferrule member having an annular band portion filling said annular groove at a distance from the end of the handle to protect the handle against splitting.

1,507,072. CLOTHESPIN AND METHOD OF MAKING THE SAME. WILLIAM LAUBER, Milwaukee, Wis. Filed Dec. 26, 1922. Serial No. 609,013. 2 Claims. (Cl. 24—138.)



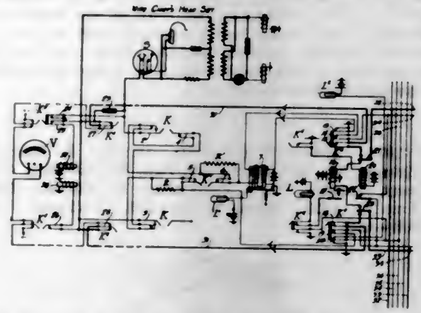
1. A clothes pin provided with a shank portion and a bifurcated portion and having a recess extending around the shank portion adjacent the bifurcated portion, and a reinforcing metal band mounted in the annular recess and in a condition of having been poured into the recess around the pin while in a molten state, the outer surface of said band at both outer edges being flush with the outer surface of the shank portion.

1,507,073. PRESSURE-REDUCING VALVE. ALFRED S. LEWIS, West Chester, Pa. Filed Nov. 30, 1921. Serial No. 518,840. 4 Claims. (Cl. 50—23.)

1. In a valve of the character specified, the combination of a casing having a valve seat therein and provided with ducts above and below said valve seat, said casing having a chamber above the valve seat and in

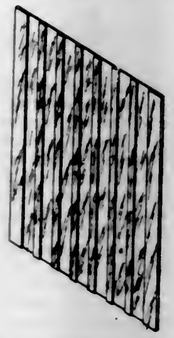
constant free communication with one of said ducts, said latter duct and chamber being of different capacities, a collapsible chamber communicating with the chamber in the casing above the valve seat, a valve, a spring

operable to press said valve against its seat, and a stem or plunger secured to a movable member of the enclosure of said collapsible chamber and operable to move said valve from its seat against the resistance of said spring.



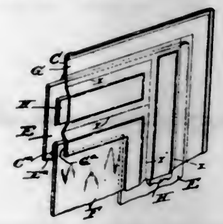
1,507,074. DEMOUNTABLE RIM. LLOYD LEWIS, Muskegon, Mich. Filed June 25, 1923. Serial No. 647,540. 3 Claims. (Cl. 301—35.)

1. A demountable rim comprising a pair of sections each provided with a flange, cross plates adapted to engage each section for holding the same together, and a series of spring clips each adapted to engage a cross plate for holding the same in position.



1,507,075. WIRE CHIEF'S TEST CIRCUIT FOR TELEPHONE SYSTEMS. CLARENCE E. LOMAX, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1921. Serial No. 470,537. 10 Claims. (Cl. 179—27.)

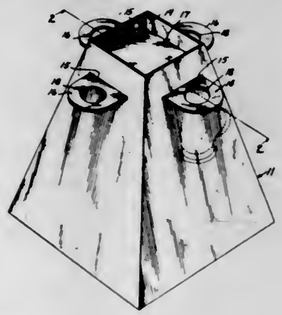
1. In a wire chief's testing system, a testing circuit comprising apparatus for testing subscribers' lines, a series of automatic switches controlled from said test circuit to connect the same with a subscriber's line, a marginal relay for controlling the release of one of



said switches, a control circuit including said relay controlled by the wire chief, and means in said control circuit for preventing the release of another of said switches.

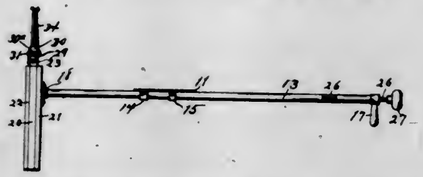
1,507,076. PROCESS FOR PREPARING WOODEN STORAGE-BATTERY SEPARATORS. ALBERT H. LUHRMAN, Cincinnati, Ohio. Filed Nov. 16, 1921. Serial No. 515,666. 5 Claims. (Cl. 204—38.)

1. The process of boiling wood in a solution adapted to remove resins, etc., from the cells of the wood, washing the wood after such boiling, and then boiling the wood in a solution containing a neutral soluble crystalline material adapted to enter the cells of the wood, and to crystallize in the cells as the wood is dried.



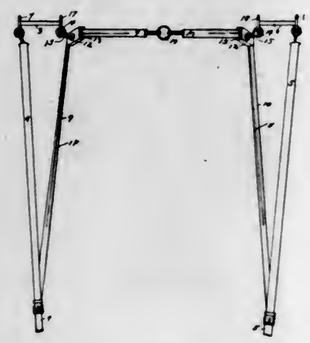
1,507,077. WINDOW FOR MOTOR-DRIVEN VEHICLES. ARTHUR MAAKE, Detroit, Mich. Filed June 29, 1922. Serial No. 571,732. 2 Claims. (Cl. 296—145.)

1. In a device of the character described, the combination of a curtain provided with a window opening, a lining for the curtain, a frame constructed of paste board or the like fitted between the curtain and lining with the marginal edge of the curtain overlapping the inner



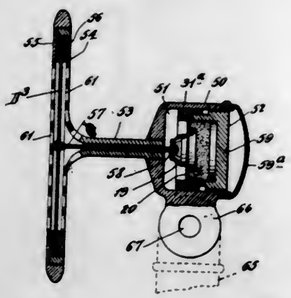
marginal edge of said frame, a sheet of glass fitted to the frame and cemented between the marginal edges of the curtain and lining, a plurality of wooden strips adjacent to and overlapping the body of the frame and covered by said lining, and a plural number of lines of stitches extending through the lining, frame, and curtain on each side of said wooden strips to secure the wooden strips against displacement.

1,507,078. DISPLAY HOLDER. DUNCAN B. MACKIE, Chicago, Ill., assignor to Benjamin Electric Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1923. Serial No. 644,533. 7 Claims. (Cl. 206—44.)



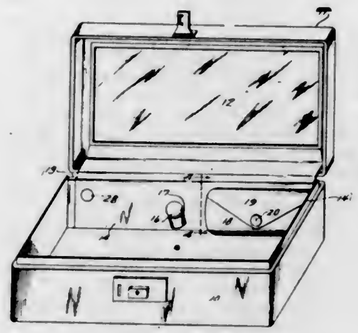
7. A combined shipping container and display holder comprising a hollow upright tapering base of sheet material, and having means for supporting devices to be shipped and displayed around the outside of the upper smaller end of the base and having means for supporting the devices to be shipped and stored around the inside of the lower larger end of the base, said means for supporting devices to be shipped and displayed around the outside of the base comprising a member of sheet material having a body portion lying inside said base adjacent the smaller end thereof and having ear portions extending through the walls of said base, said ear portions having openings therein to receive the devices, and said means for supporting the devices to be shipped and stored around the inside of the base comprising a member of sheet material having a body portion lying in a plane transverse to the axis of the base and extending to the inner side of the base, and having flap portions engaging the inner side of the base and secured thereto, said body portion having openings therein to receive the devices to be shipped and stored.

1,507,079. VIGNETTING ATTACHMENT FOR CAMERAS. LEWIS W. MARBLE, Marengo, Iowa; Hattie E. Marble administratrix of said Lewis W. Marble, deceased. Filed Mar. 9, 1921, Serial No. 451,061. Renewed Feb. 1, 1924. 3 Claims. (Cl. 95—65.)



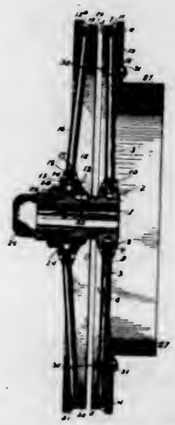
1. A vignetting attachment for cameras, comprising a suitable support, a tube mounted for oscillation on an axis perpendicular to said support and also for oscillation and rectilinear reciprocation on an axis parallel with and longitudinally of said support, a guide carried by said tube, a stem mounted for vertical reciprocation in said guide, a rod in said tube adapted for manual oscillation relative thereto, a rack and gear connection between said stem and rod, a holder on said stem, and adjusting means between said holder and stem.

1,507,080. DRIVING REIN. MOOSH MEGRDCHIAN, Fresno, Calif. Filed Dec. 12, 1923. Serial No. 680,108. 3 Claims. (Cl. 54—36.)



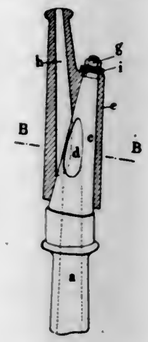
3. In combination with a set of harness for two horses including a bit for each horse, a main line for each horse, the right line being attached at one end to the outside of the bit on the right side, and the left main line being attached to the outside of the bit on the left side, a branch line attached to the right line between the ends thereof having a sliding snap hook thereon adapted to be attached to the inside of the bit on the right hand side, a branch line attached to the left line between the ends thereof having a sliding snap hook thereon adapted to be attached to the inside portion of the left bit, and means at the ends of said branch lines adapted to attach said ends together.

1,507,081. TELEPHONE TRANSMITTER. BENJAMIN F. MIESSNER, New York, N. Y., assignor, by mesne assignments, to The Magnavox Company, San Francisco, Calif., a Corporation of Arizona. Filed Mar. 12, 1919. Serial No. 282,155. 2 Claims. (Cl. 179—126.)



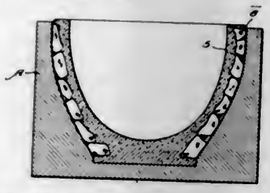
1. In a telephone transmitter, the combination of a casing having a tubular extension of small diameter, a diaphragm housing at the end of said extension, a diaphragm therein, a variable-resistance device in said casing, and a stem located movably and fitting closely in the bore of said extension and connecting said diaphragm with said resistance device, said diaphragm housing having apertures affording free and substantially equal access of air-pressure variations to both sides of the diaphragm.

1,507,082. VANITY CASE. SOMMERFIELD E. MILLER, Chicago, Ill. Filed Feb. 21, 1922. Serial No. 538,229. 1 Claim. (Cl. 240—8.4.)



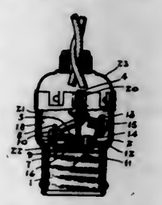
The combination with a case having a lining on the interior walls thereof, of an insulating plate intermediate one of the walls and the lining, a lamp, circuit wires and a concealed switch supported by the plate, a battery within the case, contacts between the battery and the circuit wires, a cover hingedly related to the case, and a mirror supported by the cover.

1,507,083. METAL WHEEL. WILLIAM HENRY MORGAN, Alliance, Ohio. Filed May 5, 1922. Serial No. 558,563. 6 Claims. (Cl. 301—67.)



3. A metal wheel comprising a hub provided with an annular series of socketed bosses, an adjustable member on said hub and provided with an annular series of socketed bosses, two separate felly members, each having interiorly threaded bosses, spokes insertable through the bosses on one felly member and having threaded heads to screw into said last-mentioned bosses and adapted to enter the socketed hub bosses, spokes insertable through the bosses of the other felly member and having threaded heads to screw into said bosses, said last-mentioned spokes adapted to enter the bosses on the member which is adjustable on the hub, and jam nuts on all of said spokes adjacent to the socketed bosses.

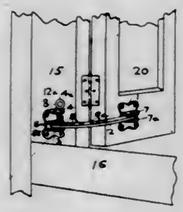
1,507,084. NOZZLE FOR SPRAYING LIQUIDS WITH ADJUSTABLE SCATTERING EFFECT. JACQUES HENRI MORISSEAU, Paris, France. Filed Nov. 27, 1922. Serial No. 603,685. 3 Claims. (Cl. 299—117.)



1. In a nozzle, a member having a tapering bore, a valve mounted in said member and rotatable about an axis, disposed obliquely to said bore and having an opening therein adapted to register with and correspondingly tapered to said bore.

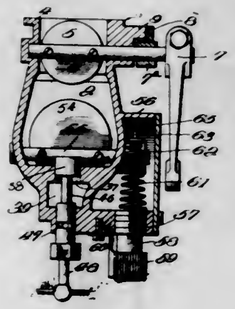
1,507,085. PROCESS OF MAKING ORNAMENTAL MASONRY ARTICLES. JOHN W. NEWMAN, Hendersonville, N. C. Filed Oct. 17, 1923. Serial No. 669,087. 2 Claims. (Cl. 18—61.)

1. The method of making ornamental masonry articles which comprises laying progressively a plurality of tiers of face stones against a mold face substantially removed from the horizontal; applying to the faces of the stones of each tier as formed a plastic backing of low fluidity; pressing such backing material between said stones to anchor the latter but not sufficiently to fill the interstices therebetween; finishing the interior surface of said backing material; permitting it to set and removing the finished article from the mold.



1,507,086. ELECTRIC-LAMP SOCKET. FREDERICK ORPEN, Toronto, Ontario, Canada. Filed Apr. 2, 1921. Serial No. 457,979. 2 Claims. (Cl. 173—358.)

1. In a lamp socket, the combination with the threaded metal shell, of a fibre disc secured to the outer side of the base of said shell, a fibre sheet bent in right angular form having one portion thereof secured to said disc and the other portion extending transversely

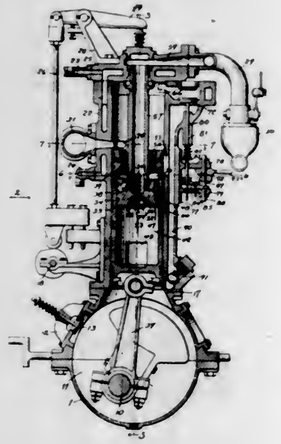


outward forming an insulating partition, a central electrical contact extending through and secured to said disc at one side of said partition, and an electrical contact connected with the threaded shell extending through said disc on the other side of said partition.

1,507,087. FASTENER FOR CASEMENT WINDOWS AND SUCH LIKE. WILLIAM CHARLES RANKIN, Hamilton, New Zealand, assignor of one-half to Joseph Bird, Hamilton, New Zealand. Filed Oct. 11, 1922. Serial No. 593,935. 1 Claim. (Cl. 292—266.)

A fastener for casement windows and the like comprising in combination a window frame, a horizontal swinging sash mounted on the frame, a bracket secured to the sash, a curved arm having one end pivoted to the bracket and provided with a series of openings, one side of the sash being provided with a slot for accommodating the inner portion of the arm when the sash is in a closed position, another bracket provided with a slot and secured to the frame in alignment with the slot therein so that the arm may slide therethrough, a plurality of suitably spaced lugs extending from the last mentioned bracket and provided with pairs of aligning openings and a spring controlled finger operated pin for engagement with either set of aligning apertures in the lugs of the second mentioned bracket and adapted for engagement with the openings in the arm and the openings in the arm being arranged out of parallelism with the sides thereof.

1,507,088. VALVE CONTROL FOR CARBURETORS. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Indiana. Original application filed Mar. 6, 1917, Serial No. 152,707. Divided and this application filed Oct. 23, 1917. Serial No. 198,046. 2 Claims. (Cl. 251—125.)



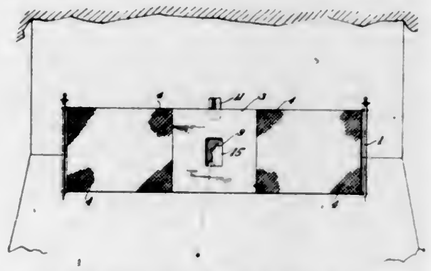
1. A carburetor comprising a casing having a suction controlled valve mounted therein, a pivoted valve stem upon which said valve is mounted, extending through the walls of said casing, an integral housing formed on said casing into which one end of said valve extends an arm mounted on said stem within said housing, an adjustable support arranged within said housing and a coiled spring carried by said adjustable support engaging said arm.

2. A carburetor comprising a casing having an integral housing, a valve stem extending through the walls of said casing having one end arranged within said housing, a suction controlled valve carried by said valve stem, an arm fixed on said stem within said housing having a pin at its free end, said housing being provided with a threaded opening, a hollow plug working in said threaded opening, said plug having a milled head and a spring arranged within said hollow plug having its free end arranged over the pin of said arm for retarding the movement thereof.

1,507,089. METHOD OF PRODUCING ALKALI-METAL XANTHATES. LUDWIG ROSENSTEIN, San Francisco, Calif. Filed Dec. 3, 1923. Serial No. 678,365. 9 Claims. (Cl. 260—98.)

3. A method of producing alkali metal xanthates which consists in bringing together an alkali metal hydroxide, water, alcohol and carbon bisulphide.

1,507,090. HIGH-COMPRESSION TWO-CYCLE ENGINE. HENRY RUEHMAN, Los Angeles, Calif. Filed May 14, 1923. Serial No. 638,867. 7 Claims. (Cl. 123—50.)

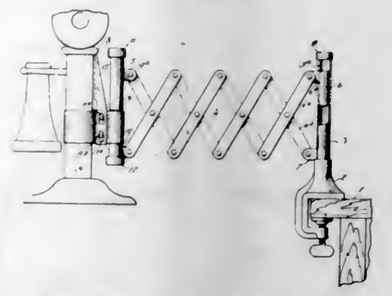


5. An engine having a crank case, an explosion chamber, a primary piston in the explosion chamber, a double-acting secondary piston in the primary piston, a tubular stem holding the secondary piston stationary, a carburetor in communication with the tubular stem, means whereby an intake of fuel is sucked through the tubular stem into the primary piston below the secondary piston during the explosion cycle and forced into the explosion chamber during the compression cycle, means whereby air is sucked into the crank case and into the primary piston above the secondary piston during the compression cycle and forced from the crank case and from the primary piston into the explosion chamber at the end of the explosion cycle, check valves for holding the sucked-in air, a check valve for admitting the compressed air to the explosion chamber and holding the explosion, and means for resisting the action of the latter check valve so as to limit the flow of air to the explosion chamber and make an air resistance to the explosion stroke.

1,507,091. PLUG. FREDRICK J. RUNSER, Cleveland, Ohio, assignor to The Byrne Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed July 29, 1922, Serial No. 578,394. Divided and this application filed May 9, 1923. Serial No. 637,624. 2 Claims. (Cl. 220—39.)

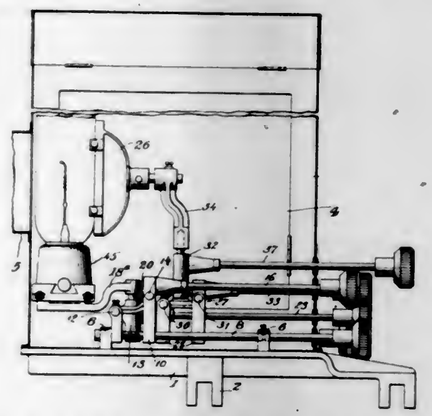
1. A plug for an opening in a container comprising a screw-threaded shank and an integral polygonal head having a gasket seat around said shank, the face of said seat being spaced from the under face of said head and the side faces of said head being substantially tangential to the circumference of said seat.

1,507,092. GOLF-PRACTICE APPARATUS. JOSEPH A. RYCHARDS, New York, N. Y. Filed May 14, 1923. Serial No. 638,785. 3 Claims. (Cl. 265—20.)



1. In a golf practice apparatus a stop sheet comprising three joined sections forming end sections and a central section, the central section corresponding to the "fairway" and being of form or appearance distinct from the end sections which correspond to the "rough," said stop sheet being mounted in forwardly inclined position relatively to the player and the central section being formed with an aperture, a swinging stop member disposed rearwardly of said aperture and also forwardly inclined, as and for the purpose set forth.

1,507,093. FOLDING CAN OPENER. KNUD FREDERIK SCHIONNING, Chicago, Ill. Filed Aug. 31, 1923. Serial No. 660,419. 1 Claim. (Cl. 30—3.)

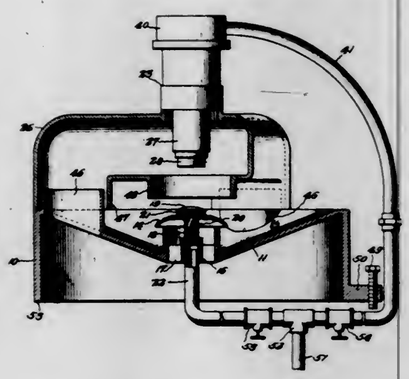


A can opener comprising a flat body portion, a blade hinged at one edge of said body portion and arranged to swing at right angles thereto, a portion of said blade being arranged to engage the edge of the body portion so as to limit its movement, said blade having a cutting edge terminating in a sharp point, said body portion having a recess to permit the entrance of a portion of the can, and being provided with a fulcrum point on the edge to which the blade is hinged, and a guard hinged to said body portion and having a part bent back upon itself, said bent back portion being arranged to envelop a portion of the body and the pointed edge of the blade adjacent thereto, thereby holding the blade in its folded position.

1,507,094. EXTENSION BRACKET. JOHN SCHOENBORN, Chicago, Ill. Filed Apr. 12, 1922. Serial No. 551,978. 5 Claims. (Cl. 248—1.)

1. In a telescoping extension bracket, a pair of posts, a lazy tongs bracket operatively combining said posts, a work supporting clamp attachable to one of said posts and to the work to be supported, said clamp made in two separable parts, and a detachable key combining said two parts, said key held in position by the weight of the work supported.

1,507,095. LAMP FOR PROJECTING APPARATUS. THEODORE F. UHLEMANN, Glen Morris, N. Y., assignor to Nicholas Power Company, Inc., New York, N. Y., a Corporation of Delaware. Filed July 2, 1920. Serial No. 393,602. Renewed Jan. 19, 1924. 6 Claims. (Cl. 88—24.)

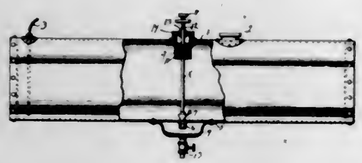


1. In a lighting equipment for projection apparatus, the combination of a light support, a reflector support and means for independently adjusting said supports in the same plane comprising a pair of guide rods upon which both said supports are mounted, power-transmitting connections between one of said rods and one of said supports, and power-transmitting connections between the other rod and the other support whereby the adjustment of each rod will effect the adjustment of one of said supports without adjusting the other.

1,507,096. LIQUID-FUEL BURNER. GEORGE VAN BALLEGOOIJEN, Zion, Ill. Filed Nov. 13, 1923. Serial No. 674,498. 3 Claims. (Cl. 158—64.)

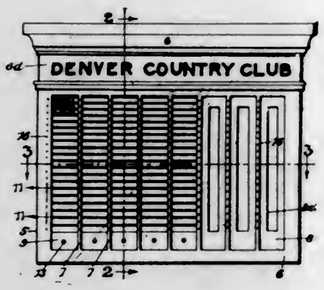
2. A liquid fuel burner comprising in combination, a base having a central depression and an opening centrally placed therein, an upstanding collar surrounding said opening, a spider centrally supported in said collar and having a screw threaded opening in its hub, a liquid fuel

conduit engaged with the screw threaded opening at its lower side, a hollow stem having screw threaded engagement with the upper portion of the opening of said hub, a flame spreader carried by said stem having a convex upper surface overlapping and spaced from the edge of said collar, a button provided with a stem having longi-



tudinal channels in its surface, said stem seated in said flame spreader stem, means to space said button above the upper surface of said flame spreader whereby fuel may flow through said hollow stem and gain access to the convex surface of said flame spreader, a flame jet supported above said button and adapted to project flame thereagainst, and means to admit fuel to said flame jet.

1,507,097. FIGURE TOY. FRANK VOREL, Hanover, Mont. Filed Oct. 5, 1922. Serial No. 592,610. 1 Claim. (Cl. 46—40.)

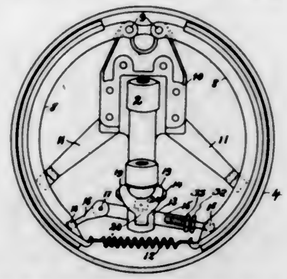


In a figure toy, a handle rod, a block slidably mounted thereon, a toy figure associated with the handle rod and block and embodying link connections between the body portion of the toy figure and the outer end of the handle rod, arms rigidly connected to said block and pivotally connected at their outer ends to the tail portion of said toy figure, the under side of the toy figure having a cutaway portion adjacent the head and throat of the same, an overbalanced lever within the cutaway portion rearwardly of the head, said lever being of curved formation with one end terminating at the head of the toy figure and a chin member for the head carried by the adjacent end of the lever with the chin member spaced from the head when the toy figure is horizontally positioned and with the exposed portion of the lever simulating the tongue of the toy figure.

1,507,098. GASOLINE TANK FOR MOTOR VEHICLES. DAVID D. WALKER, Mayfield, Idaho. Filed July 5, 1921. Serial No. 482,357. 1 Claim. (Cl. 210—57.)

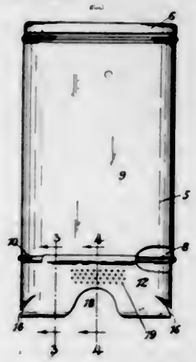
In combination, a vessel, a cup shaped collector attached to the bottom of the vessel and communicating therewith, a valve seat in the bottom of the vessel communicating with the collector, a valve in the vessel for cooperation with the valve seat, a valve stem associated with the valve, a compartment depending from the top of the vessel having its upper end open and its lower end provided with an apertured closure through which the valve stem projects, a spring on the valve stem within the compartment for normally holding the valve open, a cap on the open end of the compartment and provided with a threaded opening through which the valve stem extends, said valve stem being provided with threads adapted to engage the threaded opening of the cap whereby the valve may be moved to a closed position when desired.

1,507,099. WALL DIRECTORY. FREDERICK LIONEL WOOD, Denver, Colo. Filed June 25, 1923. Serial No. 647,643. 3 Claims. (Cl. 40—64.)



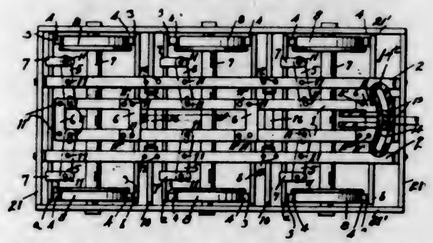
3. A wall directory comprising in combination, a frame knuckle mounted on an inclined pivot pin, the drum having a recess, a panel in said recess having upon its face, a plurality of transverse partitions which are grooved to provide open-ended slideways, and name plates movable in said slideways, the panel fitting between the sides of the recess to close the ends of the slideways when in place therein.

1,507,100. STEERING-WHEEL BRAKE. ALVIN M. YOCOM, Pottstown, Pa., assignor to The U. S. Axle Company, Pottstown, Pa., a Corporation of Delaware. Filed Dec. 23, 1922. Serial No. 608,668. 16 Claims. (Cl. 188—194.)



6. A brake for a steering wheel which is pivoted on an inclined axis, comprising the combination with the

carried by the wheel, and the brake shoes pivoted on said knuckle within said drum; of a toggle between the free ends of said shoes, a yoke member engaging but un-

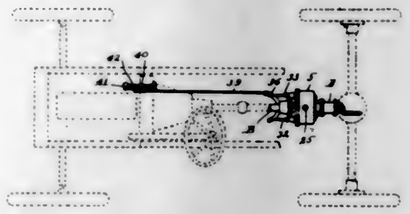


attached to said toggle, said member being slidable in the direction of the axis of said pivot pin, and means to slide said member to actuate said toggle.

1,507,101. MATCH BOX. JESSE F. YOUNG, Northport, Nebr. Filed Dec. 26, 1922. Serial No. 609,080. 1 Claim. (Cl. 206—38.)

An attachment for tobacco boxes comprising a one piece receptacle open at its top for its connection with the box and having end members and side-members formed integrally of one piece of metal, the side-members curving inwardly at the bottom of the receptacle to form a slot for the withdrawal of matches from the receptacle and the end-members of the sides being slit to permit of their moving apart for the passage of a match between them.

1,507,102. RAILWAY BRAKE. BARTOLOMEO AMENDOLA, San Francisco, Calif. Filed Oct. 25, 1922. Serial No. 596,770. 6 Claims. (Cl. 111—47.)

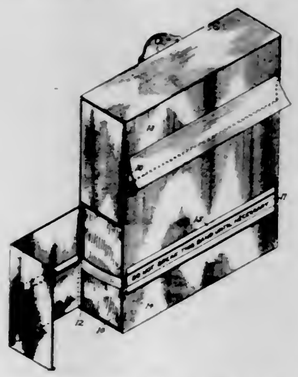


1. In a railroad car brake the combination with a car truck and its wheels of a pair of brake beams on opposite sides of each set of wheels, a slidable frame connected to the brake beams on one side of the wheels, and levers connecting the brake beams on the other side of the wheels to said frame, whereby movement in one direction causes the brake beams on both sides of the wheels to bear thereon.

1,507,103. POLE PROTECTOR. JOHN M. BAGWELL, Chico, Calif. Filed Aug. 5, 1922. Serial No. 579,839. 3 Claims. (Cl. 99—12.)

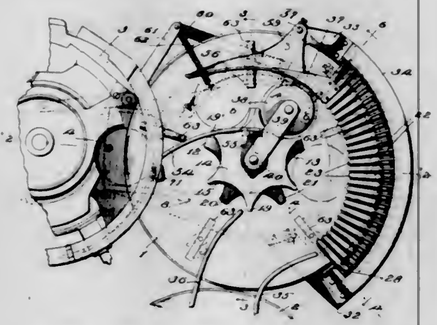
3. A device for impregnating a standing pole with a liquid preservative, comprising a casing having its inner face of a contour corresponding to that of a pole to which it is to be attached, and having its inner and upper edges flanged for the reception of elements which secure the casing on the pole, said casing having its top arranged at a downward inclination and provided with a normally closed inlet opening for a liquid preservative, the inner face of the casing, below the top thereof having a transverse opening through which is passed a centrally folded wick, the inner fold of which being immersed in the preservative, and the outer fold being forced by the casing into contacting engagement with the pole.

1,507,104. FLUID BRAKE. CURTIS E. BRADBURN and AUGUST FINKE, Garden City, Kans. Filed Apr. 2, 1923. Serial No. 629,346. 6 Claims. (Cl. 188—92.)



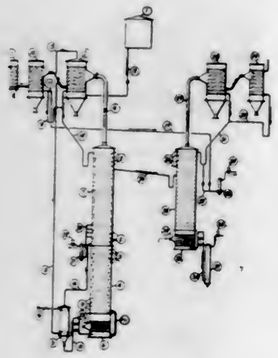
1. In a fluid brake the combination with a housing and a drive shaft therein, of a brake case supported by said housing and embodying a gear chamber and a fluid reservoir surrounding said gear chamber and separated therefrom by a partition, gears within the gear chamber, one of said gears being connected to and revolvable with the drive shaft and intermeshing with the companion gear to rotate the same and circulate the fluid through the gear case and the reservoir, valve chambers communicating with opposite sides of the gear chamber and the reservoir through ports in the partition, and valves operably mounted within said valve chambers to control the circulation of the fluid.

1,507,105. PROCESS OF OXIDIZING HYDROGEN SULPHIDE. HANNS CARSTENS, Leverkusen, near Cologne, ALFRED ENGELHARDT, Wiesdorf, near Cologne, and WOLF JOHANNES MÜLLER, Leverkusen, near Cologne, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Oct. 20, 1923. Serial No. 669,806. 18 Claims. (Cl. 23—10.)



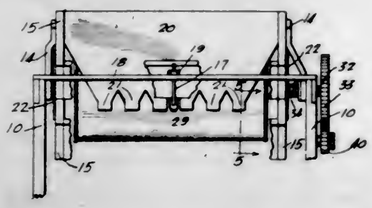
1. Process of oxidizing hydrogen sulphide which comprises contacting gas containing hydrogen sulphide and oxygen with porous silicic acid.

1,507,106. TOILET-PAPER PACKAGE. MAX M. COHN, San Francisco, Calif. Filed Sept. 18, 1923. Serial No. 663,383. 2 Claims. (Cl. 206—57.)



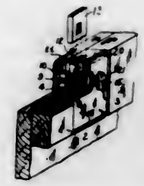
1. A toilet paper package for use in a duplex dispensing cabinet of a type having narrow slots in its front wall, through which the sheets are withdrawn, said package comprising a series of folded and interleaved sheets and a band surrounding the package and extending parallel to the line of fold of the sheets, said band being so disposed on the package as to register with the slot in the dispensing cabinet, and being of a size and character to permit of its being broken and removed through the said slot.

1,507,107. TIMING DEVICE FOR CAN MACHINES. JOHN COYLE, Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 14, 1921. Serial No. 437,214. 15 Claims. (Cl. 226—22.)



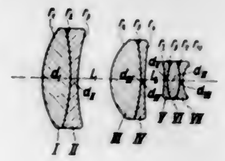
1. A timing device for filled cans including in combination, a continuously moving timing element having spaced arms forming pockets therebetween, stationary yielding means for forcing the cans laterally in succession into said pockets, and movable means associated with the timing element for engaging the cans and gradually restraining the entrance of the cans into said pockets.

1,507,108. PROCESS AND APPARATUS FOR THE CONTINUOUS DISTILLATION OF ALCOHOL. JAMES F. CYPHERS, Baltimore, Md. Filed Sept. 21, 1923. Serial No. 664,113. 20 Claims. (Cl. 195—15.)



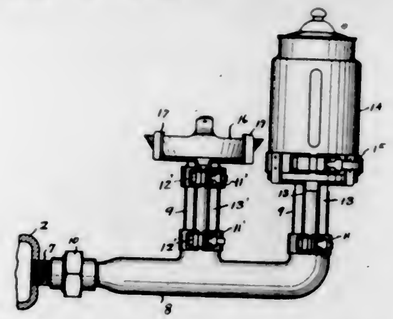
1. A process of purifying alcohol which consists in passing alcoholic vapors against a descending alcoholic stream rich in high boiling impurities, passing the residual unvaporized impurities against a current of ascending impure alcoholic vapors, removing the high boiling impurities at the zone of their greatest concentration and removing the residual impurities below said zone, withdrawing alcohol liquid freed from high boiling impurities and passing the same against a current of ascending alcoholic vapors rich in low boiling impurities and removing the alcohol at the point of its greatest purity and passing the vapors containing the low boiling impurities against a descending stream of impure alcoholic liquid, and removing said low boiling impurities at the point of their greatest concentration, substantially as set forth.

1,507,109. GRAIN SEPARATOR. WILLIAM B. DOYLE, Arago, Oreg. Filed June 27, 1921. Serial No. 480,591. 2 Claims. (Cl. 130—18.)



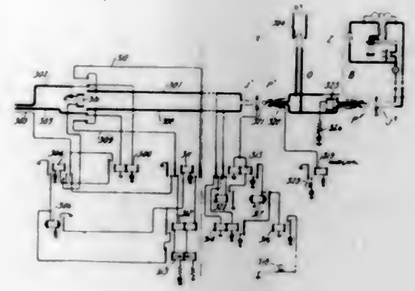
1. In a grain separator, an endless belt arranged for operation in an inclined plane, means for operating said belt including a shaft, and means for imparting lateral vibratory movement to said belt comprising fingers rigidly sustained on said shaft, a stub shaft, a cross arm secured to the stub shaft and engaging said fingers, a fixed cam engaging said fingers, and means for rotating said stub shaft whereby said fingers and cross arm cooperate to effect the driving of the first shaft, and said fingers and cam cooperate to effect a reciprocating movement of said shaft.

1,507,110. SECURITY BOX OR CASE. ROBERT HENDERSON DUNCAN, Epping, New South Wales, Australia. Filed Aug. 10, 1922. Serial No. 580,963. 6 Claims. (Cl. 292—148.)



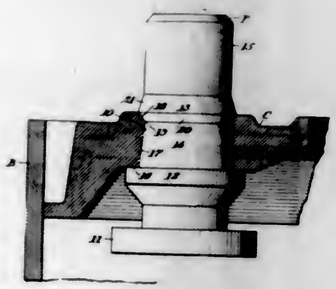
4. A metal sealing plate for the outer end of a spring pressed bolt carried in the end of a security box, said plate being provided with a portion adapted to be closed over said end of said bolt and a tongue integral with said portion adapted to seat against an abutment on said box.

1,507,111. LENS SYSTEM FOR GALILEAN TELESCOPES. HEINRICH ERFLE, deceased, late of Jena, Germany, by Isle Erfle, Jena, Germany, administratrix, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Dec. 6, 1923. Serial No. 678,985. 1 Claim. (Cl. 88—57.)



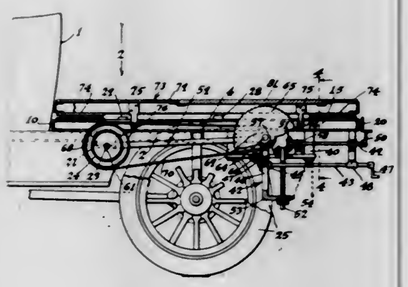
In a lens system for Galilean telescopes an objective consisting of two collective members each cemented in two parts, in each of which members the lens having the lower refractive index is facing the incident light, and a dispersive ocular cemented in three parts, the inner lens of this ocular being a flint lens.

1,507,112. COOKING ATTACHMENT FOR INTERNAL-COMBUSTION MOTORS. HENRY FREUND, Houston, Tex. Filed Feb. 25, 1924. Serial No. 695,934. 4 Claims. (Cl. 126—29.)



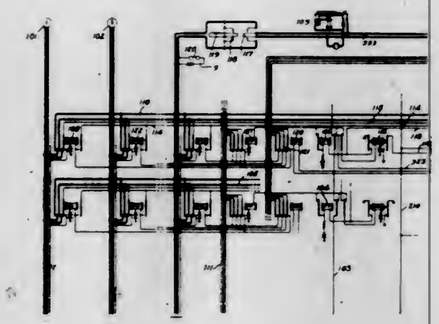
1. The combination with an internal combustion motor, of a tubular member connected into the exhaust manifold thereof, and formed with an upturned tubular neck, means for securing a utensil to be heated above the discharge end of said neck, said means including a releasable clamp adapted to be secured around said neck and clamp members attached to said clamp and formed to releasably engage with said utensil.

1,507,113. TELEPHONE-EXCHANGE SYSTEM. JOHN W. GOODERHAM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1920. Serial No. 417,421. 13 Claims. (Cl. 179—27.)



1. In a telephone exchange system, an originating office, a distant office, a trunk line extending between said offices, means at said first office for seizing said trunk line, means at said second office for extending a connection from said trunk line, a relay at the outgoing end of said trunk line responsive to the seizure thereof, means controlled by said relay and effective upon the release of said trunk line at its outgoing end, for rendering said trunk line busy at its outgoing end, and means controlled over said trunk line and effective upon the seizure of said trunk line and the subsequent release thereof, for maintaining said relay energized until connection with said trunk line has been disestablished at said distant office.

1,507,114. POST AND COVER SEALING MEANS. WALTER E. GOSSLING, New York, N. Y., assignor to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed July 30, 1920. Serial No. 400,013. 19 Claims. (Cl. 204—29.)



1. A method of securing a storage battery terminal post having spaced shoulders to a cell cover provided with an opening therethrough having a hard rubber wall initially of a shape to closely fit the part of said post between said shoulders, which comprises forcing said post into position in said opening and thereby expanding a portion of said hard rubber wall, the inherent resiliency of said hard rubber thereafter causing the expanded portion of said wall to contract into close contact with said post.

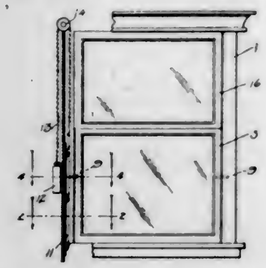
1,507,115. COMBINATION DELIVERY CAR AND SAW RIG. CHARLES E. HANCOCK, Bell, Calif., assignor of one-half to Daniel L. Moore, Bell, Calif. Filed Mar. 18, 1924. Serial No. 700,058. 6 Claims. (Cl. 143—43.)

1. An automobile having side frame bars and a rear cross bar, an extension frame permanently mounted upon the side frame bars and having a rear cross bar some distance back of the first cross bar, a saw rig frame mounted upon the extension frame, means for adjusting the saw rig frame forwardly and backwardly, a saw rig mounted upon the saw rig frame and having a driving shaft extending transversely, and pulleys upon the outer ends of the driving shaft adapted to run the saw rig by contact with the rear wheels of the automobile.

1,507,116. TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No. 396,143. 7 Claims. (Cl. 179—27.)

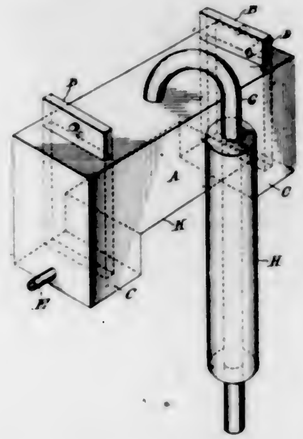
1. In a telephone system, telephone lines, trunk lines, a link circuit including two relays, means for seizing said link circuit, means for manipulating said link circuit to select one of said telephone lines, means for controlling said relays in one sequence to restore said link circuit to normal, means for manipulating said link circuit to select an idle one of said trunk lines, and means responsive to said last means for controlling said relays in another sequence to restore said link circuit to normal.

1,507,117. COMPACT CONTAINER. FRITZ R. JOHNSON, Providence, R. I. Filed Mar. 28, 1924. Serial No. 702,516. 4 Claims. (Cl. 132—83.)



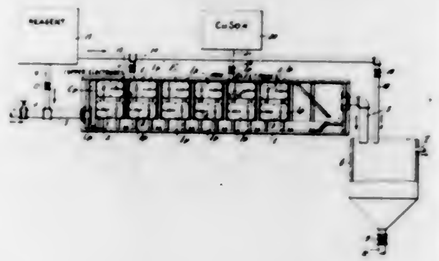
4. In a compact container, two hollow sections, a horizontal plate provided with a central depressed portion and with a curved marginal slot, an oscillatory member slidably supported by the plate in the slot, and a mirror member carried by the oscillatory member.

1,507,118. SUPPORTING DEVICE FOR FILM SPOOLS. WILHELM KABELITZ, Friedenau, near Berlin, Germany, assignor to the Firm of Optische Anstalt C. P. Goerz Aktiengesellschaft, Friedenau, near Berlin, Germany. Filed Aug. 30, 1921. Serial No. 496,947. 2 Claims. (Cl. 242—71.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



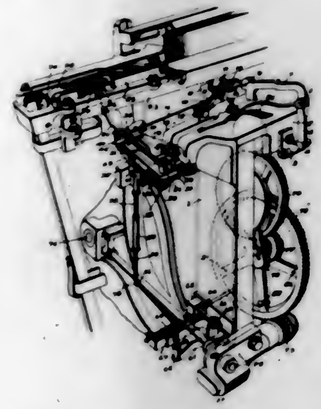
1. Supporting device for film spools, comprising an angle shaped bearing member for one end of the spool and an axially shiftable supporting member for the other end of the spool, the angle shaped bearing member being pivotably connected with a suitable currier by a pivot pin crossing the axis of the spool and adapted to swing about said pivot pin independently from said axially shiftable supporting member for the other spool end.

1,507,119. WINDOW CONSTRUCTION. CHARLES A. KARPENSTEIN, Chicago, Ill. Filed Apr. 13, 1922. Serial No. 552,260. 1 Claim. (Cl. 20—49.)



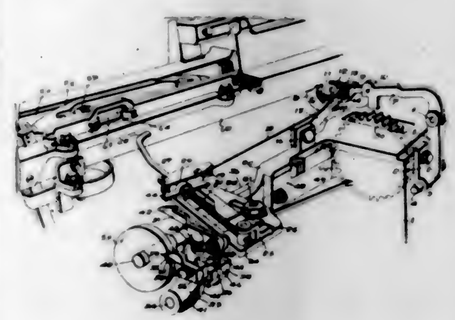
In a window construction, a sash having a groove in its side a metal plate lining said groove, a sash guide member pivotally secured to said plate and having a projection receivable in said groove, the means pivotally securing said plate and guide member together comprising a sleeve extending from said plate, and into said sash, and a pin carried by said guide member and slidably and rotatably received in said sleeve, a friction shoe, links connecting said shoe with said guide, said links extending at an angle with respect to said shoe and guide, a chain having one end secured to one of said links, a window frame having a groove therein, and a weight connected to said chain so as to cause said chain to swing said link and force the shoe into engagement with the wall of the groove in said window frame.

1,507,120. PROCESS OF HEATING AND DISTILLING LIQUIDS AND APPARATUS THEREFOR. GLENN A. KEEP, Elizabeth, N. J., and CLAYTON M. HOFF, Cleveland, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1922. Serial No. 564,512. 15 Claims. (Cl. 23—1.)



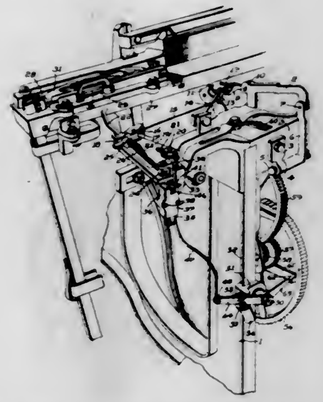
1. Process of heating liquid which comprises passing an alternating electric current through a body of liquid between electrodes, the minimum cross sectional area of the liquid in the path of the electric current being substantially less than the area of the electrodes in contact with the liquid.

1,507,121. ELECTROCHEMICAL TREATMENT OF LIQUIDS. CLARENCE P. LANDRETH, Philadelphia, Pa. Filed Apr. 6, 1923. Serial No. 630,208. 21 Claims. (Cl. 204—26.)



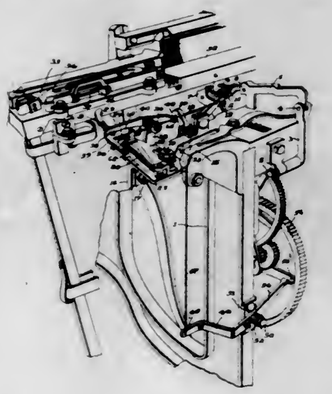
1. The method of treating liquid, as sewage, water, etc., which comprises introducing into the liquid a compound of copper, and thereafter passing current through the liquid in the presence of an electrode of iron.

1,507,122. FEELER MECHANISM FOR LOOMS. WILLIAM LANGLIRAND, New Bedford, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 15, 1923. Serial No. 639,090. 19 Claims. (Cl. 139—270.)



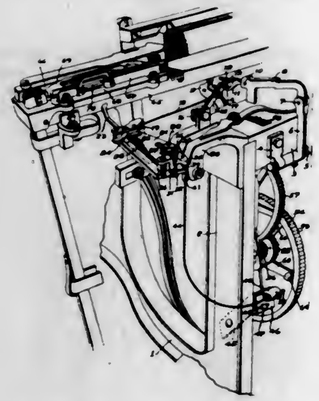
1. In a loom, the combination of the take-up mechanism for taking up the cloth as it is woven, a feeler to detect substantial exhaustion of filling in the shuttle and thereupon to initiate filling replenishment, and means including a controller and a part connected to the take-up mechanism of the loom for operating the controller at intervals to cause the feeler to have short periods of activity and intervening longer periods of inactivity during weaving with the same supply of filling in the shuttle prior to substantial exhaustion thereof.

1,507,123. FEELER MECHANISM FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 25, 1923. Serial No. 641,480. 17 Claims. (Cl. 139—270.)



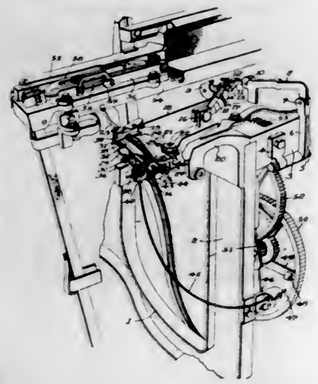
1. In a loom, the combination of a feeler to detect substantial exhaustion of the filling in the shuttle and thereupon initiate replenishment of filling, a feeler withdrawing and holding device to withdraw the feeler from cooperative relation with the filling and maintain it at rest, and means to operate said device to free the feeler at intervals during weaving with the same supply of filling in the shuttle that the feeler may have periods of activity and periods of inactivity with respect to the same filling in the shuttle.

1,507,124. FILLING-REPLENISHING MECHANISM FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 28, 1923. Serial No. 654,355. 13 Claims. (Cl. 139—270.)



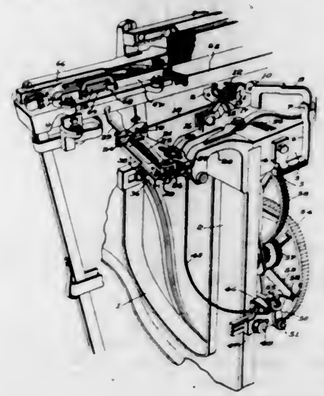
1. In a feeler mechanism for looms, the combination of a feeler to detect substantial exhaustion of the filling and thereupon initiate replenishment of filling, a pivoted detent for holding the feeler in frontward position for periods of inactivity, and means for exerting a thrust upon the detent when engaged with the feeler to cause the detent to turn upon its fulcrum and remove the feeler frontwardly from cooperative relation with the filling on detecting beats.

1,507,125. FEELER MECHANISM FOR LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 14, 1923. Serial No. 680,721. 11 Claims. (Cl. 139—270.)



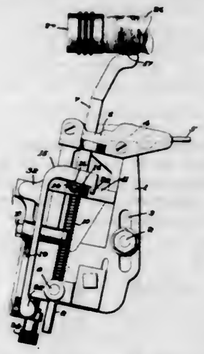
1. In a feeler mechanism for looms, the combination of a feeler, means normally acting to impel the feeler rearwardly into feeling position, a detent for holding the feeler in a frontward inoperative position, means for freeing the feeler from the detent periodically to permit the feeler to move rearwardly into feeling position, means for locking the detent in its feeler freeing position until the feeler is moved frontwardly by a working supply of filling on a detecting beat and thereupon unlocking the detent that it may again function to hold the feeler in a frontward inoperative position.

1,507,126. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 16, 1923. Serial No. 639,399. 12 Claims. (Cl. 139—270.)



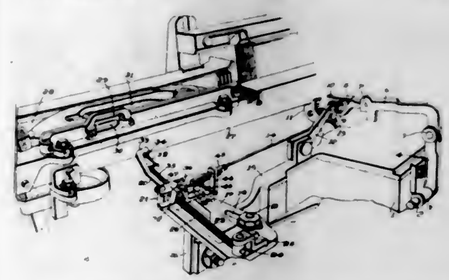
1. In a feeler mechanism for looms, the combination of a feeler mounted for movement towards and from the front of the loom and normally under the influence of a spring tending to move the feeler to rearward feeling position, a detent pivotally supported to swing in a plane transverse to and intersecting the path of movement of the feeler to hold the feeler retracted, take-up mechanism for taking up the cloth as woven, a sheath inclosed flexible controller for tripping the detent to free the feeler, and an actuator connected to the take-up mechanism to operate the controller at intervals that the feeler may have alternating periods of activity and inactivity during weaving with the same supply of filling in the shuttle.

1,507,127. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 12, 1923. Serial No. 674,113. 19 Claims. (Cl. 139—270.)



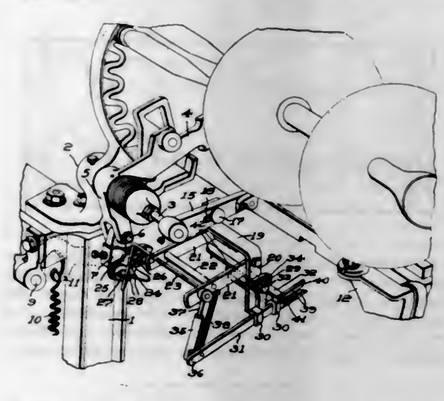
1. An intermittent feeler mechanism for looms, comprising, in combination, a feeler mounted to enter a shuttle and detect substantial exhaustion of the filling, a detent mounted at one side of the feeler to hold the latter in retracted position, a projection upon the feeler that engages the detent, a cam positioned to be engaged by said projection when the feeler is pushed frontwardly by a working supply of filling and operable to swing the feeler laterally to an inoperative position as the projection engages the detent, and means actuated periodically upon the completion of a predetermined number of picks for releasing the feeler from the detent.

1,507,128. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 12, 1923. Serial No. 674,189. 10 Claims. (Cl. 139—270.)



1. An intermittent feeler mechanism for looms, comprising, in combination, a feeler mounted to detect substantial exhaustion of the filling within a shuttle, a detent for engaging any one of a plurality of teeth on the feeler to hold the feeler in a retracted position and constructed and arranged to engage a tooth of the feeler when the latter is pushed frontwardly by a working supply of filling and operable to impart an additional frontward movement to the feeler to move it to an inoperative position, and means operable periodically upon the completion of a multiplicity of picks for releasing the feeler from the detent.

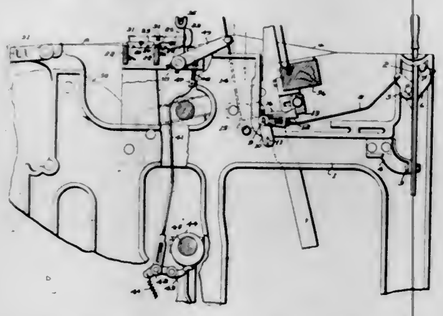
1,507,129. FEELER MECHANISM FOR LOOMS. EDWARD S. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 4, 1923. Serial No. 678,415. 10 Claims. (Cl. 139—270.)



1. In a feeler mechanism for looms, the combination of a feeler, a spring normally impelling the feeler towards its rearward position, a part connected to the feeler and having a detent engaging tooth, a detent for engaging said tooth, the engaging surfaces of said tooth and detent being relatively inclined in a direction transversely of the loom and constructed and arranged to cause the feeler to be moved laterally under the influence of said spring when the detent engaging tooth and detent are engaged as the lay goes back after a detecting beat.

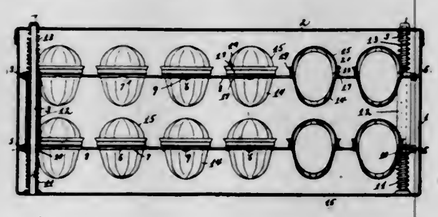
1,507,130. FEELER MECHANISM FOR LOOMS. MELVIN L. STONE, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 14, 1923. Serial No. 680,717. 10 Claims. (Cl. 139—279.)

1. In a feeler mechanism for looms, the combination of an inclined impinging feeler mounted for swinging and sliding movement in supporting means at its forward end as it slides longitudinally of the shuttle, a penetrating feeler mounted upon the impinging feeler so that both feelers move frontwardly of the loom in normal relation on a detecting beat until the filling is substantially exhausted, whereupon the feelers are caused to move relatively in a frontward direction into abnormal relation by engagement of the penetrating feeler with the more dense surface of the filling carrier, and means positioned by such relative movement of the two feelers to effect replenishment of filling upon movement of the feelers longitudinally of the shuttle.



1,507,131. FILLING-END CONTROLLER. PATRICK KEEGAN, Fall River, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Sept. 10, 1923. Serial No. 661,829. 8 Claims. (Cl. 139—261.)

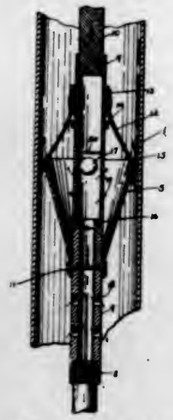
1. In a loom, the combination of filling replenishing mechanism including a transferrer and a pivoted dog connected thereto, a frame supported from a fixed part of the replenishing mechanism, a sliding member mounted on said frame, a rock shaft for actuating said sliding member, and positive connections between the rock shaft



and pivoted dog to effect rearward movement of the sliding member by pivotal movement of the dog on call for replenishment of filling and frontward movement of said sliding member on return of the dog to its initial position.

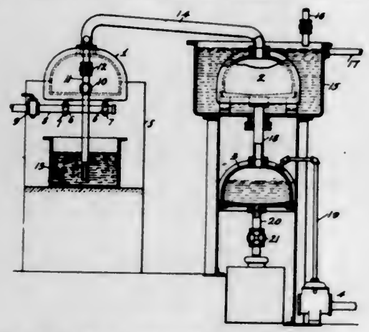
1,507,132. WARP STOP MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 11, 1923. Serial No. 668,011. 15 Claims. (Cl. 139—362.)

1. In a warp stop mechanism for looms, the combination of a drop wire support extending transversely of the loom, a drop wire pivotally hung upon the support for rocking movement and adapted to be maintained in a normal inoperative position by a warp thread during weaving and to pivot upon the suppport and raise one or the other end of the drop wire into an operative position should the associated warp thread be broken or become too slack, a feeler having a detecting movement longitudinally of and above the plane of the warp threads and drop wires and adapted to engage the raised end of a drop wire and be arrested thereby when the warp thread becomes broken or too slack, and means for stopping the loom when the feeler is arrested by the raised end of a drop wire.



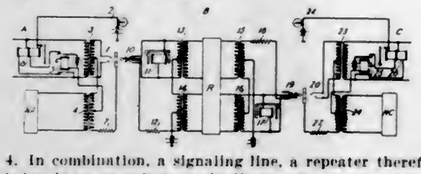
1,507,133. EGG CRATE. GOTTLOB E. LOEBLE, Brooklyn, N. Y. Filed Oct. 4, 1921. Serial No. 505,349. 2 Claims. (Cl. 220—1.)

1. A receptacle having vertical standards, a lower tray having at each corner means loosely guided thereby, means to support said tray yieldingly, an upper tray having means loosely guided by said standards, a lid adapted to be supported by said standards, and yielding means at each corner between the lid and upper tray.



1,507,134. PUMP. OSMYN MOWERS, Houston, Tex., assignor of one-half to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Oct. 23, 1920. Serial No. 418,899. 11 Claims. (Cl. 103—225.)

1. In a pump, a pump rod, a tubular pipe section thereon, a flexible cup secured to said section, said pipe section having openings therein above and below the point of attachment of said cup and an upwardly opening valve in

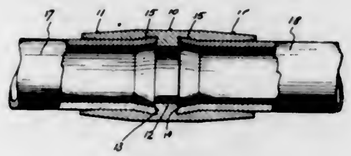


said pipe section, said cup being adapted to collapse on the downward stroke of said rod to allow the passage of most of the fluid outside thereof.

1,507,135. PROCESS AND APPARATUS FOR PRODUCING FREE NICOTINE FROM ITS SALTS. HENRY K. MCCONNELL, Richmond, Va., assignor to Tobacco-By-Products and Chemical Corporation, Louisville, Ky., a Corporation of Delaware. Filed Aug. 2, 1922. Serial No. 579,173. 3 Claims. (Cl. 260—25.)

1. The process of obtaining free nicotine from solutions of its salts, which consists in mixing hydrated lime with an aqueous solution of a nicotine salt, subjecting the mixture to dry heat while excluding the air from it, and carrying off and condensing the vapors.

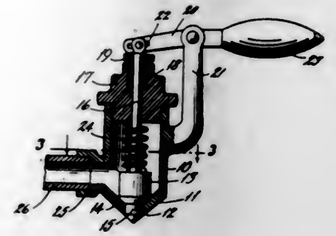
1,507,136. TRANSMISSION SYSTEM. ROBERT I. D. NICOLL, Summit, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 20, 1920. Serial No. 360,232. 9 Claims. (Cl. 179—170.)



4. In combination, a signaling line, a repeater therefor, a balancing network for said line, and a simplexed circuit connecting said network to said repeater.

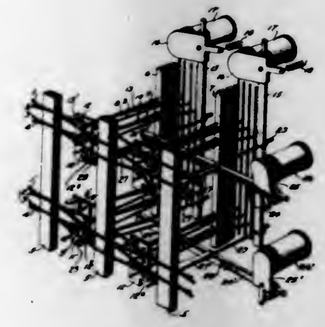
1,507,137. SPINDLE. EDWIN A. PERKINS, Jamaica, N. Y. Filed June 6, 1919. Serial No. 302,173. 5 Claims. (Cl. 118—66.)

1. The combination in a self-balancing spindle of a central post adapted to be secured to the frame of a spinning machine, a base member under continuous downward spring tension, a whirl mounted thereon, ball bearings in planes one above and one below the band-pull, adapted to carry said whirl, and a blade rigidly secured to the whirl in combination with means for continuously lubricating said bearings, consisting of an oil cup in the base member and a horizontal channel in the central post connecting said cup with a vertical boring in the central post.



1,507,138. PIPE UNION. LEON PIERCE, New York, N. Y. Filed Jan. 8, 1924. Serial No. 684,935. 3 Claims. (Cl. 285—193.)

1. In combination with pipes having their end edges inclined, a union for joining adjacent ends of pipes comprising a hollow sleeve, an internal rim intermediate the length of the sleeve, the side faces of the rim serving as a stop for the ends of the pipes, the faces of the rim and the ends of the internal surfaces of the sleeve adjacent the rim being inclined to form an acute angle, the peripheries of the pipes being adapted to be expanded against the inclined faces of said sleeve.

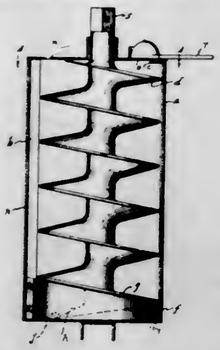


1,507,139. FAUCET. SUMNER T. PIKE, Dallas, Tex. Filed Mar. 25, 1922. Serial No. 546,767. 1 Claim. (Cl. 251—29.)

In a faucet of the character described, an upright immovable tubular head having a conical bottom with an opening at its apex, a valve of greater diameter than the opening and comprising an annular inclined shoulder normally seated on the inclined bottom of the head and a cylindrical reduced plug intersecting with the shoulder and normally fitting snugly in said opening of the bottom of the head, the plug having a drip tip normally having its surface flush with the bottom of the head, a vertically

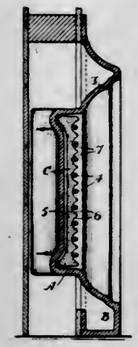
movable plunger in the head attached to the valve for lifting the same in the head and withdrawing the plug into the head, a coiled spring surrounding the plunger and normally seating the valve, and a lever fulcrumed on the head and connected with the plunger for raising the latter.

1,507,140. AUTOMATIC TELEPHONE SWITCH. JOHN N. REYNOLDS, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1921. Serial No. 486,367. 7 Claims. (Cl. 179—27.5.)



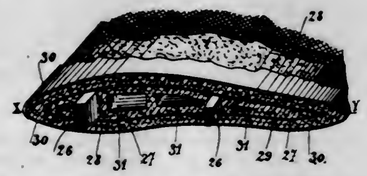
3. In a switching mechanism, a plurality of sets of fixed conductors arranged in an open grid, a plurality of sets of movable conductors arranged in rows at right angles to said grid conductors and extending through said grid, each movable conductor crossing one of said grid conductors but normally out of contact therewith, a selecting bar individual to each row of movable conductor sets, an operating bar individual to each set of grid conductors, means for actuating said bars individually, and means whereby the conjoint actuation of one of said selecting bars and one of said operating bars establishes a connection between a set of movable conductors and a set of rigid conductors at their crossing point.

1,507,141. EVACUATOR. ERNST SCHEIDEGGER, Detroit, Mich. Filed Aug. 16, 1922. Serial No. 582,176. 7 Claims. (Cl. 107—8.)



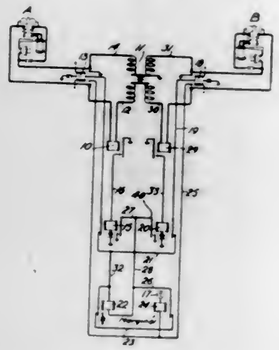
1. In a vessel evacuator, the combination of a vessel provided with a guiding groove, an auger rotatable in said vessel and of substantially the cross sectional size

of the vessel, a follower having a portion engaging in said guiding groove and a portion to engage in the



helical groove in the auger, whereby rotation of the auger causes the follower to rise vertically as it ascends the helical groove of the auger.

1,507,142. ELECTRIC HEATER. JOSEPH SCHOENFELD, San Francisco, Calif. Filed Aug. 1, 1922. Serial No. 578,936. 11 Claims. (Cl. 219—34.)



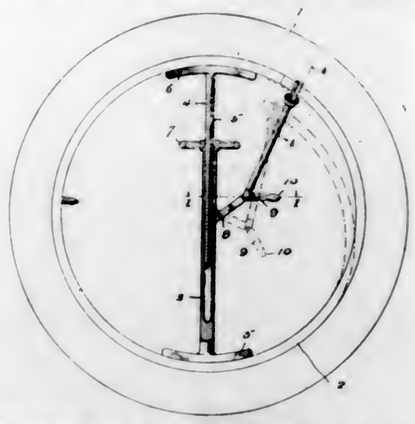
1. In a heater of the character described an electric resistance heating element support comprising a plate constructed of material which has poor heat conducting qualities, an elongated groove formed in the plate, said groove in cross section presenting a parabolic curve, and a resistance element disposed in the focal center of the parabolic curve and extending substantially from end to end of the groove.

1,507,143. AIRCRAFT CONSTRUCTION. ALBERT TOUSSAINT, St. Cyr, and JEAN JOSEPH MARIE BERTRAND, Paris, France, assignors of one-third to Jose Luis Sanchez-Resa, Sevres, Department of Seine, France. Filed Mar. 1, 1922. Serial No. 540,323. 8 Claims. (Cl. 244—31.)

8. A structural unit for aircraft consisting of a mass of considerable thickness and small density molded in such manner as to constitute two soles or flanges assembled by connecting members together with two metal plates cut out and stamped in such manner as to entirely surround the said mass, the two plates being secured together, substantially as described.

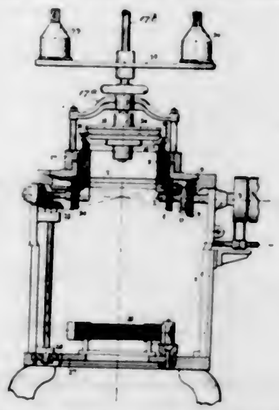
1,507,144. TELEPHONE SYSTEM. FREDERIC F. VALLETTE, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1922. Serial No. 604,200. 5 Claims. (Cl. 179—84.)

5. In a telephone system, a link circuit, a subscriber's station at each end of said link circuit, a source of ringing current, means controlled from either of said stations for connecting said source to the opposite station to signal said opposite station, means operative in response to the answering of the opposite station to automatically disconnect said source of ringing current, and a relay for each end of said link circuit for rendering the conductors of said link circuit discontinuous during the signaling interval.



1,507,145. PILE-CUTTING DEVICE. PAUL A. WAGNER, Jersey City, N. J. Filed Mar. 13, 1923. Serial No. 624,688. 12 Claims. (Cl. 139—116.6.)

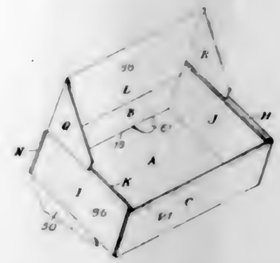
4. In a device of the character set forth, a bed supporting the fabric to be treated, a needle received in a line of pile loops on said fabric and supported by the body thereof, a roller in contact with said needle, and means for rolling said roller upon said needle.



1,507,146. TIRE TOOL. THATCHER W. WALKER, Colville, Wash., assignor to The Secretary of War of the United States of America, trustee. Filed Nov. 10, 1922. Serial No. 600,158. 1 Claim. (Cl. 157—1.)
(Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

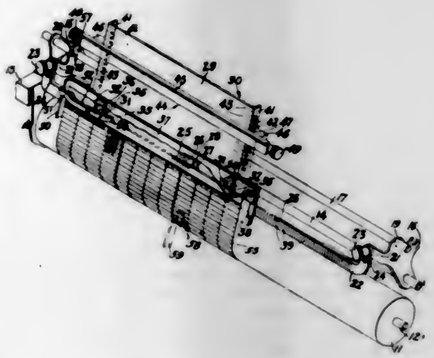
A tire tool consisting of a supporting member mounted on the inner face at opposite sides of the rim, a combined pull and thrust rod adapted to be caught on the rim at one end, and an operating lever mounted inter-

mediate its end to said rod, and at its end on said supporting member connecting the combined pull and thrust rod with the supporting member.



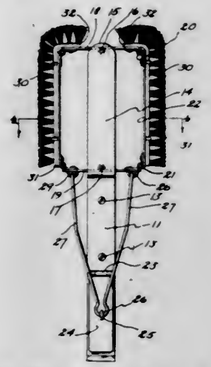
1,507,147. CIRCULAR-KNITTING MACHINE. ERICH BARTH, Chemnitz, Germany. Filed July 7, 1924. Serial No. 724,745. 3 Claims. (Cl. 66—22.)

1. In a circular knitting machine, a vertical, cylindrical needle bed, arranged rotatably in the machine, a radial, horizontal needle bed also arranged rotatably and coupled to said cylindrical needle bed so as to cooperate therewith for producing a double-walled fabric, interconnected cam elements for said needle beds arranged rotatably in the machine, a driving shaft, and means for coupling the needle beds and the cam elements alternately to said shaft so that both will rotate intermittently in the same direction while the knitting proceeds reciprocatingly from end to end of the fabric, substantially as set forth.



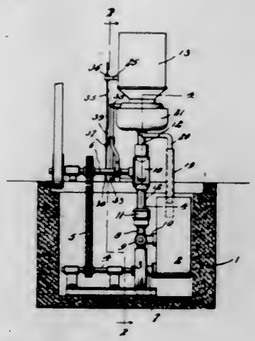
1,507,148. FOLDABLE DISPLAY BOX. CHARLES BASHWINER, Jamaica, N. Y., assignor to Active Folding Box Co., Inc., a Corporation of New York. Filed Oct. 23, 1920. Serial No. 418,942. 4 Claims. (Cl. 206—44.)

1. A foldable display box, comprising a body having an open top with a bottom section, a rear wall section foldable upwardly from the bottom section, a front wall section divided into two parts also foldable upwardly from the bottom, interlocking inner side wall members foldable from the rear wall section and from the front wall section, side wall outer sections on the ends of the bottom section, foldable over the inner side wall sections when their members are interlocked, side wall inner flaps extending from the ends of the second part of the front wall section, foldable and insertable in



the body to lay against the outer side wall sections, and rear wing members on the interlocking inner side wall members of the rear wall section, foldable upon the outer face of the rear wall section, all of said parts being cut and foldably scored from a single blank whereby advertising matter provided on one face of the blank may be arranged to appear on the exterior faces of the parts of the box.

1,507,149. TYPEWRITING MACHINE. FRED BECKER, Buffalo, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 30, 1921. Serial No. 488,538. 21 Claims. (Cl. 197—124.)

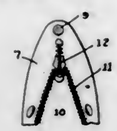


1. In a machine having writing and computing mechanisms, in combination, a platen, a platen-frame, a bar on said platen-frame above the platen, said bar having a series of teeth on its upper edge, a front paper-table having a tooth on its back, said teeth on the bar and paper-table co-operating to determine and maintain the exact lateral position of the paper-table in the machine to enable the paper-table to position the work properly with relation to the computing mechanism, said paper-table normally being positioned against the front face of the bar, and means including spring-clips to yieldably hold the paper-table against removal from the bar.

1,507,150. EXPANSIBLE BRUSH. HELENE BEHRENS, Herington, Kans. Filed June 23, 1923. Serial No. 647,356. 1 Claim. (Cl. 15—165.)

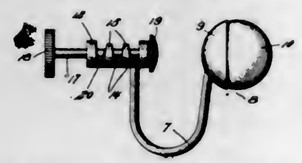
An expansible brush comprising a rigid handle composed of a solid core and a metal strap looped to extend longitudinally therefrom, leaves pivoted between the extensions of the loop at a spaced distance, said leaves normally extending outward at uniform angles, plate connections pivoted between the ends of opposed pairs of leaves, a lever hinged to said handle, links connecting said lever with one pair of said leaves, and brush elements disposed on the outer surfaces of said plate connections.

1,507,151. AUTOMATIC MILK-CAN WASHER. GEORGE S. BENNETT and LOUIS L. BENNETT, Massena, N. Y. Filed Jan. 10, 1922. Serial No. 528,172. 11 Claims. (Cl. 141—7.)



1. In a milk-can washer, the combination of a hollow, reciprocatory can-support, liquid-operable means to reciprocate the said support, a pipe on which the said support is reciprocable, said pipe being rotatable about its axis, means to so rotate said pipe, means to supply cleansing agent under pressure to said pipe, and telescopic conduit means connected to the can-support for the discharge of cleaning agent and dirt received from the can; the said means to rotate the pipe including a shaft geared to said pipe, and the said means to reciprocate the can-support including a pump operable by said shaft.

1,507,152. METHOD FOR TREATING MATERIALS CONTAINING METAL COMPOSITIONS. EDWARD SALOMON BERGLUND, Djursholm, Sweden. Filed Mar. 20, 1922. Serial No. 545,340. 7 Claims. (Cl. 75—17.)



1. The method of treating materials containing zinc and lead, consisting in reducing said materials by means of [redacted] carbide and lime.

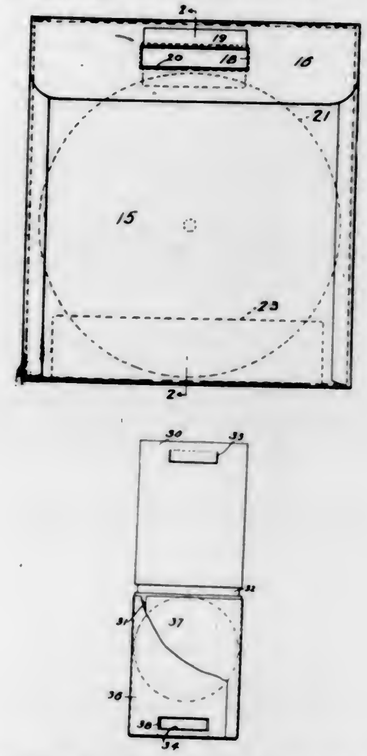
1,507,153. GLOVE CLOSURE. RALPH H. BINNS, New York, N. Y. Filed Aug. 19, 1922. Serial No. 582,854. 6 Claims. (Cl. 24—205.)

3. A glove closure including in combination a glove presenting an opening, a mounting member adapted to be positioned within said opening, means for detachably securing said mounting member to said glove, and closure elements carried by said mounting member.

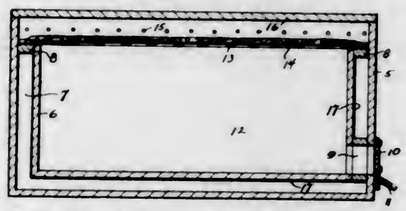
1,507,154. EAR ATTACHMENT. ADOLPHE BONNIOL, Providence, R. I. Filed Dec. 28, 1922. Serial No. 609,501. 2 Claims. (Cl. 63—14.)

2. As an improved article of manufacture, an ear attachment comprising a bow having a head at one end, a sleeve fastened to the other end of said bow and having a longitudinally-disposed slot with laterally-extended recesses forming a plurality of teeth, a clamping rod slidably and rotatably mounted in said sleeve and having at one end an operating head, and a bearing at the other end, and a lateral lug on said rod intermediate its ends and disposed between the end walls of said slot to engage in said teeth.

1,507,155. TRACTOR HITCH. JOHN BRUNGESS, Ukiah, Calif. Filed Dec. 30, 1922. Serial No. 609,982. 2 Claims. (Cl. 280—82.)



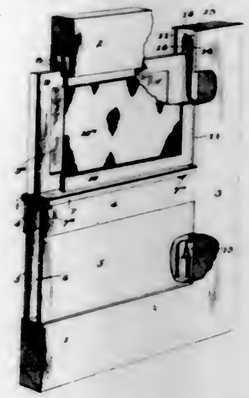
1. In a tractor hitch, a truck, a draw bar extending from the forward end thereof, means for slidably securing the draw bar to the truck, a draw bar at the rear of the truck, a flexible connection between the two draw bars, and a loose joint between the truck and load.



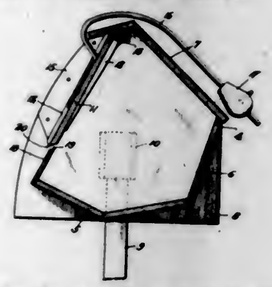
1,507,156. BAG OR ENVELOPE. JOHN W. BUNKER and ASHTON M. BONEY, New York, N. Y., assignors to Service Bag Co. Inc., New York, N. Y., a Corporation of New York. Filed May 6, 1921. Serial No. 467,447. 16 Claims. (Cl. 206—62.)

8. In a carrier of the class described, front and back walls hingedly connected at their bottom edges, overlapping side flaps attached to one of said walls, said flaps and the front and back walls having handle slots all registering in the folded relation of said parts.

14. An article of manufacture of the character described including a bag and a flap, the flap being adapted for folding over the upper edge of the bag, the back and front of the bag and the flap all having closed slots formed therethrough at points substantially registering with one another, the paper cut to form one of said slots left intact along one edge to form a tongue, the latter adapted to be bent from said attached edge as a hinge, through the other slots or apertures to form a fastening, and thence bent around one edge of the slots to face and enclose the latter.



1,507,157. CHICKEN HOVER. CHARLES WATTS CAROL, Globe, Ariz. Filed June 4, 1923. Serial No. 643,374. 1 Claim. (Cl. 119—31.)

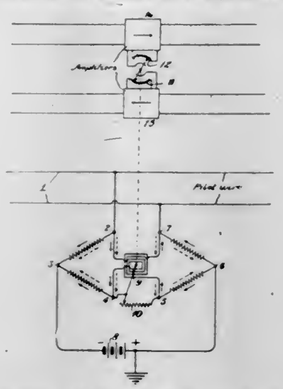


A hover of the character described comprising an inner box and an outer box, a filling strip therebetween adjacent the upper end of the inner box and below the top of the outer box whereby a dead air space is formed between the inner and outer boxes below said strip, a doorway leading from the outside to the interior of the inner box, a covering of loose cotton constituting the top of the inner box and permitting a gradual seepage of air therethrough throughout its area and a cover for the outer box, there being a plurality of spaced openings formed in the sidewalls of the outer box above the level of said inner box and in the transverse plane thereof, whereby ventilation is equalized at all points in the length of the hover.

1,507,158. DOOR. STEPHEN M. CASEY, San Francisco, Calif. Filed June 12, 1923. Serial No. 644,907. 1 Claim. (Cl. 20—36.)

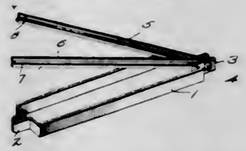
A door having an opening defined by stiles and top, center, and bottom rails, the center rails being spaced apart, solid panels connecting each center rail with the bottom rail to provide a pocket to house sash, a pair of sash adapted to be housed in such pocket, the upper rail being recessed to receive the upper ends of such sash when the same are raised above the center rails, and a sill hingedly connected to the upper edge of each center rail, said sills adapted to meet centrally above the pocket to each afford a support for the respective sash when the latter is raised, the meeting edges of the sills interfitting to prevent leakage therethrough and to tend to hold said sills in fixed pocket-closing relation when either sash is in raised position.

1,507,159. SALT BOX FOR ANIMALS. HERBERT J. COSFORD, Mondovi, Wis. Filed Nov. 23, 1922. Serial No. 602,899. 2 Claims. (Cl. 119—62.)



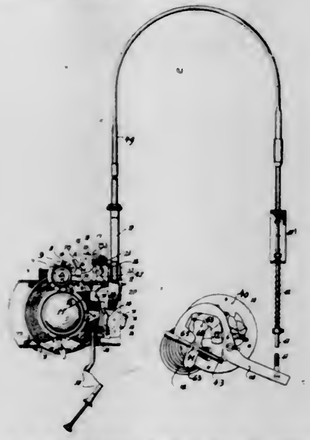
1. A salt box for animals including a box body one of the sides of which is hinged and movable by the head of the animal, a rod one end of which is secured to the hinged side of said body and the opposite end extended over the top of the latter and terminated beyond the back wall of the box body, and a weight adjustably mounted on said rod.

1,507,160. PILOT-WIRE REGULATOR SYSTEM. GEORGE CRISSON, Hackensack, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 30, 1922. Serial No. 609,911. 8 Claims. (Cl. 178—44.)



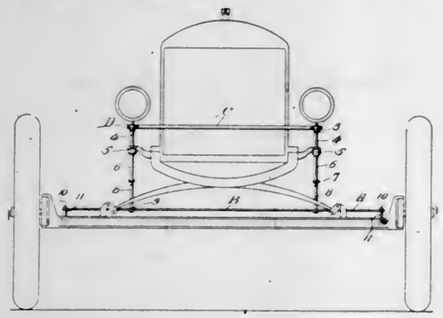
1. A system for the automatic regulation of the transmission equivalent of electrical circuits, said system comprising a pilot wire, a balance bridge including said pilot wire as one of its arms, a grounded battery connected across said bridge, a polarized differential device having two windings, connections from the windings of

said device to the bridge, said connections being such that currents due to external disturbances and flowing to ground over the two sides of the pilot wire will pro-



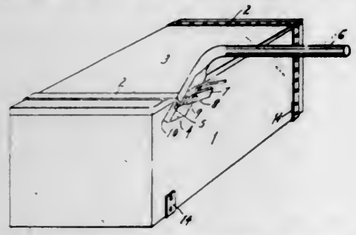
duce a differential effect in said windings, and an automatically adjusted means for varying the gain of repeaters in the transmission circuits according to the deflection of said device.

1,507,161. HAIR CRIMPER. VALENTINE F. DELMUÉ, Los Angeles, Calif. Filed Feb. 29, 1924. Serial No. 696,066. 3 Claims. (Cl. 132—41.)



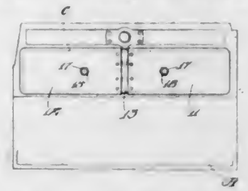
1. A hair crimper of the class described including a pair of bars pivotally associated with each other at adjacent ends and provided with longitudinally extending V-shaped mid-portions one adapted to fit within the other, and means at the free ends of the bars for holding them together.

1,507,162. PHOTOGRAPHIC APPARATUS FOR MAKING HELIOCHROMES. HERMANN DIERNHOFER, Zittau, Germany. Filed Apr. 20, 1922. Serial No. 555,087. 14 Claims. (Cl. 95—2.)



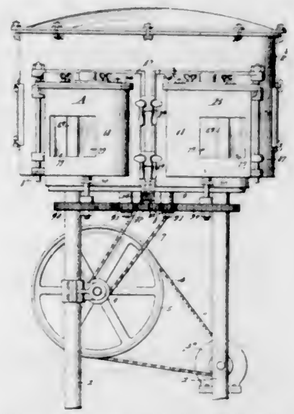
1. In a photographic apparatus for making photographs in natural colors by an automatic succession of part exposures corresponding to the different single colors, the combination with an object-glass, cassette-exchanging means and a clock-work for operating these means, of a rotary disk arranged in front of the object-glass and being adapted to act as shutter for it and to be adjusted for the various exposure times; and means for causing a succession of operations consisting in the shutting of the object-glass, the moving of said disk into such other position as requisite for the next part-exposure, the releasing of the clock-work, the tensioning of the shutter by the clock-work for the next part-exposure, and as many repetitions of this succession of operations as the number of the part-exposures require, substantially as described.

1,507,163. HEADLIGHT STEERING MECHANISM. SALVATORE DI PAOLA and GIACOMO RESTIVO, Freemanspur, Ill. Filed Oct. 11, 1923. Serial No. 667,961. 1 Claim. (Cl. 240—62.)



An automobile headlight rigging comprising upright studs adapted to be applied to the knuckle arms of the steering gear, a cross rod pivotally connected at opposite ends with said studs, said cross rod provided adjacent opposite ends with flat enlargements formed with vertical openings, vertically disposed L-shaped crank arms mounted upon the ends of the cross rod with the lower ends of their vertical portions extending through said vertical openings, the forward ends of the horizontal crank portions of said crank arms formed with upwardly extending studs, other vertically disposed L-shaped crank arms formed in the outer ends of their horizontal portions with longitudinal slots receiving the studs of the crank portions of said first mentioned arms, interiorly threaded sockets formed at the upper ends of the vertical portions of said second mentioned crank arms, lamp shafts secured in said sockets, bracket extensions adapted to be applied to the frame of the automobile and loosely receiving the lamp shafts and a second cross rod extending between and connected with the upper ends of said lamp shafts.

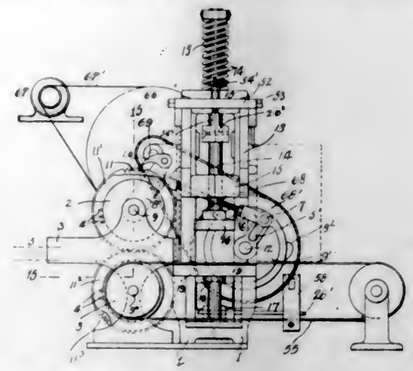
1,507,164. BOX-BAND TIGHTENER. WILLIAM A. ENGELHARD, Springfield, Mass., assignor of one-half to Frederick H. Engelhard, Springfield, Mass. Filed Aug. 1, 1923. Serial No. 655,003. 7 Claims. (Cl. 254—79.)



7. The combination, in a box-band tightener, with a head slotted to form band-gripping edges on the front and back, the front edge being lower than the rear edge, and having at its free end a gripping edge and at the other end a handle, of a button pivotally connected with said head in position to engage a band above said gripping edge at the front end of the slot, and between said button and the front side of said head, said button having one end chamfered to facilitate engagement with said band.

1,507,165. TAPPET COVER FOR INTERNAL COMBUSTION ENGINES. STEPHEN I. FEKETE, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 28, 1923. Serial No. 654,324. 4 Claims. (Cl. 123—90.)

1. The improved cover for the tappet chamber of the cylinder block of an internal combustion engine which comprises two halves formed of metal and secured together by a hinge which unites their proximate edges.

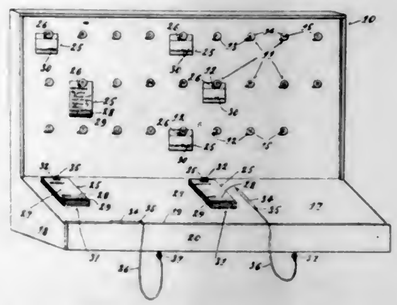


1,507,166. PROCESS AND APPARATUS FOR SEALING UNDER VACUUM. RICHARD M. GARRETT, New York, N. Y., assignor to Nestle's Food Company, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1922. Serial No. 543,967. 22 Claims. (Cl. 113—82.)

1. The herein described process of sealing vent hole openings in the lids of containers while the latter are under reduced pressure, which consists in continuously moving a container having a vent hole in its lid into, through and out of an evacuated chamber while maintaining the container in upright position and without breaking the vacuum in the chamber, and automatically softening and applying sealing material to the lid at the point where said vent occurs while the container is in motion and without breaking the reduced pressure in the chamber.

1,507,167. MACHINE FOR MAKING CONFECTIONS. FRANCESCO GIGLIOTTI, Springfield, Mass. Filed Apr. 16, 1923. Serial No. 632,397. 22 Claims. (Cl. 107—8.)

1. In a machine for the purpose described, the combination with a clamping plunger which is movable for clamping a piece of candy material of means for feeding candy under the plunger, means for actuating the plunger, the actuating means having a period of rest, or dwell during the clamping operation, means for severing the articles to be clamped, a hopper to receive sticks therein which are designed to be inserted into the finished article and means

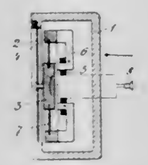


for feeding the sticks toward the finished article during the clamping operation said stick feeding mechanism being located in the path or line of travel of the article and means for removing the finished article after the clamping mechanism releases the article.

1,507,168. HAIR HOLDER. JOHN D. GOODRUM, Houston, Tex. Filed Oct. 22, 1923. Serial No. 669,984. 3 Claims. (Cl. 132—45.)

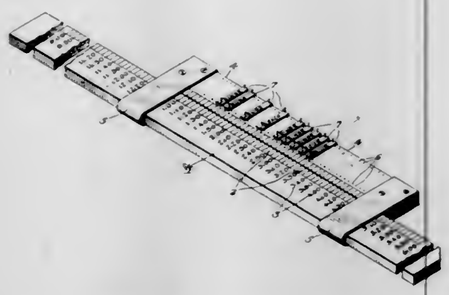
1. A device of the character described, including arcuate front and rear head clamps adjustable toward and from each other and having their ends free, arcuate side clamps having free ends, and means for holding said rear and side clamps yieldingly against the head of the wearer.

1,507,169. INTELLIGENCE STATION. HAZEL D. GREENWELL, Fort Thomas, Ky. Filed Mar. 28, 1921. Serial No. 456,263. 2 Claims. (Cl. 40—124.)



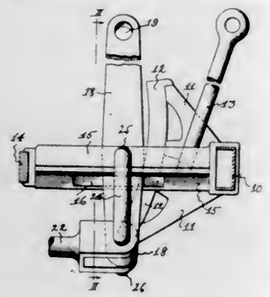
2. An intelligence station comprising in combination, a vertical board, a plurality of hooks on said board spaced apart from each other and each having a designation thereon, and message cards each having means adapted to coact with said hooks respectively for holding the respective message cards on the hooks, and a desk attached to said vertical board.

1,507,170. HOSE CLAMP. FRED WILLIS GUNN, Boston, Mass. Filed Sept. 7, 1923. Serial No. 661,419. 2 Claims. (Cl. 24—19.)



1. A wire clamp formed of a single length of wire bent intermediate its ends to provide substantially parallel end portions and a bight, the latter being bent to provide spaced apart wire engaging portions.

1,501,171. SOUND RECEIVER. WALTER HAHNEMANN and HEINRICH HECHT, Kitzeberg, near Kiel, Germany, assignors to Signal Gesellschaft m. b. H., Kiel, Germany. Filed July 21, 1921. Serial No. 486,567. 7 Claims. (Cl. 177—386.)

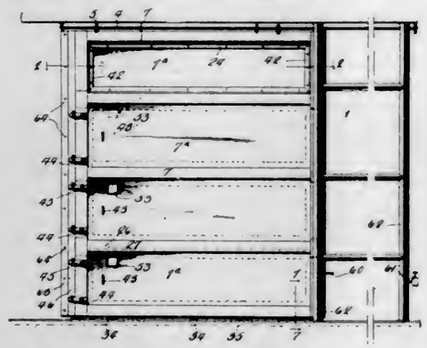


1. An electromagnetic sound receiver comprising; a vibratory structure consisting of two vibrating masses and an elastic member connecting the two said masses to each other, the one mass being formed of the magnet and the other of the armature of an electromagnetic system; and a sound receiving member adapted to take in arriving sound waves and combined with one of the said masses, while the other mass is allowed to vibrate without restraint.

1,507,172. WORKING SCHEDULE OR INDICATING GUIDE. ROBERT HENRY HARRISON, Raleigh, N. C. Filed June 27, 1923. Serial No. 648,040. 5 Claims. (Cl. 116—135.)

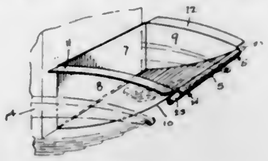
2. In a working guide or schedule, the combination with a main portion, of a supplemental portion associated therewith, graduations on said main portion, indicia carrying strips supported upon said supplemental portions, means for interchangeably arranging said strips thereon in spaced relation in the desired combinations, said spacings following a unit of measurement according to the graduations on said main portion and means for obtaining a cooperating reading between said portions.

1,507,173. RAILWAY-BRAKE-LEVER CONNECTION. BRODERICK HASKELL, Franklin, Pa. Filed Dec. 5, 1923. Serial No. 678,732. 7 Claims. (Cl. 188—205.)



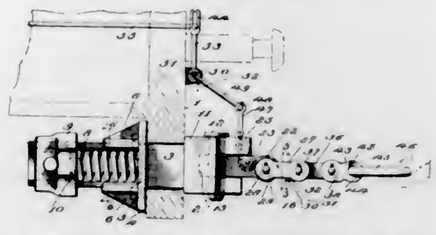
3. A brake construction comprising a brake beam having a compression member and a tension member, a strut having a slot and interposed between and intermediate the ends of said compression and tension members, a brake lever within said slot of the strut, a bottom or brake connecting rod, and a member provided with two interconnected pins and having one of its pins pivotally connecting the brake lever between its ends to said strut member and its other pin connecting an end of said brake lever with an end of said bottom or brake connecting rod.

1,507,174. PHOTOGRAPHIC FILM WITH BASE OF NEUTRAL TINT. JAMES H. HASTE and ERWIN J. WARD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 14, 1922. Serial No. 594,562. 3 Claims. (Cl. 95—9.)



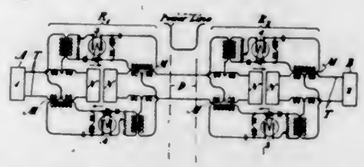
1. As an article of manufacture a photographic film comprising a photographically sensitive layer, a light-transmitting support therefor having a color which would be displeasing when viewing an image formed from said sensitive layer, and a layer containing sufficient complementary color to substantially neutralize said first named color.

1,507,175. GRAIN-CAR DOOR. CLYDE WALTER HATFIELD, Emerson, Iowa. Filed May 25, 1923. Serial No. 642,342. 9 Claims. (Cl. 189—46.)



1. A horizontally-slidable sectional grain car door, wedgingly interfitting trough-shaped members interposed between the stile of the door and a wall of a car, and a fixed upright between which and the said wall of the car said stile and its trough-shaped member is guided.

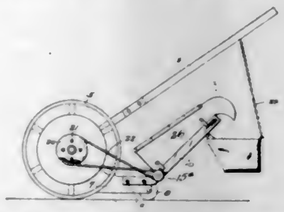
1,507,176. BAGGAGE RECEPTACLE. GUSTAVE O. HEINE, San Francisco, Calif. Filed Dec. 15, 1921. Serial No. 522,477. 3 Claims. (Cl. 224—29.)



1. A baggage receptacle for automotive vehicles comprising a curved pan having a rolled front edge to detachably engage the frame ends of a vehicle and a flanged rear edge to engage an adjacent portion of said vehicle.

1,507,177. LINK COUPLER. FRANK W. HENRIKSON, Mulberry, Kans. Filed Sept. 13, 1921. Serial No. 500,387. 7 Claims. (Cl. 213—178.)

3. In combination with the drawbar of a dinkey, a series of links pivoted to said drawbar, a second series of links pivotally connected to said first mentioned links to break upwardly only, a link coupling pivotally connected to said second series of links to break upwardly only, and means for raising and lowering said first mentioned links to swing said link coupling to raised or lowered position.



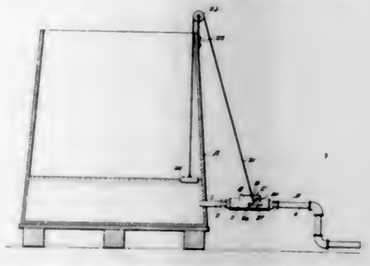
1,507,178. METHOD OF AND MEANS FOR REDUCING INTERFERENCE IN TRANSMISSION SYSTEMS. HARRY W. HITCHCOCK, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 6, 1921. Serial No. 498,626. 8 Claims. (Cl. 179—78.)

7. The method of reducing the ratio of induced current to voice current in the output of telephone circuits, which consists in amplifying the voice currents by a high factor before they enter the region of induction and amplifying the currents by a low factor after they leave the said region.

1,507,179. LAWN MOWER. ALBERT J. HOLLE, Rushford, Minn. Filed Jan. 10, 1922. Serial No. 523,261. 2 Claims. (Cl. 56—156.)

1. A lawn mower attachment comprising, a pair of spaced upwardly extending and rearwardly inclined parallel bars, each having its lower end terminal portion formed at an obtuse angle to form attaching means therefor, a conveyor element supported by said bars and operated from the mower, a plurality of braces secured to the outer side of each bar and extending inwardly over the upper edge of the said bars, inclined guide plates supported by said braces above said element and having integral outwardly turned hook members along their upper edges, and a flexible cover plate having eyelets along its side edges for the insertion of said hook members.

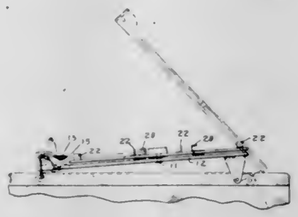
1,507,180. SANITARY BANDAGE. HENRY WELLS HOLLY, Brooklyn, N. Y. Filed Mar. 24, 1923. Serial No. 627,397. 3 Claims. (Cl. 128—286.)



1. A sanitary device of the class described comprising a pouch having an opening in the upper part thereof, a tubular end portion, a slit in the upper surface of said tubular end portion, and a second slit in the lower surface of said tubular end portion.

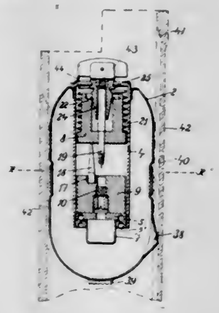
1,507,181. FIRE-RESISTING PAINT. NEVIL MONROE HOPKINS, New York, N. Y., assignor to The Burnot Fireproofing Products, Inc., a Corporation of New York. Filed Apr. 4, 1922, Serial No. 549,565. Renewed Jan. 21, 1924. 2 Claims. (Cl. 134—45.)

2. The herein described new paint composition consisting of a water solution of sodium silicate in the proportions of one and one half pints; sodium fluoride one half pint; 6 ounces finely divided asbestos and 6 ounces asbestine admixed with sufficient kaolin, and zinc oxide to increase the hiding power of the paint and sufficient coloring matter to provide a predetermined color thereto.



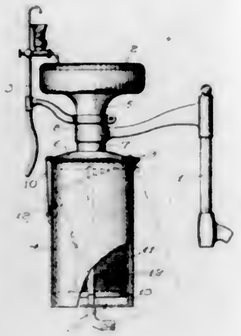
1,507,182. AUTOMATIC SHUT-OFF VALVE. WILLIAM HORWOOD, Titusville, Pa. Filed Apr. 17, 1922. Serial No. 553,678. 1 Claim. (Cl. 137—68.)

In combination with a tank and a flow pipe connected with the lower portion thereof, a valve structure connected in the flow pipe and comprising a casing having spaced valve seats, the face of one of which is disposed in the direction opposite of the flow from the tank and the other having its face disposed in the direction of the



flow from the tank, spring pressed valves located in the casing and arranged to close against the seats respectively, manually operable means for simultaneously moving the valves away from the seats and against the pressure of the springs, latch mechanism for holding the valves at open position with relation to the seats and a float device connected with the latch mechanism and operated by the level of the liquid in the tank to release the valve opening means whereby the valves under tension from their respective springs may simultaneously close against the oppositely disposed seat faces and thereby interrupt the flow of liquid in either of two directions through the casing and pipe.

1,507,183. DUPLICATOR. ALBERT ISAACS, New York, and RICHARD BALDAUF, Hempstead, N. Y., assignors to The Beck Duplicator Company, a Corporation of New York. Filed Jan. 5, 1924. Serial No. 684,592. 7 Claims. (Cl. 101—133.)



1. An attachment for duplicators comprising a paper-supporting member adapted to be movably mounted upon a duplicator and to bear a plurality of piles of paper or the like and to be moved so as to bring a predetermined pile of paper into operative position with relation to said duplicator.

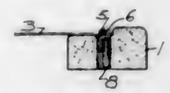
1,507,184. HAND GRENADE. FRANTIŠEK JANEČEK, Prague, Czechoslovakia. Filed July 1, 1921. Serial No. 481,944. 4 Claims. (Cl. 102—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. In a device of the kind described in combination, an igniting device, a striker body, a common guide sleeve surrounding said device and body, resilient means tending to force said members against one another, a spacing pin loosely inserted in an indenture of one and resting against the surface of the other member, an egg-shaped shell surrounding all said parts, a lateral projection on said shell and a barrel adapted to surround said shell and provided with a longitudinal groove ending short of the outer end of said barrel and adapted to embrace said projection.

1,507,185. FOUNTAIN CUSPIDOR. FRED F. JONES, Chillicothe, Ohio. Filed Nov. 5, 1923. Serial No. 673,013. 5 Claims. (Cl. 4—262.)

1. In a device of the class described a fountain cuspidor, a receptacle below said cuspidor, a pivotal connection between said receptacle and cuspidor, and a foraminous receptacle positioned within said first mentioned receptacle.

1,507,186. DEVICE FOR OPENING AND CLOSING SLIDING DOORS AND FOR OTHER PURPOSES. PATRICK R. JUDGE, Parker, S. Dak. Filed Aug. 23, 1923. Serial No. 658,926. 3 Claims. (Cl. 254—77.)

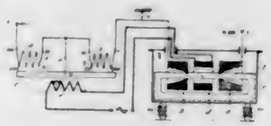


1. A pulling device comprising a lever provided at one end with a handle and at the other with a beak, and having, intermediate of said ends, through said lever, an opening from which extends a smaller opening the walls of which are capable of retaining the links of a chain when passed therethrough and laid therein.

1,507,187. SIGNBOARD. ALBERT L. JUHL and RUFUS R. DARDEN, Niles, Calif. Filed July 30, 1923. Serial No. 654,610. 1 Claim. (Cl. 40—39.)

A device of the character indicated comprising a support and a shell revolubly mounted thereon, said shell having its surface formed to present a plurality of wind engaging pockets extending longitudinally thereof and facing uniformly in one direction, said shell being provided with surfaces adapted to carry advertising indicia and sign boards arranged contiguous to said shell on one side and spaced a distance therefrom on the other side whereby to vary the air pressure on opposite sides of said shell.

1,507,188. MANUFACTURE OF CHAIR SEATS. JAMES M. KANE, New York, N. Y. Filed Oct. 2, 1923. Serial No. 666,193. 8 Claims. (Cl. 155—187.)

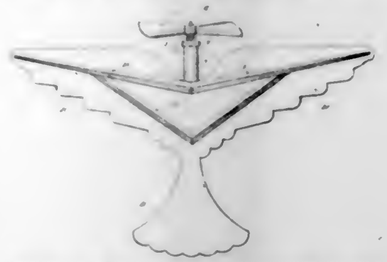


1. A chair seat comprising a frame having a plurality of holes in it, a sheet of ready-made woven cane fabric having free ends, said ends being inserted in said holes, and a plurality of plugs inserted in said holes for securing said ends therein.

1,507,189. SHOE TYING DEVICE. HENRY S. KEYES, Los Angeles, Calif. Filed Dec. 7, 1922. Serial No. 605,484. 1 Claim. (Cl. 24—117.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

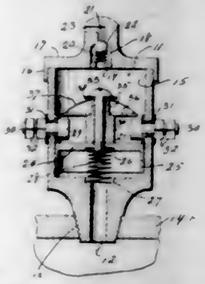
An improved means for securing the upper ends of shoe lacings consisting of passing the upper free end of the lacing through auxiliary eyelets, arranged in staggered relation to each other, at alternating angles to cause parts of the lacing to rest on the inside of the shoe and intermediate parts of the lacing to rest on the outside of the shoe at alternating angles, to prevent slipping of the shoe lace.

1,507,190. HIGH TENSION TRANSFORMER. HUBERT KRESS, Frankfort-on-the-Main, Germany. Filed Apr. 9, 1923. Serial No. 630,915. 4 Claims. (Cl. 175—356.)



1. A high tension transformer having a high tension winding, an exciting winding and an iron core, said high tension winding being divided into two electrically connected sections, said exciting winding being arranged between said sections and highly insulated from said core, and said core being insulated from earth and given a predetermined potential with respect thereto.

1,507,191. AERONAUTIC CHART. STORY B. LADD, Washington, D. C. Filed Mar. 6, 1922. Serial No. 541,549. 1 Claim. (Cl. 116—1.)



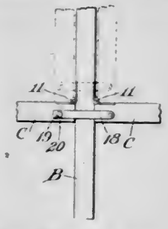
An aeronautic chart system, including a marker-instrumentality contoured to have an open central field and adapted to function as an elevated platform, said platform having a distinguishing element arranged and observable within said central open field for indicating a unit of the system.

1,507,192. TOY AIRPLANE. BERNHARD FRANK LAUKANDT, Red Wing, Minn. Filed Mar. 11, 1924. Serial No. 698,383. 3 Claims. (Cl. 244—14.)

1. In a toy air plane, a body, a propeller shaft journaled at the front end thereof, a rubber band motor inclosed in the body and operating to revolve the said shaft, and air plane members secured to the top side of the body and provided with hollow strengthening bars of light material, triangular in cross section, secured to their upper surfaces and extending laterally of the body.

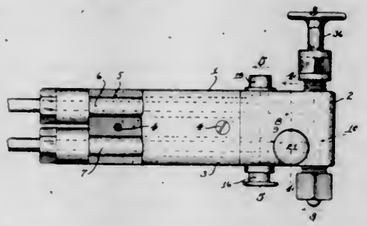
1,507,193. CUT-OUT. HENRY E. MAY and ROBERT W. SELLMAN, Detroit, Mich. Filed Sept. 9, 1922. Serial No. 587,171. 3 Claims. (Cl. 200—82.)

1. In a cut-out of the character described, a cylinder, ports formed in opposite end walls of the cylinder, means coacting with one of said ports for preventing withdrawal of air from within the cylinder, the other of said ports being adapted for connection for the source of suction a piston arranged within the cylinder and loosely fitting the same, means normally forcing said piston toward the end of the cylinder in which the last named port is disposed, contacts extended into and insulated from the walls of the cylinder, and a connecting member for said contacts carried by said piston and engaged with said contacts upon movement of the piston in a direction away from the end of the cylinder provided with the last named port.



1,507,194. FUSE. WILLIAM AUGUST MILLER, Monaca, Pa. Filed Apr. 1, 1921. Serial No. 457,745. 4 Claims. (Cl. 200—125.)

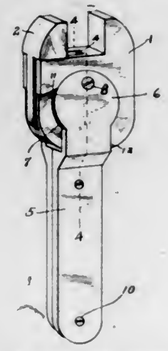
1. A fuse comprising a substantially cylindrical core made of insulating material and having an axial bore, said core being formed with a plurality of spaced parallel grooves extending longitudinally of the core and being counter-bored at the ends of the core, the counter-bore at one end of each groove being longer than the



counter-bore at the opposite end of the groove, fusible elements adapted to be disposed in said grooves and having enlarged end portions disposed in the counter-bores at the ends of said grooves, the smaller counter-bores being completely filled and the larger counter-bores being partially filled by the portions of the fusible elements disposed therein, the fusible elements terminating short of the outer ends of the longer counter-bores, contact members adapted to abut the opposite ends of the core, the contact member for the end of the core provided with the longer counter-bores having a projection adapted to enter a selected counter-bore to contact the fusible element disposed therein, and means extending through the axial bore of said core and connecting the contact members for releasably holding said contact members in abutting relation to the ends of said core and with the said projection of one of the contact members disposed in a selected counter-bore.

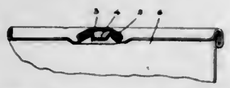
1,507,195. ILLUMINATED EMBLEM. JOHN W. MOORE, Charleston, W. Va. Filed Apr. 5, 1924. Serial No. 704,543. 3 Claims. (Cl. 40—130.)

3. In a collapsible emblem, a stem section, a pair of sections hinged to the stem section at opposite sides thereof and swingable about the hinges thereof to parallel the stem section or to positions where they align one with the other and are disposed at an angle to the sections, and common means for locking said sections in both of said positions.



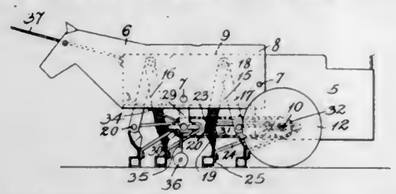
1,507,196. PAINT GUN. JOHN D. MURRAY, San Francisco, Calif. Filed Nov. 10, 1922. Serial No. 599,994. 8 Claims. (Cl. 91—45.)

1. A liquid applying apparatus including a hand-piece provided with independent channels, a mixing chamber in the hand piece into which said channels discharge, a bulbous discharge tip at the discharge end of said mixing chamber and formed with a single discharge slot extending entirely across the same, and means for controlling the passage of fluid through said channels.



7. A liquid applying apparatus including a hand-piece provided with independent inlet channels and an outlet channel at substantially right angles thereto and into which the same discharge, said outlet channel provided with a discharge port at one end, a discharge tip associated with said ported end and provided with a discharge orifice, a needle valve within said outlet channel adapted for adjustment to control the passage of material through said discharge orifice, the body of said valve at a point inwardly from said needle point being cut to provide a pair of conical depressions disposed with their apices toward each other in spaced relation, said valve body between said conical depressions and between the outer of said depressions and said needle point being longitudinally grooved, and a pair of connected valves one within each inlet channel and adapted for simultaneous operation on the gripping of the hand-piece to control the passage of fluid through said channels.

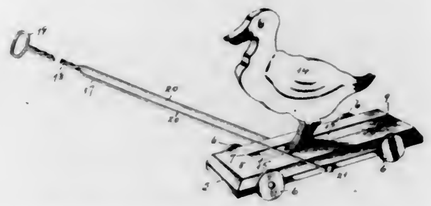
1,507,197. WRENCH. ALBERT NEAL, Kokomo, Ind. Filed Sept. 13, 1922. Serial No. 588,007. 2 Claims. (Cl. 81—128.)



1. In a wrench, a fixed jaw having circular bores extending from side to side thereof, and a slot extending from edge to edge thereof and intersecting said bores, a movable jaw having a shank entering said slot and housed therein, said shank having an opening therethrough, a handle having circular heads at one end bifurcated to fit on opposite sides of said shank and within said bores, said heads pivoting the handle to the stationary jaw, and a crank pin connected with said heads and extending through said opening in the shank for operating the movable jaw when the handle is swung laterally.

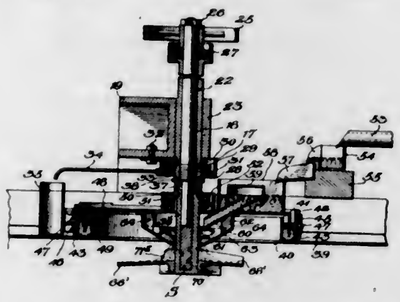
1,507,198. CLOSING THE FILLING APERTURE OF HERMETICAL BOXES. NIELS JONAS NIELSEN, Aarhus, Denmark. Filed Nov. 27, 1922. Serial No. 603,722. 4 Claims. (Cl. 220—81.)

1. A disk closure for sealing an aperture in a vessel comprising two superposed metal disks, one formed of solder and the other forming a closing member, said disks being spaced apart at their central portions, and flux material arranged in the space.



1,507,199. MECHANICAL TOY. NORTON PRENTISS OTIS, San Francisco, Calif. Filed Aug. 27, 1923. Serial No. 659,594. 4 Claims. (Cl. 46—45.)

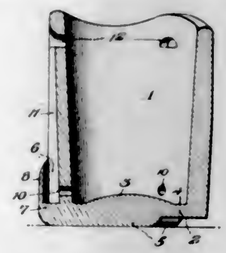
1. A figure having legs consisting of upper sections pivotally hung upon the figure, lower sections pivoted to the first sections, a driven crank shaft, and U-shaped



connections between the crank shaft and the respective legs and each including an arm operatively connected with the joint between the mating sections of a respective leg and an arm fixed to the lower section of said leg.

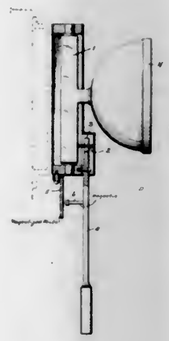
1,507,200. FIGURE WHEELED TOY. WILLIAM E. OTT, Baltimore, Md. Filed Sept. 11, 1920. Serial No. 409,554. 2 Claims. (Cl. 46—45.)

1. A toy having a base with sufficient wheels to sustain it in a horizontal plane, said base having a longitudinal groove that opens at one end thereof, a figured detachable element slidable into said base-groove, means in the groove for holding said element in place and a handle having two arms that are pivotally attached to the base at opposite sides of the groove, said arms being movable to a position in front or at the rear of the detachable element.



1,507,201. ACID DISTRIBUTOR. JOHN PATTEN, Baltimore, Md., assignor to The Davison Chemical Company, Baltimore, Md., a Corporation of Maryland. Filed June 12, 1918. Serial No. 239,692. 9 Claims. (Cl. 299—63.)

1. Apparatus of the character described adapted to distribute acid uniformly over the cross sectional area of a Gay Lussac or Glover tower including in combination a rotatable spider formed with a plurality of radiating acid channels of different lengths, the longest channel arranged to discharge the acid at a higher elevation than the shortest channel, means for delivering acid to said channels in quantities proportional to the length of said channels, and means for rotating said spider.

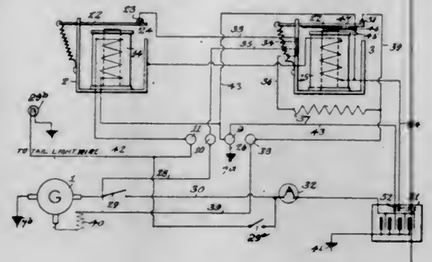


1,507,202. FLOWERPOT. JOHN H. PETTIT and JOHN J. FITZPATRICK, Vienna, W. Va. Filed Nov. 15, 1923. Serial No. 674,855. 4 Claims. (Cl. 47—38.)

1. In a flower pot, a body having a raised rounded portion on the upper face of its bottom to form a circular channel in conjunction with the side walls of the body, and a series of elongated spaced radial feed extending from the center of the bottom and projecting at their outer ends beyond the periphery of the body, vertical walls extending upwardly from the projecting outer ends of the feet and merging into the side walls of the body to form wells, the body being formed with parts establishing communication between the wells and the body interior and the outer face of the side walls of the body being formed with vertical grooves of substantially V-cross section which flare downwardly and incline inwardly and lie opposite to the well walls.

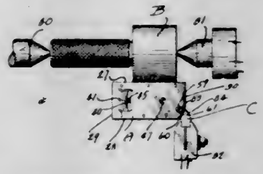
2. In a flower pot, a body, and a relatively narrow substantially semi-circular vertical wall extending upwardly from the bottom portion of the body and disposed closely adjacent to but spaced from the body periphery and having its sides integrally merging into the latter, the body periphery being grooved at points opposite to the wall so as to cooperate with the latter to form a well, the body having an opening adjacent its bottom establishing communication between the well and the interior of the body.

1,507,203. HEADLIGHT. ANDERSON REDDING, Juliette, Ga., assignor of one-half to James T. Bray, Juliette, Ga. Filed May 9, 1923. Serial No. 637,851. 1 Claim. (Cl. 240—62.)



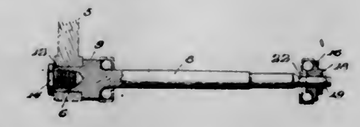
In combination, a vertically disposed member, means for supporting the same for swinging movement in a horizontal direction, an illuminating means carried by the member, an outstanding pin carried by the member, a pendulum supported for swinging movement and provided with spaced fingers between which the pin of the member extends, an outstanding magnetic member carried by the pendulum, and a stationary magnetic plate positioned adjacent to the pendulum and in close proximity to the magnetic member.

1,507,204. BATTERY-CHARGING GENERATOR AND SAFETY CONTROLLER. ALFRED H. WILLOUGHBY and GEORGE E. ROCHE, Portland, Oreg. Filed June 27, 1922. Serial No. 571,177. 2 Claims. (Cl. 171—314.)



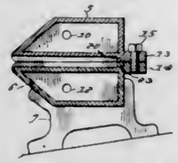
1. In a battery charging system the combination with means to provide a main battery charging circuit including a normally closed switch and a magnetic device for actuating said switch to open said circuit, of means con-

nected to said device to provide a normally opened thermostat strain relieving circuit of less resistance than the main circuit and including a normally open switch actuated by said device when energized to close the said circuit of less resistance, and means to provide an energizing circuit for said magnetic device and including a ther-



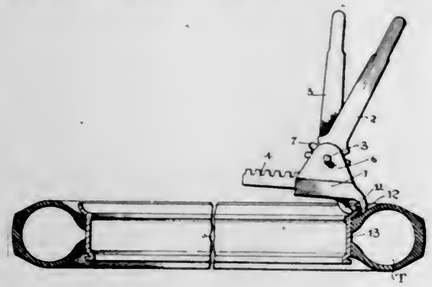
mostatic switch actuated from the heat of the battery being charged to close said energizing circuit to create said circuit of less resistance to relieve the thermostatic switch of any possible strain which might be due to the continued passing of the energizing circuit for said magnetic device.

1,507,205. CENTER INDICATOR. JOHN G. SAKOWICZ, South Deerfield, Mass. Filed Dec. 8, 1922. Serial No. 605,679. 5 Claims. (Cl. 33—185.)



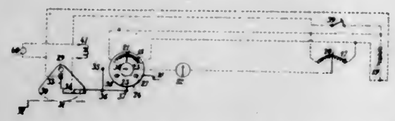
1. A gauge comprising a frame having opposed side edges in parallel relation, opposed end edges thereof in parallel relation, said side and end edges respectively disposed at right angles to each other and one corner portion of said frame being cut off to provide a diagonally disposed edge face between adjacent end and side edge faces; and indicator means movably supported by said frame and including an article engaging extension projecting through the diagonally disposed edge face and without projecting beyond the planes of the adjoining side and end edges cooperatively disposed with respect to said side and end edges.

1,507,206. PEDAL PIN. JOHN WM. SANDERS, Lorain, Ohio. Filed Mar. 29, 1922. Serial No. 547,717. 1 Claim. (Cl. 208—70.)



A device of the character described comprising a crank arm having an opening in one end thereof, a pedal pin one end thereof extending through said opening in said crank arm, an annular shoulder formed on said pedal pin engaging one side of said crank arm adjacent said opening, said pedal pin having a threaded opening extending centrally in the end thereof received in said opening in said crank arm, and a headed bolt threaded in said opening in said pedal pin the head thereof engaging the opposite side of said crank arm from that engaged by said shoulder.

1,507,207. HEATER FOR BOX TOES. FRANCOIS N. SAVARD, Avon, Mass. Filed Mar. 10, 1923. Serial No. 624,305. 1 Claim. (Cl. 34—18.)

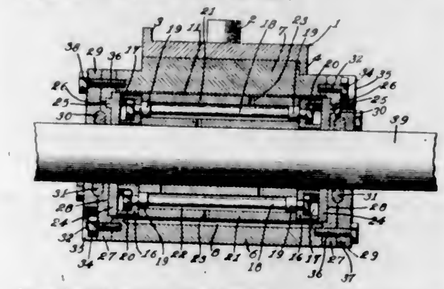


In an oven for heating leather shoe boxings, substantially rectangular chests for the reception of steam, supply and exhaust pipes connected to the said chests, the said chests having coinciding and engaging flanges on their ends and rear sides, respectively, at their bottom and top, whereby a space is formed between the chests when the flanges are in engagement with one another, and means for clamping the chests in engagement with each other with their flanges in engagement, substantially as described.

1,507,208. TIRE REMOVER. OSCAR CHARLES SCHLENKER, Plainfield, Ind. Filed Jan. 19, 1923. Serial No. 613,744. 4 Claims. (Cl. 157—6.)

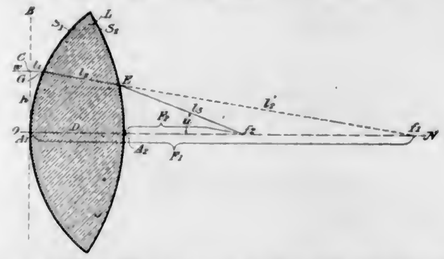
1. A tire remover comprising a frame, a single lip protruding from the front of the frame, a pair of opposing lips situated beneath said single lip and spaced laterally therefrom, a standard on back of the frame, a holding lever fixed to the frame beside the standard, a movable lever situated between the standard and holding lever having a spur gear pivoted therebetween, a rack engaged by said gear and guided in said frame, and a lug extending from said rack occupying the same plane as the single lip and being adapted to move into the space between said pair of lips.

1,507,209. APPARATUS FOR CONTROLLING FIRING ON BOARD WARSHIPS. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France, and Joseph Louis Routin, Paris, France. Filed Jan. 5, 1922. Serial No. 527,277. 10 Claims. (Cl. 89—41.)



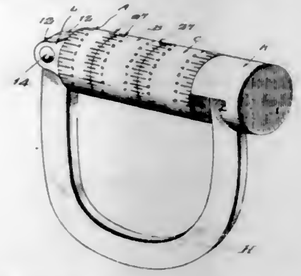
1. Ordnance apparatus comprising, in combination with a gun, a corrector for transmitting angles of train and elevation to said gun, and means for correcting the angle of train of the gun in accordance with the angle of inclination of the trunnions of the same, a parallelogram mounted adjacent to said gun, a contact for the firing circuit of the gun operatively connected to said parallelogram for actuation thereby, a second contact for completing said firing circuit when engaged by said first named contact, and a gyroscope for controlling the movement to be imparted to said first named contact by said parallelogram.

1,507,210. PROCESS OF MAKING CELLULOSE ETHERS. PAUL C. SEEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1921. Serial No. 458,748. 12 Claims. (Cl. 260—152.)



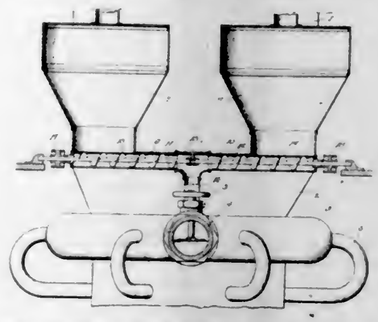
11. The process of making cellulose ethers, which comprises the steps of subjecting a mass containing cellulose and an alkali metal hydroxid and water to repeated violent disintegrating impacts until the cellulose fibers are thoroughly forced apart and intimately mixed with the hydroxid and water, and then ethylating said cellulose.

1,507,211. ROLLER BEARING. ELMER C. SHILEY, Frackville, Pa., assignor of one-half to James R. Williams, Frackville, Pa. Filed Nov. 4, 1921. Serial No. 512,879. 1 Claim. (Cl. 64—62.)



In a device of the class described, a cylindrical casing provided with an internal oil chamber extended part way around the casing, inner and outer heads on each end of the casing and provided upon their abutting surfaces with cooperating annular recesses, annular packings in the recesses, washers engaging the inner surfaces of the inner heads and connected thereto by dowels, a split-cylindrical bushing in the casing and engaged at its ends about the washers, the bushing having an opening communicating with the chamber, annular end members within the bushing and abutting against the washers, shafts connecting the end members, rollers journaled on the shafts and located between the end members, the rollers having internal oil reservoirs and being provided with transverse oil ports adapted to receive oil from the chamber, by way of the opening of the bushing, and a rotatable element carried by the rollers and extended through the end members, the washers, the heads and the packings, the packings surrounding the rotatable element closely.

1,507,212. LENS. LUDWIK SILBERSTEIN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 29, 1920. Serial No. 427,092. 10 Claims. (Cl. 88—57.)



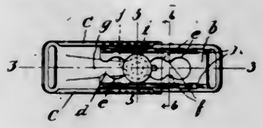
1. A lens having two aspherical surfaces, the front surface being an ellipsoidal surface, and the rear surface being so selected that the Fermat condition for the whole lens is satisfied.

1,507,213. PADLOCK. JAMES SINGER and PAUL REKETYE, East Akron, Ohio. Filed Apr. 14, 1922. Serial No. 552,667. 3 Claims. (Cl. 70—112.)

1. A lock of the character described comprising a shackle, a locking-pin pivoted at its one end to the one end of said shackle, a keeper-pin adapted to slide in a groove longitudinally of the locking-pin, a plurality of elongated sleeves encircling the locking-pin and keeper-pin, said locking pin and keeper-pin having projections or lugs arranged longitudinally thereof and occuring upon opposite sides thereof, said projections fitting into annular grooves upon the inner peripheries of the sleeves, said grooves having communicating channels adapted to permit the passage of the projections or lugs when brought into alignment, and thereby to permit the locking-pin to be moved with respect to the keeper-pin, and co-engaging means between the keeper-pin and the free end of shackle whereby the shackle may be locked to said keeper-pin when the keeper-pin is moved inwardly a certain degree.

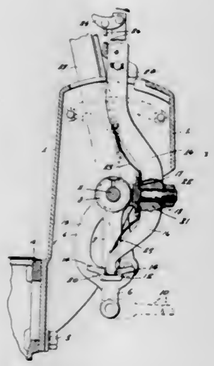
1,507,214. PROCESS FOR PURIFICATION OF PIG IRON IN BLAST FURNACES. CHARLES J. SOMERS, Jersey City, N. J., GORDON C. TIBBITTS, Somerset, Md., and EDWARD F. QUINN, Brooklyn, N. Y. Filed June 19, 1922. Serial No. 569,405. 9 Claims. (Cl. 75—14.)

1. The process of producing refined pig iron or substantially plain steel in the blast furnace, substantially free from phosphorus and sulphur, which comprises successively forming oxidizing and reducing slags in the smelting zone of the furnace during the operation thereof.



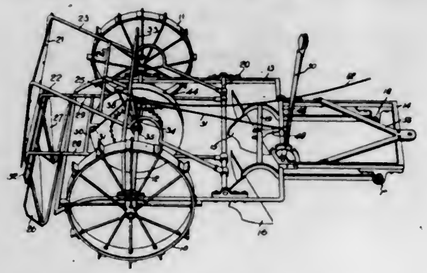
1,507,215. LINGERIE CLASP. ALFRED SPETTIGUE, Leominster, Mass. Filed Nov. 9, 1923. Serial No. 673,699. 3 Claims. (Cl. 241—12.)

1. As an article of manufacture, a lingerie clasp comprising a base perforated at its extreme ends so as to adapt it to be sewed at both ends to the under surface of the shoulder strap of an outer garment and having a



resilient tongue on the under side thereof spaced therefrom throughout the most of its length and provided with a projection engaging the base for receiving between it and the base the shoulder strap of an under garment.

1,507,216. FASTENER. CHARLES P. STOCKTON, Melrose, Mass., assignor of one-half to George C. Thomas, Malden, Mass. Filed Nov. 21, 1923. Serial No. 676,016. 5 Claims. (Cl. 24—206.)



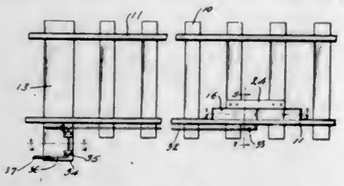
3. A fastener comprising an outer and an inner member adapted for attachment at opposite ends, said inner member being arranged for slidable connection with the outer member at its inner side and having in its middle portion a series of circular holes which are connected by a longitudinal slot extending from its unattached end, a resilient tongue connected to and extending longitudinally of said outer member and spring set in divergent relation relative thereto, and a stud fixed in the end of said tongue and extending through said outer member into the slot of the inner member, said stud having a circular head portion at its inner end adapted to be received by said circular holes and an intermediate shank portion adapted to be received by said slot, the length of said portions corresponding to the thickness of said inner member whereby either portion may be held in said slot.

1,507,217. GEAR-SHIFTING MECHANISM. HENRY W. SWEET and GEORGE C. CARHART, Syracuse, N. Y., assignors to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 10, 1922. Serial No. 600,045. 9 Claims. (Cl. 74—39.)

1. In a gear shifting mechanism, the combination of a support, a shaft carried by the support, a yoke having hubs mounted on the shaft to move about the axis of the shaft, the yoke being formed with a shifting lever bearing extending substantially outwardly in a radial direction relatively to the shaft on one side of the shaft, motion transmitting levers mounted on the shaft between the hubs of the yoke, and an operating lever pivotally mounted on the bearing of the yoke and having a lateral selecting movement about such bearing into selective engagement with any one of the motion transmitting levers, and operable to move the yoke about the axis of the shaft and shift the selected lever.

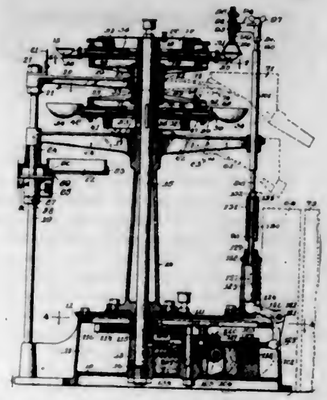
1,507,218. FURROW-MAKING MACHINE. ROBERT H. TRAPNELL, Covina, Calif. Filed May 25, 1921. Serial No. 472,343. 4 Claims. (Cl. 97—55.)

1. In a furrow making and check building machine of the class described, a carriage including an axle, a plurality of scrapers and intermittent checking scrapers carried by the carriage, a rotatable element loosely mounted on the axle, means for connecting the rotatable element to operate it, means in conjunction with the rotatable element for operating said scrapers to dig connections and build checks, and means in conjunction with said rotatable element to retain the intermittent checking scraper in a raised position when the furrows are being formed.



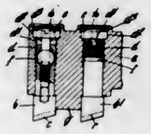
1,507,219. PROCESS FOR THE MANUFACTURE OF HOLLOW BRICKS CLOSED ON ALL SIDES. HANS TREITEL, Berlin, Germany. Filed Oct. 21, 1922. Serial No. 596,124. 6 Claims. (Cl. 25—156.)

1. A process for the manufacture of hollow bricks closed on all sides consisting in a hollow brick being first pressed with an open end and burrs of suitable thickness on two opposite walls and then pressing the burrs towards one another thereby forming a closed end having the desired cross-sectional dimensions.



5. A device for the manufacture of hollow bricks closed on all sides consisting in combination of a mould, lateral spaces thereon, said mould and spaces being adapted to be filled with plastic material, a press ram or plunger adapted to press the hollow brick within said mould and spaces with an open end and thickened walls and press-members adapted to press the projecting thickened parts of the walls towards one another after the plunger is withdrawn, for the purpose of closing the open end of the brick.

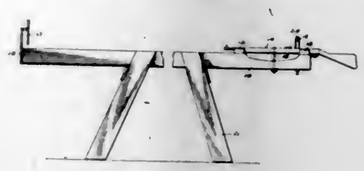
1,507,220. RAILROAD-CROSSING SIGNAL. JOHN TSCHUMPER, Carlton, Kans. Filed Mar. 28, 1924. Serial No. 702,550. 4 Claims. (Cl. 246—293.)



2. A device of the character described comprising, a railway crossing signal of the character described, comprising, a yieldable contact plate, means for preventing displacement of the said plate, a swinging crank mounted below the said yieldable plate, a roller mounted on one extremity of the crank and adapted to engage the lower side of the yieldable plate, a U-shaped rod mounted upon the supporting block, a swinging signal arm formed on the extremity of the U-shaped rod, a signal mounted on the extremity of the signal arm, a crank formed on the other extremity of the U-shaped rod, an operating rod adapted to join the said U-shaped rod crank and swinging roller crank, a coil spring secured to the U-shaped rod crank and adapted to normally retain same in an inclined position.

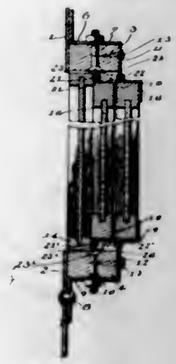
1,507,221. EGG-SEPARATING MACHINE. GEORGE WEISS, Chicago, Ill. Filed Mar. 13, 1922. Serial No. 543,227. 35 Claims. (Cl. 146—2.)

1. A machine for separating the contents of eggs and embodying an open receptacle adapted to receive the contents of the egg, mechanical means for advancing the receptacle, and means operating in timed relation to the movement of the receptacle to dump the contents therefrom.



1,507,222. SNAP GAUGE. AXEL CHARLES WICKMAN, Leamington Spa, England. Filed Nov. 23, 1920. Serial No. 426,027. 19 Claims. (Cl. 33—163.)

1. A gauge comprising a body, an adjustable gauging member comprising a shank part engaged in said body; a screw threaded adjustable member having a passage through it and threaded in said body substantially in line with said shank part, and a setting screw having an abutment on it and passed through the passage in said screw threaded adjustable member and engaged in the said shank part, the said abutment co-acting with said body so that the said body takes the setting pressure from the said abutment independently of the said screw threaded adjustable member.

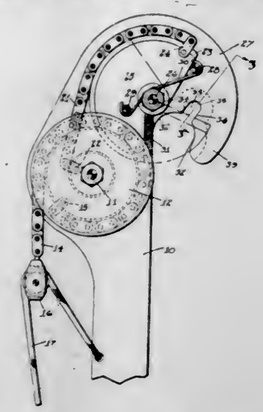


1,507,223. SIGHTING-DRILL SYSTEM AND DEVICE. JOHN G. WINTER, Waco, Tex. Filed May 31, 1922. Serial No. 564,812. 10 Claims. (Cl. 125—15.5.)

1. A sighting drill device, including a rest, a rifle provided with front and rear sights rigidly secured to the rest, an adjustable peep sight mounted to be brought to position in the rear of the rear sight, an adjustable reflector positioned in front of the rifle, a target board immovable with respect to the rest and in position to be reflected in the reflector, a disc movable over the front

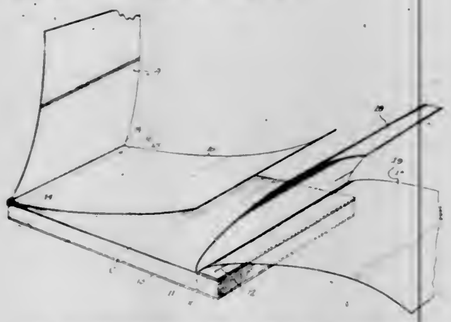
face of the target board, a miniature target on the rear face of the target board and a marker movable in unison with the disc and over the target.

1,507,224. WEATHER-STRIP GUIDE. DANIEL WILLIS ARAVE, Pocatello, Idaho. Filed May 23, 1923. Serial No. 640,952. 1 Claim. (Cl. 20—52.)



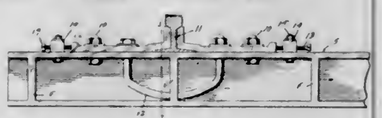
The combination with a sliding closure and the frame therefor, of a pair of metallic rails extending inwardly of the inner faces of two parallel members of the frame, and longitudinal metallic slide members secured to the closure and having portions upon the faces of the closure which are in confronting relation to said faces of the frame members, said portions of the slide members being in sliding contact with the inner faces of the rails and each slide member also having spaced guiding and retaining portions in sliding engagement with opposite lateral faces of one of said rails, each of said rails being provided at one end thereof with a laterally turned end portion extending in the path of movement of the slide member with which said rail is associated.

1,507,225. PRUNING SHEARS. LEON J. BARRETT, Worcester, Mass. Filed May 4, 1923. Serial No. 636,710. 8 Claims. (Cl. 30—11.)



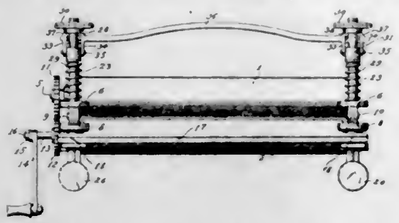
1. In a pruning shear, the combination with a support or handle having a blade thereon, of a wheel mounted on said support and adapted to turn freely and provided with two drums, one larger than the other, a flexible connection wound on the larger drum and extending therefrom for turning the wheel, a second flexible connection fixed to the smaller drum and adapted to be wound thereon by the turning of the wheel but extending outwardly from the wheel, another wheel to which the

end of the second connection is secured, having a curved surface on which it is adapted to be wound, a spring for



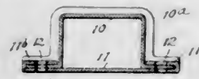
holding the second wheel in its extreme position, the last named wheel having a pruning blade for co-operating with the blade on the handle.

1,507,226. MANIFOLD TICKET. GEORGE H. BAUGHMAN, Chicago, Ill. Filed Apr. 2, 1923. Serial No. 629,486. 4 Claims. (Cl. 282—9.)



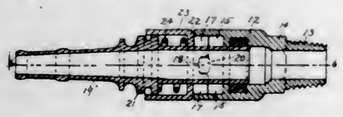
1. A manifold ticket set comprising an elongated sheet provided intermediate its ends with parallel rows of perforations and folded upon itself upon one of said perforated rows to provide two members, and a second member consisting of a shorter sheet having perforations adjacent one edge to provide a stub end that is secured to the first sheet between the parallel perforations in the latter, whereby a plurality of superposed members are provided, any one of which may be detached from the other members without separating said other members from each other.

1,507,227. TIE AND FASTENER. WILLIAM HENRY BEAL, Paris, Tex. Filed Oct. 8, 1923. Serial No. 667,290. 2 Claims. (Cl. 238—332.)



1. In a tie construction, spaced ribs forming a part of the tie, a pair of openings formed in one of the ribs, said tie having openings arranged in the upper wall thereof, fish plates on the tie and having openings adapted to register with the openings in the upper wall of the tie, securing rods extending through the openings in the rib, and having their upper ends extending into the registering openings of the fish plates and tie to lock the fish plates against movement and means engaging the ends of the fish plates for moving the fish plates.

1,507,228. QUICK-RELEASE CLOTHES WRINGER. STEPHEN BONA, Union City, Conn. Filed Aug. 15, 1921. Serial No. 492,226. 2 Claims. (Cl. 68—32.)



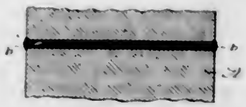
1. In a clothes-wringer, a frame, a pair of rolls mounted in said frame, a pair of standards connected to said frame, helical springs surrounding said standards for pressing said rolls together, a cross arm extending between said standards, a pair of lugs on said cross arm, a pair of spring-engaging members surrounding said standards and pivoted to said lugs, said cross-arm being provided with cam surfaces in contact with stationary means on said standards whereby on movement of said cross arm about its pivots in one direction, said springs will be suddenly released, said springs being adapted to be restored to their original condition by moving said cross arm in the opposite direction.

1,507,229. STAKE POCKET FOR VEHICLES. LEWIS W. HOSLEY, East Cleveland, Ohio, assignor to The Cleveland Hardware Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 22, 1922. Serial No. 545,745. 2 Claims. (Cl. 296—43.)

1. A stake pocket comprising a substantially U-shaped body having laterally projecting flanges with marginal beads formed along the top and bottom thereof, and a backing plate lying against said flanges and having portions folded over the flanges between the beads, and bolt holes formed through the overlapping portions of the flanges and backing plate.

1,507,230. HOSE COUPLING. CHARLES A. CLAFLIN, Medford, Mass. Filed July 29, 1920. Serial No. 399,732. 3 Claims. (Cl. 285—176.)

1. A hose-coupling comprising a tubular female member having an annular end face, a bore enlargement spaced from the end face by segmental ribs, whose ends are spaced apart to form longitudinal slots extending from the end face to the bore enlargement, the inner sides of said ribs being provided with recesses opening into the enlargement, a tubular male member having an entering portion formed to enter said bore and provided with studs, adapted to be moved forward through



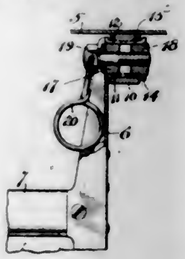
said slots, laterally in said enlargement, and backward into said recesses, and with an enlargement spaced from said studs and forming a spring abutment, a helical spring surrounding the entering portion between the said abutment and studs, and seated at one end on said abutment, and an annular head loosely surrounding the entering portion and interposed between the opposite end of said spring and the said studs, said head having at the end adjacent the female member a flanged annular portion which, when the coupling is separated, abuts the studs, and which, when the parts are in coupled relation, abuts and extends across the annular end face of the female member for the purpose described.

1,507,231. INTERCHANGEABLE TOOTH. EDWARD P. CRESSLER, Newton, Kans. Filed Jan. 30, 1924. Serial No. 689,517. 5 Claims. (Cl. 32—9.)

1. In combination with a tooth facing formed in its rear side with two holes, a retaining member applied to the tooth facing, a projection on the retaining member seated in one of the holes, a guiding tube projecting rearwardly from the retaining member and disposed in alignment with the other hole, and a fastening pin separate from the retaining member and adapted to be inserted in said guiding tube and seated in the aligned hole.

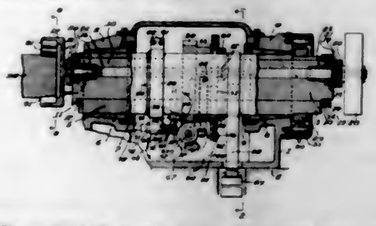
1,507,232. PROCESS OF IMPREGNATING ARTICLES WITH GUT. JOHN J. CULLINAN, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 554,825. 9 Claims. (Cl. 144—309.)

1. A solid body having a strand of gut passing therethrough and secured against displacement in the body, one end at least being secured by a heat expanded enlargement substantially flush with the surface of the body.



1,507,233. OIL CAN. ALONZO B. ELY, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Sept. 28, 1921. Serial No. 503,806. 2 Claims. (Cl. 221—40.)

2. A hand oiler comprising a one-piece sheet metal can body of sufficient rigidity to prevent distortion in the hands of a user, said body being of cylindrical form in transverse section from its upper end to a point adjacent its lower end and having an integral inwardly extending annular flange at its upper end overhanging the interior of the body, the lower end portion of the body having a permanent wedge formation and being wider transversely of the body in one direction than the diameter of the upper portion of the body, said body being provided at its upper end with external screw threads, a closure cap for the upper end of the body having a thick top wall provided with a central socket in its under face, said cap having a deep cylindrical skirt portion embracing the upper end of the can body and provided with internal screw threads complementary to the threads on the body, a thick packing disk abutting against the under face of the top wall of the cap and adapted to seat against the upper face of the can body flange, a plurality of the uppermost screw threads on the skirt portion of the cap being embedded in the periphery of said thick disk, and a dropper rod having a driving fit at its upper end in the socket in the top wall of the cap and passing through said packing disk

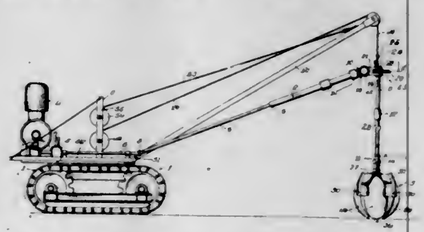


into the can body and adapted to be drawn over the inner edge of the can body flange when the cap is removed from the body.

1,507,234. FRICTION BEARING FOR WIND AND RAIN SHIELDS AND OTHER DEVICES. SANFORD EVANS, Westport, Conn., assignor to George F. Miles, New York, N. Y. Filed Jan. 26, 1923. Serial No. 615,035. 6 Claims. (Cl. 296—92.)

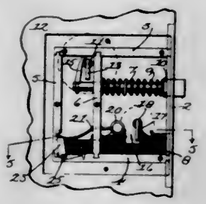
1. In a device of the character described, a support, a movable member, a pivotal connection between said support and said member comprising a ring-like bearing on one of said parts, a sleeve on the other part entering one end of the bore of said bearing, another sleeve entering the other end of the bore of said bearing, and two co-acting wedges operable to expand said sleeves when drawn toward each other, and a single manually operable means to draw said wedges toward each other.

1,507,235. METHOD OF AND MACHINE FOR MILLING TAPERED THREADS. PETER P. G. HALL, Philadelphia, Pa. Filed Sept. 22, 1919. Serial No. 325,399. 30 Claims. (Cl. 10—154.)



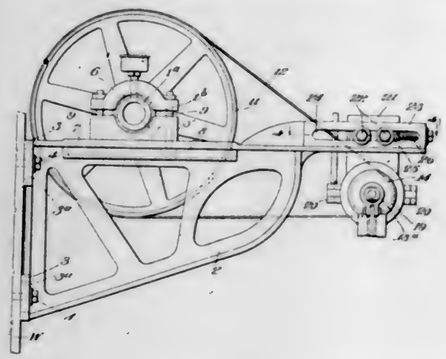
3. The combination of a tapered cutting tool, means to rotate said cutting tool about its axis, automatically operated means to cause said cutting tool to move towards the work operated upon to cause said cutter to

enter the work for cutting the threads, automatically controlled means to limit said movement at the proper depth for the threads, automatically operated means to effect a helical movement of said cutting tool relative to said work, automatically operated means to simultaneously cause movement of said cutter radially to the axis of said work and automatic means to withdraw said tool from said work and to effect a reverse helical movement of said tool to initial starting position.



19. In thread milling mechanism the combination with a cutter adapted to mill a thread on a piece of work, of means for stationarily holding the work in position to be acted upon by the cutter, means for rotating the cutter, means for automatically feeding the cutter into the work at the initiation of the cutting operation for a distance to produce the required depth of thread, means for imparting to the cutter while rotating a planetary movement about and a linear movement with respect to the work, means for automatically gradually moving the cutter transversely with respect to the axis of the work to produce a tapered thread thereon, and means for automatically disengaging the cutter from the work upon the completion of the thread.

1,507,236. EARTH-BORING MACHINE. JOHN M. HUMISTON, Berwyn, Ill. Filed Jan. 14, 1921. Serial No. 437,278. 15 Claims. (Cl. 255—19.)

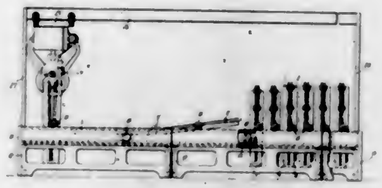


1. An earth boring device, comprising a traveling support having a rotary power crane mounted thereon, in combination with an earth auger carried by said crane, and transmission means operatively connecting said auger to the crane power source and manual means to control the application of power to the auger for driving same and to the crane for lifting and swinging the anger, said transmission means including a power shaft supported swingingly and having at one end a universal joint connection and at its opposite end adjacent to the auger a system of gearing.

1,507,237. LOCK. IGNATZ JOZEFOWICZ, Kenosha, Wis. Filed May 3, 1920. Serial No. 378,391. 1 Claim. (Cl. 70—29.)

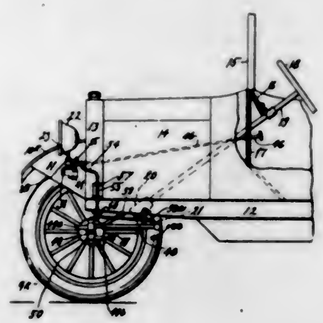
In a lock of the class described including a frame and a cover plate provided with a plurality of screws securing said plate in position, a slidable bolt provided with a seat in its upper edge, and a recess adapted to receive the bit of a key, a spring resting on said seat secured to said frame and exerting frictional pressure upon the upper edge of said bolt, a lock member or stop pivotally secured to said frame, a shaft on which said stop is mounted allowing a movement of said member against said bolt and holding said bolt in its locked position, said shaft simulating in appearance and relative position said screws to cause its function to be concealed, a latch slidably mounted in said frame above said bolt, a lug carried by said latch, a knob-spindle and a lug pivotally secured on said knob-spindle adapted to operate said latch.

1,507,238. BELT-TIGHTENING DEVICE. HENRY KOCOUREK, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 5, 1919, Serial No. 294,828. Divided and this application filed Feb. 12, 1920, Serial No. 358,236. Renewed Apr. 30, 1923. 5 Claims. (Cl. 64—52.)



1. In combination with a line shaft, a driving pulley thereon and a fixed support adjacent the shaft, a bearing for said shaft and a bracket to carry said bearing adjacent the driving pulley adapted to be mounted on said fixed support, and having a surface transverse to the mounting surface of such support, with means securing said bearing on said surface of the bracket with capacity for adjustment of the bearing toward and from the together with a driven pulley aligned with the driving pulley and bearing means comprising the sole support of such driven pulley carried by said bracket with capacity for adjustment of the pulley axis toward and from the line shaft bearing on said bracket.

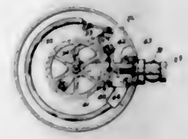
1,507,239. COMPOSITE COLOR PROCESS FOR PRINTING PICTURES. MALVIN LICHTER, New York, N. Y., assignor to Malvin Lichter and Louis Jacobs, Partners, trading as Stickless Fan Company, New York, N. Y. Filed June 19, 1923. Serial No. 646,294. 7 Claims. (Cl. 41—41.5.)



1. The method herein described of producing copies of pictures printed in colors and improving the shading of said copies, which consists in taking a picture printed in colors, improving the shading of said picture by working upon the same by hand, and then producing, by aid of the half tone color process, copies of the original picture as a whole.

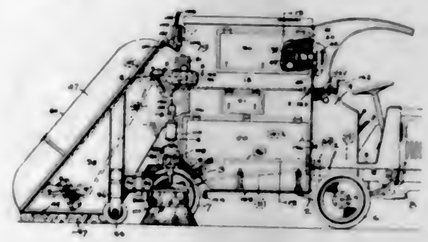
1,507,240. TIRE-TREATING APPARATUS. HECTOR V. LOUGH, Hartford, Conn., assignor to The Hartford Rubber Works Company, Hartford, Conn., a Corporation of Connecticut. Filed May 29, 1923. Serial No. 642,269. 5 Claims. (Cl. 18—2.)

2. An apparatus for treating tires comprising, in combination, a plurality of hinged sectional molds, means for supporting the sections of said hinged molds permitting them to be opened book-fashion, said means including rollers sustaining the respective mold sections at opposite sides of each, and runways for said rollers.



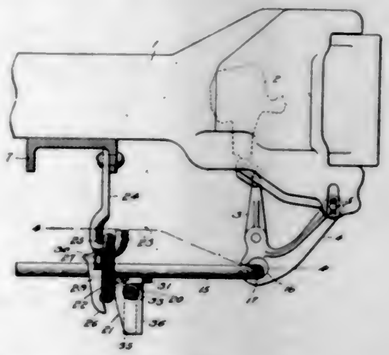
1,507,241. HEADLIGHT CONTROL FOR AUTOMOBILES. ANTON MATTSON, Minneapolis, and FRED L. DOUD, St. Paul, Minn. Filed Apr. 3, 1923. Serial No. 629,595. 2 Claims. (Cl. 240—61.)

1. In combination a pair of headlights each mounted for vertical and horizontal swinging movement, a T-shaped horizontally disposed bracket for supporting each lamp one arm of each bracket extending rearwardly, operative connection between said arms, a vertically disposed shaft on each bracket rotatably mounted in a vertically tiltable housing, means for simultaneously tilting said housings and the lamps supported thereon, means involving a vertically tiltable link pivoted on the T-shaped member for turning the lamps horizontally, operative connection between said link and the steering mechanism of an automobile for turning the lamps in accordance with the steering wheels of the automobile.



1,507,242. DEVICE FOR WEIGHING THE LOAD ON VEHICLE WHEELS. JOSEPH B. MERIAM, Cleveland, Ohio. Filed Oct. 14, 1920. Serial No. 417,000. 14 Claims. (Cl. 265—47.)

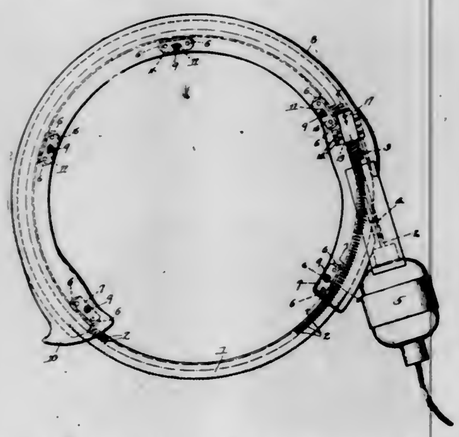
1. In a scale, the combination with a portable platform having a low height and having lateral dimensions for permitting only one wheel of a truck to be driven thereon at one time, said platform having a yielding wall, a ramp associated with the platform and disposed



in front thereof, an indicator disposed at the side of the platform, and means for communicating motion from the yielding wall to the indicator.

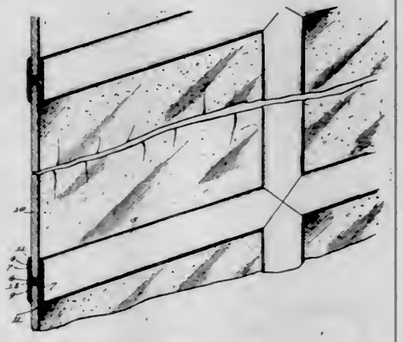
1,507,243. STREET SWEEPER. FRED H. MEYER, Oakland, Calif. Filed May 18, 1922. Serial No. 561,835. 2 Claims. (Cl. 15—11.)

2. In a device of the character described, means for securing a sweeper housing to an automotive vehicle, comprising brackets on said sweeper housing and vehicle body; complemental guideways formed on each of said respective brackets; and a common means engaging the complemental guideways to permit a vertical movement of each of said guideways relative to the other.



1,507,244. UNCOUPLING MECHANISM. ISAAC H. MILLIKEN, Aspinwall, and WILLIAM J. REGAN, Pittsburgh, Pa., assignors to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 10, 1922. Serial No. 574,022. 9 Claims. (Cl. 213—166.)

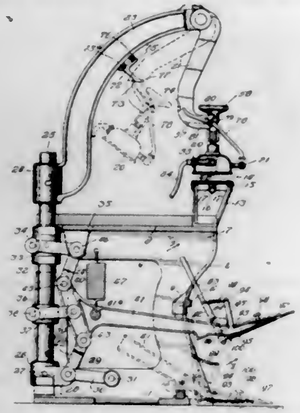
1. In an uncoupling mechanism, the combination with a car coupler and its lock, of means for moving said lock to unlocked position, said means involving a vertically rotatable member operatively connected to said lock, means supportingly engaging and adapted to actu-



ate said rotatable member, and an inverted bail for pivotally supporting said actuating means, said actuating means being provided with a plurality of spaced hooks disposed on opposite sides of said rotatable member and forming pivotal bearings for said bail.

1,507,245. PORTABLE POWER SAW. FRANK J. XANKIVELL, New York, N. Y. Filed Feb. 16, 1922. Serial No. 537,071. 7 Claims. (Cl. 193—44.)

1. A portable saw comprising in combination, an annular saw blade formed with spaced radial slots, and a motor driven worm directly meshing with said radial slots.

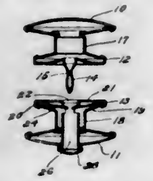


1,507,246. GAME. JOHN R. NAYLOR and ALBERT CLARK, Akron, Ohio. Filed Apr. 8, 1924. Serial No. 704,947. 3 Claims. (Cl. 189—77.)

1. A came for glass panes having a web, oppositely disposed flanges projecting from the edges of the web and channel bars mounted between said flanges the edges of said flanges being bent over the edges of said bars.

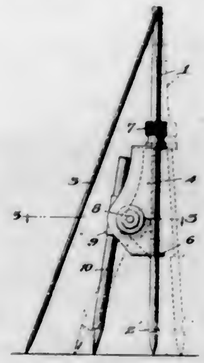
1,507,247. CONTROL DETENT. GEORGE NELSON, Chicago, Ill., assignor to Joseph Saltzman, Chicago, Ill. Filed Sept. 25, 1922. Serial No. 590,354. 6 Claims. (Cl. 74—81.)

1. In a machine comprising a movable element, the combination of mechanism engaging said element and operating, when actuated, to move the latter in one direction, means presenting yielding resistance to the movement of said element by said mechanism, and means releasably holding said element against return by said first-named means, said last-named means being formed of a member adapted when in one position to engage a relatively stationary part of the machine and hold said element against return by said first-named means,



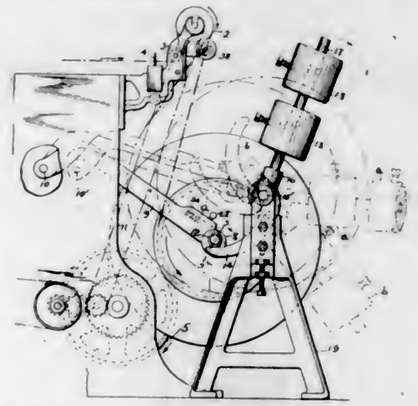
and when moved to another position disengage therefrom to permit said element to return under the action of said first-named means, and a member having yielding operative engagement with said first-referred-to member for actuating the latter.

1,507,248. LAWN-MOWER-SHARPENING DEVICE. NELS A. NELSON, Minneapolis, Minn. Filed May 2, 1923. Serial No. 636,132. 2 Claims. (Cl. 51—250.)



1. A sharpening attachment for the cutters on the revoluble cutter head of a lawn mower comprising a strip of material having spaced means disposed transversely thereof adapted to hook over the forward edge of the cutter bar of the lawn mower and seat thereon at its forward edge, resilient means engaging said cutter bar and supporting the rear portion of said strip, the top surface of said strip being formed of abrasive material and disposed in a plane intersecting the path of movement of the cutters.

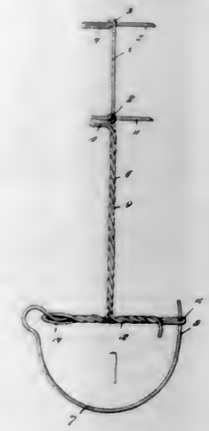
1,507,249. SEPARABLE CUFF BUTTON. WILLARD A. ORMSBEE, Taunton, Mass., assignor to Taunton Pearl Works, Incorporated, Taunton, Mass., a Corporation of Maine. Filed Aug. 4, 1923. Serial No. 655,599. 4 Claims. (Cl. 24—110.)



1. A separable cuff button comprising cooperating independent button members, each having an outer head and a flanged inner head, one of said members having a stud and the other a socket to receive said stud, a pair of transversely arranged resilient fingers extending inwardly to grip the stud, and means to lift said fingers out of their normal plane to spread positively their gripping ends and release the stud.

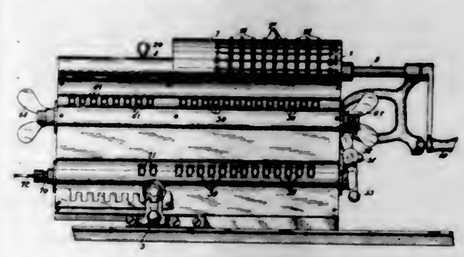
1,507,250. COMPASS. WILLIAM S. OVERLIN, Portland, Oreg. Filed Jan. 10, 1923. Serial No. 611,739. 3 Claims. (Cl. 33—27.)

1. A compass comprising a center rod, divergent supporting legs pivoted to the upper end of said rod, a sleeve freely slidable and rotatable on said rod below the point of connection of said legs, and a clamp pivoted on said sleeve and adapted to adjustably hold a marking implement.



1,507,251. WARPER FOR BEAM DYEING. ALPHONSE R. PERRIN, Westbrook, Me. Filed Dec. 23, 1922. Serial No. 608,755. 4 Claims. (Cl. 28—39.)

1. In a warping machine for beam dyeing, the combination of a warp beam, a driving cylinder on which said beam rests, a pivoted lever having a counter-weighted arm extending outwardly on one side of the pivotal point and a lifting arm extending on the opposite side of said pivotal point for exerting a lifting force on the warp beam and so formed as to shift the lifting force of said lever to approach the fulcrum of said lever as the warp builds up.

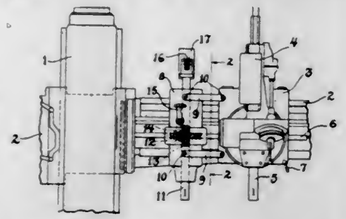


1,507,252. HANGER. DAVID E. SCHRAEDLY, Mansfield, Ohio. Filed Mar. 13, 1924. Serial No. 699,037. 2 Claims. (Cl. 108—29.)

1. A hanger of the class described, comprising a pair of elongated wires, one of said wires having the intermediate portion thereof provided with a loop, the upper end of said wire being disposed outwardly to provide attaching arms, the other wire having its upper end disposed outwardly in the same direction as the before-mentioned attaching arm, and adapted to extend through said loop, and forming an additional attaching arm, the body portions of said wires being inter-twisted and

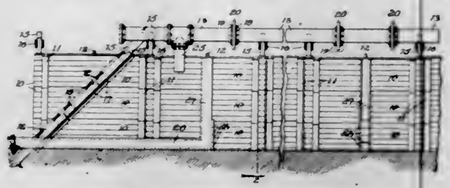
having the lower ends thereof disposed outwardly in opposite directions and adapted to conform with the shape of the article to be supported thereby.

1,507,253. CALCULATING MACHINE. ERNST SCHUSTER, Berlin, Germany. Filed May 20, 1924. Serial No. 714,729. 3 Claims. (Cl. 235—73.)



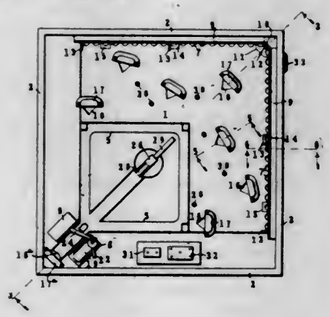
1. A calculating machine, comprising, in combination, two counting mechanisms, of which either is adapted to operate independent from the other; an adjusting mechanism common for both said counting mechanisms; a reversing gear forming an intermediary motion-transmitting means between one of the counting mechanisms and said adjusting mechanism; a rotary guide-member forming the means, by the rotation of which said reversing gear is reversed, the arrangement being such that the shafts of the cog-wheels located between the cog-wheels driven by the said adjusting mechanism and the cog-wheels meshing with the wheels of the counting mechanisms are adapted to be shifted in opposite directions, substantially and for the purpose as described.

1,507,254. AUXILIARY SPINDLE AND HEAD FOR RADIAL DRILLS. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 30, 1922. Serial No. 532,670. 8 Claims. (Cl. 29—26.)



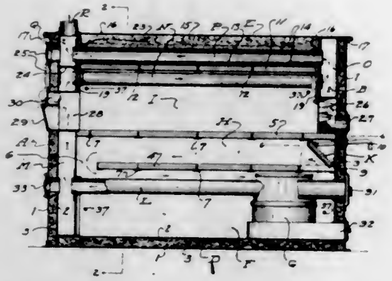
1. A drilling machine comprising the combination of an arm provided with horizontal guideways thereon, a shaft extending longitudinally of the arm, a saddle supported by the guideways and movable therealong, a drill spindle mounted on the saddle and operatively connected to the shaft, an auxiliary head mounted to slide on the

guideways at one side of the saddle, a spindle mounted in the auxiliary head, means operatively connecting the last named spindle to the shaft, and means for optionally securing the auxiliary head to the saddle.



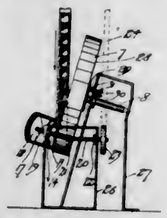
5. A radial drill comprising the combination of a vertical column, an arm mounted thereon and provided with horizontal guideways, a shaft extending longitudinally of the arm, a saddle supported by the guideways and movable therealong, a drill spindle mounted on the saddle and operatively connected to the shaft, an auxiliary head mounted to slide on the guideways between the column and saddle, a spindle mounted in the auxiliary head, means operatively connecting the last named spindle to the shaft, and means for optionally securing the auxiliary head to the saddle.

1,507,255. METHOD OF BUILDING DYKES. JACOB R. SENSIBAR, Chicago, Ill. Filed Mar. 25, 1921. Serial No. 455,475. 4 Claims. (Cl. 61—30.)



1. The method of forming a dyke consisting of placing upon the ground a form conforming to the desired configuration of the dyke, pumping a mixture of water and solid matter into said form at a plurality of points along its length, the heavier solid matter being deposited at one end of the form and lighter solid matter at the other, draining off the water, leaving the solid matter in said form and removing said form.

1,507,256. GAME. JAMES EDWARD SEVERE, Brooklyn, N. Y. Filed Dec. 15, 1922. Serial No. 607,040. 4 Claims. (Cl. 46—61.)

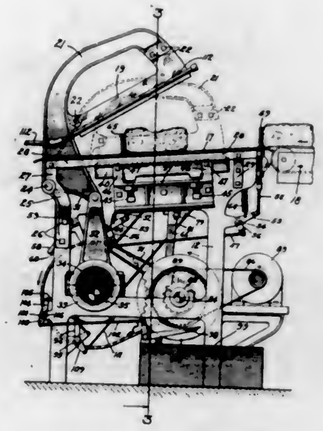


2. A game comprising a board having thereon the representation of a baseball field, an adjustable striker at the home plate, an adjustable ball propelling device at the pitcher's plate, and a series of contiguous scoring pockets covering substantially the entire playing angle at the sides of the board remote from the striker, and hazards at substantially the positions of the opposing players.

1,507,257. BAKER'S OVEN. CHARLES S. SHARP, Boonton, N. J. Filed June 1, 1921. Serial No. 474,179. 2 Claims. (Cl. 107—62.)

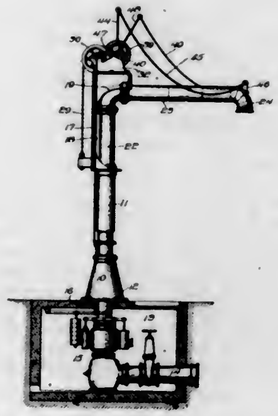
2. A baker's oven comprising a casing having a baking chamber and a heat chamber separated by a partition of high heat conductivity, said partition forming the bottom of said baking chamber and the top of said heat chamber, a heat radiating furnace arranged in said heat chamber adjacent one end thereof so that the heat radiated from said furnace is confined in said heat chamber to heat the bottom of said baking chamber, a second partition disposed between said furnace and said first-mentioned partition in spaced relation to the latter and having openings at its ends, means for opening and closing one of said openings to control circulation of said radiant heat between said first-mentioned and said second-mentioned partitions, and flues passing through said baking chamber adjacent the top thereof to conduct combustion gases from said furnace and heat the top of said baking chamber.

1,507,258. WINDING OF CINEMATOGRAPH FILMS AND THE LIKE. ALBERT EDWARD SHIRLOW, Glenhuntly (near Melbourne), and THOMAS BARTLETT MCDIARMID, Melbourne, Australia. Filed Aug. 19, 1922. Serial No. 582,906. 8 Claims. (Cl. 88—18.7.)



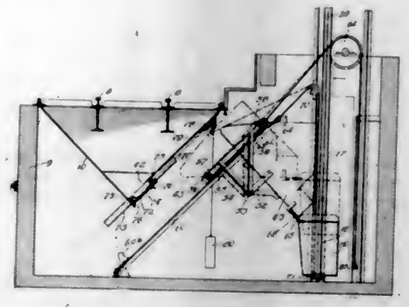
1. Means for winding cinematograph films and the like comprising a film-feeding spool, a rotating film receiving drum, and a band arranged within and against the inner circumferential surface of the drum and having angular abutting edges for receiving the title end of the film after same has passed through the gate of the projector.

1,507,259. MEAT-CUTTING MACHINE. THOMAS A. SMITH, Austin, Minn., assignor to George A. Hormel & Company, Austin, Minn., a Corporation of Minnesota. Filed Aug. 20, 1923. Serial No. 658,340. 22 Claims. (Cl. 146—146.)



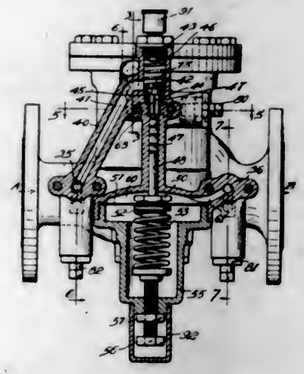
1. A meat-cutting machine comprising a frame, a table thereon adapted to receive the meat to be cut, an arm mounted to swing in a vertical plane above said table,

a knife carried by said arm and having a cutting edge which diverges from the plane of said table whereby the knife will enter the meat at an angle to the surface there-



of said table having an opening therein through which the knife blade passes, a fibrous stop beneath said opening to receive the edge of the knife, and mechanism for operating said arm and knife.

1,507,260. WATER CRANE. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1920. Serial No. 411,132. 12 Claims. (Cl. 137—21.)



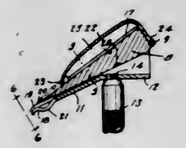
1. A water-crane formed with an upright water-conducting portion formed of lengthwise telescoping sections, counterbalancing means for said upper seciton constructed and arranged to raise said upper section upon releasing the latter after depressing it, and mechanism, involving relatively movable parts, for forcing said upper section downwardly against the resistance of said counterbalancing means.

1,507,261. MATERIAL-ELEVATING APPARATUS. BARTON S. SNOW, Batavia, Ill., assignor to T. W. Snow Construction Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1922. Serial No. 597,326. 21 Claims. (Cl. 214—125.)

1. In material-elevating apparatus, the combination of a hopper for the material to be elevated, an upwardly traveling carriage, a receptacle for receiving and elevating material from said hopper and mounted on said carriage to move thereon into a position in which its contents may discharge therefrom, a movable element into which said receptacle discharges, and means operating responsive to the movement of said element for effecting movement of said receptacle on said carriage to a position in which its contents may discharge.

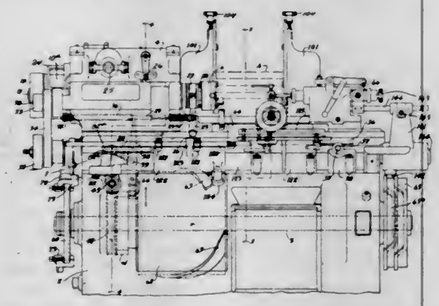
1,507,262. REDUCING VALVE. GEORGE A. SNYDER, Fostoria, Ohio. Filed Dec. 5, 1921. Serial No. 519,947. 22 Claims. (Cl. 50—11.)

3. In a reducing valve, a main valve casing, a main valve therein, a pair of auxiliary valves, mounted on the casing, each auxiliary valve adapted to cooperate with said main valve, and other valve means adapted to render said auxiliary valves active or inactive at will.



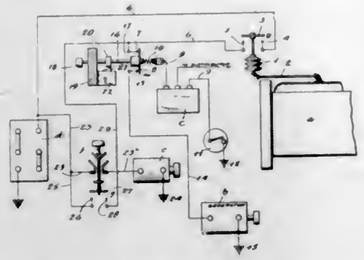
19. In a reducing valve, a main valve casing having a wall dividing the casing into high and low pressure chambers, a valve seat supported by the wall, a valve closure member coacting therewith, a cylinder removably positioned in the low pressure chamber of the valve, a piston therefor, a connecting stem between the piston and valve closure member, a cap on the valve body flanged to maintain the cylinder in rigid relation with the valve body, said cap having an extension formed thereon acting on an aligned extension formed on the piston for limiting movement of the piston.

1,507,263. COMBINED CIGARETTE, MATCH, AND CARTON. JOHN M. SORLIE, Eau Claire, Wis. Filed June 13, 1923. Serial No. 645,077. 2 Claims. (Cl. 131—52.)



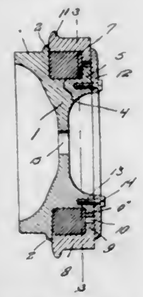
1. An article of manufacture comprising a substantially cylindrical tobacco article adapted to be smoked, the same having a wrapper and a match having its stem disposed inside of and secured to said wrapper.

1,507,264. SAFETY RAZOR. WALTER M. STEVENSON, Seattle, Wash. Filed Nov. 14, 1922. Serial No. 600,843. 1 Claim. (Cl. 20—12.)



A safety razor embodying a blade holder formed of a base plate, a handle on said base plate, a downwardly bent portion at the rear of said base plate, tooth-like guard members at the front of said base plate, upwardly projecting end members at the ends of said base plate, tapered channels formed in said upwardly projecting end members, a triangular blade arranged to be inserted within said tapered channels, a cover plate, a downwardly bent forward edge on said cover plate arranged to rest on said blade, a downwardly bent rear edge on said cover plate arranged to fit over the rear edge of said blade, downwardly bent ends on said cover plate arranged to fit over the upwardly projecting end members of said base plate, and snap means for releasably securing said cover plate to said base plate.

1,507,265. AUTOMATIC LATHE. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 17, 1920, Serial No. 381,945. Renewed Jan. 8, 1924. 14 Claims. (Cl. 82—2.)

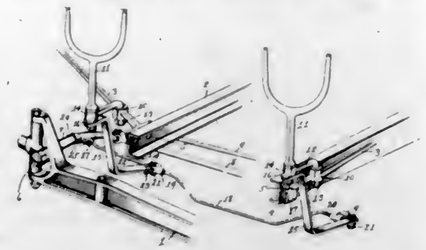


1. An automatic lathe comprising in combination, a base, attaching means extending along said base, a tool carriage operating slide on said attaching means, and a support for a taper attachment detachably mounted on said attaching means.

1,507,266. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. GEORGE H. WHITTINGHAM, Baltimore, Md. Filed June 4, 1923. Serial No. 643,302. 5 Claims. (Cl. 290—37.)

1. In an ignition system for internal combustion engines, a battery, a generator, a spark coil, circuits leading from the battery and generator, a normally closed stopping switch connecting said circuits together and to the coil, and a normally open switch in the battery circuit adapted to be closed by the operation of the engine.

1,507,267. CAR WHEEL. FRANCK AGNICHEK, Chicago, Ill., assignor of one-fourth to Frank Krasel, one-fourth to Joseph Bosch, and one-fourth to Louis I. Gottlieb, all of Chicago, Ill. Filed Apr. 4, 1924. Serial No. 704,200. 3 Claims. (Cl. 295—11.)

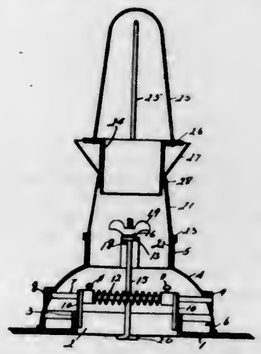


2. A car wheel comprising a body portion, an annular rib formed on the peripheral face thereof adjacent the rear face of the body portion, said body portion having an annular groove formed in the periphery thereof adjacent the front face of the body portion and adjacent the annular rib, the front face of the body portion being cut away around its outer edge to provide an annular flange, a packing ring of flexible material supported in said groove, a tread portion extending around said packing ring and having the front face thereof provided with an annular flange adapted to cooperate with the annular flange on the front face of the body portion, the rear face of the tread portion abutting the annular rib, and means for securing the tread portion on said body portion.

1,507,268. MEANS FOR TURNING AUTOMOBILE HEADLIGHTS. BRUCE G. ANDREWS and HARRY ANDREWS, Yuma, Colo. Filed Jan. 3, 1922, Serial No. 526,699. Renewed Feb. 5, 1924. 1 Claim. (Cl. 240—62.)

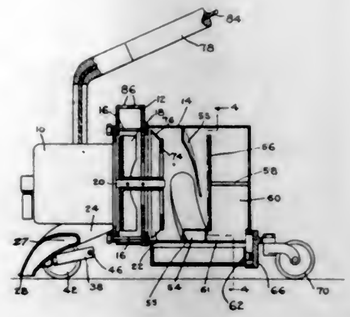
Headlight turning means for an automobile which is provided with the usual fender brackets or rods having sockets for the lamp forks, comprising L-shaped brackets each having a leg received in one of the aforesaid sockets and rigidly secured thereto against movement and its other leg provided with a vertically arranged bearing-eye,

the usual lamp supporting brackets or forks having their shanks directly fitting, and rotatably mounted in, said eyes, Z-shaped shifting arms secured to the lower ends of the shanks of said lamp supporting brackets or forks, a cross rod pivotally connected to the shifting arms to cause them to move in unison, a clamp embracing the arm of one of



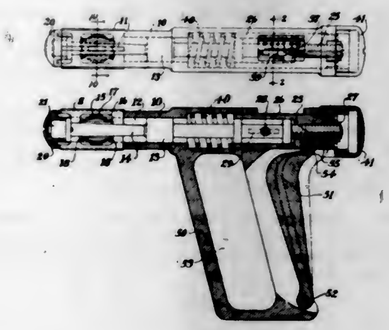
the steering knuckles, said clamp being shiftable to different positions along said arm, and a rod pivotally connecting the clamp to one of the Z-shaped shifting arms for the lamp brackets or forks, whereby movements of the arm of said steering knuckle are imparted to the shifting arms and lamp brackets or forks to cause the lamp brackets or forks to turn.

1,507,269. ADAPTER FOR SMOKE AND FUME ARRESTERS. GEORGE H. HACKMIRE, Collegeville, Pa. Filed Mar. 4, 1922. Serial No. 541,222. 4 Claims. (Cl. 285—203.)



4. As an article of manufacture, an adapter comprising a plate having an opening therethrough, a rib fixed to the lower face thereof and conforming to the contour of said plate, and a plurality of spaced arcuate segmental ribs fixed to the inner face of said plate on two opposite sides of the opening therethrough, any of said ribs coacting with the collar about the smoke outlet of a stove to position the adapted.

1,507,270. FUME ARRESTER. GEORGE H. BACKMIRE, Collegeville, Pa. Filed Jan. 24, 1924. Serial No. 688,161. 8 Claims. (Cl. 126—85.)

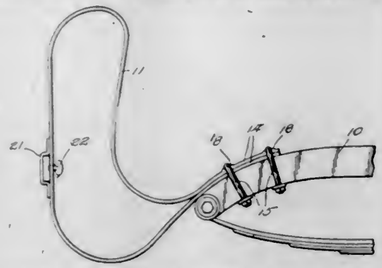


1. A fume arrester comprising an adapter of sufficient dimensions to set over and inclose an outlet flue of a gas range, means for locating and temporarily holding the device in place upon the gas range, and means for clamping the device in final position.

1,507,271. SUCTION CLEANER. ASHLEY C. BENNETT, Minneapolis, Minn. Filed Sept. 23, 1920. Serial No. 412,282. 5 Claims. (Cl. 183—77.)

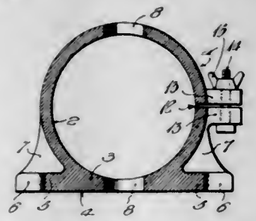
1. A suction cleaner for carpets, rugs and the like comprising a fan casing having discharge openings, a fan in said casing, an air cleaner casing attached to said fan casing and connected therewith, means for introducing air into said air cleaner casing, troughlike members helically arranged on the inside of said air cleaner casing to form helical passageways for the incoming air, said troughlike members extending for only a portion of the circumference of said air cleaner casing, and cooperating helical ribs extending for the remainder of the circumference thereof.

1,507,272. INTERNAL-EXPANDING GAUGE. EARLE BUCKINGHAM, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,214. 4 Claims. (Cl. 33—178.)



1. A gauge comprising in combination, a body member, gaging members inserted therein, means to move said gaging members into and out of gaging position, and means for holding said gaging members in contact with said moving means, said holding means comprising leaf springs having their central portion engaging said body member and their end portions engaged by said gaging memebrs.

1,507,273. BUMPER. GERALD S. CARRICK, Chicago, Ill. Filed May 26, 1922. Serial No. 563,960. 2 Claims. (Cl. 293—55.)



2. A bumper comprising two forked castings adapted to be attached to the ends of the side members of a vehicle,

the forked ends of said castings carrying two parallel horizontal bars, and a plurality of substantially vertically

arranged elongated loops formed of spring steel mounted on said bars, said loops carrying on their forward sides a horizontally arranged bar.

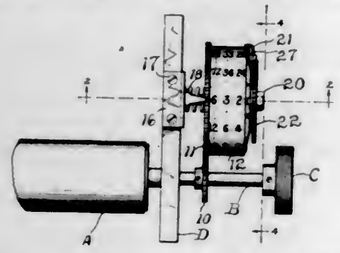
1,507,274. PISTON JIG. ROSS E. CURTIS, Lincoln, Kans. Filed June 9, 1923. Serial No. 644,418. 2 Claims. (Cl. 29—80.)

1. A piston jig for use in applying, removing and reaming piston bushings, said device comprising a body adapted to snugly embrace and sustain the walls of the piston throughout the extent of the latter during bushing applying, removing and reaming operations, said body having openings to aline with the bushing receiving openings in the piston.

1,507,275. WALL-FINISHING MATERIAL. MICHAEL W. DUFFY, Wyoming, Ill. Original application filed May 2, 1921, Serial No. 466,358. Divided and this application filed Apr. 1, 1922. Serial No. 548,857. 2 Claims. (Cl. 91—68.)

2. The method of producing a wall finishing material which consists in treating solid particles of vegetable material to a boiling borax solution, drying the material, and subjecting it to treatment of a coloring matter prior to its application to a wall.

1,507,276. METHOD OF APPLYING STUCCO FINISH TO WALLS. MICHAEL W. DUFFY, Wyoming, Ill. Filed May 2, 1921, Serial No. 466,358. Renewed July 8, 1922. Serial No. 573,634. 9 Claims. (Cl. 91—68.)

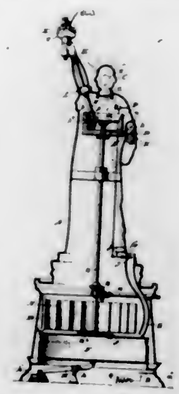


1. The method of forming a stucco finish on wall surfaces which consists in sizing the wall-surface, and applying thereto sawdust or like vegetable material by means of an instrument adapted to having rolling contact with said surface and charged with said material.

1,507,277. BOTTLE-SEAL-CAP LIFTER. JOHN S. DUNLAP, Chicago, Ill. Filed July 28, 1922. Serial No. 578,137. 1 Claim. (Cl. 65—46.)

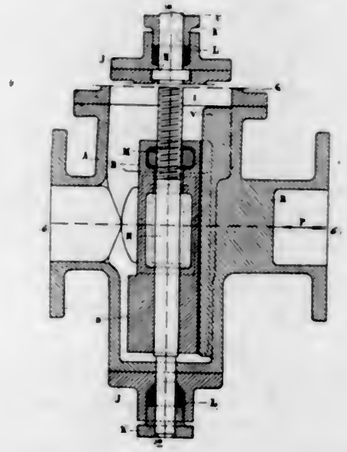
A bottle cap lifter adapted to remove a bottle cap of ductile material and having a convex upper surface, said lifter comprising a handle-portion equipped at its forward end with a hook adapted to take under the edge of the cap, and a fulcrum-forming projection so located relative to the area of the cap surface as to bear thereon at a point within its marginal edge and within the inner edge of the neck of a glass bottle when said lifter is applied to a cap thereon whereby to prevent the splintering of the bottle neck and consequent lodgment of particles of glass in the bottle contents when pressure is applied to said fulcrum-forming projection, the edge of the lifter between said hook and projection being slightly spaced from the cap and arranged to contact therewith through initial depression of the projection and the forcing downwardly of the convex upper surface of the cap with resulting spreading of its circumferential edge to assist in the tight engagement of said hook under said edge, the edge of the lifter adjacent the projection on the side thereof opposite to the hook being spaced from the cap a greater distance than the first mentioned edge whereby to avoid contact of such edge with the cap in the downward cap-removing movement of the lifter.

1,507,278. ATTACHMENT FOR TYPEWRITERS. FRED EDWARD FANGER, Mexico, Mexico. Filed Aug. 9, 1922. Serial No. 580,591. 5 Claims. (Cl. 197—189.)



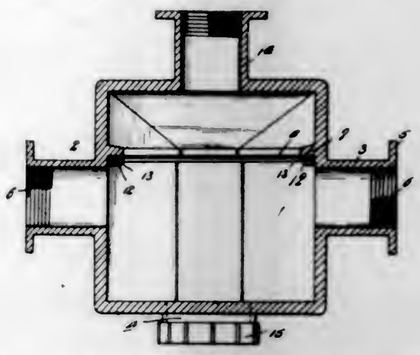
1. A typewriter attachment of the class described including a toothed drive pinion adapted to be revolved with the revolving of the axle of the platen roller, a toothed driven gear element adapted to mesh with said pinion to be driven thereby, a revoluble indicating element in rigid relation with said gear element, presenting at its periphery annular series of symbols indicating varied line spacing, a stud shaft on which said gear element and said revoluble indicating element are loosely mounted for jointly turning about the axis of said shaft, a fixed pointer relatively to which said indicating element revolves, and a spring coiled about said shaft and abutting said revoluble element to maintain the same in position on the shaft with the driven gear element in mesh with the drive pinion, said revoluble element and driven gear element being slidable axially on the shaft to disengage the driven element and pinion to permit setting of the attachment.

1,507,279. SIGNALING MEANS FOR TOY BANKS AND FOR OTHER PURPOSES. LOUIS GICLAS, Washington, D. C. Filed June 4, 1921. Serial No. 475,075. 10 Claims. (Cl. 46—36.)



1. A bank of the character described comprising a coin receiver, movable illuminating signaling means, means for illuminating said signaling means, means operatively

associated with said movable illuminating signaling means and coin receiver rendered effective upon an accumulation of coins in the coin receiver for actuating



the movable signaling means, and means connected with the signaling means and actuated by the coin receiver for setting in action the illuminating means.

1,507,280. BALANCED SLUICE VALVE. GABRIEL GOMAND, Barcelona, Spain. Filed June 26, 1922. Serial No. 570,981. 3 Claims. (Cl. 251—59.)

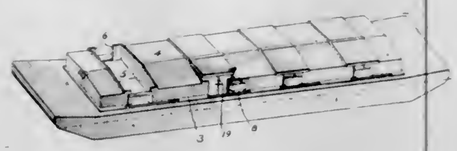
1. A balanced sluice valve, comprising a casing provided with an inlet and an outlet for the current; a pair of oppositely-curved delivery channels within the casing leading from the inlet toward the outlet; upper and lower stuffing-boxes mounted in the top and bottom of the casing; a vertically-movable valve in the casing to control communication between said channels and outlet, normally occupying a closed, lower position and receiving directly against its two side faces, when in such position, the up-stream pressure of the currents in said channels; and a vertical operating rod whereon said valve is slidably mounted projecting at opposite ends into said stuffing boxes and having its lower portion reduced to form an annular shoulder which is located between and in spaced relation to the lower face of the valve and the bottom of the casing.

1,507,281. PUMP SEPARATOR. WILLIAM O. GREER, Kentenia, Ky. Filed Mar. 29, 1923. Serial No. 628,621. 1 Claim. (Cl. 210—165.)

A device of the class described comprising a casing, having a pair of inlets at opposite sides thereof, an outlet in one side of said casing, a flange formed in the casing, and extending inwardly from the opposite side between the inlet and the outlet, a vertically arranged screen element having its edges disposed against the flange, a U-shaped clamping strip positioned against the edges of the screen element, fastenings passing through the clamping strip and flange, the bottom walls of the receptacle being inclined, a drain plug at the bottom of the casing, and a removable cover secured to the upper face of said casing.

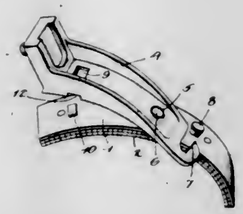
1,507,282. PAVEMENT. WILLIAM CUSHING HAMMATT, San Francisco, Calif. Filed Apr. 14, 1923. Serial No. 631,999. 1 Claim. (Cl. 94—10.)

A device of the character above described, comprising a pavement slab of concrete composed of mineral aggregate, Portland cement and water in any proportion, separated from the subsoil by a water proof sheet consisting of building paper, roofing felt or any kind of fabric water proof in character before laying or made so in the process of laying by means of asphalt, tar, oil, paint or other water repellent element or compound.



1,507,283. WELL-DIGGING MACHINE. GEORGE WILLIAM HANNA, Sardis, Tenn. Filed May 8, 1923. Serial No. 637,409. 1 Claim. (Cl. 255—63.)

In apparatus of the character described, the digger comprising a cylindrical shell, means for hoisting the shell, grapple rods pivotally mounted within the shell



at the upper portion thereof and having angularly disposed upper end portions extending toward the intermediate portion of the shell, springs interposed between the shell and the upper end of the said angularly disposed portion and adapted to normally hold the lower portions of the gripper rod against the inner surface of the shell, a roller located between the angularly disposed portions of the gripper rod, and means operatively connecting the roller with the hoisting means for the shell.

1,507,284. CARGO BOX FOR BARGES. EMIL HENSEN, Coraopolis, Pa. Filed June 9, 1923. Serial No. 644,359. 3 Claims. (Cl. 114—26.)

1. A cargo box for barges including opposite side walls and double sloping roof, a hatchway in the roof extending from wall to wall, opposite doorways in the side walls continuous with the hatchway, and a double hatch for said hatchway the opposite halves of the hatch adapted to swing vertically on the ridge of the roof as an axis and, when raised, while still overhanging the hatchway, affording increased head-room in the doorway.

1,507,285. TRANSMISSION BAND. GLENN R. HOFFMAN, Springfield, Ill., assignor to Hoffman Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Apr. 8, 1924. Serial No. 705,131. 14 Claims. (Cl. 188—249.)

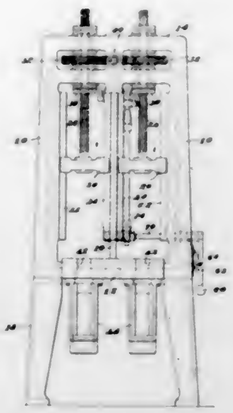
7. A transmission band, a detachable ear pivotally connected therewith, the ear and band being formed with cooperating studs and openings disposed between the pivotal connection and ends of the ear, one opening being in an arc with the pivotal connection as its center and the other having a recess in communication therewith and disposed in an arc with the pivotal connection as its center.

1,507,286. SCISSORS SHARPENER. DAVID W. HOLDZKOM, Longport, N. J. Filed June 8, 1922. Serial No. 566,873. 2 Claims. (Cl. 76—88.)

1. A scissors sharpener formed from a single piece of metal properly shaped and bent to produce converging handle portions, parallel spaced head portions, an ear formed with the side edges of one head portion and adapted to be bent around the edge of the other head portion, and outwardly projecting wings providing bearing surfaces, an inwardly projecting rib produced in one

of the head portions, and a sharpening member located between the head portions and resting upon said rib and being held against endwise movement by the ears.

1,507,287. GARMENT HANGER. JOHN F. HOLLIDAY, Washington, Ind., assignor to Hincher Manufacturing Company of Indiana, Washington, Ind., a Corporation of Indiana. Filed June 6, 1923. Serial No. 643,815. 2 Claims. (Cl. 211—13.)

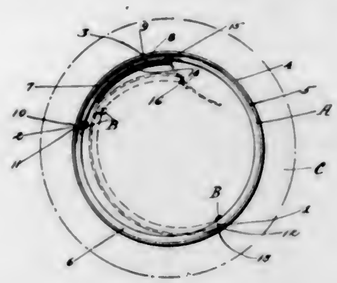


1. In a garment hanger, a rigid wooden body arched upwardly and long enough to support the shoulders of a garment, a metal hanger-hook secured to the middle of the body, and a wire crossing the hook above the body and bent at its ends toward the body and rigidly engaged therewith to form shoulders at places so remote from each other that the neck of a wide necked garment strikes a shoulder on one side before the opposite side slips off of the end of the hanger, the ends being bent at not greater than right angles to the horizontal wire member in the side next to the hook.

1,507,288. BROACHING MACHINE. MATTEO E. INFIORATI, Jr., New London, Conn., assignor to The J. N. Lapointe Company, New London, Conn., a Corporation of Maine. Filed Sept. 12, 1922. Serial No. 587,677. 6 Claims. (Cl. 90—3.)

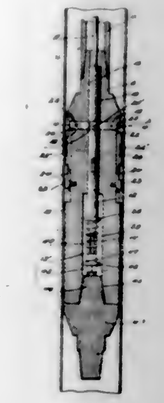
6. A press adapted for operating push broaches comprising mechanism having two reciprocating press heads, means guiding them each vertically without rotation, a

rotating drive shaft arranged horizontally between them and having intermeshing connection therewith, and a bell crank lever having one end swinging vertically and



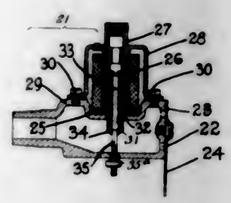
adapted to be controlled by press head movement, and having its other end swinging horizontally and adapted to control driving mechanism of said press heads.

1,507,289. METHOD OF LIQUEFYING GAS. WILLIAM M. JEWELL, Chicago, Ill., assignor to Chlorine Products Company, Chicago, Ill., a Corporation of Illinois. Filed May 12, 1919. Serial No. 296,460. 31 Claims. (Cl. 23—10.)



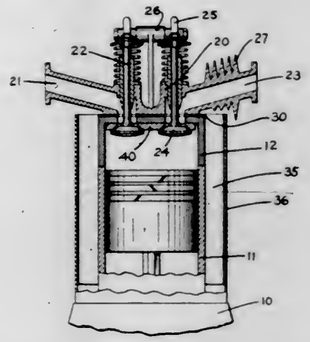
4. The method of liquefying chlorine gas which consists in compressing the gas in the presence of sulphuric acid in finely divided condition to be carried along by the current of gas, and condensing the gas while intermixed with the sulphuric acid.

1,507,290. JOINT LOCKING AND REENFORCING MEANS. EUGENE A. JONES, Los Angeles, Calif., assignor to Richard J. Palmer, Los Angeles, Calif. Filed Jan. 5, 1921. Serial No. 435,236. 3 Claims. (Cl. 301—32.)



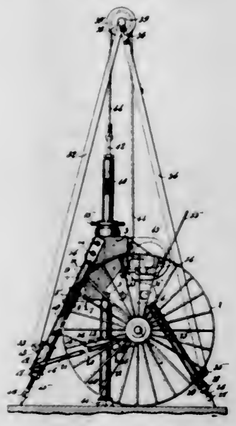
1. A device of the character disclosed, comprising two relatively movable members, and means for maintain end portions thereof in opposed relation and permitting relative movement thereof, the same comprising a part attached to one of said members, and connected with the other of said members so as to permit relative movement between the members; there being a slotted portion of one of said members, and said part extending between the members having a headed end part adapted to be received in said slotted portion in interlocking relation; said headed end portion being hingedly united with said member having said slotted portion at a point remote from an end portion thereof.

1,507,291. COMBINED CASING SPEAR AND COUPLER. JESSIE E. JONES, Bartlesville, Okla. Filed Aug. 20, 1921. Serial No. 493,865. 9 Claims. (Cl. 255—35.)



1. In a combined casing spear and coupler, an invertible body provided at both ends with means for attaching supporting members, projectile elements provided with inclined teeth, and means within the body for projecting said elements beyond the contour thereof comprising a plunger and a key, said key adapted to occupy different position with respect to the plunger to vary the force exerted upon said projectile element.

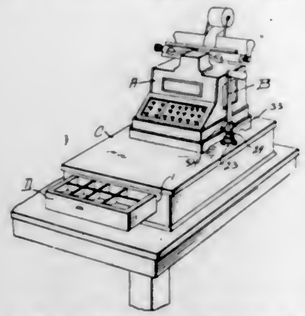
1,507,292. SYSTEM OF GAS CONTROL. CHARLES F. KETTERING and WILLIAM A. CHRYST, Dayton, Ohio, assignors, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 3, 1917. Serial No. 146,542. 6 Claims. (Cl. 123—129.)



1. In a fuel mixer for internal-combustion engines, the combination with a mixing chamber casing having an air inlet; of a fuel nozzle extending into said casing, and provided with a valve seat; a valve slidable within said nozzle and cooperating with said seat; and an electromagnet surrounding said nozzle and cooperating with said valve.

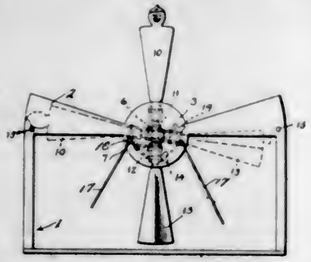
1,507,293. CYLINDER CONSTRUCTION. CHARLES F. KETTERING and WILLIAM B. EARNSHAW, Dayton, Ohio, assignors, by mesne assignments, to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 11, 1919. Serial No. 344,070. 5 Claims. (Cl. 123—171.)

1. A cylinder for internal-combustion engines, comprising a barrel portion of wear resisting metal; a head portion of a metal which is comparatively a good conductor of heat; and a plurality of cooling elements each associated with the barrel portion and the head portion and in effective thermal contact therewith.



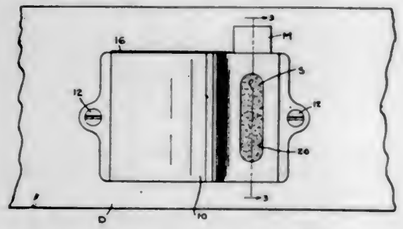
1,507,294. DRILLING MACHINERY. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 20, 1919. Serial No. 298,488. 76 Claims. (Cl. 255—4.)

43. In a drilling apparatus, a drill stem, engaging means therefor, and resilient means for operatively connecting and disconnecting said engaging means with said stem, said resilient means being necessarily completely yielding during both of said operations.



1,507,295. DRAWER-OPERATING MECHANISM. CLIFFORD NADEN, Boise, Idaho. Filed Dec. 1, 1919. Serial No. 341,600. 8 Claims. (Cl. 235—22.)

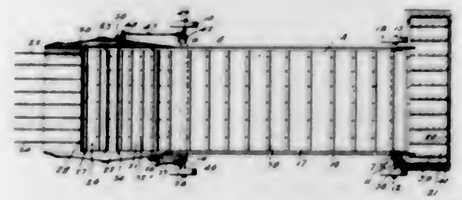
8. In combination with a structure including a drawer, an adding machine adapted to be removably supported upon the structure and including a casing and an operating handle, a latch for holding the drawer in closed position, and a member engaged directly by the handle



exteriorly of the casing of the mechanism for releasing the latch from the drawer upon movement of said handle.

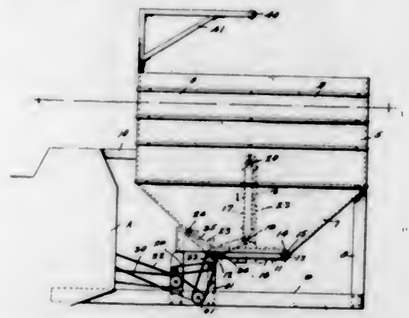
1,507,296. GAME APPARATUS. AUGUST DUMPE NEWMAN, Cangal, New South Wales, Australia. Filed June 3, 1921. Serial No. 474,668. 3 Claims. (Cl. 46—59.)

1. In a game apparatus, the combination with a frame of open work structure, a disk mounted at the center of said frame, a rigid guard leading from said disk to the sides of said frame, and stops carried by said guard, of a rotatable main shaft journalled in the disk in the rear of said frame, an upstanding target mounted on said shaft and adapted to fold upon said shaft, the longitudinal axis of said target being parallel to the longitudinal axis of said shaft and means fixed to said shaft which when struck will cause said shaft to rock whereby said guard may hide said target.



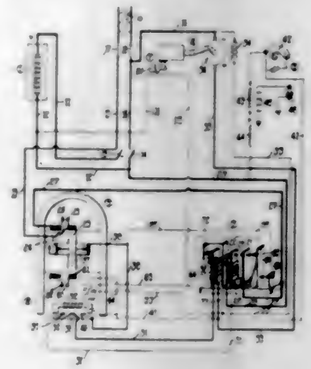
1,507,297. SMOKER'S APPLIANCE. LOUIS A. PRIESS, Minneapolis, Minn., assignor to William L. Minor, Minneapolis, Minn. Filed Dec. 27, 1920. Serial No. 433,197. 1 Claim. (Cl. 206—30.)

A smoker's appliance comprising an integral one-piece casing having a flat vertical wall adapted to be secured to a vertical support, said casing containing two vertically extending compartments open at their upper ends



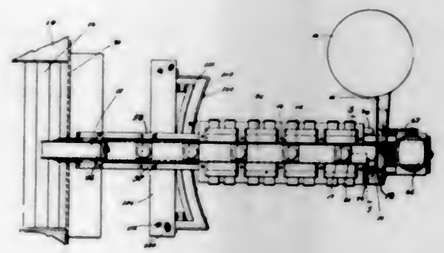
and arranged side by side, one of said compartments being adapted to receive a match box and being provided with an opening for exposing the striking surface of the match box, means in the bottom of said compartment for supporting the inner portion of the match box in raised position relatively to the outer portion thereof, and a cup removably supported in the other of said compartments.

1,507,298. SHOCK LOADER. RUSSELL D. PUGH, Eureka, Kans. Filed Jan. 17, 1923. Serial No. 613,212. 3 Claims. (Cl. 56—357.)



1. In a shock loader comprising a longitudinally extending main frame including front and rear axles and a reach pole connecting the axles, ground wheels mounted upon the axles, a relatively tall rear supporting frame connected with the rear axle and a relatively short supporting frame connected with the front axle, an inclined elevator extending the full length of the main frame and connected with the relatively short and relatively tall supporting frames, a transverse conveyor carried by the relatively tall frame, an animal draft appliance connected directly with the rear axle and disposed under the elevator, and a shock pickup mechanism carried by the forward end of the main frame and disposed in front of the inclined elevator.

1,507,299. SELF-FEEDER. RUSSELL D. PUGH, Eureka, Kans. Filed Jan. 17, 1923. Serial No. 613,213. 1 Claim. (Cl. 130—1.)

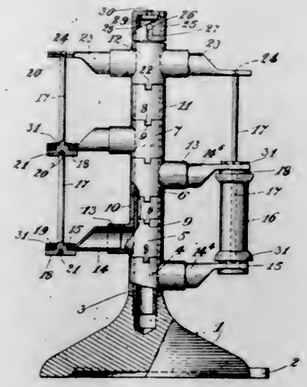


The combination with a grain separator, of a self-feeder therefor including a frame connected with the separator, a hopper carried by the frame having its lower end tapered, a horizontally disposed conveyor belt arranged in the lower end of the hopper, bundle cutting knives disposed in the hopper at one end of the conveyor, a vertically disposed endless belt arranged in the hopper for preventing the clogging up of the bundles therein, and conveyor belts arranged below the hopper at one end thereof for receiving the cut bundles from the first mentioned conveyor and the cutting knives for delivering the same into the separator.

1,507,300. ELECTRICITY GENERATING AND STORAGE SYSTEM. JAMES B. REELOGLE, Detroit, Mich., assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 31, 1920. Serial No. 370,235. 4 Claims. (Cl. 40—30.)

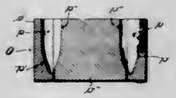
1. An electricity generating and storage system comprising a battery, a hydro-carbon engine, a generator adapted to operate as a motor to crank the engine and to be driven thereby to charge the battery, an electric heater for the fuel passing to the engine, and automatic means for controlling the operation of the generator and engine in accordance with the electrical condition of the battery to maintain the latter within predetermined limits of voltage, means for initiating the operation of the generator to crank the engine when the environment temperature falls to a predetermined minimum and for substantially simultaneously initiating the flow of current to the heater to heat the latter.

1,507,301. LEER CONVEYER. PERCY Q. WILLIAMS, Cincinnati, Ohio. Filed June 3, 1922. Serial No. 565,733. 23 Claims. (Cl. 198—31.)



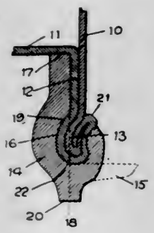
1. In a device of the class described the combination of a bottle machine, a leer, a conveyer comprising sectional carrier plates, each sectional carrier plate being adapted to carry bottles step by step from the bottle machine to the leer and means to operate the bottle machine, the conveyer and the leer, in timed relation.

1,507,302. MULTIPLE SPOOL HOLDER. MILTON ZUBER, New York, N. Y. Filed Aug. 12, 1922. Serial No. 581,311. 18 Claims. (Cl. 242—139.)



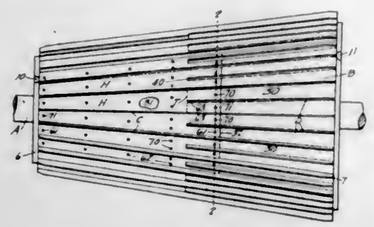
1. In a multiple spool holder, in combination, a vertical support rod, and a plurality of spool brackets mounted

on said rod and extending at an angle thereto, each said bracket having mounting means near its outer end for a



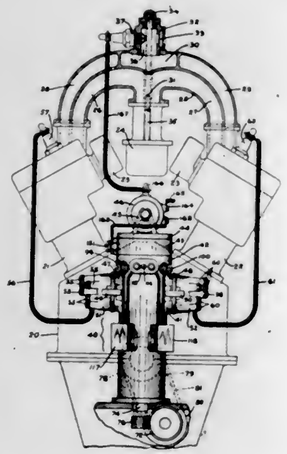
spool, and means to prevent undesired removal of each spool from its support.

1,507,303. SUPPOSITORY-MAKING MACHINE. SAMUEL K. APPLEBAUM, New York, N. Y. Filed May 5, 1923. Serial No. 637,003. 5 Claims. (Cl. 18—16.)



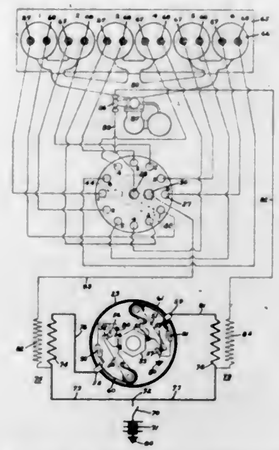
3. An apparatus of the character described, including a mold-block consisting of a plurality of mold-parts, one of which lies within the other and both of which are provided with recesses that are parts of a mold-cavity, the recesses being unequal in volume; a holder for the mold-block; and means for forcing into the mold-cavity therein the material that is to be given shape.

1,507,304. STEEL BARREL. ROBERT S. BLAIR, South Orange, N. J., assignor to Meurer Steel Barrel Company, Inc., a Corporation of New York. Filed Jan. 9, 1919. Serial No. 270,353. 7 Claims. (Cl. 220—73.)



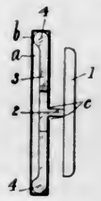
1. In construction for steel barrels and the like, in combination, a body portion, a flanged head portion fitted therein, the edges of said body and flange of said head being formed into a joint of at least four thicknesses of metal, and a heavy annular malleable ring provided with a pair of flanges embracing said joint, the outer surface of said joint being of concave form and the outer flange of said ring being forced into the concavity formed thereby.

1,507,305. BUILT-UP MEMBER FOR PAPER-PULP ENGINES. ARCHER LE ROY BOLTON, North Andover, Mass. Filed Nov. 21, 1923. Serial No. 676,034. 8 Claims. (Cl. 92—27.)



1. The combination in a built up member for paper pulp engines of a metal body having circular cross sections, the centres of such sections forming a straight axial line, with metal bars each of which is disposed in a plane which passes through the axial line and is fastened at one edge to the metal body, wooden supports between adjoining bars and said body, and metal truss plates positioned substantially concentric to the surface of the body which rest on the faces of and are fastened to the wooden supports between adjoining bars medially between their opposite longitudinal edges.

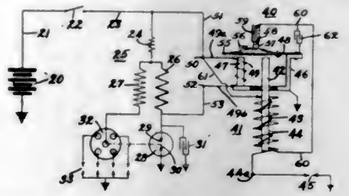
1,507,306. IGNITION SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Filed Mar. 22, 1920. Serial No. 367,630. 7 Claims. (Cl. 123—148.)



1. In an ignition system for an internal-combustion engine provided with a fuel burner for heating the intake, the combination with a current source; of engine ignition apparatus including an engine controlled circuit interrupter and a housing for the same, and an engine driven cam for intermittently operating said interrupter; and burner ignition apparatus including an engine controlled circuit interrupter, and a housing for the same adapted to be supported by the engine interrupter housing, said burner interrupter having a movable portion projecting into the plane of said cam to be operated thereby.

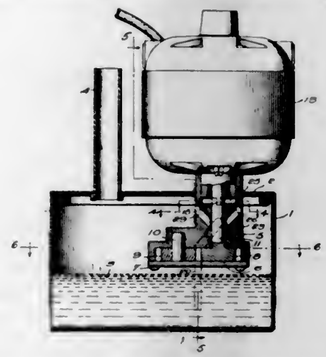
1,507,307. IGNITION SYSTEM. WILLIAM A. CHRYST, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 17, 1920. Serial No. 431,435. 5 Claims. (Cl. 123—148.)

1. In an ignition system, the combination with an engine having a plurality of sets of spark plugs and a fuel burner having a spark plug; of a current source; a plurality of ignition coils; means for distributing in recurrent sequence the impulses of one coil to a set of engine spark plugs and for concurrently distributing in recurrent sequence the impulses of another coil to another set of engine spark plugs and to the burner plug; and timing mechanism for so controlling the passage of current to the coils that impulses of substantially equal intensity will be delivered to the sets of engine spark plugs, while the burner plug is being provided with impulses.



1,507,308. SIGN. THOMAS NELSON EVENS, Saffron Walden, England. Filed Jan. 26, 1924. Serial No. 688,787. 7 Claims. (Cl. 40—140.)

1. A loose letter sign of the kind comprising a grooved base the face of which has a slot opening into the groove and a plurality of characters having stems to which are attached carrying bars adapted to fit into and to be slidable in the groove with the stems extending through the slot, the carrying bars engaging and being held in position through contact with the opposing walls of the grooved base, the said grooves being recessed opposite the slot so that the bottoms of the recesses are spaced away from the carrying bars.

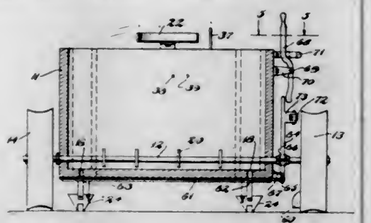


1,507,309. IGNITION SYSTEM. JOHN T. FITZSIMMONS, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 20, 1921. Serial No. 478,786. 16 Claims. (Cl. 123—148.)

1. In an ignition system for internal combustion engines, the combination with a current source; of one or more engine spark plugs; ignition means for said engine plugs including an ignition coil and a timer; another

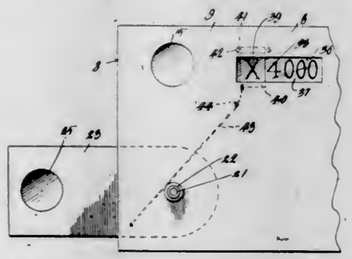
spark plug for separate ignition purposes; and other ignition means electrically controlled by said timer for supplying ignition periodically for said other plug.

1,507,310. LUBRICATING SYSTEM. FRED G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to The Folberth Auto Specialty Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 28, 1921. Serial No. 518,346. 2 Claims. (Cl. 230—30.)



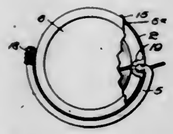
1. The combination with a tank and cover, of a pump casing arranged on the inside of said cover and depending therefrom, a shaft arranged in said casing and projecting through said cover, said tank being adapted to contain a quantity of oil, an inlet pipe connected to the inlet side of said pump and extending through said cover, a branch pipe connected thereto and extending downwardly, said branch pipe being adapted to be submerged in the oil in the bottom of said tank, said pump casing being provided with inclined passages extending from the outlet side of said pump upwardly toward said shaft, said casing being provided with a recess surrounding said shaft and communicating with said inclined passage, and being further provided with a passage extending from said recess outwardly to the exterior of said casing.

1,507,311. CORN PLANTER. JULIUS GOLON, Suffield, Conn. Filed May 7, 1923. Serial No. 637,266. 1 Claim. (Cl. 221—118.)



In a corn planter, hoppers for the seed corn and fertilizer, each of said hoppers formed with discharge openings in the bottom, guides secured to the hoppers and depending below the bottom, a plate slidable in said guides in contact with the lower surface of the bottom and formed with openings to register with the discharge openings in the hopper bottoms, a lever connected at one end to said plate and pivotally supported upon the ground wheel axle of the planter, said lever having a lateral offset adapted to be engaged by a projection on one of the ground wheels to move the lever at each revolution of the wheel and thereby move the plate to cause registry of the openings in said plate with the openings in the hopper bottom, a hand lever pivotally

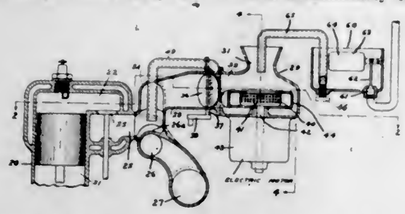
supported upon one of the hoppers and having its lower free end arranged adjacent the upper end of the first mentioned lever, whereby operation of the hand lever



will move the first mentioned lever to a position to hold the lateral projection beyond the influence of the ground wheel, and means whereby the hand lever may be temporarily held in operative position.

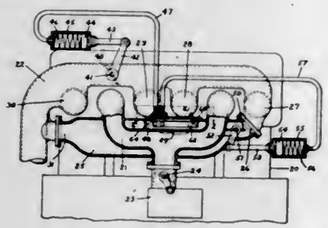
1,507,312. CLASSIFICATION BOX. LOGAN H. HOOPER and RICHARD A. MURRAY, Muskogee, Okla. Filed Mar. 31, 1924. Serial No. 703,291. 4 Claims. (Cl. 116—30.)

3. In a locomotive signaling device, an illuminated casing having an opening in the front wall thereof, a transparent plate fitted within said opening having the locomotive number affixed thereto, a flexible curtain carried by the casing and arranged adjacent to the locomotive number having a designating letter affixed thereto, a signaling flag, means for moving the signaling flag into and out of the casing, and a pull cord for operatively connecting the signaling flag with the curtain whereby upon movement of the flag, the curtain will be operated therewith.



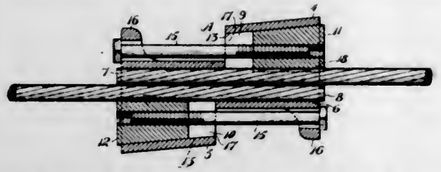
1,507,313. DENTAL FLOSS HOLDER. CHARLES E. HUDSON, Leominster, Mass. Filed Feb. 8, 1923. Serial No. 617,717. 13 Claims. (Cl. 132—92.)

1. A dental floss holder comprising a case, an arm movable thereon permitting withdrawal of the floss from the case and through the inner arm end and also adapted, when swung away from the case, to lock the floss against further withdrawal.



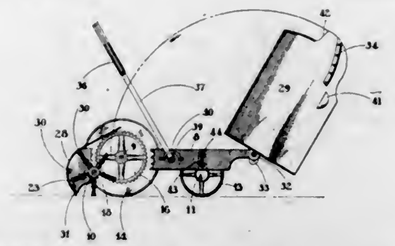
1,507,314. FUEL-DISTRIBUTING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 28, 1920. Serial No. 392,343. 7 Claims. (Cl. 123—126.)

1. In a fuel distributing system for internal-combustion engines, the combination with a multi-cylinder internal-combustion engine having a plurality of intake passages; of fuel comminuting and distributing means including a rotating member throwing off a fuel spray, and compartments adapted to receive substantially equal



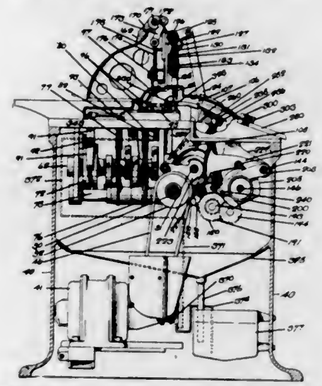
amounts of said fuel spray directly from said member; and separate passages each connecting one of said compartments with an intake passage.

1,507,315. MANIFOLD HEATING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 16, 1920. Serial No. 410,802. 8 Claims. (Cl. 123—122.)



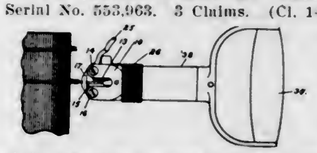
1. In a system of control for intake heaters, the combination with an internal-combustion engine having an intake conduit and an exhaust conduit; of a jacket about said intake conduit; a valve controlling the passage of exhaust gases from said exhaust conduit into said jacket; a suction device in communication with the engine for operating said valve; and temperature responsive means for controlling said suction device.

1,507,316. ROPE CLAMP. JOHN T. KEMPER and CHARLES W. KEMPER, Alameda, Calif. Filed Apr. 20, 1921. Serial No. 462,897. 6 Claims. (Cl. 24—136.)



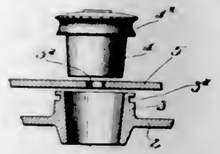
4. A cable clamp comprising a housing having a cable channel formed therein, said channel extending from end to end of the casing and being centrally disposed with relation thereto, a wedge chamber formed at each end of the housing and at opposite sides thereof, each wedge chamber communicating with the cable passage and each wedge chamber being open at its opposite end, a lug formed on each end of the housing and at opposite sides thereof, said lugs being perforated and being in alignment with the open ended wedge receiving chambers, a wedge insertible in each chamber, a threaded passageway formed in each wedge, and a bolt for each wedge, said bolts being insertible through the perforated lugs and adapted to be received by the respective threaded passages in the wedges, said wedge receiving chambers and the wedges received thereby being wider than the cable passage to form guide ledges for the wedges which will limit the movement of the wedges toward the cables.

1,507,317. LAWN SWEEPER. ERNESTE E. LABERGE, Rockliffe, Ontario, Canada. Filed Sept. 26, 1922, Serial No. 590,717. Renewed Feb. 1, 1924. 1 Claim. (Cl. 15—79.)



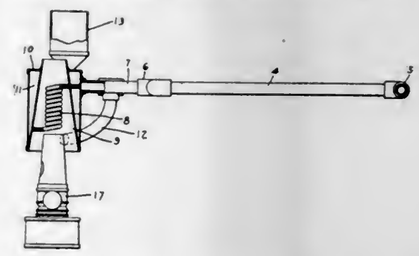
A sweeping machine of the character described constituting a wheel supporting frame, drive wheels carried by the said frame, a sweeping and elevating rotor, means rotating the said rotor by the rotation of the said drive wheels, a hingedly mounted container carried by the frame, means for directing the grass and foreign matter swept up by the said rotor into the said receptacle, a deflector mounted in the container, and a flexible lip carried by the said deflector, directing means adapted to prevent dust and foreign matter passing under the forward end of the said machine, and to enhance the suction of the rotor.

1,507,318. MACHINE FOR FOLDING SHEET MATERIAL. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 20, 1921. Serial No. 478,793. 123 Claims. (Cl. 153—2.)



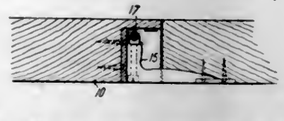
1. A machine for folding sheet material comprising a matrix; a ram; means for moving the ram toward the matrix; and means carried by the ram for measuring the amount of material to be supplied to the ram and matrix to form a fold.

1,507,319. TOOL. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 553,963. 3 Claims. (Cl. 140—119.)



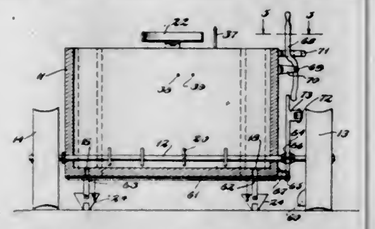
1. A tool for twisting or untwisting wire ends, comprising means for gripping the wire ends, said means having a shank rigidly connected thereto and carrying a ratchet, a sleeve loosely mounted upon said shank to enable support and guidance of the tool, a handle for rotating said shank and revolubly mounted thereon, a sleeve attached to said handle and enclosing said shank and its ratchet, and pawl mechanism within the last-mentioned sleeve adapted to coact with said ratchet to prevent rotation of the handle in but one direction.

1,507,320. BATTERY-TERMINAL PROTECTOR. WILLIAM A. MACKENZIE, Long Beach, Calif. Filed Sept. 7, 1923. Serial No. 661,505. 7 Claims. (Cl. 204—28.)



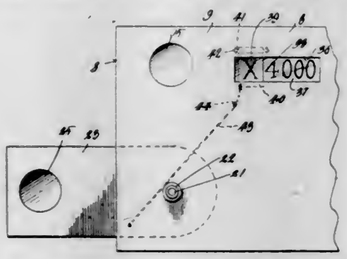
1. A protector for upper portions of storage batteries, said protector consisting of a device applicable to a plug seat forming a part of the battery and which device is adapted to cover a joint between an inserted plug and its seat to prevent leakage.

1,507,321. HEATING SYSTEM FOR INCUBATORS. CHARLES A. MILTON, Kokomo, Ind. Filed Mar. 29, 1922. Serial No. 547,815. 2 Claims. (Cl. 237—15.)



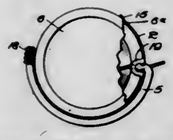
1. A heater for incubators comprising a boiler having a cylindrical outer wall and a tapered inner wall forming a flue, an outlet for hot water in the side of the boiler adjacent the top thereof, an inlet for cold water in the side of the boiler adjacent the bottom thereof, a coil in said flue having one end in communication with the lower portion of said boiler and having its other end projecting through the walls of said boiler and forming communication with said outlet, and means for heating the water in the coil, substantially as set forth.

1,507,322. HINGE FOR VEHICLE DOORS. WALTER MORRIS, Dulwich Hill, near Sydney, New South Wales, Australia, assignor to C. W. Elliott Limited, St. Peters, near Sydney, Australia. Filed Jan. 6, 1922. Serial No. 527,303. 3 Claims. (Cl. 16—135.)



1. A concealed door hinge comprising in combination a recessed leaf adapted to be mounted in a cavity in the door post, said leaf formed with an open side and front and being closed elsewhere, and having a pintle pin mounted in the recess, a T-stem extending laterally from said pintle, and a crank leaf having a flat butt plate adapted to be secured to the inner face of the

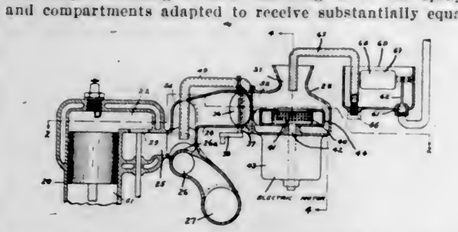
supported upon one of the hoppers and having its lower free end arranged adjacent the upper end of the first mentioned lever, whereby operation of the hand lever



will move the first mentioned lever to a position to hold the lateral projection beyond the influence of the ground wheel, and means whereby the hand lever may be temporarily held in operative position.

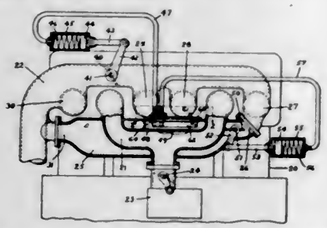
1,507,312. CLASSIFICATION BOX. LOGAN H. HOOPER and RICHARD A. MURRAY, Muskogee, Okla. Filed Mar. 31, 1924. Serial No. 703,291. 4 Claims. (Cl. 116—30.)

3. In a locomotive signaling device, an illuminated casing having an opening in the front wall thereof, a transparent plate fitted within said opening having the locomotive number affixed thereto, a flexible curtain carried by the casing and arranged adjacent to the locomotive number having a designating letter affixed thereto, a signaling flag, means for moving the signaling flag into and out of the casing, and a pull cord for operatively connecting the signaling flag with the curtain whereby upon movement of the flag, the curtain will be operated therewith.



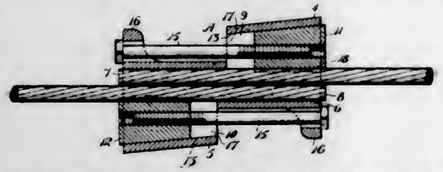
1,507,313. DENTAL FLOSS HOLDER. CHARLES E. HUDSON, Leominster, Mass. Filed Feb. 8, 1923. Serial No. 617,717. 13 Claims. (Cl. 132—92.)

1. A dental floss holder comprising a case, an arm movable thereon permitting withdrawal of the floss from the case and through the inner arm end and also adapted, when swung away from the case, to lock the floss against further withdrawal.



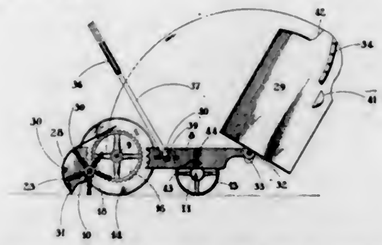
1,507,314. FUEL-DISTRIBUTING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed June 28, 1920. Serial No. 392,343. 7 Claims. (Cl. 123—126.)

1. In a fuel distributing system for internal-combustion engines, the combination with a multi-cylinder internal-combustion engine having a plurality of intake passages; of fuel comminuting and distributing means including a rotating member throwing off a fuel spray, and compartments adapted to receive substantially equal



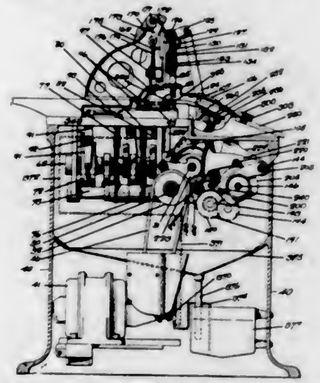
amounts of said fuel spray directly from said member; and separate passages each connecting one of said compartments with an intake passage.

1,507,315. MANIFOLD HEATING SYSTEM. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 16, 1920. Serial No. 410,802. 8 Claims. (Cl. 123—122.)



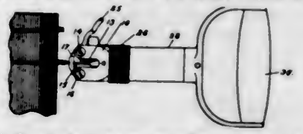
1. In a system of control for intake heaters, the combination with an internal-combustion engine having an intake conduit and an exhaust conduit; of a jacket about said intake conduit; a valve controlling the passage of exhaust gases from said exhaust conduit into said jacket; a suction device in communication with the engine for operating said valve; and temperature responsive means for controlling said suction device.

1,507,316. ROPE CLAMP. JOHN T. KEMPER and CHARLES W. KEMPER, Alameda, Calif. Filed Apr. 20, 1921. Serial No. 462,897. 6 Claims. (Cl. 24—136.)



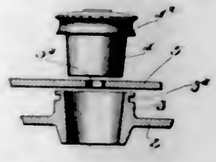
4. A cable clamp comprising a housing having a cable channel formed therein, said channel extending from end to end of the casing and being centrally disposed with relation thereto, a wedge chamber formed at each end of the housing and at opposite sides thereof, each wedge chamber communicating with the cable passage and each wedge chamber being open at its opposite end, a lug formed on each end of the housing and at opposite sides thereof, said lugs being perforated and being in alignment with the open ended wedge receiving chambers, a wedge insertible in each chamber, a threaded passageway formed in each wedge, and a bolt for each wedge, said bolts being insertible through the perforated lugs and adapted to be received by the respective threaded passages in the wedges, said wedge receiving chambers and the wedges received thereby being wider than the cable passage to form guide ledges for the wedges which will limit the movement of the wedges toward the cables.

1,507,317. LAWN SWEEPER. ERNESTE E. LABERGE, Rockliffe, Ontario, Canada. Filed Sept. 26, 1922, Serial No. 590,717. Renewed Feb. 1, 1924. 1 Claim. (Cl. 15—79.)



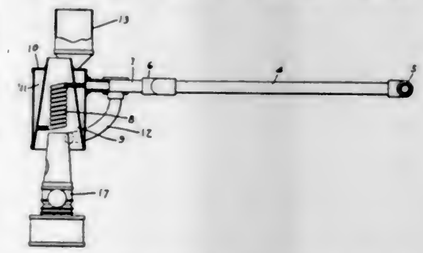
A sweeping machine of the character described constituting a wheel supporting frame, drive wheels carried by the said frame, a sweeping and elevating rotor, means rotating the said rotor by the rotation of the said drive wheels, a hingedly mounted container carried by the frame, means for directing the grass and foreign matter swept up by the said rotor into the said receptacle, a deflector mounted in the container, and a flexible lip carried by the said deflector, directing means adapted to prevent dust and foreign matter passing under the forward end of the said machine, and to enhance the suction of the rotor.

1,507,318. MACHINE FOR FOLDING SHEET MATERIAL. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 20, 1921. Serial No. 478,793. 123 Claims. (Cl. 153—2.)



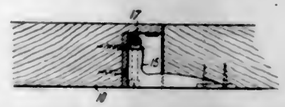
1. A machine for folding sheet material comprising a matrix; a ram; means for moving the ram toward the matrix; and means carried by the ram for measuring the amount of material to be supplied to the ram and matrix to form a fold.

1,507,319. TOOL. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 553,963. 3 Claims. (Cl. 140—119.)



1. A tool for twisting or untwisting wire ends, comprising means for gripping the wire ends, said means having a shank rigidly connected thereto and carrying a ratchet, a sleeve loosely mounted upon said shank to enable support and guidance of the tool, a handle for rotating said shank and revolubly mounted thereon, a sleeve attached to said handle and enclosing said shank and its ratchet, and pawl mechanism within the last-mentioned sleeve adapted to coact with said ratchet to prevent rotation of the handle in but one direction.

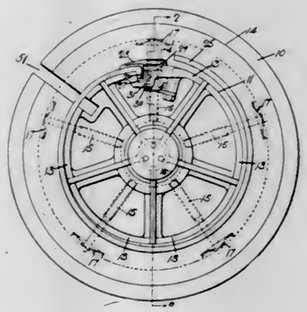
1,507,320. BATTERY-TERMINAL PROTECTOR. WILLIAM A. MACKENZIE, Long Beach, Calif. Filed Sept. 7, 1923. Serial No. 661,505. 7 Claims. (Cl. 204—28.)



1. A protector for upper portions of storage batteries, said protector consisting of a device applicable to a plug seat forming a part of the battery and which device is adapted to cover a joint between an inserted plug and its seat to prevent leakage.

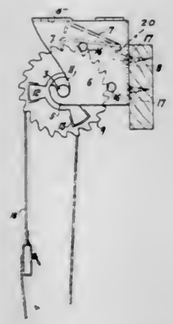
1,507,321. HEATING SYSTEM FOR INCUBATORS. CHARLES A. MILTON, Kokomo, Ind. Filed Mar. 29, 1922. Serial No. 547,815. 2 Claims. (Cl. 237—15.)

1. A heater for incubators comprising a boiler having a cylindrical outer wall and a tapered inner wall forming a flue, an outlet for hot water in the side of the boiler adjacent the top thereof, an inlet for cold water in the side of the boiler adjacent the bottom thereof, a coil in said flue having one end in communication with the lower portion of said boiler and having its other end projecting through the walls of said boiler and forming communication with said outlet, and means for heating the water in the coil, substantially as set forth.



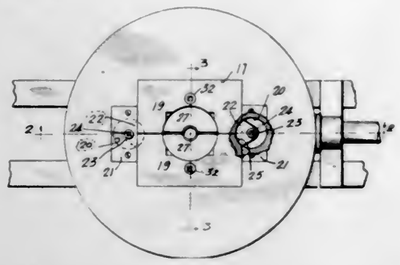
1,507,322. HINGE FOR VEHICLE DOORS. WALTER MORRIS, Dulwich Hill, near Sydney, New South Wales, Australia, assignor to C. W. Elliott Limited, St. Peters, near Sydney, Australia. Filed Jan. 6, 1922. Serial No. 527,303. 3 Claims. (Cl. 16—135.)

1. A concealed door hinge comprising in combination a recessed leaf adapted to be mounted in a cavity in the door post, said leaf formed with an open side and front and being closed elsewhere, and having a pintle pin mounted in the recess, a T-stem extending laterally from said pintle, and a crank leaf having a flat butt plate adapted to be secured to the inner face of the



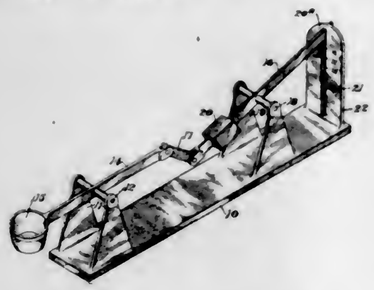
door stile, there being a socket hole in the crank leaf, said leaf adapted to receive the extending portion of said T-stem, and a fixing nut adapted to engage the end of said stem whereby the stem is detachably locked in the crank portion of the crank leaf.

1,507,323. COILING MACHINE. CHARLES P. NELLIS, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 29, 1923. Serial No. 660,052. 4 Claims. (Cl. 144—268.)



1. In a coiling machine for coiling a plurality of strips of fibrous material to form an annulus, a winding drum, a spring ring positioned upon the periphery of said drum and adapted to be compressed by said strips when they are wound thereupon so that said ring exerts a radial pressure upon said strips, said ring being adapted for removal from the machine along with the completely wound annulus.

1,507,324. WINDOW-BLIND FITTING. CHARLES NEVATT, Glasgow, Scotland. Filed Nov. 27, 1922. Serial No. 603,410. 4 Claims. (Cl. 156—34.)



2. A window blind fitting comprising, in combination, a blind roller, a drum-forming journal and a bearing journal one at each end of the said roller, said drum-forming journal being adapted to receive the cord and provided with a shoulder and a collar, a ratchet wheel held between said shoulder and said collar, a spring washer holding said wheel in contact with said shoulder, a bearing having an aperture to receive said bearing journal, a double walled bracket having its outer wall formed with a forwardly projecting hook to receive and support said drum-forming journal and having a detent mounted on a pin pivoted to and between both of its side walls.

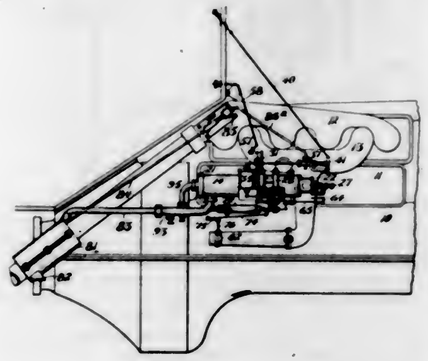
1,507,325. SELF-SETTING SLIP FOR ROTARY TABLES. CHARLES B. REYNOLDS, Whittier, Calif. Filed July 7, 1921. Serial No. 482,960. 11 Claims. (Cl. 255—23.)

1. The combination with a rotary drill table, of a pair of bushings removably positioned therein, means for locking said bushings to said table, and drill rod engaging slips adjustable horizontally in said bushings.

1,507,326. EGG SCALE. WILLIAM JOHN SCHMIDT, Sunnyvale, Calif. Filed July 2, 1923. Serial No. 649,034. 7 Claims. (Cl. 265—61.)

1. A scale comprising a fulcrumed scale beam at one end of which an article to be weighed may be disposed, a pivotal weight arm connected at its end to the other end of the scale beam, whereby swinging movement of the scale beam will be accompanied by swinging movement of the weight arm, a weight on said arm disposed between its pivotal point and end whereby an article to be weighed placed on the end of said scale beam may raise the weight an amount in proportion to its own weight, and indicating means actuated by movement of the scale beam and weight arm to indicate the weight of an article being weighed.

1,507,327. PROCESS OF COATING EDGES OF LENSES. WILLIAM J. WRIGHTON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 11, 1922. Serial No. 581,094. 3 Claims. (Cl. 91—70.)

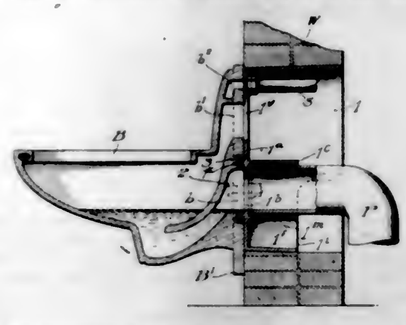


1. The process of coating lens edges consisting in applying a plastic coating to the edge of the lens, baking this coating to a hardened condition, applying a solvent to the baked coating and polishing the same to a finishing condition.

1,507,328. FOOD PRODUCT AND METHOD OF PRODUCTION. SUREN H. BABIGIAN and BERGE BABIGIAN, Berkeley, Calif.; said Berge Babigian assignor to said Suren H. Babigian. Filed Mar. 4, 1922. Serial No. 541,213. 5 Claims. (Cl. 99—11.)

4. A method of treating fruit, vegetables and the like, which consists in first soaking them in a lime solution until the entire mass has been permeated, thereafter washing the articles; then soaking them in a neutralizing and astringent solution at boiling temperature; then washing the articles thus treated; and then boiling the articles in a weak sugar solution.

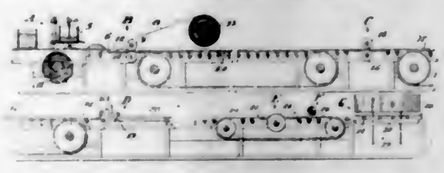
1,507,329. FUEL VAPORIZER. WILLIAM L. BAUMGARDNER and EARL W. BAUMGARDNER, Watsonville, Calif. Filed Jan. 4, 1922. Serial No. 526,989. 7 Claims. (Cl. 123—25.)



1. A vaporizer for an internal combustion motor comprising a main casing formed of three concentric tubular members of different diameters and connected at their ends to form an outer annular chamber, an intermediate annular chamber and a central vaporizing chamber, means for introducing steam to the outer chamber at one end of the casing, a passageway formed between the outer and intermediate chamber at the opposite end of the casing, means for injecting liquid fuel into said chambers at said passageway, means establishing communication between the intermediate chamber and the central chamber at the end of the casing opposite said passageway whereby steam and fuel admitted to the casing will mix in the intermediate chamber and enter the central vaporizing chamber to form an explosive gas, and a valve controlled passageway between said central chamber and the intake manifold of the engine.

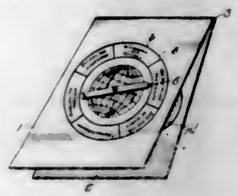
1,507,330. METHOD OF PREPARING SHORT FIBER CELLULOSIC MATERIAL FOR CHEMICAL TREATMENT. ALFRED L. BROADBENT, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 8, 1919. Serial No. 336,719. 7 Claims. (Cl. 260—146.)

1. In the conversion of short-fiber cellulosic material into esters thereof, the method which comprises mixing with such material a different longer-fiber cellulosic material.



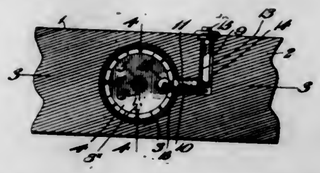
1,507,331. SUPPORT FOR WALL CLOSETS, ETC. WILLIAM V. BUTMAN, Philadelphia, Pa. Filed June 16, 1924. Serial No. 720,370. 10 Claims. (Cl. 4—252.)

1. A support for wall closets and the like, comprising a hollow body adapted to be built into a wall and open at its rear and having its front end provided with openings for connection of a drain pipe to the bowl outlet,



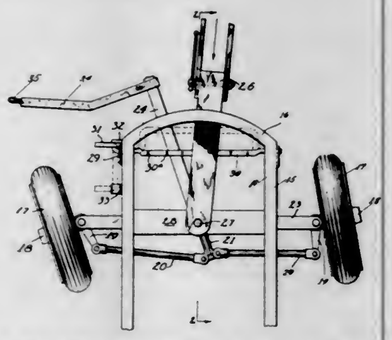
and for connection of a water supply pipe to the bowl inlet and for the bolts and to fasten the bowl thereto.

1,507,332. METHOD OF MANUFACTURING COMPOSITION WALL BOARD. JOSEPH A. BUTTRESS and GEORGE A. BUTTRESS, Los Angeles, Calif., assignors to Rex Goodcell, Los Angeles, Calif. Filed Dec. 27, 1923. Serial No. 682,880. 4 Claims. (Cl. 154—2.)



1. The method of manufacturing wall board consisting in interposing a wet, pasty, plastic composition between two advancing sheets of paper and rolling same to form a strip of initial thickness, conveying the strip a distance to permit expansion of the plastic, pressing the strip to compress the plastic and at the same time reduce the strip to final thickness, conveying the compressed strip a distance to permit the plastic to fully set, cutting the strip thus formed into finished commercial lengths and trimming the same while in motion, and subjecting the severed finished lengths to a final drying action.

1,507,333. MAGNETIC TOY OR SIMILAR DEVICE. JOHN B. CARROLL, Oak Park, Ill., assignor to J. B. Carroll Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1923. Serial No. 667,884. 11 Claims. (Cl. 46—49.)

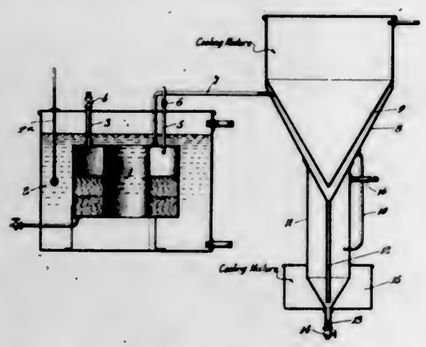


1. In a device of the class described, the combination of a dial, a magnetic indicator rotatively supported on and in movable relation to said dial, a rotative nonmetallic sheet supported in movable relation to said dial, said dial and rotative sheet having spaces thereon adapted to contain correlated print, and a second magnetic member attached to and movable with said rotative non-metallic sheet to different positions with respect to said dial.

1,507,334. LEVEL. JOHN N. CHADWICK, Camden, N. J., assignor of one-half to Emerson McDobbins, Camden, N. J. Filed Aug. 8, 1923. Serial No. 656,409. 2 Claims. (Cl. 240—8.4.)

1. In a device of the character stated, a body, a drum to be illuminated disposed transversely of said body and adapted to support a level, the drum side wall being apertured entirely therethrough and said body having a substantially longitudinal passage therein in register with the drum aperture, a casing enclosing a battery arranged in said passage and protruding through the drum aperture into said drum to interlock with the latter, a light bulb within said drum carried by said battery casing, a push button located upon said body, and an electrical connection between the battery and said push button.

1,507,335. DRAFT AND STEERING RIG FOR TRAILERS. EARL R. CLAYTON and CORWIN R. WELCH, Los Angeles, Calif. Filed May 31, 1923. Serial No. 642,562. 4 Claims. (Cl. 280—33.55.)



1. A draft and steering rig of the character described comprising a draft bar adapted for pivotal movement upon the frame of a vehicle, a resilient member adapted for operative connection to the steerable wheels of the vehicle, said resilient member being normally urged to a position in which it provides an operative connection between the draft bar and said wheels, and means for moving the resilient member to cause the same to be disconnected from the draft bar, said means comprising a crank arranged to allow the resilient member to have sliding contact therewith so as to permit of the manual movement of the member in effecting a steering of the wheels of the vehicle.

1,507,336. ELECTRICALLY-HEATED BEDPAN. CHRISTOPHER L. COOLING, Santa Monica, and HARRY G. OSTERMANN, Los Angeles, Calif. Filed July 27, 1923. Serial No. 654,134. 1 Claim. (Cl. 4—112.)

The combination with a bed pan having a straight upwardly projecting rim, of a telescopic rim fitting the upwardly projecting rim, means upon the telescopic rim forming a hollow compartment, the top of the compartment being extended to form a partial cover for the pan, and an electric heating element in the compartment.

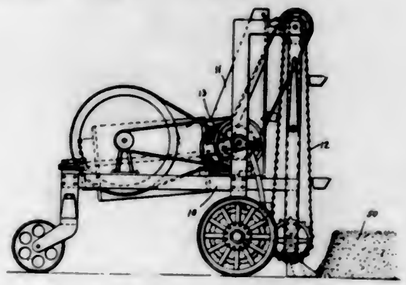
1,507,337. PURIFICATION OF ETHER AND OF OTHER VOLATILE SUBSTANCES. JAMES HENRY COTTON, Toronto, Ontario, Canada, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 25, 1918. Serial No. 255,637. 8 Claims. (Cl. 260—151.)

1. The process of purifying a volatile substance containing volatile impurities, which comprises evaporating the impure substance at a temperature below its boiling point, subjecting the resulting vapors to cooling in a series of well-defined stages, the cooling temperature employed at each succeeding stage being lower than the temperature of the immediately preceding stage, and separating said substance in a substantially pure state at an intermediate cooling stage.

1,507,338. PECTIN FREED FROM PROTEIN AND STARCH. STUART L. CRAWFORD, Rochester, N. Y. Filed Oct. 20, 1920. Serial No. 418,318. 2 Claims. (Cl. 99—11.)

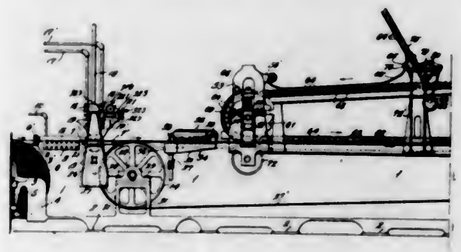
1. The process of producing a pectous compound consisting of treating a vegetable material to remove the natural sugar therefrom, treating the remaining pulp with a solvent to extract the pectous substances, treating the pectous liquor to convert any proteid therein into soluble forms such as peptones and amides and subsequently concentrating the liquor thus obtained.

1,507,339. BOTTLE OPENER. JOHN FREDERICK CRYER, Mount Vernon, N. Y. Filed Apr. 4, 1922. Serial No. 549,496. 2 Claims. (Cl. 65—47.)



1. An article for use as a bottle opener, comprising a partially circular body with a straight edge and having a cutting blade protruding from the central part of its straight edge, said blade formed with a neck portion and an approximately dart-shaped head having arcuate shoulders in spaced proximity to the straight edge of the body, said body having at one end of its straight edge a notch providing a prying spur at the juncture of said straight edge with the curved edge of the body for removing a wire on the neck of the bottle and the body also having on its curved edge a protruding hook-shaped element for detaching caps from bottles, all cut and formed from a flat sheet of metal.

1,507,340. METHOD OF TREATING COPPER. ROBERT J. CUNNINGHAM and GEORGE H. KING, Salt Lake City, Utah. Filed May 15, 1919. Serial No. 297,230. 4 Claims. (Cl. 75—17.)

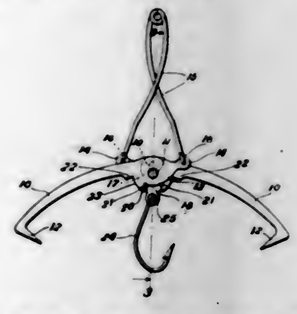


1. The method of treating copper, which consists in melting commercial copper to form a molten bath, covering the surface of the bath with salt (NaCl), after the copper has set but before it has cooled removing the excess salt and the impurities from the surface of the copper.

1,507,341. SAND-CUTTING MACHINE. ELMER E. DAVIS, Muncie, Ind. Filed July 17, 1923. Serial No. 652,054. 3 Claims. (Cl. 83—56.)

1. In a sanding machine for foundries and the like, the combination of an inclined shaft, a spider supported thereby, a peripherally perforated shell concentric with the shaft and supported at its upper end by the spider, means closing the lower end of said shell, a cylindrical screen supported at its lower end by said spider communicating with said shell, whereby the screen is closed by said shell and shell closure, and a peripheral baffle between said shell and said screen and supported by said spider.

1,507,342. METHOD AND MACHINE FOR MAKING STIFFENED FABRICS. LEWIS K. DAVIS, New York, N. Y., assignor to Vaughn Camp, Norfolk, Va. Filed May 17, 1921. Serial No. 470,471. 26 Claims. (Cl. 154—1.)



14. In an apparatus of the character described, the combination with means for progressing a backing material through the machine, means for heating the material, means for distributing an adhesive thereon, means for evenly spreading the adhesive, and a hopper for reinforcing strips, of means for delivering said strips in spaced relation one to the other from the hopper to and upon the adhesive and means for embedding the strips into the adhesive.

1,507,343. GAME APPARATUS. FRANK O. DEGENHARDT, Brooklyn, N. Y., assignor of one-half to George Boecher, Brooklyn, N. Y. Filed Feb. 15, 1922. Serial No. 536,655. 8 Claims. (Cl. 46—59.)

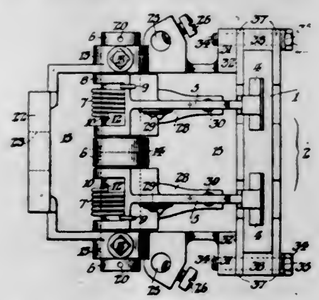
1. In a game apparatus, a stand, a plunger extending through the stand, an indicator, a rod to which at one end the indicator is attached, a support extending from the said stand and to which the said rod is pivotally connected to swing the indicator from an invisible to a visible position, the opposite end of the rod extending through a slot provided therefor in the inner end of the plunger, and means for normally maintaining and returning the said plunger to its initial position whereby in the movement of the plunger in one direction the rod is moved to swing the indicator from its invisible to its visible position and when the plunger is returned to its initial position the rod is moved to swing the indicator from its visible to its invisible position.

1,507,344. TRAP FISHHOOK. GEORGE H. DOERING, Brooklyn, N. Y. Filed July 3, 1922. Serial No. 572,565. 6 Claims. (Cl. 43—5.)

6. In a device of the class set forth a pair of flat sheet metal gaffs having gripping ends, the said gaffs being overlapped at one point and widened at said point, a pivot pin extending through the gaffs at the said overlapping point, a spring tending to close the gaffs, a flat sheet metal trigger and locking plate interposed between the said opposed widened surfaces of the gaffs and formed with a longitudinal slot to receive the pivot pin, stops integral with the trigger plate at its opposite side edges, stops formed integrally with the gaffs and adapted to engage the stops on the trigger plate, the said trigger plate being slidable longitudinally to engage its stops with the said stops on the gaffs to hold the gaffs spaced apart, the stops on the gaffs being

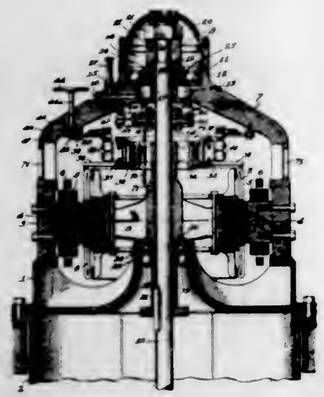
located at the edges of the widened portions of the gaffs and the opposed faces of said widened portions contacting with the opposite faces of the trigger plate whereby the trigger plate is braced for a substantial portion of its area adjacent the points of engagement of its stops with the stops upon the gaffs, and a bait hook attached to the trigger plate and extending toward the gripping ends of the gaffs.

1,507,345. CALENDAR. JAMES DOYLE, Norwalk, Ohio. Filed Jan. 2, 1923. Serial No. 610,156. 7 Claims. (Cl. 40—121.)



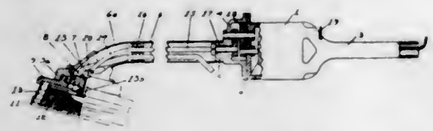
1. A calendar having the months arranged in groups of three units, one group being superimposed upon another, all of the even numbered units having one color, and all of the odd numbered units having another color, whereby the removal of each successive unit alternately changes the predominating color.

1,507,346. METALLURGICAL PROCESS. ROY A. DRISCOLL, Bay Point, Calif., assignor to General Electric Furnace Corporation, Reno, Nev., a Corporation of Nevada. Filed Feb. 9, 1921. Serial No. 443,641. 8 Claims. (Cl. 204—63.)



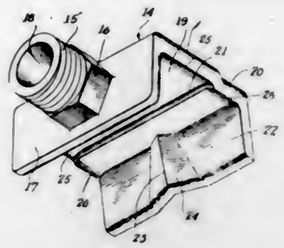
5. A method of producing metallic products in an electrical furnace, which consists in forming an electrical resistant film over the surfaces of the various metalliferous ingredients, of which final product is to consist, thereafter feeding the material thus treated to an electrical furnace.

1,507,347. ELECTRIC-BRUSH HOLDER. DAVID BURGESS FLOWER, Glenside, Pa. Filed Mar. 11, 1924. Serial No. 698,404. 12 Claims. (Cl. 171—324.)



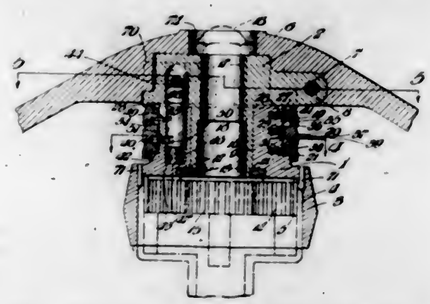
8. In an electric brush holder, the combination with a frame having a face for engagement with a brush box and screw threaded sockets; of a brush box including parallel plane faced sheet metal plates, which are reversible to present either of their plane faces toward the brush; spacing blocks separating said plates in parallel relation; said plates and spacing blocks having holes therethrough registering with said screw sockets; screws extending through said plates and spacing blocks in engagement with said sockets; whereby a smooth faced slide bearing for a brush is afforded between said plates and blocks; and means arranged to press the brush to operative position.

1,507,348. ELECTRIC GENERATOR. HENRY FORD, Dearborn, Mich. Filed Nov. 5, 1920. Serial No. 421,858. 4 Claims. (Cl. 171—252.)



1. In an electric generator, the combination with a field, having an armature rotatably mounted therein and an end frame mounted at one end of the field, of a collector-ring formation and its brushes mounted within the end frame, a commutator mounted between the armature and said collector-ring formation and within the end frame, a plurality of brushes arranged about the commutator, an annular brush holder comprising a ring rotatably secured to and within the end frame and extending in a plane normal to the axis of rotation of the commutator intermediate the collector-ring formation and the commutator, said ring having a plurality of inwardly extending arms upon which the brushes are pivotally mounted and from which they are insulated, and means for connecting alternate brushes to one of the sides of their common circuit.

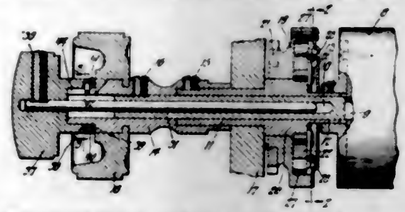
1,507,349. WINDOW-WASHING DEVICE. JOHN M. FRANZ, Saginaw, Mich. Filed June 7, 1922. Serial No. 566,525. 2 Claims. (Cl. 15—29.)



2. A window cleaner comprising a handle, a motor within said handle, an inflexible tube on said housing, a revolvable shaft within said tube and operatively connected to said motor, a short flexible tubular extension on said inflexible tube, a flexible shaft rotatable within said flexible extension and connected to said revolvable shaft, a housing on the end of said tubular extension and a cleaning element within said housing and operatively secured to the end of said flexible shaft.

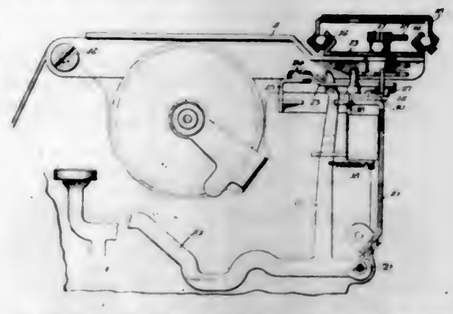
1,507,350. SPRINKLER HEAD. ERIC T. FRANZEN, Maplewood, N. J. Filed June 28, 1922. Serial No. 571,576. 2 Claims. (Cl. 299—121.)

1. A sprinkler head comprising an elongated rectangular wall, a nozzle extending centrally from said wall, a cover plate extending from the upper edge of said wall immediately above the outlet opening of said nozzle, a ledge on the lower side of said plate, an outwardly inclined front wall extending downwardly from said cover plate beyond said ledge, and a converging angled element on the inner side of said front wall disposed centrally in front of said nozzle.



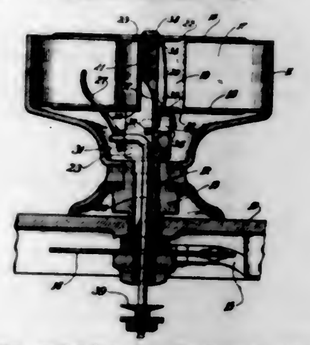
1,507,351. COMBINATION LOCK FOR MOTOR VEHICLES. ERNEST R. HEYM, Philadelphia, Pa., assignor, by mesne assignments, to Otto Hermann, Philadelphia, Pa. Filed Mar. 30, 1923. Serial No. 628,692. 12 Claims. (Cl. 70—53.)

1. In a combination lock, a lower casing section, an upper casing section connected therewith and capable of relative rotation with respect thereto, a locking plunger mounted in one of said sections, yielding means tending to move said locking plunger to cause it to engage the other casing section, a plurality of combination rings operatively connected with said locking plunger to retain it in its locked and unlocked position and to release it from its unlocked position, and manually actuated means to move said locking plunger into its unlocked position.



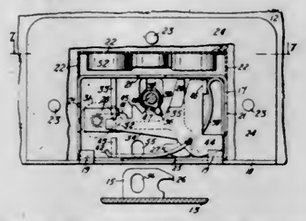
1,507,352. VARIABLE LINE SPACER. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Aug. 13, 1921. Serial No. 492,185. 7 Claims. (Cl. 197—123.)

1. The combination with a platen and a line spacing wheel loosely mounted thereon, of a clutch disc connected with one of said members, a clutch ring connected with the other of said members and surrounding said disc, said disc having a portion of the periphery thereof flattened to provide a clutching surface inclined to the surface of said ring, a pair of oppositely disposed clutching rollers positioned in the space between said flattened surface and said ring, resilient means for forcing said rollers in opposite directions into the bights between said disc and ring, pivot levers for shifting said dogs toward one another



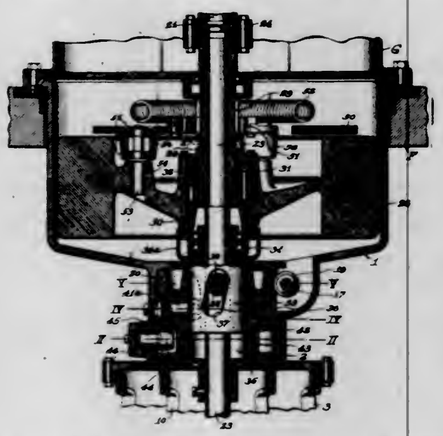
against the tension of said ring, and means for simultaneously operating said levers to release both of said rollers.

1,507,353. BACK SPACER FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Aug. 25, 1921. Serial No. 495,330. 13 Claims. (Cl. 197—91.)



13. A typewriter having a foldable platen carriage frame, an escapement wheel mounted on said frame, a main frame for supporting said platen carriage frame, and back spacing mechanism arranged to operate directly on said escapement wheel when said platen carriage frame is in operating position.

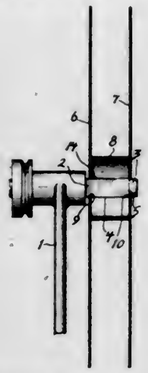
1,507,354. RIBBON MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed June 8, 1922. Serial No. 566,759. 15 Claims. (Cl. 197—160.)



1. Ribbon mechanism for typewriters comprising a spool, a spindle for said spool, a control member, and a spring for positioning said control member, said spring being connected with said spindle in position to enter within said spool when said spool is placed upon said spindle.

1,507,355. LOCK FOR CARRYING CASES. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 3, 1923. Serial No. 616,839. 11 Claims. (Cl. 70—115.)

1. In a lock of the class described, the combination of a keeper mounted on one of the two parts to be locked together, and locking mechanism mounted on the other of said two parts, said locking mechanism comprising a spring pressed catch adapted to interlock with said keeper and having a hand operated device for releasing it, and a hasp adapted also to engage said keeper and also adapted when in operated position to prevent manual operation of said catch.

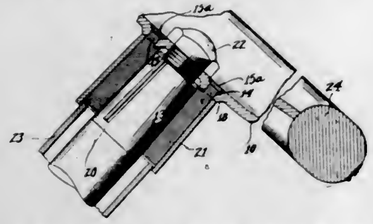


1,507,356. HYDROELECTRIC-UNIT FLYWHEEL GOVERNOR. ALLEN A. HORTON, Highland Park, Mich., assignor to Henry Ford, Dearborn, Mich. Filed Jan. 27, 1922. Serial No. 532,122. 11 Claims. (Cl. 264—6.)

1. In a speed regulator, the combination of a rotatable shaft, a regulating gear through which said shaft extends, means to facilitate manual adjustment of said regulating gear, a balance wheel mounted to be helically movable relatively to said shaft, a planetary centrifugal mechanism connected to the balance wheel and to the rotatable shaft, said connection being such that the movement of the balance wheel and the centrifugal mechanism relatively to the rotatable shaft is co-ordinated, and means for applying said movement to the regulating gear independent of the first mentioned means to cause the latter to be operated and controlled.

1,507,357. REEL AND SPINDLE MOUNT THEREFOR. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 8, 1923. Serial No. 623,689. 19 Claims. (Cl. 242—70.)

1. A device of the character described including a spindle adapted for the removable mounting of a reel over an end thereof and provided with a longitudinally varied reel mount surface having an inner portion extending laterally beyond the outer portion thereof and terminating in an outwardly facing shoulder disposed intermediately of the reel mount surface, and a reel having a corresponding longitudinally varied and shouldered

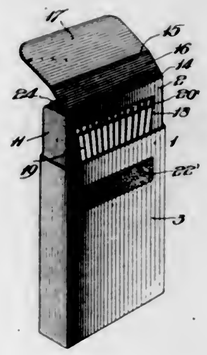


spindle opening adapted to cooperate with the reel mount surface of the spindle to prevent reverse mounting of the reel on the spindle, the shoulders of the spindle and reel being engageable when the reel is mounted on the spindle.

1,507,358. ART OF PRINTING. JOSEPH A. IMHOF, New York, N. Y., assignor to Invisible Color Print Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1922. Serial No. 550,305. 4 Claims. (Cl. 41—20.)

1. As a new article of manufacture, a design, produced from half-tone plates or the like, of apparently uniform color but carrying soluble coloring matter in substantially invisible form comprising: a plurality of partial images printed in superimposed and partially overlapping relation with insoluble ink of a substantially uniform color the insoluble ink of the several partial images containing differently colored soluble coloring matter, the overlapping of the coloring matter producing requisite latent coloring other than that of the primary colors.

1,507,359. WHEEL CONSTRUCTION. HENRY W. ANGSTEN, Michigan City, Ind. Filed July 27, 1921. Serial No. 488,039. 10 Claims. (Cl. 74—33.)



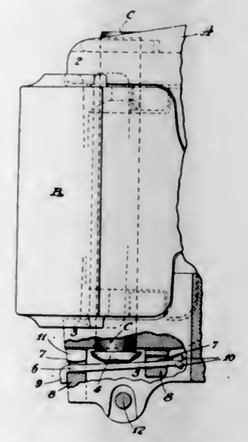
1. A wheel having the spokes thereof struck from a single piece of sheet metal and the hub thereof formed of a plurality of wedge shaped members.

1,507,360. REFRIGERATING MEANS FOR CINEMATOGRAPHIC APPARATUS. CARLOS ANSELMI and MARCELINO VITURRO, Buenos Aires, Argentina. Filed May 7, 1921. Serial No. 467,537. 3 Claims. (Cl. 88—17.)

1. In an apparatus of the type described, a plurality of tubes positioned around the projecting window, said tubes having a row of small perforations so arranged that the compressed air from within the tube impinges in the form of a plurality of small jets directly onto that portion of the film which is in front of the window, and means for elastically supporting the window.

1,507,361. COMBINED CIGARETTE AND MATCH BOX. BELFORD BARNETT, Camden, and WILLIAM LEE MACFARLAND, Brooklawn, N. J. Filed July 31, 1923. Serial No. 654,844. 1 Claim. (Cl. 206—48.)

A container for tobacco products formed from a blank comprising a body portion and top and bottom and side tabs, said body having an opening therein, an enclosing case for said container, and fire proofing material arranged upon the inner face of said casing which material registers with said opening, in closed position of said casing, a strip of matches secured in said opening so that the match sticks and heads are confined in the walls of said opening.



1,507,362. WRENCH. JOSEPH BARTOSIK, Monessen, Pa. Filed Apr. 23, 1923. Serial No. 634,109. 5 Claims. (Cl. 81—121.)

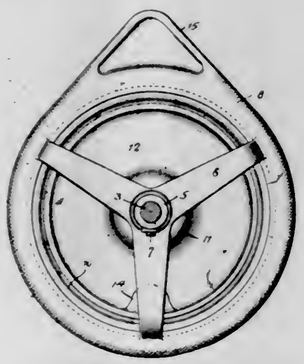
2. In a wrench of the character described, a body provided in one end with a nut-receiving socket, a member carried by the body and adapted for engagement with a screw stud, said socket being adapted to fit about a nut threaded onto the stud, means for frictionally locking the stud-engaging member to the body for rotation therewith, said means permitting independent turning movement of the body a predetermined distance in one direc-

tion and thereafter establishig operating connections between the body and the stud-engaging member, said means also permitting independent turning movement of the body in the other direction after the stud has been screwed into position and acting to disconnect the stud-engaging member from the body.

1,507,363. PIVOT-PIN SUPPORT FOR CAR COUPLERS. ARTHUR J. BAZELEY, Cleveland, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed June 30, 1921, Serial No. 481,468. Divided and this application filed Mar. 15, 1923. Serial No. 625,356. 2 Claims. (Cl. 213—156.)

1. In a car coupler having a head, a knuckle, a pivot pin, and ears on the head extending forwardly above and below the knuckle, the lower ear having a hollow lug at its base surrounding the lower end of said pivot pin, a flattened pin for supporting the pivot pin, said flattened pin extending through apertures in said ear, one of said apertures extending upwardly from said supporting pin to provide access to said pivot pin, and means for retaining said flattened pin in the apertures in said webs.

1,507,364. PLASTER GROUND. EDWARD L. BENEDICT, Sewickley, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 21, 1922. Serial No. 569,784. 1 Claim. (Cl. 72—116.)

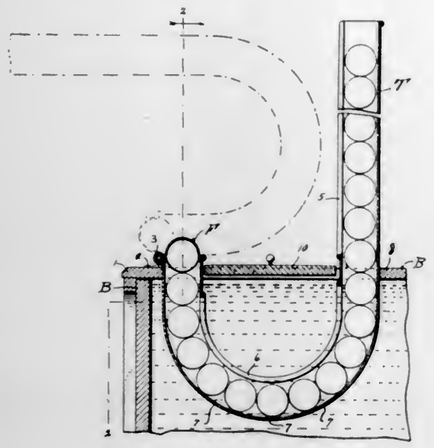


A plaster ground or backing composed of strand wires and stay wires connected at their points of intersection, and rearwardly extending bends formed in said wires between the points of intersection in said frame or plane of the fabric, a substantially flat sheet of continuous surface material through which said bends extend, said sheet having perforations formed therein for the entrance of a

portion of the plaster applied to the front of the sheet, and a retaining member engaging the loops of said bends, that

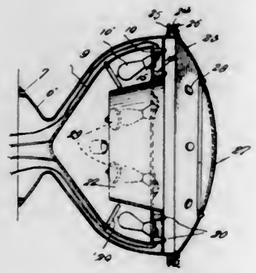
portion of the plaster which extends through said perforations serving as a locking means for plaster applied to the rear side of said sheet.

1,507,365. ARC-GAP INSTALLATION. CHARLES E. BENNETT, Decatur, Ga., assignor to Balt Manufacturing Company, Atlanta, Ga., a Corporation of Georgia. Filed Apr. 7, 1922. Serial No. 550,425. 15 Claims. (Cl. 175—30.)



1. In an arc gap terminal, an arcing contact, an associated dished insulator coaxial therewith and presenting its convex face toward the gap, in combination with an adjustable condenser plate adapted to lie within the area of the insulator adjacent its concave face.

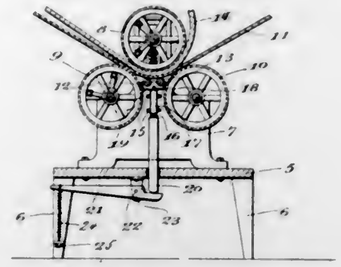
7. In an arc gap terminal, a threaded terminal rod, an arcing contact at the end of said rod, and a condenser plate screwing on said rod to adjust the same toward or from said contact.



1,507,366. REFRIGERATOR. WALTER F. BRITTON, Anniston, Ala. Filed Sept. 29, 1923. Serial No. 665,583. 5 Claims. (Cl. 62—35.)

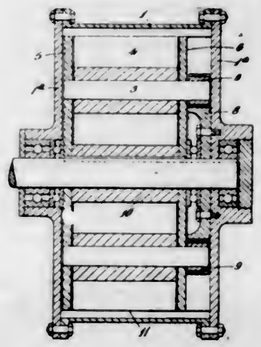
5. A device of the class described comprising a box providing a cooling chamber having an opening in its top wall, a tube having an arcuate end portion for insertion within the cooling chamber through the opening in the top wall, means for hingedly connecting the free extremity of the arcuate portion of the tube to the box to permit the tube to have swinging movement, and a plate rotatably supported by discharge end portion of

the tube, said plate being substantially semi-circular in cross section and provided with means for rotating the same.



1,507,367. SHIP'S LIGHT. SAMUEL H. EDELSTEIN, Bayonne, N. J. Filed July 5, 1923. Serial No. 649,523. 1 Claim. (Cl. 240—41.)

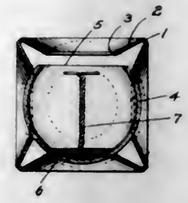
A ship's light comprising a casing having ventilating openings, a reflector housed therein and spaced from the side walls thereof, a cone shaped skirt member supported in the casing beyond the larger end of the reflector and extending into the reflector, said skirt member having an annular flange which extends to the inner surface of the casing and which is provided with ventilating openings, electric bulbs disposed in the space between the inner surface of the reflector and the skirt portion, electric conductors leading through the space between the reflector and the casing to the bulbs and lenses located in the space between the reflector and the skirt portion.



1,507,368. WOOD-BENDING MACHINE. CHARLES W. ELLIOTT. New Albany, Ind. Filed Aug. 22, 1921. Serial No. 494,206. Renewed Nov. 2, 1923. 4 Claims. (Cl. 144—255.)

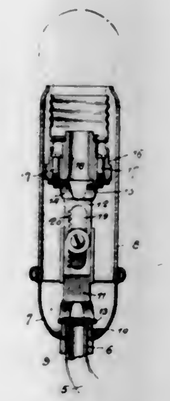
1. In a wood bending machine, a series of bending rolls arranged in triangular relation, a resilient strip between said rolls, between which strip and one of the rolls the work travels, and presser rollers engaging the strip on

opposite sides of the vertical center line of the last-mentioned roll and located between the other ones of the rolls.



1,507,369. POWER-TRANSMITTING APPARATUS. ALBERT EDWARD ESCOTT, London, England. Filed Mar. 6, 1924. Serial No. 697,173. 4 Claims. (Cl. 74—39.)

1. A power transmitting apparatus comprising driving and driven members, a drum rotatable about its geometric axis, said drum containing a quantity of liquid and constituting one element of the power transmitting apparatus, supports within said drum, said supports being freely rotatable about the axis of the drum, a system comprising paddles rotatably mounted and in squirrel cage fashion on said supports, said system constituting the other element of the power transmitting apparatus, a sun-wheel carried by the drum and planet wheels carried by said paddles and engaging said sun-wheel for transmitting motion from one member to the other.

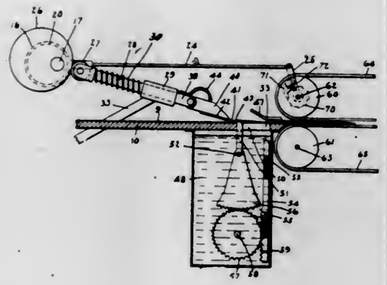


1,507,370. ASH TRAY AND LIKE STRUCTURE. BENJAMIN F. FREEBLE, Jamaica, N. Y., assignor to Sewickley Electric Manufacturing Company, Sewickley, Pa., a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 677,689. 2 Claims. (Cl. 131—51.)

1. In an ash-tray or like structure the combination of a casing and a receptacle, the casing being thin-walled and of essentially spherical form, the continuity of the sphere being interrupted over segmental planes which correspond to the faces of a concentric polyhedron, and the casing wall being there modified in shape, to form inwardly leading open-bottomed funnels, the edges of all of the funnels lying in a common spherical surface, the said receptacle being of essentially spherical form, hollow, and segmented on one plane to form an open-mouthed cup, and the said cup resting on and borne by the edges of the funnels formed in the casing and being

rotatable on the bearings which the said edges afford, the center of gravity of said cup lying eccentrically on the side of its spherical center opposite the mouth thereof.

1,507,371. LAMP SOCKET. GILBERT W. GOODRIDGE, Fairfield, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 14, 1922. Serial No. 594,551. 5 Claims. (Cl. 240—52.)

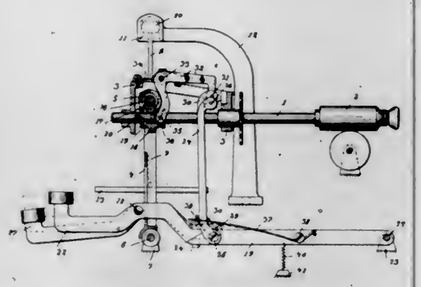


1. An electric lamp socket and a supporting standard therefor, comprising a pair of relatively displaceable members, one of which carries the socket, and the other of which is adapted to be mounted on a support, a rack and pinion connection between said members for relatively displacing the same, and constantly acting friction means for holding the members in the relative positions to which they are thus adjusted.

1,507,372. MULTIPLY PAPER. JASON H. GREENSTREET, Indianapolis, Ind.; Charles J. Greenstreet administrator of said Jason H. Greenstreet, deceased. Filed Dec. 20, 1919. Serial No. 346,231. 13 Claims. (Cl. 154—246.)

1. A multiply paper comprising a plurality of layers secured together by adhesive material, one or more intermediate layers being provided with crushed portions displaced from the normal plane of the paper and overlapping each other and secured together by adhesive material, substantially as set forth.

1,507,373. PAPERBOARD MACHINE. JASON H. GREENSTREET, Indianapolis, Ind.; Charles J. Greenstreet administrator of the estate of said Jason H. Greenstreet, deceased. Filed Apr. 26, 1921. Serial No. 464,665. 14 Claims. (Cl. 154—30.)

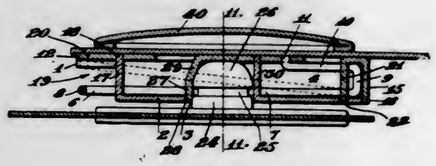


1. In a paper folding machine, the combination of paper feeding means, tiltably mounted paper creasing means, and reciprocatory paper folding means coacting with said paper creasing means to simultaneously tilt the same to crease the paper prior to folding.

1,507,374. MANUFACTURE OF ICING. ANNIE S. HEINRICH and JOSEPH HEINRICH, Paterson, N. J. Filed Aug. 3, 1923. Serial No. 655,543. 2 Claims. (Cl. 99—16.)

The herein-described method of forming an icing which consists in preparing a beaten spongy fondant containing albumen and a farinaceous substance and having its plasticity more pronounced than its crystalline quality, preparing another fondant of sugar and water heated together and so that the consistency of the second fondant shall be approximately the same as that of the first fondant, and cooling and then mixing and beating together the two fondants until the mixture assumes a soft pasty consistency.

1,507,375. TYPE-CYLINDER TYPEWRITER. MAX HELM, Niederschonhausen, near Berlin, Germany. Filed Aug. 24, 1921. Serial No. 494,971. 10 Claims. (Cl. 197—47.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

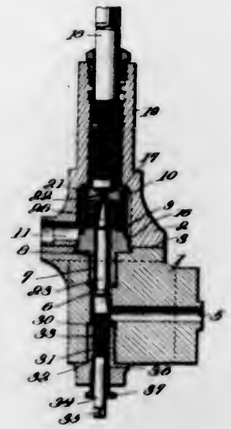


1. In a typewriter in combination, a type cylinder and a spindle carrying said cylinder, means for imparting to said cylinder a rotary and a longitudinal motion and two separate alternatively operable means for imparting to it a transversal motion, one of said latter means being arranged for simultaneously imparting to said cylinder a motion other than transversal.

1,507,376. MACHINE FOR PACKAGING RUBBER TIRES AND SIMILAR ARTICLES. LEROY F. HINTZ, Highland Park, Ill., assignor to Alec J. Gerrard, Chicago, Ill. Filed Jan. 26, 1924. Serial No. 688,862. 19 Claims. (Cl. 100—31.)

1. In a tire packaging device, the combination of means for supporting a plurality of tires in a predetermined position; twisting means to secure a tie wire around said tires while so supported; and means to aid in ejecting said tires after the securing operation.

1,507,377. FASTENER. OSCAR W. HOOPPAW, St. Louis, Mo., assignor to Hooppaw Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 18, 1919. Serial No. 291,027. 12 Claims. (Cl. 24—218.)

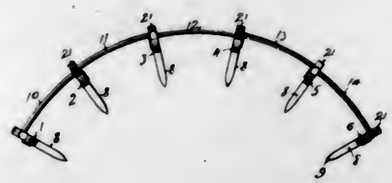


6. In a fastener of the character described, a clasp member and a stud member unitable therewith, the clasp member carrying a spring member normally in position to engage the stud member and the stud member having a portion to receive the spring member to be thereby locked in a definite final uniting relation to the clasp member, said spring member being liftable by the stud member moving in engagement therewith into uniting relation to the clasp member, and being also liftable manually to release the stud member from uniting relation with the clasp member, and an abutment member on said clasp member engageable by one side of the stud member to oppose the force tending to tilt the clasp member on the stud member when the spring member is lifted manually.

1,507,378. HOMOGENIZING VALVE. DIEDRICH F. HORMANN, Oklahoma City, Okla., assignor of one-half to E. F. Comegys, Oklahoma City, Okla. Filed Feb. 19, 1924. Serial No. 693,808. 7 Claims. (Cl. 99—2.)

7. A homogenizing valve comprising a recessed casing, a stack of homogenizing annuli mounted therein, a

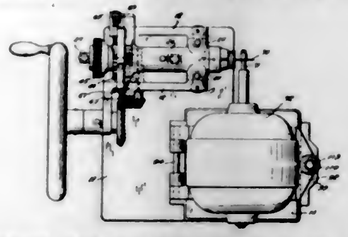
threaded plug mounted in said casing and housing a centrally threaded bore, a pressure pin mounted in the



bore of said plug and having threads engaging the threads of said bore, said pin having a tapered portion extending outside of said casing for turning said pin.

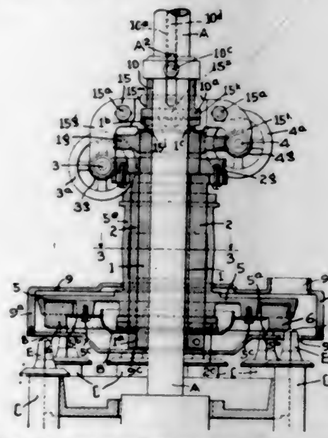
1,507,379. PLASTIC. WILLIAM HOSKINS, Chicago, Ill., assignor to Economy Fuse & Manufacturing Company, Chicago, Ill., a Corporation of New York. Filed Mar. 17, 1921. Serial No. 452,953. 32 Claims. (Cl. 106—27.)

1. A cement capable of setting with a solution of phosphoric acid and adapted for press molding, said cement comprising a filler and from 2 to 10% of calcium aluminate as its effective bonding constituent.



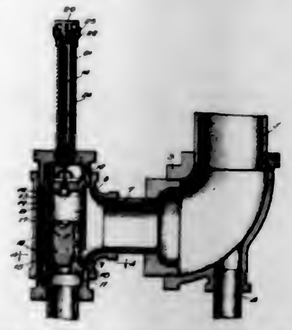
1,507,380. HAIR-WAVING COMB. HANNAH JACOBS, Brooklyn, N. Y. Filed June 12, 1922. Serial No. 567,635. 8 Claims. (Cl. 132—35.)

1. In a device of the class described, the combination of a plurality of combs movable laterally toward and from each other and curved links connecting said combs for causing them to lie in arched formation in a direction laterally of the combs when said combs are spread apart.



1,507,381. COMMUTATOR-SLOTTING MACHINE. WILLIAM JANNELL, West Park, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 3, 1920. Serial No. 428,073. 16 Claims. (Cl. 90—56.)

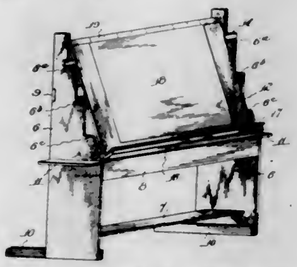
16. In a device of the class described, a rotary disk knife, a chuck carrying casing adapted to oscillate about a pivot extending transversely of the plane of said knife, means for resiliently holding said chuck in oper-



ative relation with said knife, and means for moving said chuck casing to inoperative position.

1,507,382. GRINDING ATTACHMENT FOR AUTOMATIC BUTTON MACHINES. ALBERT F. KEFFLO, Muscatine, Iowa. Filed June 8, 1923. Serial No. 644,267. 15 Claims. (Cl. 79—9.)

1. In a button grinding machine the combination of a shaft, a rotatable sleeve eccentrically mounted on said shaft, a second sleeve eccentrically mounted on the first sleeve and a grinding disk rotatably positioned on the second sleeve.



1,507,383. FLUSH-TANK VALVE. RUDOLPH KLANN, Chicago, Ill. Filed Apr. 5, 1923. Serial No. 630,059. 8 Claims. (Cl. 4—30.)

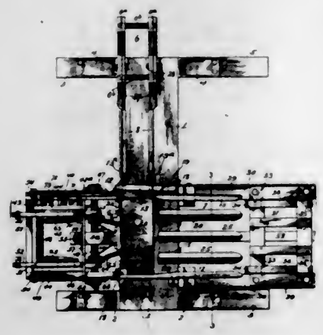
1. A device of the character described comprising a hollow member, a sleeve arranged in said hollow member, a closure for each end of the sleeve having a port therethrough forming valve seats, the sleeve having

inlet ports adjacent the lower closure, a manually operable valve controlling the upper closure port, and a valve for controlling the lower closure port, said lower valve being operable within the sleeve.

1,507,384. EASEL. FRANK W. KNOWLTON, Mount Vernon, N. Y. Filed Jan. 19, 1924. Serial No. 687,244. 2 Claims. (Cl. 45—131.)

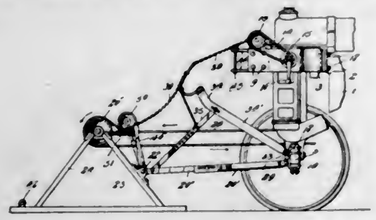
1. An easel comprising a frame formed of spaced apart upright side pieces having stepped horizontal ledges at the upper part of the forward edges thereof, a cross-piece between said side pieces near their lower ends, a face-board attached between the forward edges of the side pieces above the cross-piece and below the aforesaid ledges, and a cross-bar at the rear end of the frame near the upper end thereof; together with a drawing-board hinged to the upper edge of the face-board to swing between the side pieces and limited in its rearward movement by the cross-bar, the hinges being at the rear of the face-board and drawing-board so that the meeting edges limit the forward movement of the latter to upright position, a forwardly projecting ledge attached to the lower end of the drawing-board, and a removable rod to rest on the ledges of the side pieces across the back of the drawing-board to support it at an inclination.

1,507,385. WORK SUPPORT FOR HEATERS. MILTON M. KOHN, New York, N. Y. Original application filed June 19, 1922, Serial No. 569,346. Divided and this application filed June 20, 1923. Serial No. 646,679½. 8 Claims. (Cl. 126—226.)



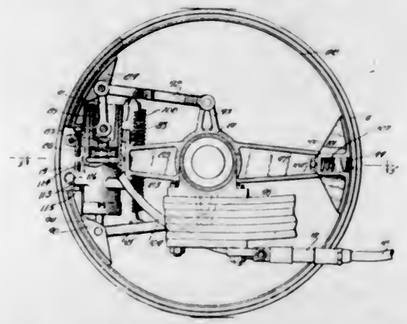
1. A work support for gas burners comprising a spider having radiating arms and a crown ring adapted to engage the top of a burner tube, means on said arms adapted to prevent sliding movement of an article placed thereon, and means at the ends of said arms for supporting a cover.

1,507,386. PADLOCK. MIKE KOSCHO, Trenton, N. J. Filed July 26, 1923. Serial No. 653,934. 2 Claims. (Cl. 70—17.)



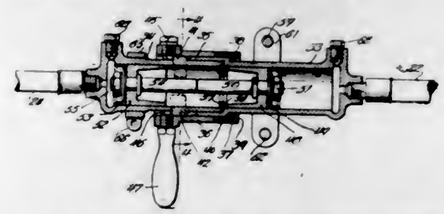
1. In a padlock of the class described, a casing, transversely extending partitions formed in said casing, said partitions having recesses formed therein, a cover plate having a transversely extending slot secured to said casing, a bolt slidably positioned within the recesses formed in said partitions and retained therein by said cover plate, a recess formed in one side of said bolt, a spring element for normally retaining the lower end of said bolt in a position to obstruct a portion of said slot, and a key having a laterally projecting lug adapted for engaging the recess formed in said bolt for moving the latter out of alinement with said opening.

1,507,387. MACHINE FOR BOXING OR CASING CANS. ALBERT H. KYLER, Westminster, Md. Filed Mar. 20, 1923. Serial No. 626,433. 12 Claims. (Cl. 226—15.)



1. In a machine of the character described, the combination with a table, an assembling frame disposed at substantially right angles to said table and having a gateway at one side thereof, and guiding means for cans communicating with the assembling frame at said gateway, of a pusher to enter said frame, separating blades carried by said pusher and movable across said gateway, means whereby said blade may yield bodily in a lateral direction, means for causing vertical movement of the pusher to operate said blades, and means for operating said pusher.

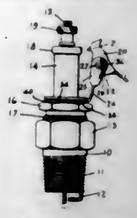
1,507,388. SAW ATTACHMENT FOR TRACTORS. OSCAR H. LARSON, Grove City, Minn. Filed Feb. 19, 1923. Serial No. 620,111. 1 Claim. (Cl. 180—53.)



In combination with a motor vehicle, a saw attachment comprising longitudinally extensible bars pivoted to the axles of the vehicle, a yoke member pivoted at its ends to the axle of the vehicle at points above the points of pivotal connection between the said bars and the axle, longitudinally extensible arms pivotally connected at one end with the free end portions of said bar and pivotally connected at their opposite ends with the side portions of the yoke member, an upwardly and rearwardly curved strip mounted upon the yoke member, winding mechanism mounted upon the frame of the vehicle above the yoke member, a flexible element arranged to wind upon said winding mechanism and connected with the strip, a pin carried upon the frame of the vehicle and engageable with the strip to hold the yoke members and bars in an elevated position, a saw frame pivotally connected with the free ends of the bars and adapted to rest upon the ground when the bars are lowered, and means connecting the saw frame with the strip and adapted to swing the saw frame over and upon the arms when the bars and yokes are elevated.

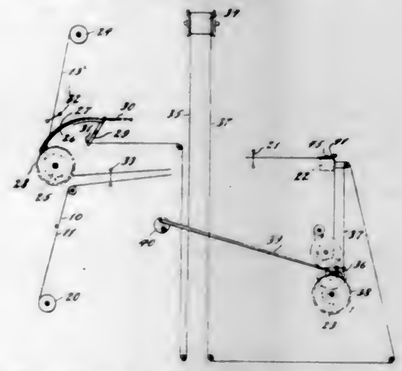
1,507,389. BRAKING APPARATUS. MALCOLM LOUGHEAD, Detroit, Mich., assignor, by mesne assignments, to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 23, 1922. Serial No. 531,145. 8 Claims. (Cl. 188—152.)

1. In a braking apparatus, a brake drum, a brake band adjacent thereto, means for applying braking pressure to said band, and means engaging said brake band adjacent to the end thereof for preventing the engagement of said brake band adjacent to its end with the drum during the initial movement of said band, said means operating to bring said brake band end into engagement with said drum as the brake band reaches its operative position.



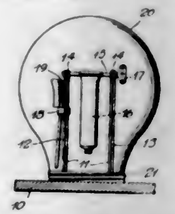
1,507,390. BRAKING APPARATUS. MALCOLM LOUGHEAD, Detroit, Mich., assignor, by mesne assignments, to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 23, 1922. Serial No. 531,146. 10 Claims. (Cl. 188—3.)

1. In a braking system, two sets of braking apparatus, each set including brake cylinders and tubes for conveying fluid thereto, means for forcing fluid under pressure into the tubes of one set of apparatus, means actuated by the pressure in said tubes of one set for creating pressure in the tubes of the other set, and means for preventing the passage of fluid from the tubes of one set to those of the other.



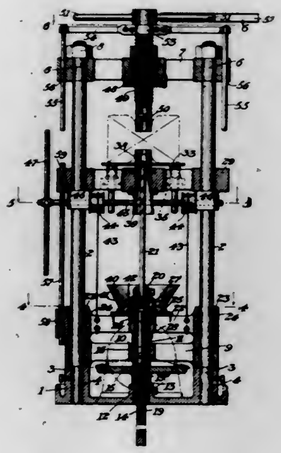
1,507,391. SAFETY AND SHORT-CIRCUITING DEVICE FOR SPARK PLUGS. CHARLES K. MALOTT, Indianapolis, Ind. Filed June 12, 1920. Serial No. 388,554. 3 Claims. (Cl. 175—183.)

3. The combination of a spark plug including a metallic portion provided with a circumferential groove, and an annular channel, a safety and short circuiting device for said spark plug, said device including a pivotally supported circuit member, standard means supporting said circuit member, a bifurcated standard supporting base member, the free ends of said bifurcations extending angularly of said bifurcations into said circumferential



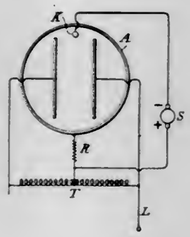
groove, and projecting means upon one of said bifurcations and seatable in the annular channel for yieldingly securing said safety and short circuiting device upon said spark plug.

1,507,392. METHOD AND APPARATUS FOR WEAVING FRENCH-KNOT FABRICS. FRED B. MANLEY, Paterson, N. J., assignor to Textile Development Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1923. Serial No. 613,659. 19 Claims. (Cl. 139—57.)



1. The method of weaving fabric, comprising the interlacing of normal and special warp strands with filling to produce cloth, inserting at predetermined times an extra pick of filling over all of the normal warp strands and beneath the special warp strands, and then raising the extra pick of filling above the surface of the fell of the cloth to produce large loops in the special warp strands.

1,507,393. TOILET SET. ANTONIO MATIAS, Washington, D. C. Filed Apr. 7, 1923. Serial No. 630,615. 2 Claims. (Cl. 221—6.0.)



1. A device of the character described, comprising an air-tight base, upright supports, a cross member between the upper ends of said supports for attachment to the end of a paste tube, the upright members being of such length as to support the tube with the lower end free of the base and a removable dust proof cover adapted to go over said support.

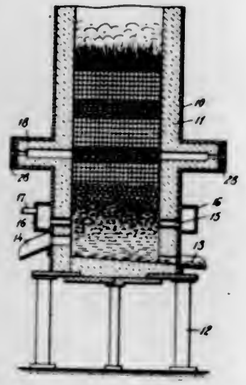
1,507,394. METHOD AND APPARATUS FOR OBTAINING SAMPLES. WILLIAM MEINERSMANN, Elizabeth, N. J. Filed Jan. 8, 1921. Serial No. 435,839. 12 Claims. (Cl. 77—5.)

1. In an apparatus of the class described, the combination with a piercing element, of means for supporting substantially loose material to be operated upon above said element, means for locally compressing said material at the section through which said piercing element is to pass, and means for operating said piercing element

1,507,395. PROTECTING CONDENSER PARTS AGAINST CORROSION. RALPH D. MERSHON, New York, N. Y. Filed Sept. 14, 1920. Serial No. 410,344. 11 Claims. (Cl. 175—318.)

1. The herein described method of protecting the inactive parts of an electrolytic condenser, which consists in making of filming metal the part to be protected, forming a film thereon, and when the condenser is in operation maintaining on such film an electrostatic stress directed toward the electrolyte.

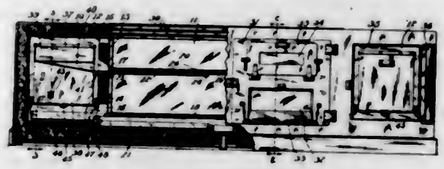
10. An electrolytic condenser having inactive as well as active parts made of filming metal coated with a protective film.



1,507,396. DOUBLE POCKET AND MEANS FOR LOCKING SAME. MOSES MIGDALOWITZ, Rochester, N. Y., assignor of one-third to Nathan Singer and one-third to Philip Rosen, both of Rochester, N. Y. Filed Mar. 13, 1924. Serial No. 698,882. 2 Claims. (Cl. 2—253.)

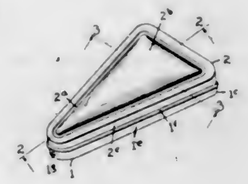
2. In a double pocket, the combination of two outer walls, a partition between said outer walls, having two button holes provided therein, a button on the inside of each of said outer walls and opposite to one of the button holes provided in said partition, said partition

being adapted to be partly buttoned to one of said outer walls and partly to the other of said outer walls to partially close each of the pockets of said double pockets.



1,507,397. SMELTING OR FUSING METALLIC SUBSTANCES. RICHARD MOLDENKE, Watchung, N. J. Filed Dec. 11, 1922. Serial No. 606,045. 19 Claims. (Cl. 75—14.)

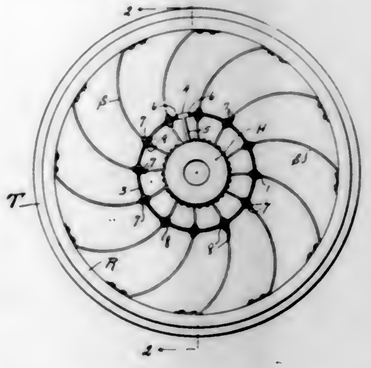
1. The improvement in the process of smelting or fusing metallic substances in which the metallic substance is subjected in a furnace to the action of heat resulting from the combustion of fluid and solid fuels, which comprises so adjusting or arranging the supply of fluid and solid fuels and the air or other combustion-supporting gas or gases that the products of combustion of the fluid fuel shall not come in contact with the molten metal.



1,507,398. REFRIGERATOR. ROBERT A. MOURON and SAMUEL M. MOURON, Indianapolis, Ind., assignors to Holcomb & Hoke Mfg. Co., Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 14, 1923. Serial No. 662,625. 9 Claims. (Cl. 62—37.)

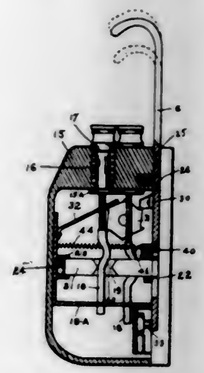
5. A refrigerator comprising a main hollow body divided by a transverse partition structure into a refrigerant chamber and a refrigerating chamber, said transverse partition structure providing a communication between the lower part of the refrigerant chamber and the lower part of the refrigerating chamber, a communication between the upper part of the refrigerating chamber and the upper part of the refrigerant chamber, and an intermediate communication between an intermediate portion of the refrigerant chamber and an intermediate portion of the refrigerating chamber, a flow-defining par-

tition of less length than the refrigerating chamber arranged in the refrigerating chamber below the intermediate communication between the refrigerant chamber and refrigerating chamber, a refrigerant container arranged within the refrigerant chamber and having a vertical extent both above and below the intermediate communication between the refrigerant chamber and refrigerating chamber and provided with means to divert a portion of refrigerated air laterally to the said intermediate communication.



1,507,399. PUFFER PACKAGE FOR INSECT POWDER. HUGH PERRY MCCORMICK, Baltimore, Md., assignor to McCormick & Co., Incorporated, Baltimore, Md., a Corporation of Maryland. Filed Apr. 18, 1923. Serial No. 632,859. 2 Claims. (Cl. 43—146.)

1. A puffer package for the purpose specified, comprising a body member and a corresponding top member, such members having interengaging side portions, a bead in the side portion of the body member, each member having a bead lying without the plane of its face intermediate and adjacent the side portions thereof and a concavo-convex portion surrounded by said bead; the said concavo-convex portions in the body and top members projecting outwardly in opposite directions, and adapted when compressed to expel the contents from the box, and to assume their normal positions when released, the body member having a disk partly punched in its side below the bead, no part of the periphery of said disk being entirely severed from the body portion, but being detachable therefrom by pressure.

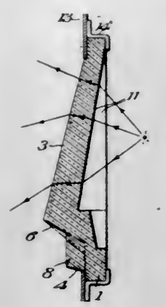


1,507,400. CUSHION WHEEL. SHAFTER M. MCCRANIE, Hartford, Ala., assignor of one-half to John W. Hause, Tampa, Fla. Filed July 1, 1922, Serial No. 572,212. Renewed Mar. 6, 1924. 7 Claims. (Cl. 152—50.)

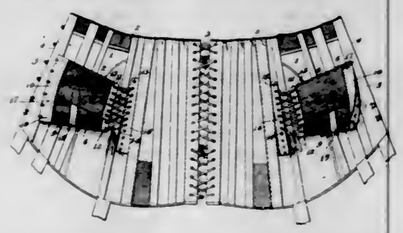
1. A wheel structure comprising a hub, a rim, spring spokes connecting said hub and rim, a substantially annular rod arranged at one side of the wheel and freely engaged with the spokes, means for attaching said rod

to the hub, and means carried by said rod and co-acting with the spokes for regulating the tension of the spokes.

1,507,401. AUTOMOBILE LOCK. WILLIAM R. TOWNLEY, Corning, N. Y., assignor, by mesne assignments, to Rochester Lock Corporation, Rochester, N. Y., a Corporation of New York. Filed Jan. 5, 1921. Serial No. 435,249. 9 Claims. (Cl. 70—54.)



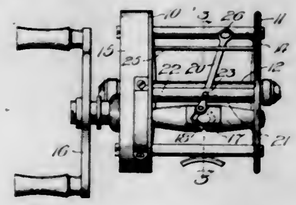
1. In an auto lock, a plurality of bolts movably mounted, a latch plate disposed at an angle to said bolts, a locking plate engaging said latch plate and holding it against movement, each of said bolts separately engaging with said locking plate and holding it in locking position, and keys for moving said bolts to release said locking plate.



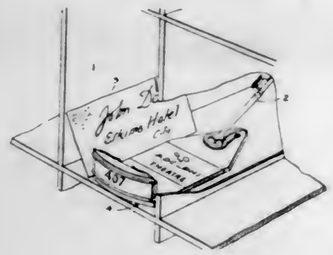
1,507,402. DIRECTIONAL SIGNAL LENS. PAUL SCHUYLER VAN BLOEM, Hempstead, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,462. 6 Claims. (Cl. 40—136.)

4. A directional signal lens comprising an integral molded arrow the walls of said arrow being tapered up-

wardly so that the upper portion of the arrow is thinner than the lower portion thereof whereby light rays passing outwardly through the arrow will be bent and diverted downwardly.

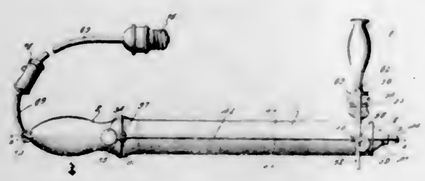


1,507,403. CORSET. MILLARD VON HALLE, Palisades Park, N. J. Filed Mar. 31, 1924. Serial No. 703,054. 4 Claims. (Cl. 2—27.)



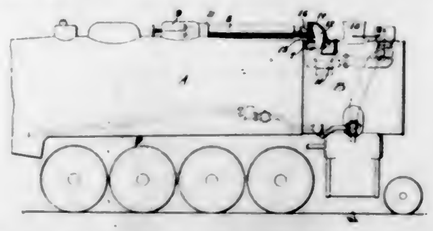
1. The combination with a corset, of cup-shape abdominal lifting and supporting means adjustably attached to the corset including: two connected members, one member on each side of the inside front of the corset and each member consisting of a plurality of bands of resilient material fastened together in overlapped angular relation with respect to each other at their ends nearest the central front portion of the corset, their other ends being free, and means for varying, with respect to each other, the angular relation and extent of overlapping of the bands of each member to thereby vary at will the curvature or the pull or pressure of the cup-shape lifting and supporting means.

1,507,404. LINE-DISTRIBUTING DEVICE FOR REELS. JOHN T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed Aug. 8, 1923. Serial No. 656,399. 7 Claims. (Cl. 242—84.4.)



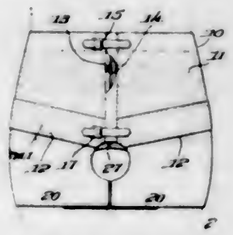
1. In combination with a fishing reel, line distributing means therefor comprising a shaft connected to rotate with the reel, a pillar fixedly extended adjacent the shaft, there being a slot formed transversely and longitudinally through the pillar, a lever extended through the slot and fulcrumed to the pillar to oscillate within the slot thereof, one end of the lever being thereby maintained adjacent to the shaft, means at the opposite lever end for guiding a line in its winding movements upon the reel, and a cam device associated with the shaft adapted to engage the end of the lever proximate thereto so as to oscillate the same, substantially as described.

1,507,405. KEY TAG. FRANK B. WHITCOMB, San Francisco, Calif. Filed June 27, 1923. Serial No. 648,042. 5 Claims. (Cl. 40—2.)



1. A key tag comprising a body portion constructed to provide an upright face of sufficient area for presenting in upright position, identifying indicia.

1,507,406. DEVICE FOR MELTING SOLIDS. JULE SCREVEN WILLCOX, Savannah, Ga. Filed Dec. 22, 1922. Serial No. 608,507. 23 Claims. (Cl. 120—116.)

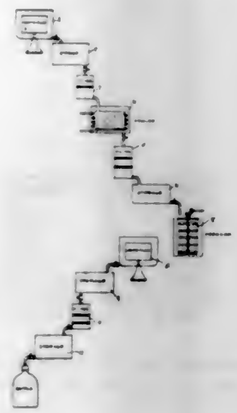


23. A device of the class specified comprising a heating vessel having a discharge opening therein, double spiral grooves on the exterior of the vessel in proximity to the discharge end, an electrical resistance element wound in the double spiral grooves, electrical insulating material wrapped around the heating vessel and the electrical resistance mounted thereon, an interior plug for the discharge opening, a stem on which the plug is mounted extending through the heating vessel, a protecting tube through which the stem is adapted to reciprocate, an exterior plug for said opening, a rod carrying said plug, a guide on the device in which the rod is adapted to reciprocate, a cam member on the rod, a sealing stamp mechanism cooperating with the cam member whereby the rod is reciprocated to seat the exterior plug, means cooperating with the rod to cause the interior plug to seat, an outer casing, a heat insulating material placed between the outer casing and the electrical resistance and electrical insulation, a vent near the back of the device extending through the outer casing, the heat insulating cover and the heating wall, a detachable handle for the heating vessel having a passageway therein for the electrical conductors, a screw plug for the exterior end of the passageway for guiding the conductors, and a supporting member integrally formed with the screw plug for hanging up the device.

1,507,407. STEAM CONNECTION FOR LOCOMOTIVES. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Oct. 20, 1922. Serial No. 595,758. 13 Claims. (Cl. 105—37.)

7. In a locomotive, the combination of a dry pipe, a superheater header, and a dry pipe end between the dry pipe and superheater header, said end constituting an anchor for the dry pipe.

1,507,408. CORSET. MARGARET A. WOODS, Somerville, Mass. Filed June 14, 1923. Serial No. 645,437. 2 Claims. (Cl. 2—41.)



1. A corset of the class described composed in part of a plurality of pieces to form a body portion having a plurality of rows of stitches encircling it; a strain receiving strip fast with said body portion and applied thereto in an encircling manner and in the direction of length of said rows of stitches; and being secured to the back of said corset below the waist line and sloping downwardly toward the front and passing over the hip portions, whereby abdominal weight sustaining is transferred to the buttocks and hips of the wearer rather than to the waist means to fasten said corset to the wearer; and additional securing means adapted to cooperate with said strip whereby said corset body will be relieved of excess strain.

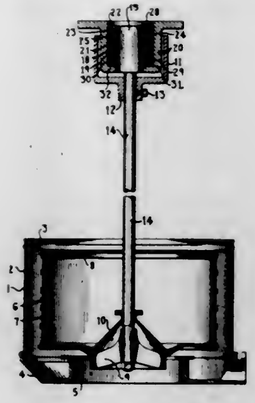
1,507,409. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 17, 1919. Serial No. 345,588. 3 Claims. (Cl. 123—169.)

1. A spark plug comprising a base, an insulating member carried thereby, a fixed electrode carried by said member and projecting therefrom and an arcuate electrode having both ends fixedly carried by said base, all points on said last named electrode being equally distant from the center of the end of said insulating member.

1,507,410. METHOD OF MAKING CONCENTRATED COFFEE LIQUIDS CONTAINING OILS. WALTER M. ZORN, East Cleveland, Ohio. Filed July 10, 1924. Serial No. 725,128. 10 Claims. (Cl. 99—11.)

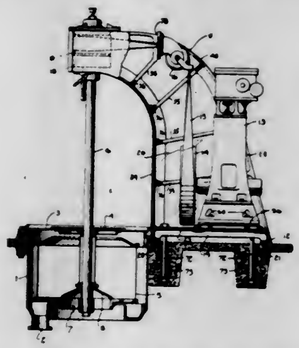
1. The method of making a liquid coffee concentrate, containing oils, consisting of infusing ground coffee with water to obtain a coffee liquid, cooling and freezing such liquid into a snow form, removing the snow and ice crystals from the frozen mass, and filtering the obtained concentrate to remove all suspended matter.

1,507,411. PISTOL. VID ZUGAJA, Youngstown, Ohio. Filed May 13, 1922. Serial No. 560,617. 1 Claim. (Cl. 42—44.)



In a pistol of the type described, a frame, a hand stock carried thereby, a barrel pivotally mounted upon the frame, a trigger guard pivotally mounted at one end to the frame and having its free end normally positioned within a socket formed in said stock, interengaging means carried by the trigger guard and barrel, a slidable tensioned latch device carried within said stock and adapted to normally engage the free end of said guard, an angular extension carried by said latch and projecting outwardly of said stock, and a gripping means carried by said extension for sliding the tensioned latch from its normal position.

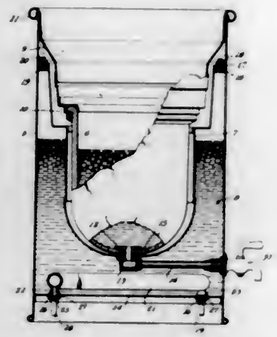
1,507,412. CENTRIFUGAL MACHINE. TANDY A. BRYSON, Troy, N. Y., assignor to Tolhurst Machine Works, a Corporation of New York. Filed June 12, 1920. Serial No. 388,659. 17 Claims. (Cl. 64—48.)



1. A centrifugal machine including in combination a basket and supporting and rotating means therefor com-

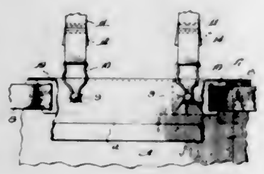
prising a basket shaft, a flexible, non-resilient support therefor, and a plurality of contacting relatively movable

friction members carrying the weight of the basket and shaft and acting by such movement to dampen the gyratory movement of the shaft.



1,507,413. CENTRIFUGAL MACHINE. TANDY A. BRYSON, Troy, N. Y., assignor to Tolhurst Machine Works, a Corporation of New York. Filed Dec. 10, 1920. Serial No. 429,737. 7 Claims. (Cl. 210—63.)

3. A pillar for a centrifugal machine comprising a unit-casting having relatively thin angularly disposed walls uniting and reinforcing members therebetween, the pillar having its base at one side of the basket and curved upwardly over the basket, the upper end of the pillar serving as a support for the basket shaft.

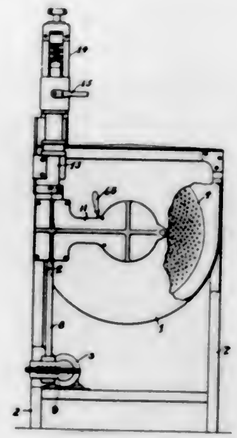


1,507,414. COFFEE URN. EDWARD NEY, New York, N. Y. Filed Apr. 4, 1924. Serial No. 704,089. 2 Claims. (Cl. 53—3.)

1. A combination coffee urn of the character disclosed comprising a casing having a continuous fixed shoulder on the inner wall of the same, a gasket seated on said shoulder, an annular shell within the casing having a flanged rim engaged with said gasket, a continuous clamping ring bearing on said flanged rim, a plurality of screw bolts securing said clamping ring to the annular shoulder with the gasket and the flanged rim of the shell interposed therebetween and thereby providing a closed but readily opened annular water chamber between the casing and shell, a jar within the shell having an upper annular extension covering the detachable fastening means for the water jacket shell and having a readily detachable engagement with the upper end of the casing, whereby upon removal of said jar access will be provided to the fastening means for the water jacket shell, which fastening means can then be released to permit removal

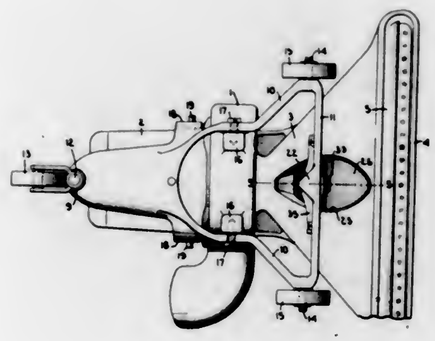
of the water jacket shell and consequent exposure of the entire interior of the casing and outlet connections extending from the jar through the shell, readily detachable to enable first the removal of the jar and then the removal of the shell.

1,507,415. HOSE SUPPORTER. HERBERT R. OLIVER, Baltimore, Md. Filed Apr. 24, 1923. Serial No. 634,329. 3 Claims. (Cl. 241—1.)



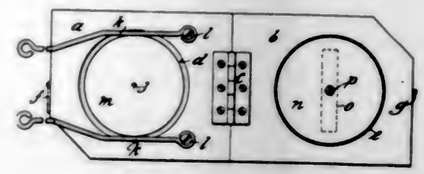
1. A device for supporting hose in connection with suspending straps and hose fasteners comprising a band to encircle the leg and hose a sufficient distance below the upper end of the latter so that the upper portion of said hose is folded forwardly over said band, means for connecting the ends of the band, plates carried by the band and having their upper edges of considerable length to provide extensive bearings for the fold of the hose, and means forming a part of said plates respectively for cooperating with the aforesaid hose fasteners in connecting the folded portion of the hose to the plates, whereby the pull of the hose is along the upper edges of said plates around the leg of the wearer.

1,507,416. WASHING MACHINE. WILLIAM V. ORR, Cleveland, Ohio. Filed June 10, 1918. Serial No. 239,107. 2 Claims. (Cl. 74—50.)



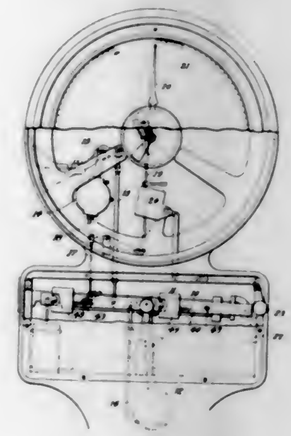
1. In mechanism of the character described, in combination an oscillating part, a countershaft geared thereto, a driving shaft, a pair of opposed bevel gears loosely sleeved on said driving shaft, a gear on said counter shaft meshing with said first gears, a clutch member slidable on said driving shaft, and adapted to engage said first gears selectively, a lever having one end operatively attached to said clutch member, and a plurality

of rings journaled upon the axis of said oscillating part, each ring having a projection adapted to engage a projection of the adjacent ring, and the projections of the



terminal rings being arranged, one to engage a projection on said oscillating part and the other to engage the opposite end of said lever.

1,507,417. SUCTION CLEANER. WILLIAM V. ORR, Cleveland, Ohio. Filed May 26, 1921. Serial No. 472,831. 8 Claims. (Cl. 15—8.)

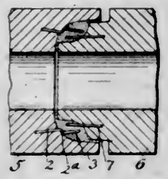


1. In a suction cleaner, in combination, a rigid frame, floor engaging means whereby said frame is supported in stable equilibrium, a cleaner casing pivotally mounted upon said frame on a substantially horizontal axis, said casing having a fan chamber and motor rigidly connected together and also a nozzle which projects beyond the frame and is provided with a downwardly facing inlet mouth, and means for adjustably securing said casing in different positions about its pivot whereby the distance of said inlet mouth from the floor is adjusted.

1,507,418. HOLDER OR GRIP FOR HOLDING TINS, BOXES, OR THE LIKE. KATE OSBORNE, Bridgwater, England. Filed Nov. 3, 1923. Serial No. 672,584. 6 Claims. (Cl. 217—5.)

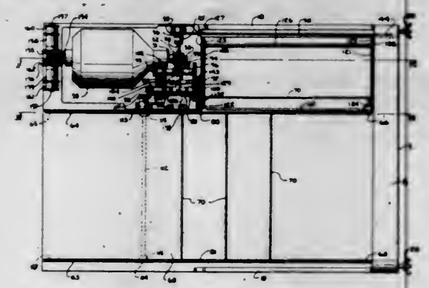
1. A holder comprising a base, a recess in the base adapted to hold the base of the tin, a cover, a recess in the cover, means for securing the base of the tin in the recess, and a wire on the base adapted to engage the tin.

1,507,419. SCALE. LOUIS A. OSGOOD, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed May 13, 1921. Serial No. 469,108. 6 Claims. (Cl. 265—62.)



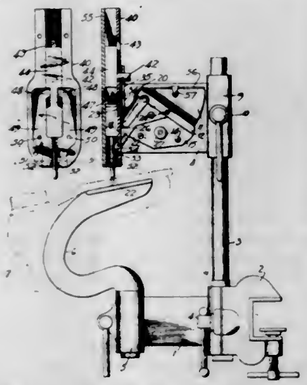
1. In a weighing scale in combination with a fulcrumed scale beam, an automatic load counterbalancing means therefor, of means for indicating the automatically counterbalanced load, of a tare beam carried by the main scale beam, of a poise slidable thereon, of a slidable rack carried by said tare beam and secured to said poise, and means for adjusting the rack longitudinally and thereby shifting the poise relatively to the beam fulcrum, said means comprising an operating member and a pinion meshing with the rack, said operating member and pinion being rotatively mounted upon said tare beam.

1,507,420. EXPANSIBLE-JOINT CONSTRUCTION. WALTER C. PARMLEY, Upper Montclair, and CHARLES GILMAN, Plainfield, N. J. Filed Feb. 13, 1919. Serial No. 276,854. 6 Claims. (Cl. 72—53.)



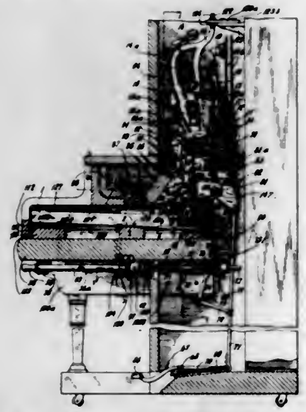
1. The combination of adjacent masses of concrete, of an expansible joint comprising a strip of ductile metal having its opposite edges imbedded in the concrete

masses and extending across the line of jointure, a portion of said strip between the edges thereof being free



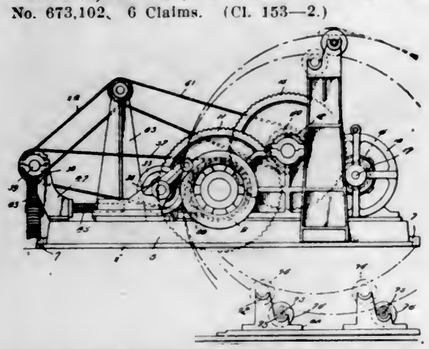
from adhesion to the concrete and positioned to be stretched or compressed by movement of the masses of concrete.

1,507,421. MINING MACHINE. RICHARD PEALE, St. Benedict, Pa., assignor to Rembrandt Peale, St. Benedict, Pa. Filed Mar. 24, 1921. Serial No. 454,986. 32 Claims. (Cl. 262—28.)



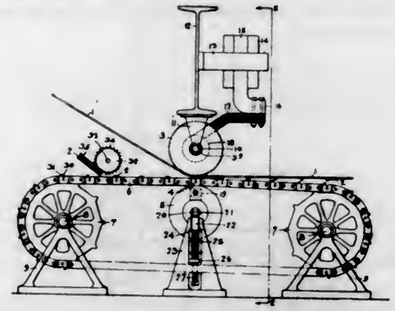
1. A mining machine including in combination, a flat, low machine frame constructed and arranged to be propelled on the ground, an endless guideway structure rigidly and permanently mounted at the front of said frame, a cutter chain running in said guideway, means for driving said chain, and for driving the frame along the ground to press the cutter chain into the work, said guideway and cutter chain being constructed and arranged to cut an endless kerf, the exterior boundaries of which are at least coextensive with the maximum cross-sectional area of the machine.

1,507,422. NAILING DEVICE. JOSEPH PETRICEK, Chicago, Ill. Filed June 21, 1922. Serial No. 569,833. 1 Claim. (Cl. 1—18.)



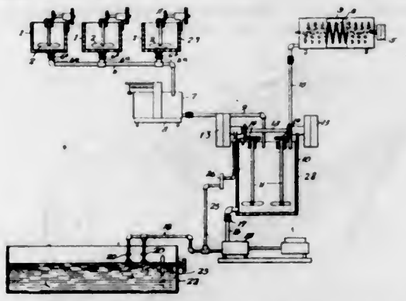
In a nailing device, a work support, a nail magazine, a nail chute registering therewith, a plate connecting said chute and nail magazine, nail-feeding mechanism associated with said plate for feeding the contents of said magazine into said chute, a recessed head plate formed with a perforation in alignment with the mouth of said chute, a reciprocating hammer arranged in the recessed portion of said head plate, twin levers arranged in said head plate and operatively associated with said hammer, said levers being formed with nail-receiving recesses in the plane of said hammer, and lever controlled mechanism for actuating said hammer.

1,507,423. TRANSPOSITION KEYBOARD. PAUL M. PIEL, New York, N. Y. Filed Oct. 15, 1920. Serial No. 417,256. 29 Claims. (Cl. 84—447.)



20. In a piano having a series of wippens offset from their keys, the combination with inclined abstracts bent to form horizontal bearings for articulation in wippen or on key, of guide-arms for said abstracts pivoted in each abstract, and pivots for the guide-arms at other fixed points offset from the abstract so that any tendency of the bent portions to yield will be effectively counteracted by the pull of said guide-arms.

1,507,424. COMBINATION BAND OR TUBE CORRUGATING AND FLANGING MACHINE. CARL B. PRITCHARD, Scottdale, Pa. Filed Nov. 6, 1923. Serial No. 673,102. 6 Claims. (Cl. 153—2.)

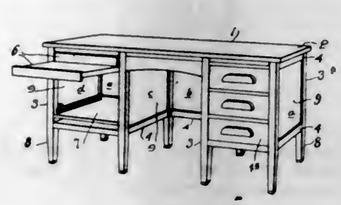


1. In a corrugating and flanging machine of the character described, a base, corrugating and flanging driving rolls mounted for rotation upon said base, corrugating and flanging forming rolls also mounted upon said base and adapted for respective cooperation with said driving rolls, means for actuating said driving rolls and simultaneously actuated means for controlling the slow movement of said forming rolls in a direction toward said driving rolls, and means for stopping the movement of said forming rolls either jointly or singly.

1,507,425. ELECTRIC WELDING MACHINE. WILLIAM EDGAR REED, Pittsburgh, and EDWARD L. BENEDICT, Sewickley, Pa., assignors to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 29, 1922. Serial No. 564,372. 16 Claims. (Cl. 140—112.)

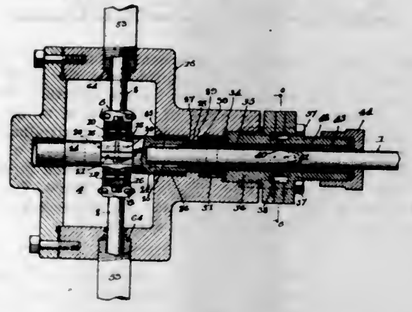
1. Electric welding apparatus for applying stay members to a series of strand members, comprising welding means disposed on one side of said series, rectilinearly movable welding means at the other side of said series and movable in the same direction and at the same speed as said strand members, and means for continuously moving the last-named welding means.

1,507,426. MARGARINE AND THE PROCESS OF MAKING SAME. MARVIN C. REYNOLDS, Oak Park, Ill. Filed Feb. 26, 1921. Serial No. 447,984. 6 Claims. (Cl. 99—13.)



5. An article of food consisting of an intimate mixture of fatty substances and milk in which the ingredients are formed into small, substantially uniform crystals and crystalline aggregates, thereby producing a homogeneous substance of a velvety like smooth nature free from spots or lumpy particles, and retaining substantially all of the milk solids.

6. The process of manufacturing margarine which consists in forming a liquid emulsion from fatty substances and ripened milk, then separating said emulsion into discrete particles while in a liquid state and forcibly impinging said particles upon a cold liquid medium, maintaining the particles in a liquid state until the strike the liquid medium, whereby said particles are instantly solidified and become stabilized, and then moving these particles out of the way of the following particles.

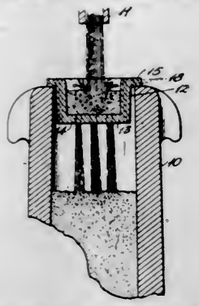


1,507,427. FURNITURE AND CABINET PANEL. FREDERICK R. ROSSITER, Dayton, Ohio, assignor or one-half to Harry Goldman, Middletown, Ohio. Filed Nov. 18, 1921. Serial No. 516,192. 2 Claims. (Cl. 45—6.)

1. In combination, a panel for furniture and cabinets consisting of a thin metallic sheet having a central rectangular portion and marginal portions extending from each side thereof, the marginal portions on two of the opposite sides being bent terminating at distances remote from the other ends of the sheet, whereby the marginal portions on the other sides of the sheet form tongues lying in the plane of the central portion, and a frame comprising side and end members, said side members each having each end mortised and provided on their inner edges with grooves extending from one mortise to the other and of the same width as said mortises, said grooves being of proper size to receive the bent marginal

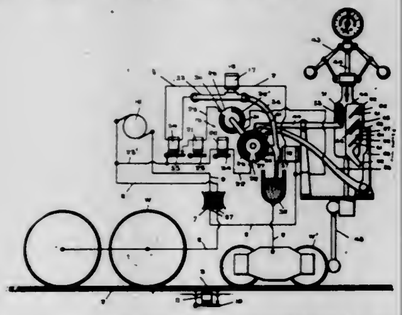
portions of the panel, the end members having at each end a tenon fitting the respective mortises and being provided with narrow grooves extending from end to end and having each one side co-terminus with a respective side of the grooves in the first mentioned side frame members and being of substantially the same thickness as the metallic sheet to receive the straight tongue marginal portions thereof, the bent marginal portions having their ends terminating under the end members of the frame.

1,507,428. ICE MACHINE OF THE COMPRESSION TYPE. HERMAN W. ROTTEL, Milwaukee, Wis. Filed Sept. 20, 1919. Serial No. 325,247. 6 Claims. (Cl. 286—8.)



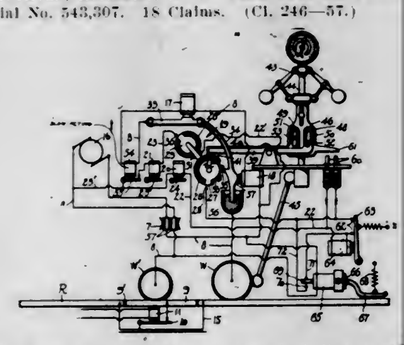
6. A rod stuffing box including a flexible cup surrounding said rod to be sealed, a lantern, the sealing portion of said cup having wedging engagement with said lantern, means for applying fluid pressure to the exterior of said cup, and means for applying pressure longitudinally of the cup to maintain said sealing portion in wedging engagement with said lantern.

1,507,429. APPARATUS AND METHOD FOR CASTING METAL PRODUCTS. ANDREW R. ROWE, Portsmouth, Ohio. Filed Mar. 17, 1923. Serial No. 625,855. 4 Claims. (Cl. 22—19.)



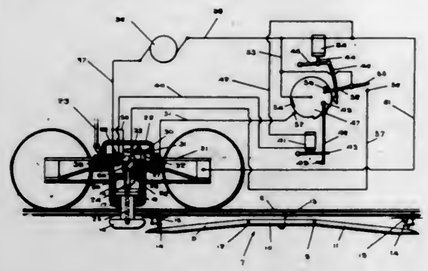
1. In an apparatus for casting metal, a mold having an open top, a reservoir of relatively lighter material than the material being melted, said reservoir being loosely seated in the top of said mold, said reservoir projecting downwardly into the top of the mold and having an integral bottom with perforations therein, there being

vents provided between the exterior walls of the reservoir and the walls of the mold whereby when the ma-



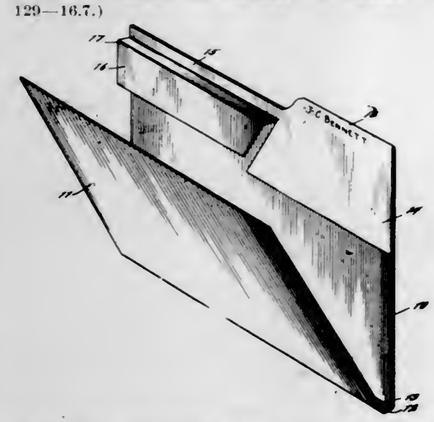
terial being moulded is poured in said reservoir, it may pass through the holes in the bottom thereof and the air in the mold escape through said vents.

1,507,430. SIMPLEX TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed Sept. 6, 1921. Serial No. 498,609. 28 Claims. (Cl. 246—57.)



12. A vehicle controlling equipment including a movable controlling device, means controlled from the track for automatically moving said device in one direction, means for controlling the movement of said device in the opposite direction, and means operable for controlling the lastnamed means below a predetermined speed of the vehicle and requiring a predetermined reduction in speed at any speed below said predetermined speed, for the operation of said lastnamed means for the movement of said device in the second named direction.

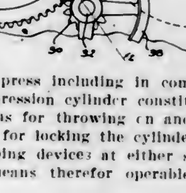
1,507,431. SIMPLEX TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed Mar. 13, 1922. Serial No. 543,307. 18 Claims. (Cl. 246—57.)



17. Vehicle controlling apparatus including a rail or conductor having insulated isolated sections and main sections, controlled bridges for connecting the isolated and main sections across the insulation, and a vehicle controlling equipment including a circuit normally closed by said rail or conductor and having a contact member to pass over said isolated sections and to open the circuit one or more times when the bridges are opened, and means operated by the breaking and closing of said circuit one or more times for producing progressive controlling conditions.

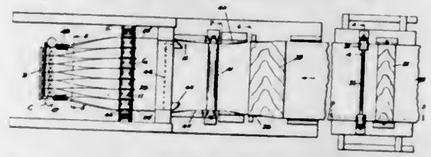
1,507,432. SIMPLEX TRAIN CONTROL. ALFRED L. RUTHVEN, Rochester, N. Y. Filed June 26, 1922. Serial No. 571,063. 17 Claims. (Cl. 124—180.)

10. Vehicle controlling apparatus including a ramp, and a vehicle controlling circuit arranged to include said ramp and a rail of the track in passing the ramp, said ramp being constructed and arranged for the breaking of said circuit one or more times in passing the ramp.



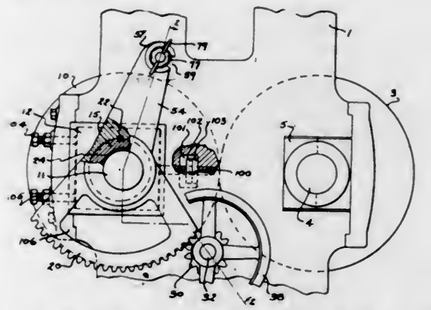
1,507,433. FILE FOLDER. ADOLF H. SCHAFFERT, Rochester, N. Y., assignor to Yawman & Erbe Manufacturing Co., a Corporation of New York. Filed Aug. 30, 1923. Serial No. 660,089. 5 Claims. (Cl. 129—16.7.)

5. A folder comprising a blank folded to form a back and a front, the back being provided at the upper edge thereof with a flap having a free edge adapted to overlie the outer edges of papers in the folder, the upper edge of said back being also provided with a portion extending beyond said flap to provide a label tab, and a strip of material firmly secured to said label tab and adjacent portions of said back.



1,507,434. INSECTICIDE. GUSTAV SCHOLLMEYER, Cothen, Anhalt, Germany, assignor to the Firm: Chemische Fabrik Cöthen, Inhaber Emil Musche, Cothen, Anhalt, Germany. Filed Jan. 17, 1921. Serial No. 437,921. 7 Claims. (Cl. 167—6.)

5. As a new product, a solid mixture of naphthalene a substance adapted, on being heated, to develop formaldehyde vapors, and a substance adapted to promote combustion, the proportion being such that the mixture on being ignited will merely glow at a temperature below the flashing point of naphthalene.



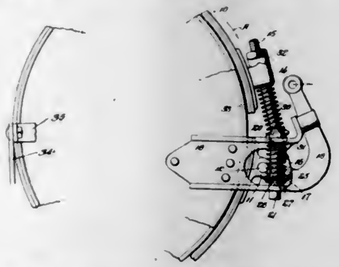
7. As a new article of manufacture, the combination of a conical candle containing naphthalene and a substance adapted to promote combustion, a primer on top of said candle, a metal box surrounding said candle and a grid closing said box and extending between said candle and said primer.

1,507,435. CELL-CASE MACHINE. HARVEY SEGUR, Chicago, Ill., assignor to Tite-Pack Filler Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1922. Serial No. 584,087. 17 Claims. (Cl. 93—37.)

1. In combination with a cell case machine arranged to cut and assemble longitudinal and transverse paper strips to construct the cell case, of mechanism for forming a flange on two of the outer strips thereof.

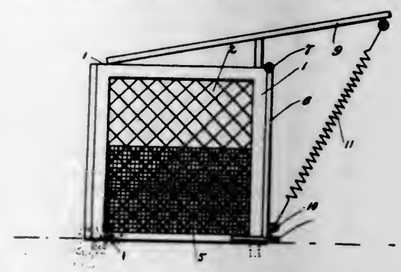
1,507,436. PRINTING PRESS. RALPH C. SEYMOUR, Short Hills, N. J. Filed Aug. 30, 1923. Serial No. 660,142. 20 Claims. (Cl. 101—247.)

1. A printing press including in combination a form cylinder and impression cylinder constituting a printing couple, and means for throwing on and off the impression, and means for locking the cylinders at impression comprising clamping devices at either side of the press and actuating means therefor operable from one side of the press.



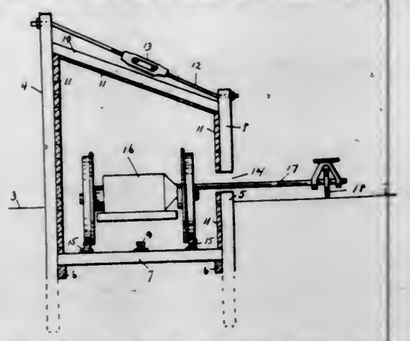
1,507,437. VALVE FOR AIR TUBES. GEORGE W. SHEELEY, Frederick, Md. Filed Aug. 9, 1922. Serial No. 580,715. 3 Claims. (Cl. 152—12.)

1. In a valve for air tubes, a main tube having a bore of relatively small diameter extending from its inner end, a cylindrical bore of larger diameter extending inward from its outer end, an enlargement at the inner end of the cylindrical bore of larger diameter, a hollow plug extending into the cylindrical bore of larger diameter from its outer end, terminating a substantial distance from the outer end of the enlargement and having a valve seat at its inner end, and a cylindrical valve adapted to fit the cylindrical bore of larger diameter and of a length not less than the distance between



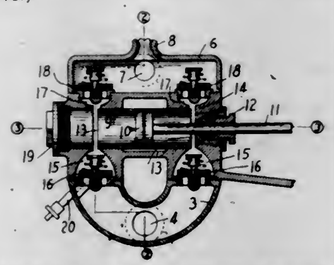
the inner end of the hollow plug and the outer end of the enlargement and provided on its outer face with a gasket adapted to fit against the valve seat on the inner end of the hollow plug.

1,507,438. BRAKE-BAND SUPPORT. GEORGE L. SMITH, Washington, D. C., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Jan. 31, 1924. Serial No. 689,743. 8 Claims. (Cl. 188—77.)



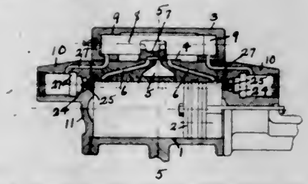
1. In a brake structure, a brake band adaptable for rotary movement in either direction, a toggle mechanism for contracting the band, and means for yieldingly resisting rotary movement of the band in either direction, said means including spring elements mounted on and independently of the toggle mechanism respectively.

1,507,439. STARTING CAGE FOR RACING DOGS. OWEN P. SMITH, Chicago, Ill. Filed May 16, 1921. Serial No. 470,080. 1 Claim. (Cl. 119—15.5.)



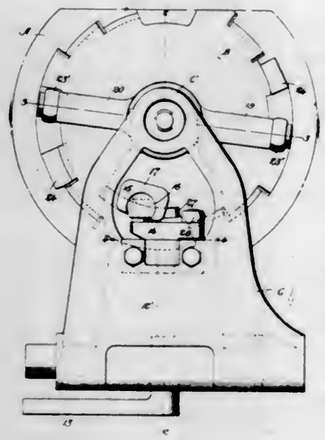
In a starting cage for racing dogs, a frame comprising a box-like structure divided into a plurality of compartments and comprising walls formed of wire mesh partially covered with fabric, individual rear doors for each of the compartments and a single front door hinged at its upper end to the top walls of the frame, divergent inclined members secured to the top of the said frame and extending upwardly and outwardly beyond the face of the front door and having their outer ends in the plane of the side walls of the box-like structure, springs secured to the outer ends of said inclined members and to the door and lying in the plane of the hinges, and a latch at the bottom of the cage for coaction with the lower edge of the front door to hold the front door normally closed against the tension of said springs, said springs adapted to raise the front door upon release of the latch.

1,507,440. HOUSING FOR CONVEYER CARS AND TRACKS. OWEN P. SMITH, Chicago, Ill. Filed May 24, 1921. Serial No. 472,312. 3 Claims. (Cl. 46—73.)



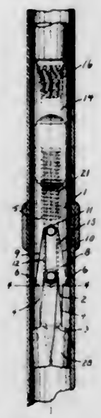
1. In a housing for covering tracks and cars having laterally extending arm operated upon said track, the combination of posts set in the ground at the sides of said track, timbers attached to said posts to form a frame, and boards attached to said timbers and posts to form a continuous enclosure above said track, and having a continuous opening in one side of said housing adapted to permit extension of the laterally extending arm therethrough, and truss rods attached to the closed side of the housing adapted to support the side of said housing above the said continuous opening.

1,507,441. PUMP. JACOB A. SNIDER, Dayton, Ohio, assignor to The Uniflow Pump & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 26, 1921. Serial No. 495,621. 2 Claims. (Cl. 103—175.)



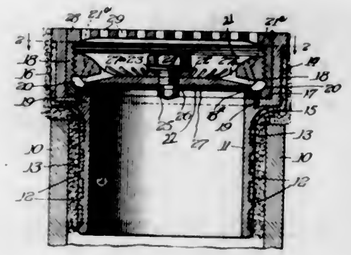
1. In a pump, a housing, a cylinder mounted in said housing, a piston mounted in said cylinder, said housing having a suction chamber beneath said cylinder, and a discharge chamber above said cylinder, the walls of said housing having portions extending inwardly at the respective ends of said cylinder to form relatively small passageways about the ends of said cylinders, which passageways communicate with said suction chamber and said discharge chamber, and valves to control said communication.

1,507,442. PUMP MOTOR. JOHN A. SPEARS, Grove City, Pa. Filed Sept. 10, 1921. Serial No. 499,778. 7 Claims. (Cl. 121—157.)



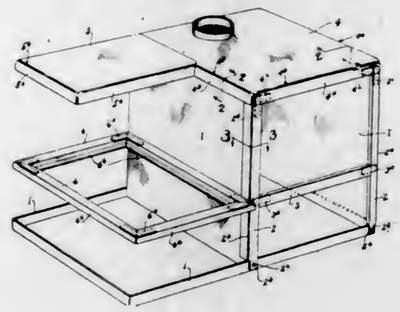
1. In a pump motor, the combination of a cylinder; a piston in the cylinder; a main valve controlling the flow of motive fluid to the cylinder; a valve motor actuating the valve having its movable element normally connected to an exhaust; and means comprising a valve mechanism actuated by the piston for admitting fluid under pressure momentarily to one side of the movable element to actuate the valve motor.

1,507,443. BREECH MECHANISM. HENRY J. STAMBAUGH, Troy, N. Y., and GEORGE M. MCCANN, Washington, D. C., assignors to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Dec. 31, 1923. Serial No. 683,753. 15 Claims. (Cl. 89—20.)



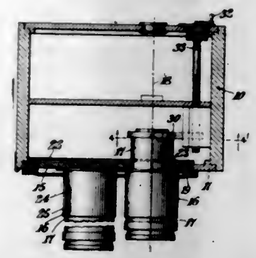
1. In a gun, the combination of a carrier, a threaded breech plug mounted on the carrier for both motions of rotation and translation with respect to the carrier, a shaft rotatable on the carrier, and devices directly operated by rotation of the shaft, when the threads of the plug are disengaged from the threads of the screw box of the gun, to simultaneously rotate and translate the plug.

1,507,444. SOLID-WEDGE UNDERREAMER. FRED SWAN, Marietta, Ohio. Filed July 3, 1923. Serial No. 649,341. 12 Claims. (Cl. 255—76.)



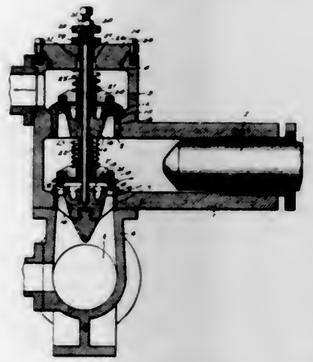
1. In an under-reamer, a reamer body having at its lower end a downwardly extending solid wedge and having abutments at the upper end of the wedge, oppositely arranged cutters having solid bodies having their rear faces adapted to bear against the faces of the wedge and having shanks extending upward from their bodies, the shanks of the two cutters overlapping one on the other and being pivotally connected, and means engaging the shanks for drawing the cutters upward to bring their upper ends against the abutments.

1,507,445. SEWER VALVE. AXEL R. SWANSON, Chicago, Ill. Filed Nov. 16, 1921. Serial No. 515,648. 5 Claims. (Cl. 251—160.)



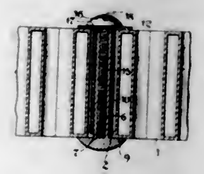
1. A cylindrical drain member, a valve guide in the upper portion of said drain member and a valve in engagement with said valve guide, an upper portion of said valve being of larger diameter than a lower portion thereof whereby a peripheral extending groove is formed around the valve at its lower side, the said valve having perforations therethrough connecting with said peripheral groove whereby when the said valve is open, water will drain therethrough and when closed prevents the flow of water therethrough.

1,507,446. STOVE STRUCTURE. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Eclipse Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed Oct. 16, 1919. Serial No. 330,994. 2 Claims. (Cl. 126—39.)



1. In a stove structure, a wall provided with an inset portion having an internal terminal flange, an overlapping wall resting on said inset portion of the other and provided with a companion flange, and tongues and recesses transversely cut and struck out from said flanges for locking the latter against relative longitudinal movement.

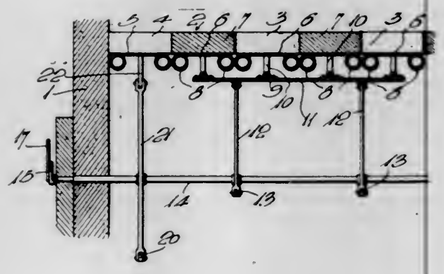
1,507,447. CAMERA. EDMUND WISNIEWSKI, New York, and ANTON STÖGER, Long Island City, N. Y. Filed Nov. 29, 1921. Serial No. 518,559. 6 Claims. (Cl. 95—45.)



1. A camera having a rotatable turret plate and a plurality of lenses mounted therein, and focusing mechanism located at the rear of the camera and adapted to engage a selected one of said lenses.

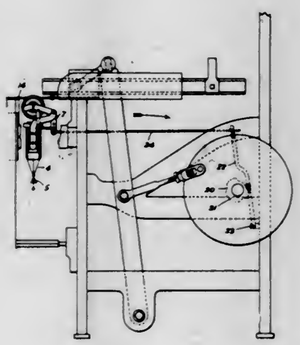
1,507,448. VALVE-HOLDING DEVICE. ROSCOE H. ALDRICH, Allentown, Pa. Filed May 16, 1923. Serial No. 639,387. 6 Claims. (Cl. 277—61.)

1. In a valve structure, a casing provided with seat openings arranged in line, a valve seat for each opening, a valve member for each seat, a holding rod acting to force one of said seats into its opening, an independently acting tubular rod for forcing the other seat into its opening, and means for holding said rods in operative position.



1,507,449. REPAIR DEVICE. MAX ANCHELEVICH, Evansville, Ind. Filed Oct. 16, 1923. Serial No. 668,868. 2 Claims. (Cl. 137—99.)

1. A repair device for the purpose set forth comprising a pair of telescopic closure members each having its outer end provided with a head, each of said members including a shank, one of said shanks provided with a socket for

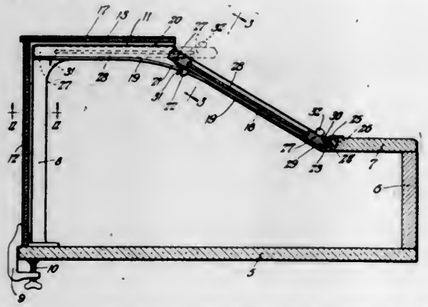


the reception of the other of said shanks and the last mentioned shank provided with a socket formed with a threaded wall, and a removable coupling member including a threaded shank extending into the last mentioned shank and engaging the threaded wall of said socket for detachably connecting said closure members in operative position, the shanks of said closure members being polygonal in cross section and the shank of said coupling member being cylindrical.

1,507,450. AIR CONTROL FOR LIQUID-FUEL BURNING FURNACES. CHARLES A. ANDERSON, New Orleans, La. Filed Feb. 8, 1923. Serial No. 617,895. 6 Claims. (Cl. 158—4.)

1. A liquid fuel burning furnace having a plurality of relatively small air inlet openings spaced apart over the greater part of the area of its floor, the front end of said floor having relatively large air inlet openings; damper plates for controlling said openings, and means for simultaneously operating all of said damper plates and for moving the plates of said relatively large openings a greater amount than the other plates.

1,507,451. APPLIANCE FOR LUBRICATING THE PILE WIRES EMPLOYED IN JACQUARD AND LIKE LOOMS FOR WEAVING CARPETS, RUGS, OR OTHER LIKE FABRICS. CHARLES RAULK, Bridgnorth, England. Filed Oct. 29, 1923. Serial No. 671,430. 6 Claims. (Cl. 139—45.)

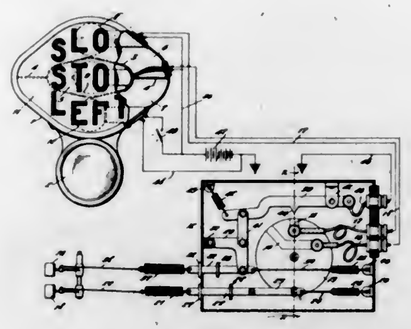


1. An appliance for lubricating pile wires of looms, comprising a holder for lubricant, a bracket upon the holder, an arm fulcrumed to the bracket, a roller brush rotatably mounted in the arm, and means for causing said brush to peripherally engage with the lubricant.

1,507,452. ZIRCONIUM STEEL AND PROCESS OF MAKING SAME. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 11, 1922. Serial No. 581,285. 7 Claims. (Cl. 75—1.)

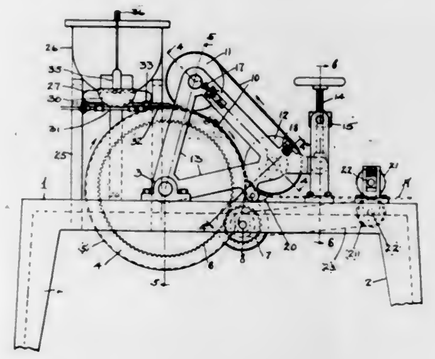
1. Process of treating steels containing sufficient sulphur to cause red-shortness, comprising adding zirconium thereto in proportion sufficient to counteract to a substantial degree the detrimental effect of the sulphur.

1,507,453. DISPLAY CASE. SAMUEL BERMAN, Chicago, Ill. Filed Apr. 30, 1923. Serial No. 635,603. 5 Claims. (Cl. 211—9.)



1. In a display case, guide members comprising substantially horizontally extending straight portions, inclined straight portions and curved portions joining said horizontally extending and inclined portions, and doors slidably mounted between said guide members, said guide members having lower flanges comprising horizontally extending guiding and supporting flange portions, inclined guiding and sealing flange portions and curved guiding flange portions joining said horizontally extending flange portions and said inclined flange portions, said doors sliding on said flanges.

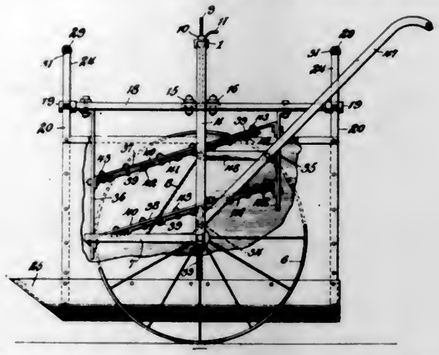
1,507,454. AUTOMATIC PUMP CONTROL. MCMASTER SYLVESTER BLACKBURN, San Antonio, Tex., assignor to McMaster Sylvester Blackburn and J. S. Arrington, trustees for the Petroleum Engineering Company, a Common Law Trust Company. Filed Apr. 30, 1923. Serial No. 635,627. 15 Claims. (Cl. 103—40.)



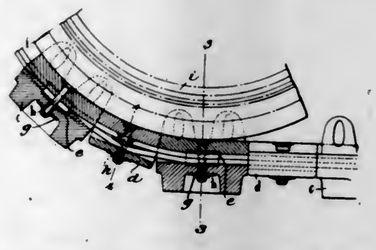
1. The combination with a well pump having a standing valve; of means controlled by the quantity of liquid in the well for automatically holding said standing valve open when the liquid level has lowered to a predetermined extent.

1,507,455. AUTO SIGNAL. BENJAMIN BLACKMORE, Akron, Ohio. Filed Oct. 25, 1922. Serial No. 596,914. 5 Claims. (Cl. 200—59.)

1. A signal circuit closing means, comprising a rotary member, a pair of contacts on the rotary member, a contact lever adapted to engage either of said contacts, and means adapted to connect said lever with the brake pedal of an automobile and the rotary member with the clutch pedal of the automobile.



1,507,456. STRIP-CASTING MECHANISM. CLAIR H. BRASTED, East Cleveland, Ohio, assignor, by mesne assignments, to The Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1918. Serial No. 253,915. 18 Claims. (Cl. 207—12.)



1. In apparatus for forming a strip or the like direct from molten metal, the combination with a suitably supply of such metal; of a rotary disk provided with a molding groove in its outer face, a nozzle adapted to discharge a graduated stream of metal into such groove; and a member contacting with such face of said disk to close a section of such groove adjacent said nozzle, said member being movable conjointly with the disk face wherewith it thus contacts and also being bodily angularly adjustable about the axis of said disk.

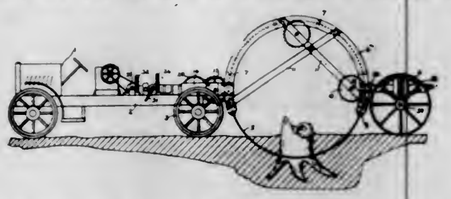
1,507,457. ROLL-WEEVIL MACHINE. ARTHUR BRIGDEN, Birmingham, Ala. Filed Feb. 14, 1922. Serial No. 536,601. 28 Claims. (Cl. 43—133.)

1. A device of the class described, comprising a wheeled supporting frame, a separate frame supported thereon, hangers mounted on said separate frame and carrying troughs, inwardly-extending fingers carried by the separate frame above the troughs, and means for automatically adjusting the fingers toward and from each other transversely of the frame and independently of the fingers.

1,507,458. ENDLESS TRACK FOR VEHICLES. JOHN TUTHILL DREYER, London, England, assignor to The Variable Speed Gear Limited, London, England. Filed Nov. 8, 1923. Serial No. 673,561. 6 Claims. (Cl. 305—10.)

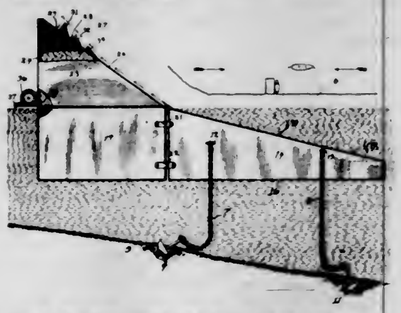
1. An endless track for vehicles comprising an endless flexible member and a plurality of shoes loosely mounted thereon for longitudinal movement.

1,507,459. BOBBIN RETAINER. LOUIS ALEXANDRE CADORET, Pawtucket, R. I. Filed Apr. 16, 1923. Serial No. 632,444. 4 Claims. (Cl. 139—206.)



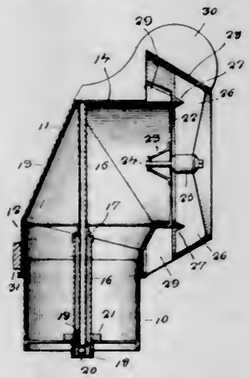
2. A bobbin retainer of the character specified, formed from a single length of wire bent between its ends to provide attaching arms, portions of said arms adjacent the outer ends thereof being bent to provide substantially U-shaped portions for accommodating a portion of the head of the bobbin, the wire beyond said U-shaped portions being directed at right angles to provide portions for reception in the usual groove of said bobbin head.

1,507,460. ROTARY HOOP SAW. JOHN T. CARROLL, Houston, Tex. Filed June 17, 1921. Serial No. 478,399. 6 Claims. (Cl. 143—85.)



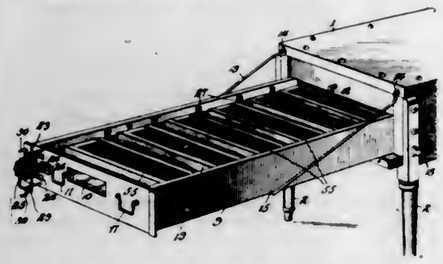
1. In a device of the character described, a support, an arcuate frame thereon, a circular hoop saw mounted

for rotation thereon, means to rotate said saw comprising a toothed wheel mounted outside the circle of said saw and placed to fit within spaced openings in



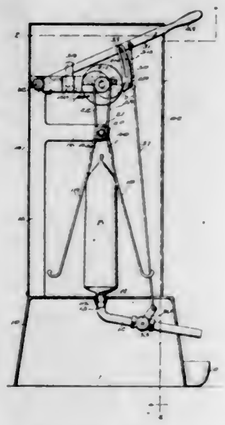
said blade, an operating shaft to rotate said wheel and means to swing said frame on the axis of said operating shaft.

1,507,461. COMBINED FLOATING BREAKWATER AND POWER GENERATOR. ROBERT P. CHASE, Montara, Calif. Filed July 12, 1922. Serial No. 574,507. 3 Claims. (Cl. 61—20.)



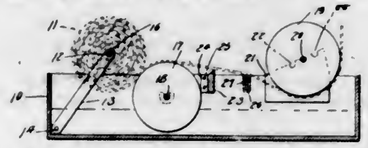
1. In a floating break water, a tank adapted to act as a float, a tapered tank secured to said first mentioned tank, a weight provided at the forward end of said tapered tank for the purpose of retaining the tapered portion of said tank at a point beneath the surface of the water, a third tank mounted on said first mentioned tank, and means for filling said third mentioned tank through the action of waves contacting therewith.

1,507,462. VENTILATOR. JOSEPH LOUIS CHILDERS and FREDDIE ARLAUD, Sand Springs, Okla. Filed Oct. 8, 1918, Serial No. 257,423. Renewed May 10, 1924. 1 Claim. (Cl. 98—2.)



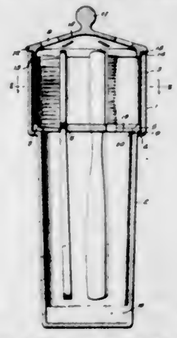
A ventilator of the class described comprising a stationary base, a cowl rotatably mounted on the base and including a horizontally disposed portion, a spider secured within the horizontal portion and arranged adjacent the open end thereof, a bracket projecting inwardly from the spider and providing a bearing, a shaft rotatably mounted in the bearing of the bracket and extending through the spider, a fan carried by the shaft and having its blades notched to accommodate the edges of the horizontal portion, means surrounding the fan for collecting air therefor, and a counterbalancing weight carried by the cowl as and for the purpose specified.

1,507,463. INCUBATOR. PEHR CHRISTIANSSON, Carlos, Minn. Filed Jan. 18, 1923. Serial No. 613,383. 7 Claims. (Cl. 119—44.)



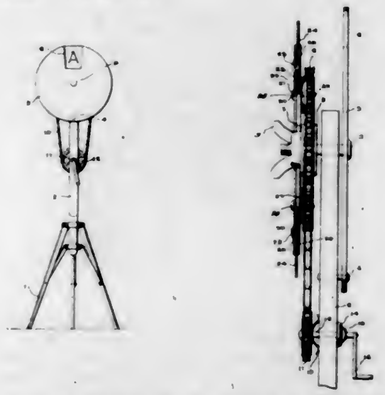
1. In an incubator, an egg chamber, a plurality of trays in said chamber for receiving eggs, each tray having trunnions on which it is revoluble, and a sprocket wheel secured thereto, a sprocket wheel revolubly mounted outside the chamber, a sprocket chain connecting all of said sprocket wheels, a ball secured to the outside sprocket for oscillating the same to turn the trays, and means for limiting the movement of the ball in each direction.

1,507,464. DISPENSING DEVICE FOR COLLAPSIBLE CONTAINERS. JOHN H. CLEGG, Suffern, N. Y. Filed July 7, 1922. Serial No. 573,296. 1 Claim. (Cl. 221—60.)



In a device for dispensing substances packaged in collapsible containers, mechanism for exerting a pressure on the container comprising a pair of forceps, a manipulating means operable to successively effect the closure of said forceps, said manipulating means comprising extensions on the forcep jaws, a rotary shaft between said extensions, oppositely disposed cams on the shaft, a ratchet wheel secured to the shaft, an arm loosely mounted on the shaft having a spring pressed pawl, and a manipulating lever engageable with said arm for successively moving the same in opposite directions.

1,507,465. PAPER-PASTING MACHINE. DANIEL COLLINS, Baker, Oreg. Filed Oct. 30, 1922. Serial No. 597,881. 2 Claims. (Cl. 91—14.)

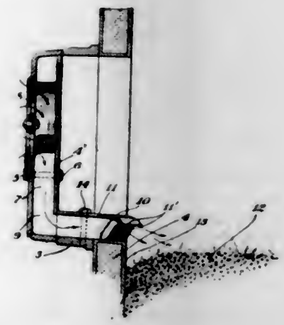


1. An adhesive-applying machine having a reservoir to contain adhesive, an applicator to travel in the adhesive and transfer the same to material passed thereover, an idler under which the material passes, and bearing means for the idler having a plurality of bearing notches at different elevations for mounting the idler.

1,507,466. TOOTHBRUSH HOLDER AND STERILIZER. WALTER H. COLLINS, Summit, N. J. Filed Apr. 11, 1923. Serial No. 631,428. 5 Claims. (Cl. 206—15.1.)

1. A tooth brush holder, comprising a container formed with a shoulder, a cover for the container, a plate arranged in the container and mounted on said shoulder for receiving tooth brushes with the bristle portions thereof supported above the plate, said plate being formed with an aperture for each tooth brush, and a depression adjacent each aperture, said shoulder and plate being spaced downwardly from the top of the container sufficiently to accommodate that part of the tooth brush supported above the plate.

1,507,467. CHART. JAMES VICTOR CONOVER, Paoli, Okla. Filed Feb. 2, 1923. Serial No. 616,627. 3 Claims. (Cl. 35—2.)

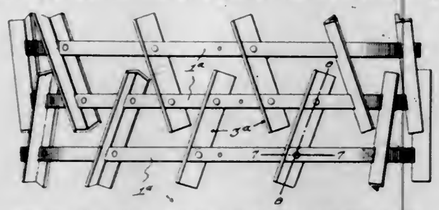


1. In an educational chart, a support, a member having a sight opening fixed thereto, a wheel journaled on the support, to the rear of the member, a pair of ring members, cards bearing educational problems positioned between said rings, means for removably securing the rings and cards to the wheel, means between the wheel and one of the rings for causing the latter to exert a pressure toward the other ring to bind the card therebetween, means for revolving the wheel to bring the cards successively to view through the sight opening, and means for locking the wheel to hold the same from movement when the cards are so positioned.

1,507,468. SEED PAN. RODNEY M. COOP, Gadsden, Tenn. Filed Feb. 18, 1922. Serial No. 537,494. 2 Claims. (Cl. 56—207.)

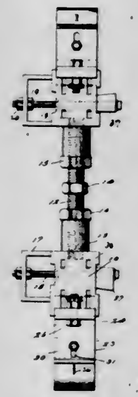
1. A seed pan for mowing machines having a receptacle and means for pivotally mounting the front edge thereof upon the finger bar of a cutting mechanism, a screening cover for the receptacle provided with openings for the reception of seed dropped from plants engaged by the cutting mechanism and passing over the surface of the cover, the means for pivotally mounting the receptacle consisting of a pivot rod disposed parallel with the cutter bar, and a reinforcing rod formed with terminal eyes pivotally engaging the pivot rod and being crimped into the side walls of the receptacle to reinforce the same.

1,507,469. FURNACE. JOHN M. CORSON, Brooklyn, N. Y. Filed Jan. 15, 1924. Serial No. 686,424. 5 Claims. (Cl. 110—175.)



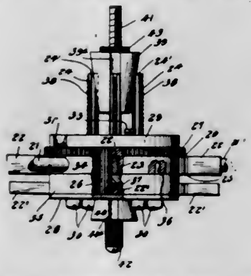
5. The combination with a furnace having a fuel inlet and a door normally closing said fuel inlet, said door having an air inlet at its intermediate portion, a plate secured to the back of the door, webs spacing the plate from the back of the door, said webs forming a plurality of flues whereby the air entering the air inlet is directed downwardly and spread laterally, and a webbed plate secured to the bottom of the fuel inlet and forming flues communicating with the first-mentioned flues whereby the air is directed into the furnace at the bottom of the fuel opening.

1,507,470. TRACTION-INCREASING MEANS FOR TRACTION ENGINES. HARRY V. CROSLEY, Roundup, Mont. Filed Aug. 13, 1923. Serial No. 657,074. 4 Claims. (Cl. 301—40.)



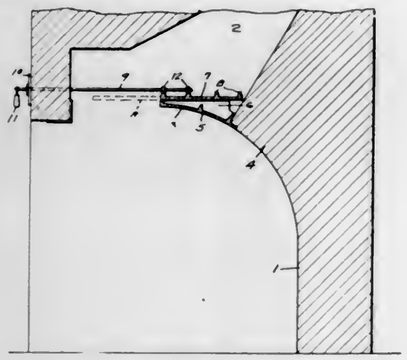
2. In traction increasing means for traction wheels, arcuate carrying straps arranged in parallelism, and spaced lugs arranged on and at an angle to the straps;

the said lugs being of angular cross-section and each having a base portion arranged at the inner sides of and



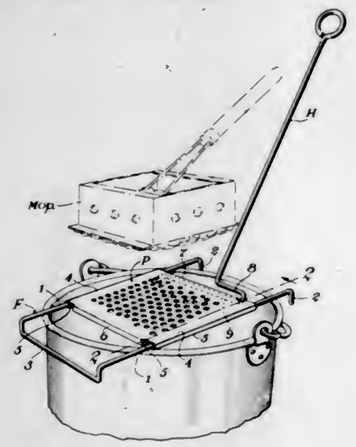
connected to the straps and also having an outwardly extending portion with apertures snugly receiving the straps.

1,507,471. GIN LEG. JOE DINES, Tempe, Ariz. Filed Feb. 26, 1923. Serial No. 621,493. 3 Claims. (Cl. 19—48.)



3. In a device of the class described, a rod, a frame including a socket portion having adjustable connection with the rod, a wedge adjustable transversely of the frame and rod, spaced elements on opposite sides of the wedge, a bearing block adjustable upon the transverse movement of the wedge, means inclosing the bearing block and cooperating with one end thereof for forming a complete bearing, an extension carried by the frame, an adjustable rod passing through the wedge and through said extension, and means engaging the rod and extension for maintaining the adjustment of the wedge.

1,507,472. ADJUSTABLE TAP AND DIE. THOMAS J. DOWD, New York, N. Y. Filed Aug. 31, 1922. Serial No. 585,395. 13 Claims. (Cl. 10—142.)



5. A thread cutting tool having a head consisting of a body disk provided with radial operating arms and oppositely disposed retainer disks connected by retaining screws extending through the body disk, bit shanks fitted in radial guides in the body disk and provided with rack teeth, pinions mounted in openings in the body disk and in mesh with the racks of the shanks, said pinions being terminally confined by the retainer disks, and a common adjusting ring revolubly mounted upon the head in internal meshing relation mutually with said pinions for effecting simultaneous adjustments of the bit shanks, tapping cutter bars being carried by the inner end of the bit shanks in parallelism with the axis of the head.

1,507,473. FIREPLACE. GEORGE F. DRAY, Santa Ana, Calif. Filed Nov. 5, 1923. Serial No. 672,951. 2 Claims. (Cl. 126—120.)

1. The combination with a fireplace formed with an arched back and having a flue, of a transverse arch plate arranged in continuation of the arch of the fireplace, and a damper slidably mounted upon the arch plate for movement into and out of a position in extension of the arch of the fireplace.

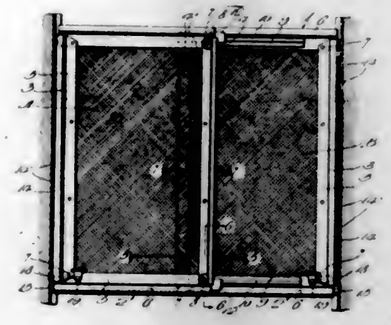
1,507,474. MOP WRINGER. JOHN FRANK ETTER, Chambersburg, Pa. Filed Apr. 7, 1923. Serial No. 630,525. 1 Claim. (Cl. 15—261.)

A mop wringer comprising a substantially U-shaped frame, the intermediate portion thereof being offset with respect to the side members, the free extremities of the side members being continued by arms disposed in the same general direction as the offset of the intermediate portion of the frame, said side members of the frame being of a length to permit the same being supported upon a bucket, a plate secured to the side members and

bridging the space therebetween, said plate being of a length less than the side members, one end marginal portion of the plate having a tubular flange disposed thereinlong, an elongated handle having one end portion provided with a laterally extending arm disposed through said flange, said arm having an angularly disposed extension for contact from below with the plate to limit the swinging movement of the handle when raised into working position.

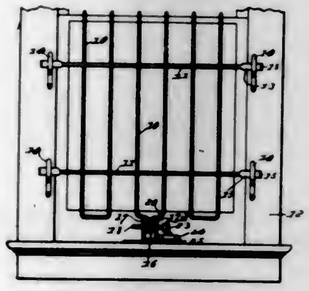
1,507,475. NOSE WASHER. ERNEST FLAGG, New York, N. Y. Filed Mar. 7, 1923. Serial No. 623,511. 3 Claims. (Cl. 128—232.)

1. A nose washing device which includes a tubular member extending into the nose, a cap or diaphragm on the end thereof to stop up the nasal passage, said member having passages therein beneath the cap to permit discharge of cleansing fluid therethrough, and means associated with the tubular member and movable to scrape the inner nasal surfaces whereby matter thereon will be removed and washed out by the cleansing fluid.



1,507,476. METHOD AND APPARATUS FOR MAKING DENTAL CROWNS. JOSEPH MICHAEL FLANIGAN, Shamokin, Pa. Filed Dec. 2, 1921. Serial No. 519,489. 4 Claims. (Cl. 22—97.)

1. A dental mold which comprises a plastic impression of a tooth to be crowned, a hollow shell-like matrix disposed over the impression of the tooth, and sealing material disposed around said matrix to seal the matrix in position over the impression whereby liquid metal can be poured into the matrix and the impression to form a mold for a metal tooth and a stem therefor.

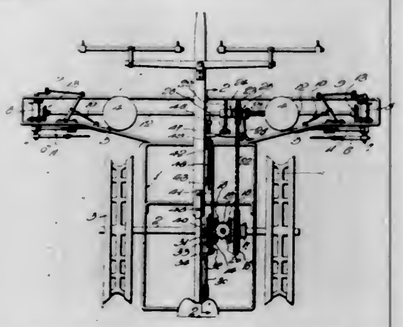


1,507,477. ADJUSTABLE WINDOW SCREEN. FRANK FRACCASCIA, Philadelphia, Pa. Filed Sept. 21, 1922. Serial No. 589,662. 2 Claims. (Cl. 156—38.)

1. A screen comprising a frame having upper and lower bars and side bars connecting the upper and lower bars, screening carried by said frame, said lower bar being provided with a hollow bead and leaves extending from said hollow bead for gripping the lower portion of said screening, a latch pin slidably mounted in the bead of said lower bar for movement longitudinally therein, a spring yieldably holding said pin with one end portion extended beyond the end of the lower bar, and an actuating lever for said pin pivotally carried by one of the leaves of the lower bar and extending into the bead and engaging the pin to cause inward movement thereof to an inoperative position when the lever is swung in one direction, said lever being disposed in a vertical plane and having its upper end portion bent to provide a side extension disposed in a horizontal

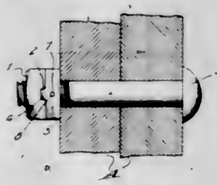
plane for permitting said lever to be readily grasped and after being moved to draw the latch inwardly constitute means for moving the screen upwardly.

1,507,478. BURGLARPROOF WINDOW GUARD. JOHN A. GRAY, East St. Louis, Ill. Filed June 23, 1921. Serial No. 479,793. 3 Claims. (Cl. 189—79.)



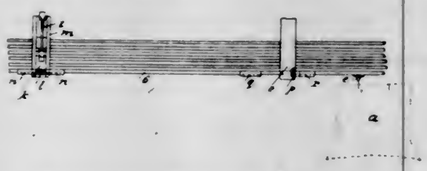
1. A device for the purpose indicated embodying a member longitudinally movable to effect removal and comprising a pair of rods forming a loop of which the looped end is extended to form an eye, and locking means for securing said member against longitudinal movement and consisting of spaced locking ears between which said eye is disposed when said member is in its normal position, and a locking pin passing slidably through said ears and said eye.

1,507,479. BALL RETURN FOR POCKET-BILLIARD TABLES. JOHN A. HAND, Cleveland, Ohio. Filed Feb. 15, 1923. Serial No. 619,091. 11 Claims. (Cl. 46—12.)



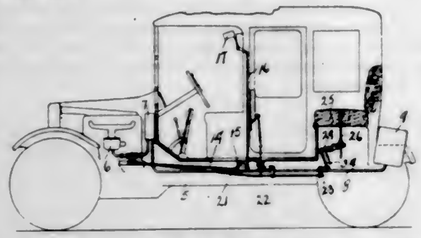
1. In a ball return attachment for pocket billiard tables, trough shaped ball receiving sections each made up of spaced bars, guide sleeves frictionally connecting said spaced bars, and suspending loop members extending about said bars.

1,507,480. MARKER-SHAFT-DRIVING MECHANISM FOR CORN PLANTERS. CHARLES D. HARNESS and CHARLES D. BRADSHAW, Lucasville, Ohio. Filed Apr. 23, 1923. Serial No. 634,060. 15 Claims. (Cl. 74—7.)



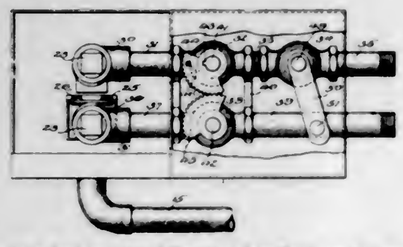
1. A mechanism of the class described comprising driving means including a power take-off member and a control device for advancing or retarding said power take-off member, driving connections operated by said power take-off member and including a clutch, and clutch operating connections between said control device and said clutch.

1,507,481. NUT LOCK. COURTLEY G. HARRIS, Paris, Ill. Filed Sept. 22, 1922. Serial No. 589,803. 2 Claims. (Cl. 151—24.)



1. A lock nut of the class described comprising a nut having a notch in its under face, a locking member having a tongue for engaging the notch and a locking pin in the member for holding the same against movement.

1,507,482. THREAD-GUIDING DEVICE FOR COTTON KNITTING MACHINES. CURT HILSCHER, Chemnitz, Germany. Filed Aug. 26, 1921. Serial No. 495,811. 2 Claims. (Cl. 66—12.)

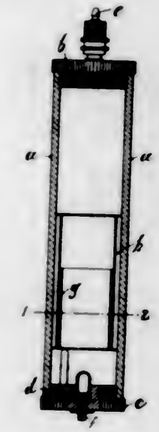


1. An improved thread-guiding device for Cotton knitting machines for the production of stockings with two heel parts comprising in combination thread guide rails for the knitting of the leg; an auxiliary thread guide rail for the knitting of the rows of loops between the heel parts, stops for the ends of the auxiliary rail, stops fixed on said rail for determining the length of travel of said rail and a stop on the machine within the range of travel of said rail, said stops on the auxiliary rail working together with said stop of the machine for determining the working travel of said auxiliary thread guide rail.

1,507,483. TAXIMETER FUEL-CONTROL MECHANISM. JOHN A. HOLMQUIST, New York, N. Y. Filed June 8, 1923. Serial No. 644,274. 3 Claims. (Cl. 180—82.)

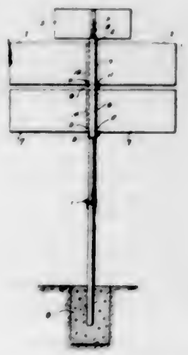
1. A taximeter fuel control mechanism in combination with the seat and fuel supply system of a motor vehicle, comprising a main fuel conduit, a by-pass conduit in communication with said main fuel conduit, a valve within each of the said conduits, means connecting the valve in the by-pass conduit with the indicator arm of a taximeter, and means operable by the seat to open and close the valve in the main fuel conduit.

1,507,484. OIL BURNER. FRANK HUMPHREVILLE, Atlantic City, N. J. Filed June 16, 1923. Serial No. 645,854. 2 Claims. (Cl. 158—78)



1. In a fuel burner of the type described, an air nozzle, an oil nozzle, means for simultaneously controlling the flow of air and oil to said air and oil nozzles, means for limiting the movement of said last-mentioned means, means for controlling the volume of oil flowing to the oil nozzle, said last-mentioned means comprising a valve arranged between the first-mentioned means and the oil supply, a lever for operating said valve, and adjustable means adapted for engagement with opposite sides of said lever to limit the movement thereof.

1,507,485. PEN AND PENCIL CLIP. EDWARD E. JENKINS, Baltimore, Md. Filed Nov. 21, 1923. Serial No. 676,010. 4 Claims. (Cl. 24—11.)

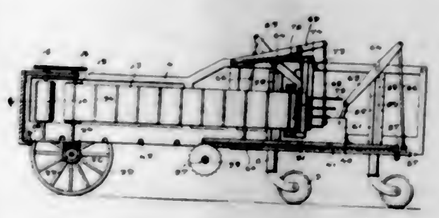


3. A pen or pencil clip comprising a flat volute coil of spring wire having an integral extension affording a gripping member, said wire coil having, extending from its central portion, an integral flattened portion adapted to be inserted in the cap of a fountain pen between such cap and a sleeve therein.

1,507,486. MEANS FOR ASCERTAINING THE POSITION OF PUNCTURES IN THE AIR TUBES OF PNEUMATIC TIRES. JOHN JONES, Littleborough, England. Filed June 25, 1923. Serial No. 647,516. 2 Claims. (Cl. 73—51.)

1. An apparatus for locating punctures, comprising a cylinder provided with means for connecting its end portions with an air tube and with an air pump respectively, and a removable chamber provided with perforated ends and inserted in the said cylinder, said chamber being adapted to contain combustible material which emits smoke when ignited.

1,507,487. SIGN. CLAUDE W. KLITZ, Aberdeen, S. Dak. Filed May 24, 1923. Serial No. 641,152. 1 Claim. (Cl. 40—39.)

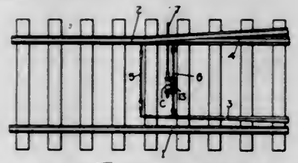


A sign having a post, sign blades disposed to extend on opposite sides thereof, the inner edge portions of the sign blades overlapping each other and being secured together, each blade extending a considerable distance from its inner edge portion laterally beyond the inner edge portion of the adjacent blade, said portions being outwardly depressed to form a tube fitting the post, means on the post preventing downward displacement of said blades, a tip, a sign blade carried by said tip contrasting with the first mentioned sign blades, and said tip having a socket engaging the upper end of said post and overlapping the first mentioned sign blades to prevent upward displacement thereof.

1,507,488. EXTENSION BOLT. EMIL EDWARD KRALMER, Hicksville, N. Y. Filed May 9, 1922. Serial No. 559,564. 2 Claims. (Cl. 90—59.)

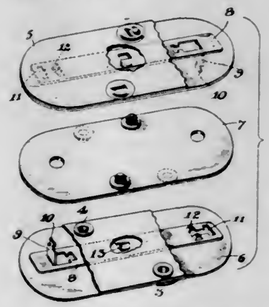
1. In combination with a table provided with T-slots, a device of teh class described, comprising a sleeve having an internal opening extending longitudinally therethrough, a head formed on the lower end of said sleeve and shaped to fit into the T-slots in said table, a stud bolt for engaging in the opening in said sleeve, a lock nut mounted on the lower end of said stud bolt for locking it in position in the sleeve, and means mounted on the upper end of the stud bolt to clamp an article on the table.

1,507,489. SHOCKING MACHINE. WILLIAM D. KESSELRING, Topeka, Kans. Filed Nov. 9, 1920. Serial No. 422,875. 3 Claims. (Cl. 56—410.)



1. A shocker attachment for self binding harvesters, including means for receiving horizontally delivered bundles of grain; of conveyor means for turning the bundles to a vertical position and for moving the same longitudinally in one direction, a cradle having upper and lower sections for receiving the bundles, a platform between the cradle sections, means for moving the platform longitudinally to permit of the lowering of the lower section of the cradle and the shock thereon, means for raising the upper section of the cradle when the lower section thereof has been lowered, automatic means for returning the cradle sections when the shock has been delivered, and means for automatically returning the platform to initial position.

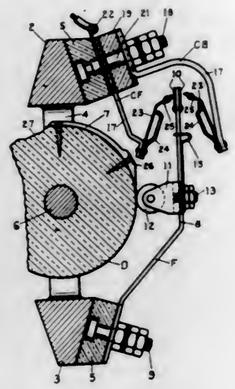
1,507,490. PISTON. WILLY KÜCHEMANN, Berlin-Wilmersdorf, and FRANZ WUCHERER, Berlin-Charlottenburg, Germany. Filed Feb. 27, 1924. Serial No. 695,495. 9 Claims. (Cl. 74—108.)



1. A piston comprising a hollow body, a piston pin extending across said body, and means movable longitudinally of the piston for increasing the outer diameter thereof only at opposite points to cause said body to be deformed into other than a circular configuration.

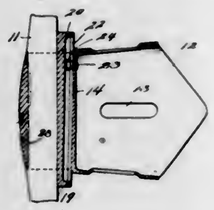
1,507,491. SWITCH THROW-ROD CONNECTION. EDWIN C. LARRY, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Jan. 15, 1923. Serial No. 612,679. 10 Claims. (Cl. 246—450.)

1. A throw-rod connector comprising, an elongated casing having open ends and provided with an internal abutment near its middle and having a drainage opening near said abutment and oil holes near its ends, a throw-rod extending through said casing provided with adjustable stops adapted to engage said abutment, and cap members closing the ends of said casing and said oil holes.



1,507,492. KEY CASE. EDWARD LA VINE, Los Angeles, Calif. Filed Mar. 31, 1923. Serial No. 629,125. 14 Claims. (Cl. 150—40.)

1. A key case comprising in combination, a pair of walls between which keys are adapted to be housed, spacing elements between the walls at either end thereof on which keys are adapted to be swingably suspended, said elements each constituting a lateral projection at one end of each wall and having a T-head terminal, and a T-head slot at the other end of each wall to receive the T-heads of the respective projections.

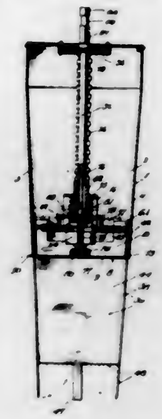


1,507,493. CIRCUIT CONTROLLER FOR SEMAPHORE SIGNAL MECHANISMS. RICHARD C. LEAKE, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Nov. 18, 1920. Serial No. 424,924. 7 Claims. (Cl. 246—253.)

6. A circuit controller for semaphore signal mechanisms, comprising relatively movable contact members, one member having a spring and a retainer, said members being arranged to cause flexing of the spring and relative sliding movement of the contacting parts of said members

when they are pressed together, and a drum for operating said members, said drum having projections thereon at different radial distances.

1,507,494. PICK-HEAD FASTENER. WILLIAM D. LEWIS, Plymouth, Pa. Filed July 2, 1923. Serial No. 649,147. 1 Claim. (Cl. 306—40.)



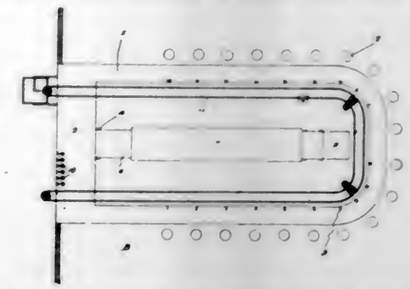
A device of the character described comprising a helve socket having an outer closed end and a stirrup projecting beyond said closed end, a wedge slidable through the stirrup and having a channel extending longitudinally thereof and formed with closed ends, the wedge including a plate secured thereto and formed with a longitudinal slot of less width than the channel and also provided with bendable projecting portions extending inwardly at opposite sides of the slot at one end, and a pin secured to said outer closed end of the socket adjacent one side edge of the latter and provided with a head of greater extent than the slot of the plate and freely movable in the channel of the wedge, the pin being inserted between the bendable projecting portions at one end of the opposite sides of the slot in the plate and said projections bent inwardly to close the slot and hold the pin in connection with the plate and wedge.

1,507,495. MEASURING AND DISPENSING APPARATUS. HERBERT W. LUSTIG, Youngstown, Ohio, assignor to Joseph J. Lustig, Saranac Lake, N. Y. Filed Jan. 17, 1923. Serial No. 613,196. 23 Claims. (Cl. 107—48.)

1. In apparatus for extracting measured quantities of a commodity from a mass of the same, a casing having a bottom plate adapted to rest upon the mass of the commodity, a plurality of blades mounted in the casing

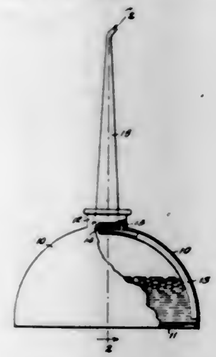
to be projected and extracted past the bottom plate, the blades when projected being adapted to penetrate the mass and enclose a portion thereof of definite form and

volume, and means mounted in the casing including a reciprocating head carrying the blades to actuate the blades.



1,507,496. REFLECTOR. CLAUDE A. MALLORY, Madison, S. Dak. Filed June 7, 1922. Serial No. 566,454. 4 Claims. (Cl. 240—1.)

1. A device of the class described comprising a frame, a plurality of reflectors in the frame, each reflector consisting of a base formed of a single piece of material formed into a flat pyramid, mirror strips resting against the inner sides of the pyramid, flanges on the base bent over the mirror strips to hold them in place, flanges on the base adapted to be secured to the frame and to flanges of other bases and an electric lamp associated with each reflector.

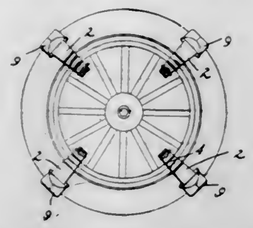


1,507,497. CAFÉ SYSTEM. JAMES AVERY MARTIN, Birmingham, Ala. Filed Aug. 21, 1922. Serial No. 583,398. 1 Claim. (Cl. 156—1.)

A café system of the character described comprising a substantially U-shaped table, disposed within a dining room and having one end arranged adjacent an opening formed in the wall of a kitchen, a flat top frame interposed between the sides of the table, a pair of conveyors arranged in superposed horizontal relation between the sides and below the flat top of the frame, a receiving table transversely disposed with relation to the conveyors and having one edge arranged adjacent one end of the upper conveyor for automatically receiving articles therefrom, a serving table having one

edge disposed adjacent the opposite end of the lower conveyor and transverse to the end of the U-shaped table arranged adjacent to the opening and a motor operating the conveyors as and for the purpose specified.

1,507,498. OIL CAN. WILLIAM G. MATTHEWS, Brooklyn, N. Y. Filed Dec. 14, 1923. Serial No. 680,666. 2 Claims. (Cl. 221—48.)

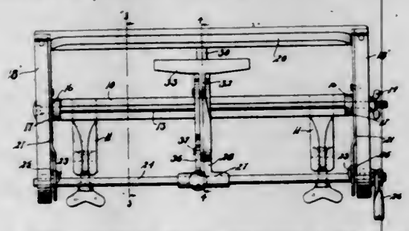


2. An oil can comprising a body having a flexible resilient portion constituting a diaphragm for alternately effecting the raising and lowering of the internal pressure thereof, said body having an outlet opening, an annular interiorly threaded boss on the body surrounding the outlet opening, a conduit in said body extending from the inlet opening to a point adjacent its bottom and one side thereof, a disk-like member seated in the bottom of the boss having a hinged resilient central portion constituting a flap valve overlying the outlet opening, a spout having an annular outturned flange seated in the boss and upon the marginal portion of the disk-like member, a nut threaded into said boss, surrounding the spout and engaging its flange for clamping the same together with the disk-like member in said boss, a filling nozzle, a removable closure plug in the filling nozzle, said plug having a passage therethrough constituting an inlet, and an inwardly opening outwardly closing check valve for controlling said inlet opening.

1,507,499. LUG. WILLIAM MEIDENBAUER, Waukesha, Wis. Filed Aug. 12, 1922. Serial No. 581,447. 1 Claim. (Cl. 301—44.)

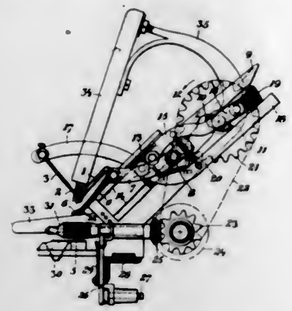
A lug of the character described comprising a curved plate for engaging the tread of the tire, a pair of side plates hingedly secured to the sides of the curved plate and being bent inwardly adjacent the free ends to provide felly engaging parts, said side plates being further

bent in parallel adjacent parts operatively associated, one of which is provided with a slot aligned with an opening in the other part, a flange formed on one of said parts and arranged at right angles thereto, an inclined flange formed on the opposite part and said inclined flange being provided with a slot communicating with the first mentioned slot, a bolt received in the slot and opening respectively and a wing nut for said bolt.



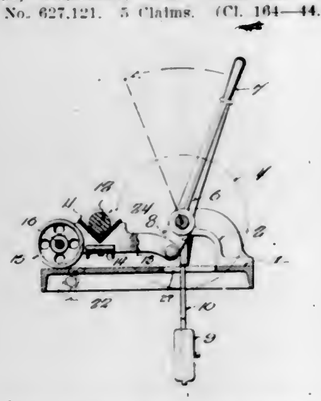
1,507,500. TOOTHBRUSH. SILAS W. METZ, Connellsville, Pa. Filed Apr. 4, 1923. Serial No. 629,866. 3 Claims. (Cl. 15—167.)

1. In a tooth brush of the character described, a substantially U-shaped head having its arms of arcuate shape and converging away from the bight portion of the head, the bight portion of the head also being of arcuate shape, and a handle extending from the central part of the bight portion of said head, the arms being provided with depending bristles.



1,507,501. SAW CLAMP. GEORGE W. MILLER, Waynesville, N. C. Filed May 23, 1923, Serial No. 640,934. Renewed July 26, 1924. 2 Claims. (Cl. 76—78.)

1. A saw clamping device comprising a main clamp having a fixed jaw and a movable jaw, the fixed jaw being provided with a longitudinal groove, a rod supported by the clamp, a secondary clamp slidably mounted on said rod and including a fixed jaw and a movable jaw arranged directly beneath the jaws of the first-mentioned clamp, and an extension projecting from the fixed jaw of the secondary clamp and movable in said longitudinal groove for the purpose specified.

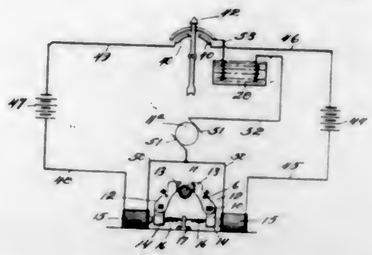


1,507,502. MACHINE FOR THE PRODUCTION OF HORSEHAIR THREADS. FRITZ MÖBIUS, Gross-Kolzig, Germany, assignor to Charles Frederick Ralph Glealer, London, England. Filed June 16, 1923. Serial No. 645,755. 3 Claims. (Cl. 117—13.)

1. A feeding mechanism for machines for the production of endless horsehair threads comprising in combination a reservoir for the horsehair open at the lower end from which the bundle of horsehair projects, a finger, a needle, designed to grip some of the said horsehair threads against said finger, means for moving said needle towards and away from said finger, means for lowering said needle and finger simultaneously, a feeding bow designed to receive the horsehair threads released by said needle when the same is moved away from the finger,

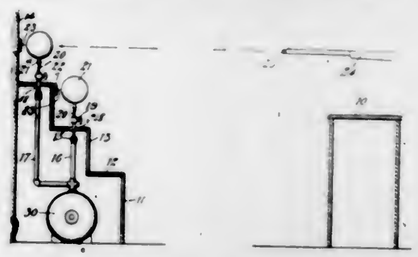
two gripper cylinders below said feeding bow, means for moving said feeding bow with regard to said gripper cylinders to feed the horsehair threads between said cylinders, and means for rotating said gripper cylinders in opposite directions to convey the horsehair threads towards a spinning mechanism.

1,507,503. STOCK-CUTTING MACHINE. LORECOTT MOLLART, Watertown, Wis. Filed Mar. 23, 1923. Serial No. 627,121. 5 Claims. (Cl. 164—44.)



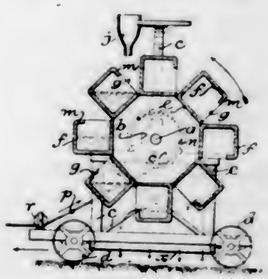
1. A stock cutting machine comprising a circular knife, a lever for rotating said knife back and forth through a portion of a turn, a carrier for supporting the stock closely adjacent the knife, and mechanism operatively coupling said carrier and knife to reciprocate said carrier as said knife is oscillated, whereby said stock is presented to said knife while said knife is being oscillated.

1,507,504. DIRECTION-CONTROL MECHANISM FOR AEROPLANES. WALTMAN M. MORGAN, Kansas City, Mo., assignor of two-thirds to Alfred Peterson, Independence, Mo. Filed Mar. 22, 1921. Serial No. 454,543. 2 Claims. (Cl. 172—282.)



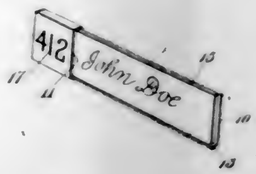
1. The combination with an aeroplane, of motor-actuated steering mechanism, a bowl containing a fluid conductor, suspended from the aeroplane to assume a horizontal position regardless of tilting movements of the machine, a fluid conductor in said bowl, two electro-circuits for energizing the motor alternately, said circuits including spaced contacts; and a magnetic needle

and a contact in circuit with said fluid conductor and movable with said needle adapted through change in the course of travel of the machine, to engage one or the



other of the said spaced contacts, to complete the respective circuit and energize the motor to set the rudder for the return of the machine to its predetermined course.

1,507,505. AMUSEMENT APPARATUS. ORSON DESAIX MUNN, Southampton, N. Y. Filed June 21, 1922. Serial No. 569,892. 12 Claims. (Cl. 46—59.)



1. Amusement apparatus, comprising a target consisting of an inflatable member of flexible material having a fixed point of attachment but capable of limited bodily movement, a pin held in fixed relation to said inflatable member, and a means for striking said inflatable member to force the same into contact with said pin.

1,507,506. SELF-PROPELLED TRAVELING IRRIGATOR. ALBERT EDWARD MURPHY, Swanbourne, near Perth, Western Australia, Australia. Filed Feb. 3, 1922. Serial No. 533,917. 2 Claims. (Cl. 299—49.)

1. A device of the character described comprising a frame, a shaft journaled in said frame, receptacle secured to said shaft and revoluble therewith, said receptacles extending substantially the entire width of the frame, winding wheels carried by said shaft, means for delivering water to said receptacles, a perforated tray beneath said frame and extending substantially the entire width of the frame, and a cable for each of said winding wheels, each of said cables having one end secured to one of said winding wheels and having its opposite end adapted to be attached to a fixed point.

1,507,507. INDICATOR HOLDER. WILLIAM A. MCCARTNEY, Texarkana, Tex. Filed Apr. 22, 1924. Serial No. 708,297. 3 Claims. (Cl. 40—16.)

1. In a sign holder of the type described, a rectangular plate adapted for attachment to a suitable support and provided upon its lower edge with an outstanding flange forming a ledge, a flange projecting upwardly in spaced parallel relation to the plate and from the outer edge of the flange at one end of the first named flange, the upper end of the said flange extending over and engaging the upper edge of the plate.

1,507,508. RIM LOCK. ROBERT F. MCKENZIE, Scottsville, Ky., assignor of one-fourth to Gilbert G. Wilson, Scottsville, Ky. Filed Feb. 28, 1923. Serial No. 621,802. 1 Claim. (Cl. 301—23.)

A demountable rim comprising a split ring having a recess in one end, an opening and closing link pivotally connected to the ends of the ring, and a tongue extending from one end of the link beyond the pivot thereof for closing the recess when the ring ends engage, said tongue being formed with a key receiving opening extending obliquely and transversely thereof.

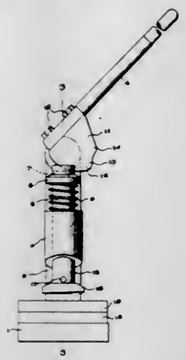
1,507,509. PROCESS FOR MANUFACTURING CARBON FILAMENT FOR INCANDESCENT LAMPS. KIKEI NISHIKAWA, Tokyo, Japan. Filed July 21, 1921. Serial No. 486,549. 2 Claims. (Cl. 176—127.)

1. A process of treating carbon filament, consisting in eliminating the magnesium ash from the raw material by chemical process and refining the formed filament for further elimination of magnesium.

1,507,510. SHIM-CUTTING PRESS. GEORGE H. NORTH, La Crosse, Kans. Filed Apr. 14, 1923. Serial No. 632,074. 1 Claim. (Cl. 164—26.)

In a shim cutting press, a base, a standard arising therefrom, a handle member swingably supported on the standard, an enlargement removably secured on the inner end of the handle having two spaced cam surfaces, a spring influenced plunger supported for vertical move-

ment on the standard and having a slotted upper end in which the cam enlargement on the handle is received, a male die removably secured to the plunger, a bed



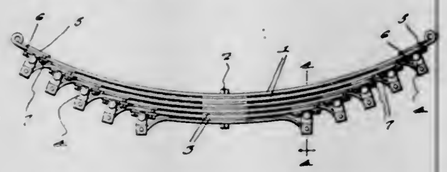


plate resting on the base, a female die plate guided on the bed plate removably secured thereto and to the base, and a spring influenced ejector in the female die member.

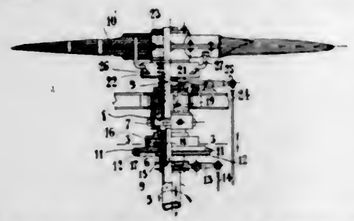
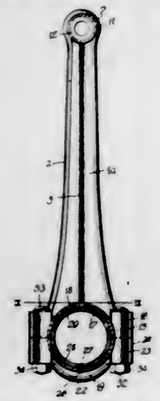
1,507,511. SPRING. FRANCIS D. PARKER, Hillsboro, Wis. Filed May 23, 1923. Serial No. 640,988. 1 Claim. (Cl. 267—47.)



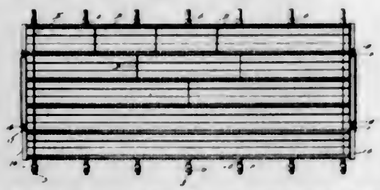
A spring of the class described comprising a plurality of leaves connected together at their centers and having eyes at their ends, a pair of plates clamped to each end of the spring by bolts passing through projecting parts of the plates, one plate of each pair having a tubular part and shackles having their bolts passing through the eyes and the tubular parts.

1,507,512. TOY WALKER. JOHN FERRETT, New York, N. Y. Filed Feb. 1, 1924. Serial No. 689,958. 3 Claims. (Cl. 46—22.)



1. A toy walking device which comprises a frame having a curved runner portion adapted to rest on and to be rolled over the ground, a pivoted seat mounted on said frame, and a handle portion rigidly attached thereto, said seat adapted to be maintained in a substantially horizontal position by a person seated thereon independent of the movement of the frame with respect to the ground and the body of the person as it may be moved by said person in traveling over the ground.

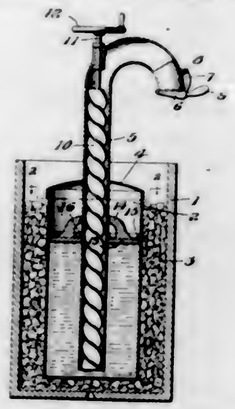
1,507,513. HELICOPTER WITH VARIABLE-PITCH PROPELLER. EDOUARD PERRIN, Paris, France. Filed Mar. 16, 1921. Serial No. 452,708. 9 Claims. (Cl. 244—19.)



1. In an airship, the combination of a supporting propeller having blades the pitch of which is settable in one or the other of two predetermined limits; means acting automatically to adjust the pitch to the minimum limit when the engine is shut off, irrespective of the velocity of the propeller; and means acting automatically to bring the pitch to the maximum limit when the engine torque drives the propeller, irrespective of the propeller velocity.

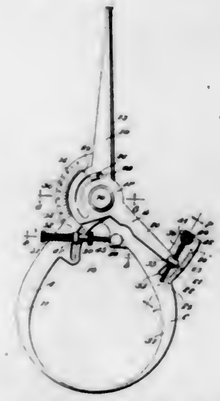
1,507,514. CONNECTING ROD. JOHN H. PETROSKY, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 5, 1915. Serial No. 59,721. 10 Claims. (Cl. 74—17.)

3. A power transmitting member comprising sheet metal members having interlocked longitudinal edges, each member having a longitudinal stiffening rim, a bridge connecting said members intermediate the ends thereof, liners supported at the ends of said members, bushings in said liners, and a lubricant conduit extending from one liner to the other and through said bridge between said members.



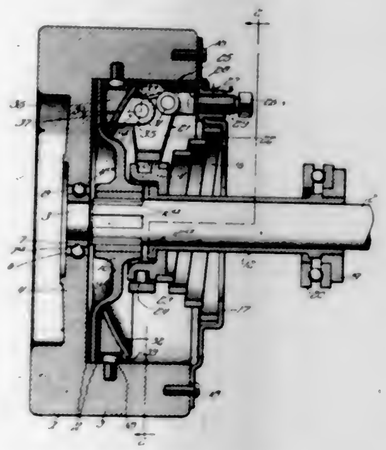
1,507,515. CEMENT-BLOCK MOLD. JOSEPH AUBREY POTTER, Staunton, Va. Filed Apr. 18, 1923. Serial No. 632,972. 5 Claims. (Cl. 25—121.)

1. A mold of the class described comprising a support, adjustable side supporting members on the support, a plurality of molding plates, base plates adapted to be



placed between the side plates, cut-off lates, means for holding the cut-off plates at any desired points along the lengths of the mold plates and means for clamping the parts together.

1,507,516. SANITARY PLASTIC-FOOD SERVER. HOLDEN C. RICHARDSON, Philadelphia, Pa. Filed Sept. 21, 1921. Serial No. 502,250. 3 Claims. (Cl. 107—14.)



3. A sanitary plastic food server comprising an original container for food in a plastic condition having a closed top, a tube extending down through the top and permanently attached thereto with its lower end disposed near the base of the container, the upper end of said nozzle being curved or returned upon itself and having its discharge end disposed downwardly, conveying means disposed within said tube and having means extending through and above the tube for operating said conveying means, following means disposed about said tube within said container for pressing the plastic food toward the bottom of the container and for maintaining the said tube in substantially vertical position, and die means extending across the discharge end of said tube.

1,507,517. CALIPERS. RAFAEL M. ROBLES, Manila, P. I. Filed Jan. 2, 1923. Serial No. 610,253. 3 Claims. (Cl. 33—148.)

1. A device of the character described comprising a pair of pivotally connected members, each including a curved edge portion, said legs being used together for outside measurements, one of said members including a straight leg portion, said last mentioned member having graduations on both sides thereof, the other member of said pair having indicating characters cooperating with the graduations to provide for a reading of the device, an additional member pivotally associated with the aforementioned members, and including a straight leg portion arranged parallel with the afore-mentioned straight leg portion and used therewith for inside measurements, means for simultaneously adjusting the members of said pair, means for independently adjusting the leg portion of said additional member toward and away from the first mentioned straight leg portion, and means for determining the degree of the last named adjustment.

1,507,518. CLUTCH MECHANISM. CHARLES B. ROSE, East Moline, Ill. Filed Mar. 30, 1920. Serial No. 369,849. 16 Claims. (Cl. 192—68.)

16. In an automotive clutch, a driving member, a driven member, friction discs for connecting and disconnecting said members, a pressure ring for engaging the discs, a member in self-aligning contact with the pressure ring, and clutch operating means engaging the self-aligning member.

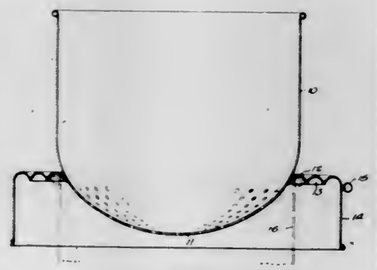
1,507,519. DENTAL PLATE. LARS JENSEN RUD, Herning, Denmark. Filed June 28, 1923. Serial No. 648,320. 4 Claims. (Cl. 32—4.)

2. A dental plate, comprising a hard rubber member, to one side of which the artificial teeth are fastened, and a strip of soft rubber secured to the other side of said member and having a thin, flexible free edge which is adapted to adhere closely and tightly to the adjacent surface of the natural gum when the plate is in place; substantially as described.

1,507,520. PUMP FOR LIQUIDS. WILLIAM JOSEPH RUSDELL, Wolverhampton, England. Filed July 14, 1921. Serial No. 484,813. 7 Claims. (Cl. 103—76.)

1. In a method of raising or forcing liquids which consists in moving by the power portion of the stroke of a reciprocating piston a column of liquid so that it

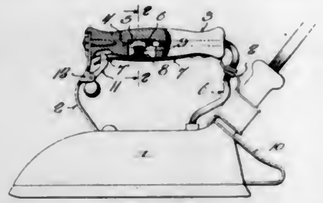
acquires momentum sufficient to keep the column in movement after the power portion of the stroke has ceased to act and so that more liquid is drawn in by the



moving column in the direction of the flow, the improvement which consists in prolonging the power portion of the stroke.

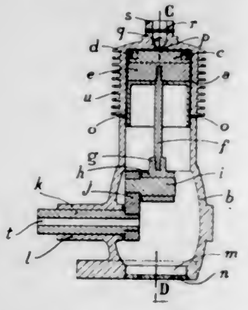
1,507,521. PROCESS FOR REVIVIFYING FILTERS. MATTHEW RUSSELL, Greenock, Scotland. Filed Dec. 8, 1923. Serial No. 679,473. 4 Claims. (Cl. 252—3.)

1. A process of revivifying charcoal or other carbonaceous filtering medium in filter chambers for sugar and other liquors, which consists in passing superheated steam through one filter chamber at a temperature above approximately 600° F., thereafter cooling the filtering medium in said filter chamber by passing saturated steam therethrough, transferring the saturated steam as superheated steam to the next filter chamber for partially revivifying the filtering medium therein and thereafter repeating the process successively, substantially as described.



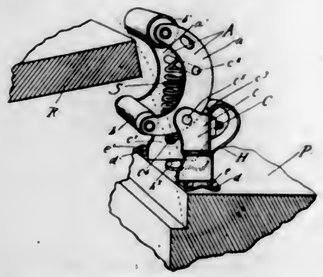
1,507,522. COLANDER. ROSE C. SIMON, New York, N. Y. Filed June 21, 1923. Serial No. 646,881. 2 Claims. (Cl. 219—155.)

1. The combination with a colander having a spherical bottom portion, of means for supporting the same from the upper end of a vessel, comprising an annular flange having a plurality of concentric corrugations for engaging and embracing the upper edge of the vessel to which it is applied, the wall of the central corrugation forming an arcuate support for the spherical bottom of the colander.



1,507,523. ELECTRIC IRON. JOHN SLOMAR and EVERETT SCHRADER, St. Francis, Wis. Filed Apr. 11, 1922. Serial No. 551,551. 2 Claims. (Cl. 200—157.)

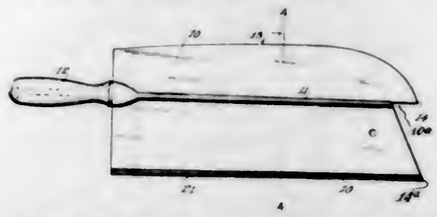
1. A switch for controlling the circuit of an electric iron having a handle, said switch comprising a movable bar adapted to be attached to said handle and having a projecting portion lying adjacent said handle and adapted to be grasped by the operator when the operator holds the handle, an electric switch controlled by said bar, said bar being biased to switch open position, and a gravity controlled dog normally inactive when the handle



is in horizontal position and adapted to lock said bar in switch closed position when the iron is approximately vertical.

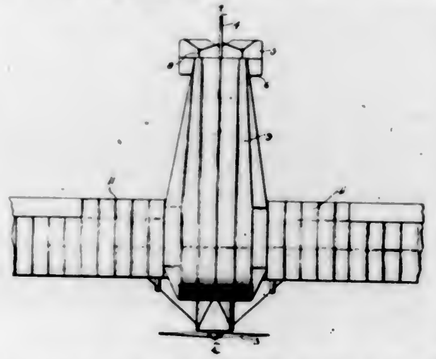
1,507,524. RECIPROCATING PUMP. ARSÈNE STEURS, Bourgeois-Rixensart, Belgium, assignor to Verse Moulart & Compagnie, Brussels, Belgium, a Corporation of Belgium. Filed Mar. 15, 1923. Serial No. 625,297. 2 Claims. (Cl. 230—6.)

1. In a reciprocating pump, the combination of a cylinder and a crank case cast in one piece, a piston in said cylinder, a cross-pin mounted to oscillate in said piston and bearing throughout its length against said piston, a rod rigidly connected to said cross-pin, a crank shaft journalled in a side wall of said crank case and adapted to reciprocate said rod, said shaft having an axial bore connecting said crank case with the outside air, said crank case being provided with an opening having a larger diameter than said piston.



1,507,525. DOOR CATCH. LEONARD W. STEWART, Cincinnati, Ohio. Filed June 9, 1923. Serial No. 644,295. 4 Claims. (Cl. 292—79.)

1. In combination with a spring actuated door catch comprising an arm fulcrumed to a bracket, and a spring disposed between said bracket and said arm, said arm

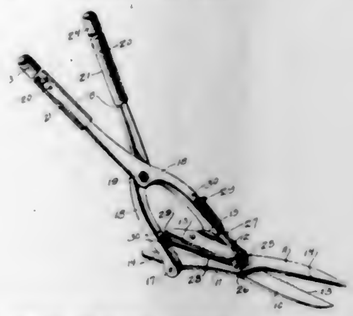


adapted to be tripped into operating position by the action of a closing door and held thereto by said spring, means for resisting the action of said spring during said tripping operation.

1,507,526. COMBINATION IMPLEMENT. JOHN STRAUB, Ashley, N. Dak. Filed Apr. 28, 1923. Serial No. 635,299. 1 Claim. (Cl. 146—212.)

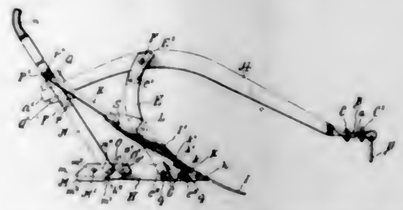
A tool for the purpose set forth comprising a substantially wide blade having a slicing edge and a severing edge, and a fixed handle extending from one end of the blade, said blade having its other end formed with a substantially triangular cutaway portion to provide a pair of unguarded spaced points projecting in the same direction and to further provide two full substantially equal length edges, one of said points at the outer terminus of the slicing edge and the other at the outer terminus of the severing edge, said points arranged substantially in transverse alignment with respect to the blade and, together, being adapted for use as a meat tenderer.

1,507,527. FLYING MACHINE. ARCHIE BRYAN STRINE, Quantico, Va. Filed Jan. 14, 1924. Serial No. 686,169. 1 Claim. (Cl. 244—12.)



An airplane comprising superposed planes, a fuselage located between the planes, each of said planes comprising laterally projecting wing portions and a hollow central portion, forming a carrying compartment of greater depth and chord than the said wing portions.

1,507,528. CARRIAGE RUNNER. WALDEMAR SUOMINEN, Worcester, Mass. Filed Jan. 15, 1923. Serial No. 612,717. 3 Claims. (Cl. 280—13.)

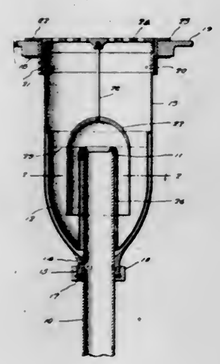


1. The combination with the front and rear wheels of a carriage, flanged metallic runners for the wheels and having their front and rear ends curved upwardly, front and rear clamping members having their forward ends twisted and pivotally secured to said runner and their rear ends grooved, locking dogs pivotally secured to the flanged portion of the runners and adapted to be seated in the grooves of the locking members, and means provided on the forward end of the front clamping member for preventing rotation of the front wheel.

1,507,529. HEDGE TRIMMER. LARS FREDRICK SUNDMAN, Normal, Ill. Filed June 13, 1923. Serial No. 645,147. 6 Claims. (Cl. 30—11.)

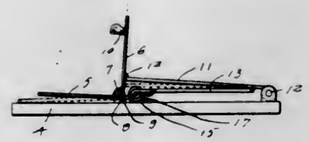
1. A cutting implement comprising a pair of pivoted blades with cooperating cutting edges, a pair of handles pivoted to each other and having their lower ends pivotally connected to the respective blades in rear of their pivot, and bracing links pivotally connected at one end to the blades and at the other end to the respective handles.

1,507,530. PLOW. ANGEL VARGAS, Hollo, P. I. Filed Feb. 3, 1923. Serial No. 616,674. 1 Claim. (Cl. 97—195.)



A plow of the character described, comprising a metal beam curved downwards front and rear, a curved standard connected to said beam and bifurcated at its lower end, a landside connected to the bifurcated ends of said standard, the said landside being provided with a laterally projecting flange at the forward edge, a plow share connected to said flange, a moldboard connected to said plow share and to said standard, a single handle bar having its heel bent forwardly at an angle, said bent portion being connected to said landside, a metal strap connected to said handle bar and spaced away therefrom and adapted to receive the rear end of said beam, wedges driven into a space between said strap and said beam for holding said beam firmly in place, a shoe detachably connected to the rear end of said landside and having an inclined edge abutting against said handle bar, and a brace connecting the rear portion of the moldboard with said handle bar.

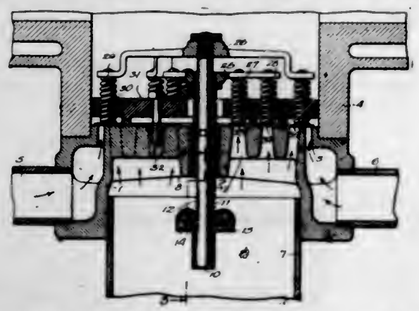
1,507,531. TRAP. OTTO H. VAUDELL, New Lisbon, Wis. Filed Jan. 9, 1922. Serial No. 528,038. 1 Claim. (Cl. 182—19.)



A trap for sewer pipe comprising an outer casing having an opening in the bottom thereof to receive the pipe, means for connecting the casing with the pipe with the

latter terminating an apperciable distance below the upper edge of said casing, an inner casing arranged within the outer casing and slightly spaced therefrom, the inner casing having an opening in the bottom thereof and formed with a central tubular portion which receives the pipe, an inwardly and downwardly extended flange formed on the upper end of the tubular portion and utilized

and extended into the upper end of the pipe to support the casing, the tubular portion being of a larger diameter than the pipe and spaced therefrom, a cover for the outer casing, a rod depending from the cover, and a dome shaped member supported by the rod and surrounding the adjacent end of said pipe and tubular portion of the inner casing.

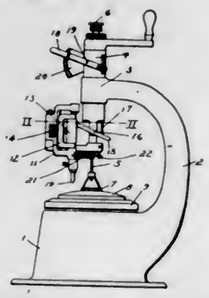


1,507,532. RODENT TRAP. WALLACE J. VICKERS, Logan, Utah. Filed Dec. 8, 1921. Serial No. 520,892. 1 Claim. (Cl. 43—81.)

A trap having a catching frame, a spring to urge movement thereof, a detent for said frame, plates integral with and substantially at a right angle to each other, means integral with one of the plates providing a shoulder engageable by said detent, a bait holding means integral with the last mentioned plate and on the opposite side theerof to said shoulder, the other plate constituting a trip, ears integral with both of said plates and connected to both of said plates and extending inwardly from the junction of said plates, a pivot rod extending through said ears, and a base mounting said pivot rod and with respect to which the trip plate is normally angularly disposed.

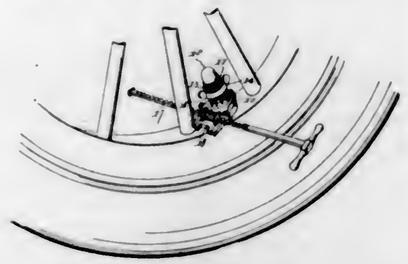
1,507,533. MIXING VALVE. BEN FRANKLIN WALKER and WILLIAM JASPER HARPER, Baxter Springs, Kans. Filed Aug. 29, 1923. Serial No. 660,021. 1 Claim. (Cl. 48—180.)

A mixing valve construction which includes a valve casing having a plurality of air and fuel ports arranged in circular rows, a plurality of ringlike valve plates covering said ports, a plurality of springs bearing on said plates, an adjustable spider member adapted to engage with certain of said springs, a second adjustable spider adapted to engage with certain others of said springs,



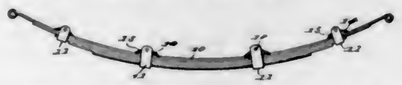
and means controlled by an operator exterior to the valve construction to adjust said spiders and selectively vary the pressure of the springs on said plates.

1,507,534. OPHTHALMIC-FRAME STRETCHER. ROBERT M. WASON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 18, 1922. Serial No. 555,048. 1 Claim. (Cl. 81—3.)



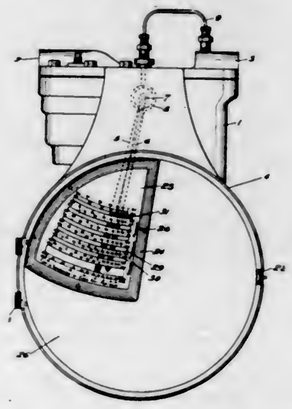
A device of the character described, comprising a pair of pivoted handles, a jaw member carried by each handle, a semicircular plate carried by each jaw member, each of said plates having its outer portions shaped to fit within the lens receiving groove of an ophthalmic frame, resilient means to normally urge the semi-circular plates apart to stretch the ophthalmic frame, a shaft received through said jaw members, and means carried by the shaft to stop the separation of the jaws at a predetermined point so that the ophthalmic frame may be stretched to a predetermined size.

1,507,535. GUIDE FORMER. ROBERT M. WASON, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Associaton of Massachusetts. Filed Sept. 18, 1922. Serial No. 588,880. 2 Claims. (Cl. 33—30.)



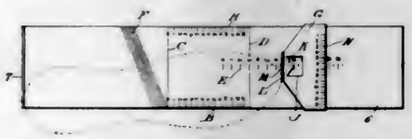
1. A former of the character described, comprising a disc, a link connected thereto, a lever pivoted to the link whereby upon adjustment of the lever the disc will be tilted, and means to maintain the lever in the desired adjustment.

1,507,536. DUST-CAP REMOVER. CLARENCE W. WATSON, Alliance, Ohio. Filed May 23, 1922. Serial No. 563,102. 5 Claims. (Cl. 81—3.)



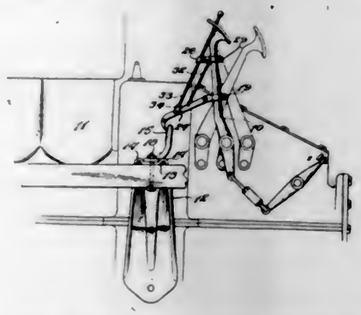
1. A dust cap removing tool having a yoke, a diametrically contractable sleeve having gear teeth swiveled in the yoke for engaging a dust cap, and means for effecting rotary movement of the sleeve consisting of a slidable rack bar engaging the teeth on the sleeve.

1,507,537. VEHICLE SPRING CLIP. HENRY T. WEIS, Fairmont, W. Va. Filed Dec. 9, 1922. Serial No. 605,823. 2 Claims. (Cl. 267—53.)



2. A silencer for use in connection with vehicle spring clips having transverse pins or bolts for connecting the side arms of the clips, the same consisting of a resilient bowed plate adapted to be interposed between the pin or bolt and the exposed surface of the adjacent spring leaf for terminal contact with the latter, said plate being provided at one end with parallel arms and at the other end with a tongue of which the latter is wrapped around said pin or bolt in a plane between said arms.

1,507,538. GAUGE. HENRY P. WESTCOTT, Erie, Pa.; Ada K. Westcott administratrix of said Henry P. Westcott, deceased. Filed Apr. 12, 1922. Serial No. 551,959. 13 Claims. (Cl. 234—19.)

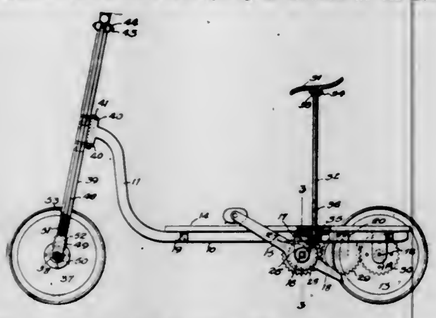


1. A gauge comprising a plurality of charts arranged in superposed relation, the upper chart being provided with a sight opening and a series of scales, the lower chart being also provided with a scale, a plurality of indicating means arranged between said charts, one of said means being movable with respect to the scale on the lower chart, each scale of the series of scales on the upper chart being furnished with an index having a value identified with one of the values indicated on the scale of the lower chart by its indicating means, the other of said indicating means being movable with respect to the series of scales on the upper chart to indicate at any time a desired value, on that one of the scales of said series whose index corresponds with the value indicated by the first mentioned indicating means relative to its scale on the lower chart.

1,507,539. FOOT-MEASURING STICK. HARRY N. WHEELER, Montgomery, Ala. Filed Dec. 17, 1923. Serial No. 681,222. 2 Claims. (Cl. 33—3.)

1. A measuring stick comprising a stick member having a heel piece, an arch scale upon the intermediate portion of the stick for showing the arch measure and a central scale off-set from the arch scale and having more widely separated markings than said arch scales for showing the overall length of the foot in the same terms as the arch measure for easy comparison, and a slide movable longitudinally on the stick in both crosswise and lengthwise positions, and having an index for use in connection with the two scales.

1,507,540. CLUTCH-PEDAL LATCH. BURL WILLIAMS, Beatrice, Nebr. Filed May 9, 1923. Serial No. 637,809. 2 Claims. (Cl. 74—81.)

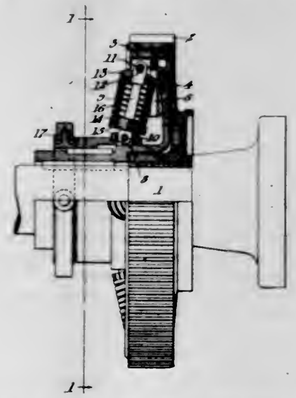


1. A clutch pedal latch for motor vehicles including a rack bar for attachment to the vehicle in front of the pedal, a pivoted spring elevated pawl for connection to the pedal to cooperate with said bar, and a reciprocable foot rod connected with the pawl to extend adjacent the upper end of the pedal for engagement by the foot to depress the pawl into engagement with the bar locking the pedal when rocked forwardly and provided with means to engage the pedal for limiting the pawl in its upward movement.

1,507,541. SCOOTER. HARVEY ORVIS WILSON, Wilmington, Del. Filed Apr. 23, 1923. Serial No. 634,111. 2 Claims. (Cl. 208—36.)

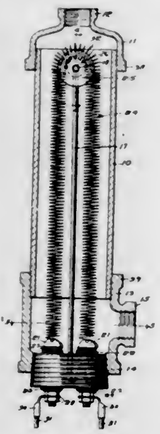
1. A scooter including a frame, a transverse turnable shaft supported from the frame, a pedal, a housing rigid with the pedal and adapted to rock therewith about the axis of said shaft, a coiled spring within said hous-

ing and secured at one end thereto, a member rigid with the frame and having a hub concentric with said shaft to which hub said spring is secured at its other



end, an axle turnably supported from the frame, a running wheel on said axle, and a drive connection between said shaft and said axle.

1,507,542. DEVICE AND ELEMENT FOR PERFORATING BANDS OF TYPE-COMPOSING MACHINES. OTTO WOLTERS, Magdeburg, Germany. Filed Oct. 12, 1921. Serial No. 507,394. 5 Claims. (Cl. 164—125.)

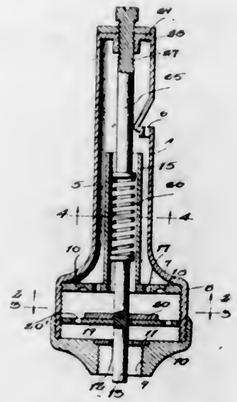


1. A device for the production of registering strips for automatic composing machines consisting of a row of plate-shaped interchangeable elements composed like a line of types, each element having on its edges fixed projections which represent in combination an individual sign and which serve for releasing the punching device, and a reading mark on the fourth edge of said element.

1,507,543. FLEXIBLE CLUTCH. JOSEPH BARRAJA-FRAUENFELDER, Bridgeport, Conn. Filed Dec. 23, 1921. Serial No. 524,423. 4 Claims. (Cl. 192—76.)

1. In a clutch of the character described, the combination of an outer fixed member, and an inner movable member including a shoe, a shifting device, a link interposed between the shoe and shifting device and provided with a longitudinal slot and a pin for connecting it with the shoe, and a pivot pin for connecting it with the shifting device, and a helical spring mounted upon the link and having a cap engaged by the pin that connects the link and shoe, whereby the pressure on the spring may be released and the shoe retracted by direct pull on the link and shoe.

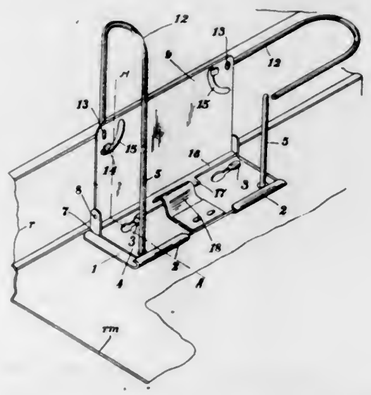
1,507,544. ELECTRIC FLUID HEATER. LOVERD B. CHEATHAM, Atlanta, Ga., assignor to P. and S. Electric Heating Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 22, 1924. Serial No. 701,207. 7 Claims. (Cl. 219—38.)



1. An electric heater of the character described, comprising a casing, a rotatable insulating spool mounted within the casing near one end thereof, a resistance coil folded about the rotatable spool for providing longitudinal portions of the resistance coil which extend within the casing throughout the major portion of the length of said casing without having contact with other parts whereby such longitudinal portions are free to adjust themselves due to expansion or contraction, terminals connected with the ends of said longitudinal portions of the resistance coil, and inlet and outlet means for the casing.

1,507,545. PROCESS FOR THE MANUFACTURE OF ARTIFICIAL MEERSCHAUM. PAUL DEUSSING, Ruhla, Germany, assignor to the Firm Löwenstein & Co., Frankfort-on-the-Main, Germany. Filed June 1, 1921. Serial No. 474,225. 3 Claims. (Cl. 106—4.)

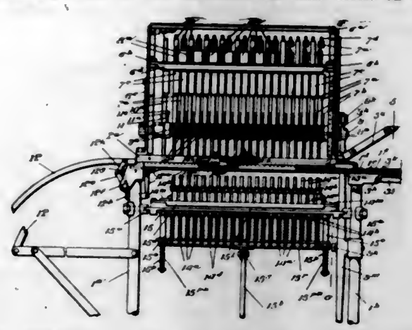
1. Process for the manufacture of artificial meerschaum consisting in finely grinding a substance commonly used for the manufacture of earthenware, composed of Hallic earth and Meissner clay with whiting and quartz dust, in adding water to said mass, in filtering the same to form a paste, in bringing the paste into well dried moulds, in letting the mass dry in the moulds, in removing the dry mass from the moulds and in giving the same the biscuit baking known in the manufacture of porcelain.



1,507,546. TIRE SIGNAL. GEORGE DILLMAN, Raton, N. Mex. Filed June 20, 1923. Serial No. 646,674. 1 Claim. (Cl. 116—34.)

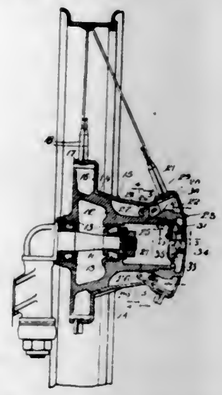
In a low pressure tire alarm, a whistle body, an enlarged casing formed on the inner end of the whistle body, a head detachably connected to the casing for engaging the ordinary tire valve filling body, the head carrying a valve seat, a second valve seat threaded in the body, an axially disposed guide formed on the second valve seat and extending into the whistle body, a plunger reciprocally mounted in the casing, a plunger rod connected with the plunger and extending outwardly of the head and into said guide, a valve body carried by the plunger and arranged to sit upon the valve seat in the casing and the valve seat carried by the head,

resilient means for normally urging the plunger away from the valve seat in the casing and on the valve seat in the head, and a rod mounted in the guide for adjusting the tension of the spring, as and for the purpose specified.



1,507,547. FILING DEVICE FOR LETTER FILES, PORTFOLIOS, AND THE LIKE. ALOYS GRÜNEWALD, Berlin, Germany. Filed May 5, 1923. Serial No. 636,910. 3 Claims. (Cl. 129—8.)

1. A filing device for files, portfolios and similar articles comprising in combination filing pins, bows which, standing upright in the normal position, can be folded over at the height of the upper ends of the file pins perpendicularly to the direction of movement of the papers filed, a base plate on which the filing pins are fixed and a supporting plate hingedly connected with said base plate and on which, the bows are oscillably mounted.

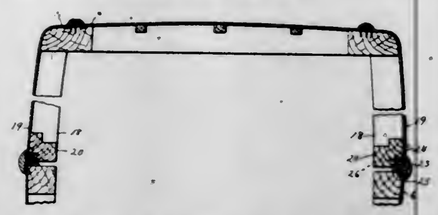


1,507,548. BALLOT-COUNTING MACHINE. JOHN S. BAKER, Los Angeles, Calif. Filed Nov. 10, 1920. Serial No. 423,117. 61 Claims. (Cl. 235—56.)

1. In a machine for the purpose specified; a plurality of detectors; means for lowering the detectors upon a perforated card to detect same; and means for forcibly depressing such of the detectors as find holes in the

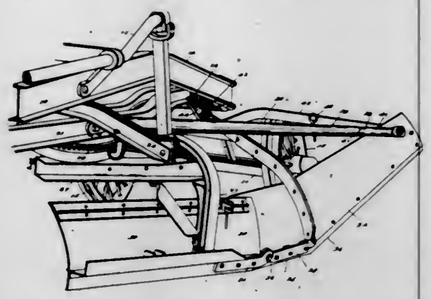
card, means for feeding a plurality of cards beneath the detector pins prior to the detecting operation; and means for ejecting the card after the detecting operation.

1,507,549. HUB STRUCTURE FOR WHEELS. EDWARD G. BUDD and JOSEPH LEDWINKA, Philadelphia, Pa., assignors, by direct and mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 6, 1916. Serial No. 118,716. 9 Claims. (Cl. 301—9.)



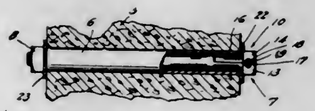
1. In a wheel structure, a permanent hub member having outwardly tapering seating surfaces, a removable hub member having cooperating seating surfaces, at its inner end, and an outwardly flared bearing surface at its outer end, a nut threaded upon the outer end of said permanent hub member and having an inwardly tapered or inclined inner end surface, wedge blocks interposed between said hub members to be engaged by the tapered or inclined surface of the nut, said wedge blocks engaging the outwardly flared bearing surface of the outer hub member to lock said hub member upon the seating surfaces of the permanent hub member, and an expansible ring threaded through said wedge blocks to retain the same in position.

1,507,550. CAR-TOP DRESSING AND METHOD OF PREPARING THE SAME. CHARLES K. EVANS, Albert Lea, Minn. Filed July 24, 1923. Serial No. 653,565. 4 Claims. (Cl. 134—11.)



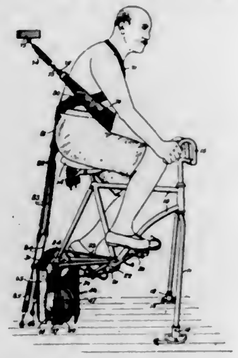
3. A coating composition consisting of the following ingredients mixed in the following proportions: one pint boiled linseed oil, one-half pint mineral pigment, one tablespoonful diamond dye dissolved in water, two tablespoonfuls common salt dissolved in water, and two tablespoonfuls of turpentine.

1,507,551. AUTOMOBILE BODY AND METHOD OF MANUFACTURING THE SAME. CHARLES H. WIDMAN, Detroit, Mich. Filed Feb. 20, 1923. Serial No. 620,137. 9 Claims. (Cl. 296—28.)



1. The method of manufacturing an automobile body which consists in first forming a plurality of panels and strips and a cowl so as to provide some of them with bent edges and some with bends intermediate their edges to form corner portions, then enameling said panels, strips and cowl and then assembling them to a wooden body frame with said bent edges turned over portions of the frame.

1,507,552. DITCH-FORMING GRADER. JOSEPH D. ADAMS and ROY E. ADAMS, Indianapolis, Ind., assignors to J. D. Adams and Co., a Partnership consisting of J. D. Adams, R. E. Adams, W. R. Adams, and J. D. Adams, trustee. Filed Aug. 23, 1920. Serial No. 405,318. 13 Claims. (Cl. 37—155.)



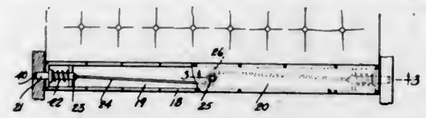
1. A ditch-forming road grader, comprising the combination of a wheel-supported frame and a ground-cutting element, said ground-cutting element being angularly adjustable in a vertical plane and including two blade members vertically angularly adjustable relative to each other.

1,507,553. WIRE-ATTACHING DEVICE FOR CONCRETE FENCEPOSTS. WILLIAM R. C. COOK, Renton, Wash. Filed June 26, 1922. Serial No. 570,842. 1 Claim. (Cl. 256—50.)

A wire-attaching device for a fence post having a tube element embedded therein, a wire attaching device consisting of a bolt comprising two complementary parts and having a shank which is screw threaded at one end and having a head at its other end, said head and a portion of the shank adjacent thereto being halved to provide a recess in one part of the bolt to receive the other part of the bolt, opposing wire-receiving grooves provided in the complementary parts of the bolt head, means coacting with said tube element for detachably coupling the parts of the bolt together, and a nut engaging the threaded part of the bolt for retaining the bolt coupling means in operative position with respect to said tube element.

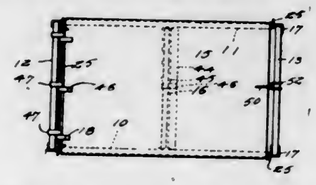
1,507,554. EXERCISING APPARATUS. JOHN J. COOPER, Stamford, Conn. Filed Apr. 11, 1921. Serial No. 460,207. 20 Claims. (Cl. 46—69.)

1. In an exercising apparatus, a movable frame adapted to be operated by a user thereon, and yieldable means adapted to engage the body of a user on the frame and having means to connect with a fixed support and adapted to restrict the user's movement with the frame.



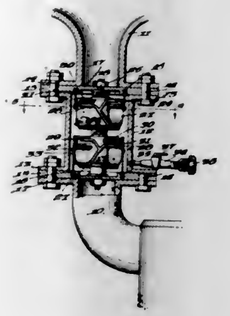
1,507,555. ENGINE INDICATOR. HARVEY D. GEYER, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 21, 1921. Serial No. 454,271. 7 Claims. (Cl. 234—21.)

1. In a pressure element for optical engine indicators which is adapted to be attached to the cylinder walls, the combination of means permitting the ignition of the fuel in the cylinder with means responsive to pressure directly therewithin, and including a pressure receiving surface located so as to be substantially flush with interior of the cylinder when such element is attached to the cylinder.



1,507,556. LATCH FOR SEAT AND BODY CONSTRUCTIONS FOR MOTOR VEHICLES. VICTOR W. PAGÉ, New York, N. Y. Filed Nov. 22, 1921. Serial No. 517,037. 1 Claim. (Cl. 292—36.)

A lock of the type set forth comprising a housing, a transverse partition adjacent each end of the housing and forming a second housing, bolts slidably mounted in said partitions and the end of the first-mentioned housing, a spring surrounding each of said bolts and adapted to maintain the bolts in extended position, a link connected to each of said bolts and extending substantially to the center of said first-mentioned housing,



a lever mounted in said housing and to which each of said links is pivotally connected, and a recess formed in the lever and adapted to receive an operating means to operate the lever and simultaneously operate the bolts.

1,507,557. FOLDING BOX OR CRATE. EDWARD A. LOHRENTZ, Milwaukee, Wis. Filed Sept. 25, 1923. Serial No. 664,734. 10 Claims. (Cl. 217—16.)

1. A collapsible crate having upstanding walls collapsibly connected together, a wall connected to one of said walls and adapted to normally span the upstanding walls and for disposition between them in the collapsed condition of the crate, a partition for the upstanding walls, and said partition having means to engage and support the spanning wall.

1,507,558. FUEL-MIXING ATTACHMENT. SCIPIO S. GENTILE, Vicksburg, Miss. Filed Oct. 20, 1922. Serial No. 595,789. 2 Claims. (Cl. 48—180.)

2. The combination with an internal combustion engine provided with a carburetor and an intake manifold of a fuel mixer comprising a jacket adapted to be interposed between the carburetor and the intake manifold, gaskets arranged at the ends of said jacket, said gaskets being provided with circular slots, propeller-like members rotatably mounted within said jacket, layers of wire gauze associated with each propeller-like member and collars carried by said propeller-like members and engaging said slots whereby the fuel entering said jacket will be positively directed into engagement with said propeller-like members.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 326—No. 2. TUESDAY, SEPTEMBER 9, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 19, 1924.*

Alexander Rechnitzer, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of William S. Gubelmann, 773 Richmond Avenue, Buffalo, N. Y., and patent granted March 14, 1922, No. 1,409,575, to Alexander Rechnitzer, 140 St. Botolph Street, Boston, Mass., and a notice of such declaration sent by registered mail to said Rechnitzer at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Rechnitzer, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 25, 1924.*

The Royal Manufacturing Co., its assigns or legal representatives, take notice:

An interference has been declared by this Office between Remy E. Stoffel, 2868 Lemp Avenue, St. Louis, Mo., for registration of a trade-mark and trade-mark registered September 4, 1894, No. 25,211, to The Royal Manufacturing Co., 527 North Cherry Street, Lancaster, Pa. The Office having been unable to secure service upon The Royal Manufacturing Co., notice is hereby given that unless The Royal Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 27, 1924.*

Zucker & Levett & Loeb Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between A. P. Munning & Co., 52 Vesey Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 23, 1908, No. 69,580, to Zucker & Levett & Loeb Company, New York, N. Y., and a notice of such declaration sent by registered mail to said Zucker & Levett & Loeb Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Zucker & Levett & Loeb Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Aug. 22, 1924.*

Camthol Company, Portland, Oreg., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of the Camthol Company (a Corporation of Delaware), 420 Hall Street E., Savannah, Ga., to effect the cancellation of the trade-mark registration of Waugh Medicine Co., of No. 300 A Street, Grangeville, Idaho, No. 97,515, dated June 9, 1914. The records of this Office show that the Camthol Company, Portland, Oreg., is the assignee of said Waugh Medicine Co. The notice of such proceeding sent by registered mail to the respondent, the Camthol Company, Portland, Oreg., having been returned by the post office as undelivered, notice is hereby given that unless said Camthol Company, Portland, Oreg., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,374,366, G. W. Dickerson, Telephone switch, decided July 29, 1924, claims 21, 23, and 30.

Pat. 1,455,690, G. W. Wells, Hinge, decided July 30, 1924, claims 1 and 2.

Pat. 1,484,950, A. E. Lundell, Telephone-exchange system, decided July 30, 1924, claims 1 and 2.

Condition of Applications Under Examination at Close of Business August 29, 1924.

(Total number of applications awaiting action, excluding Trade-Mark Division, 60,249; Trade-Mark Division, 1,752. Oldest new case, Jan 2, 1924; oldest amended, Jan. 2, 1924. The dates given are 1924.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
116	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Feb. 8	Feb. 15	985
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	Feb. 7	Jan. 24	774
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	Mar. 24	May 9	546
234	4. MERRITT, A. D., Conveyers, Chutes, Skids, Guides, and Ways; Conveyers, Fluid Current; Conveyers, Power Driven; Excavating; Handling—Hand and Hoist-Line Implements; Material or Article Handling; Pushing and Pulling Implements; Traversing Hoists.	Mar. 3	Apr. 8	929
108*	5. MACNAB, J. F., Harvesters; Jewelry; Music; Acoustics; Sound Recording and Reproducing; Tying Cords or Strands.	Jan. 9	Jan. 18	1,053
318	6. LEWERS, A. M., Bleaching and Dyeing; Chemicals; Chemistry—Carbon Compounds; Explosive, Pyrotechnic, and Match Compositions; Fertilizers; Substance Preparation; Hides, Skins, and Leather; Sugar and Starch; Concentrating Evaporators.	Jan. 2	Jan. 2	1,195
312	7. JARBOE, C. G., Games and Toys; Optics; Photography	Mar. 1	Feb. 20	1,712
133	8. CLIFT, J. W., Beds; Chairs and Seats; Furniture; Kitchen and Table Articles; Store Furniture	Feb. 27	Apr. 4	1,470
221	9. TRYON, F. M., Air and Gas Pumps; Hydraulic Motors; Injectors and Ejectors; Motors, Fluid; Motors, Fluid Current; Pumps.	Jan. 18	May 7	701
118	10. BARTHOLOMEW, J. A., Motor Vehicles; Land Vehicles—Animal Draft Appliances, Bodies and Tops, Dumping.	Mar. 6	Apr. 1	1,421
148*	11. ARMSTRONG, H. C., Boot and Shoe Making; Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whips and Whip Apparatus; Cutting and Punching Sheets and Bars; Driven, Headed, and Screw-Threaded Fastenings.	Apr. 5	Apr. 4	972
380	12. PIERCE, F. P., Machine Elements	Apr. 1	Mar. 19	1,054
154*	13. NIXON, G. A., Bolt, Nail, Nut, Rivet, and Screw Making; Chain, Staple, and Horseshoe Making; Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning.	Feb. 8	Feb. 11	1,102
102*	14. BRUMBAUGH, N. J., Compound Tools; Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Tools; Wire Fabrics and Structure; Wire Working.	Jan. 26	July 2	679

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

MAGNUM IMPORT COMPANY, INC., *v.* COTY. COHN TRADING AS MACLEN IMPORT COMPANY, *v.* COTY. BAUM ET AL., TRADING AS BEAUTEX COMPANY, *v.* COTY. IVORY NOVELTIES TRADING COMPANY, INC., *v.* COTY. MAGNUM IMPORT COMPANY, INC., *v.* HOUBIGANT, INC.

Nos. 978, 979, 980, 982, 981. Decided May 7, 1923.

1. CERTIORARI—POWER OF SUPREME COURT TO SUSPEND OR MODIFY DECREE OF CIRCUIT COURT OF APPEALS.
Under Judicial Code, section 262, this court has power to suspend or modify an interlocutory or final decree of the circuit court of appeals, which is reviewable under section 240 by certiorari, pending the disposition of a petition filed here for the issuance of that writ.

2. SAME—PURPOSES OF.
The jurisdiction to bring up cases from the circuit court of appeals by certiorari was given for the two purposes of securing uniformity of decision in the circuits and of having questions of importance decided by this court when desirable in the public interest—not for the purpose of giving the defeated party another hearing.

3. SAME—APPLICATION TO SUSPEND JUDGMENT OF CIRCUIT COURT OF APPEALS.
An application to suspend a judgment of the circuit court of appeals, pending disposition of a petition for certiorari here, should be first made to that court, which is free to determine it upon its own view of the likelihood of a certiorari being granted and of the balance of convenience.

4. SAME—SAME—STAY BY SUPREME COURT IN CASE OF REFUSAL BY CIRCUIT COURT OF APPEALS.
If the application be refused by that court, a stay will be granted here, pending the application for certiorari, only upon an extraordinary showing, and, even after certiorari has been granted, only in a clear case and upon a decided balance of convenience.

PETITIONS for orders, pending applications for certiorari, suspending decrees of the Circuit Court of Appeals for the Second Circuit.

APPLICATIONS for orders to suspend interlocutory decrees of the circuit court of appeals pending petitions for certiorari.

Mr. Charles H. Tuttle (Mr. Isaac Reiss and *Mr. William J. Hughes* on the briefs) for petitioners.

Mr. Asher Blum (Mr. Hugo Mock on the briefs) for Coty, respondent.

Mr. George S. Hornblower (Mr. Lindley M. Garrison and *Mr. Raoul E. Desvernine* on the brief) for Houbigant, Inc., respondent.

Mr. Chief Justice TAFT delivered the opinion of the Court.

All these cases involve the question how far the purchasers of perfumes made by manufacturers whose perfumes have gained a high reputation with the public may use the name and trade-mark of such manufacturers in rebottling or repacking and selling them when, as claimed by the manufacturers and owners of the trade-mark, the process of rebottling and repacking injures the perfumes and impairs the value of the trade-mark and the reputation of the manufacturers. In a case presenting a similar question, to wit, *Prestonettes, Inc.*, v. *Coty*, 260 U. S. 720; 326 O. G. 246, this Court granted a writ of certiorari, and applications in the above-entitled cases are now pending. They are also before us on petitions praying that this Court issue orders suspending the operation of the decrees of the circuit court of appeals and that, pending the applications for certiorari in this Court, we restore the temporary injunctions of the district court which the circuit court of appeals enlarged.

The district court found that the defendants in all these cases were infringing the rights of the complainants in their trade-marks and the use of their trade names, but thought it sufficient to permit the defendants to continue their rebottling and repacking of complainants' perfumes and powders if in the form in which resold, the bottles or boxes bore a legend reciting all the facts and not giving any more prominence to the fact that these were complainants' perfumes or powders than to the fact that they had been rebottled and repacked by defendants. The circuit court of appeals found that such rebottling and repacking as done by defendants so impaired the delicate odors and qualities of the perfumes and powders that it unlawfully injured the right of the complainants in their trade-marks and business, that such rebottling and repacking and resale with the use of the original manufacturer's trade-mark and name were a violation of a criminal statute of the State of New York, that the proposed inspection of defendants' rebottling and repacking with a view to preserving the excellence of the perfumes and powders would entail such expense and burden upon complainants as to be impracticable, and that the only complete and satisfactory remedy to which complainants were entitled was an injunction against the use of the complainants' trade-marks or names upon the rebottled or repacked articles for sale, and the temporary injunctions granted by the district court were accordingly modified and the case was remanded to the district court for final hearing. Applications were then made to the circuit court of appeals to stay the mandate and to grant an application upon proper bond to suspend its modification of the district court's orders until applications for certiorari and motions for a suspending order could be made to this Court. After full consideration, these motions were denied by the circuit court of appeals, its mandate has gone down and the injunctions as enlarged by it are now in force. Meantime these applications for certiorari have

been made here, and in advance of our consideration of them in due course, motions for the suspension of the orders of the circuit court of appeals have been presented to us on affidavits and heard, and are now to be decided.

It is objected for Houbigant, Inc., one of the respondents in these petitions for certiorari, that this Court has no jurisdiction to suspend the operation of the order or decree of the circuit court of appeals pending a petition for certiorari and before it is granted. The cases of *In re Massachusetts*, 197 U. S. 482, *In re Glaser*, 198 U. S. 171, and *McIntire* v. *Wood*, 7 Cranch 504, are cited to this point. They are wholly without application. The first two were cases pending in inferior courts which, under the Constitution and the statutes of the United States, could never, by any possibility, come within the jurisdiction of this Court. The third case was one of an application to a circuit court for the issuing of a mandamus to the register of the Land Office to compel him to issue a final certificate of purchase of land to the relator. This Court found that, under the statute, the circuit court was not given original power to issue a mandamus in such a case when not necessary or ancillary to the exercise of its jurisdiction otherwise conferred.

[1] Under section 262 of the Judicial Code this Court is given power to issue all writs not specifically provided for by statute which may be necessary for the exercise of its jurisdiction, and agreeable to the usages and principles of law. Here the jurisdiction of this Court to grant the application for certiorari already made and pending is conferred by section 240 of the Judicial Code. That section provides that in any case, civil or criminal, in which the judgment or decree of the circuit court of appeals is made final, it shall be competent for this Court by certiorari upon the petition of a party thereto to bring the case here for review as if it had come by error or appeal. By section 128 of the Judicial Code, as amended by the act of January 28, 1915, chapter 22, section 2, 38 Stat. 803, the judgment or decree of the circuit courts of appeals is made final in trade-mark cases. Hence, if in its discretion, this Court conceives that upon the showing made it should order the suspension or modification of a judgment or decree of the circuit court of appeals, interlocutory or final, to preserve or secure a status of the case for the full and satisfactory exercise of its reviewing power over it, it may make the necessary order of suspension or modification upon such terms as seem equitable upon the filing of the petition for certiorari and pending its disposition. So much on the question of the power.

[2] The question how the Court should exercise this power next arises. The jurisdiction to bring up cases by certiorari from the circuit courts of appeals was given for two purposes, first to secure uniformity of decision between those courts in the nine circuits, and second, to bring up cases involving questions of importance which it is in the public interest to have decided by this Court of last resort. The jurisdiction was not conferred upon this Court merely to give the defeated party in the circuit court of appeals another hearing. Our experience shows that 80 per cent of those who petition for certiorari do not appreciate these necessary limitations upon our issue of the writ. When, therefore, after the petition is filed and before its submission, an application is made for a suspension of the judgment or decree of the circuit court of appeals, a heavy burden rests on the applicant.

[3, 4] The petition should, in the first instance, be made to the circuit court of appeals which with its complete knowledge of the cases may with full consideration promptly pass on it. That court is in a position to judge first whether the case is one likely under our practice to be taken up by us on certiorari, and second, whether the balance of convenience requires a suspension of its decree and a withholding of its mandate. It involves no disrespect to this Court for the circuit court of appeals to refuse to withhold its mandate or to suspend the operation of its judgment or decree pending application for certiorari to us. If it thinks a question involved should be ruled upon by this Court, it may certify it. If it does not certify, it may still consider that the case is one in which a certiorari may properly issue, and may in its discretion facilitate the application by withholding the mandate or suspending its decree. This is a matter, however, wholly within its discretion. If it refuses, this Court requires an extraordinary showing, before it will grant a stay of the decree below pending the application for a certiorari, and even after it has granted a certiorari, it requires a clear case and a decided balance of convenience before it will grant such stay. These remarks, of course, apply also to applications for certiorari to review judgments and decrees of the highest courts of States.

Coming now to the circumstances presented on the inquiry before us, we find nothing to justify our granting the motion. It is clear that the circuit court of appeals gave full consideration to a similar motion and with a much fuller knowledge than we can have, denied it. As we have said, we require very cogent reasons before we will disregard the deliberate action of that court in such a matter. We have read the affidavits and we do not find that the petitioners have, in the light of what we have said, made a case for the suspension of the order. On the contrary, the weight of the evidence is clearly with the respondents.

The petitions are denied.

Supreme Court of the United States.

ELECTRIC BOAT COMPANY *v.* THE UNITED STATES. *Decided January 28, 1924.*

CONTRACT—LICENSE GRANTED TO GOVERNMENT—CONSTRUCTION OF.

Where the United States, without disclosure to it of the scope of an application for patent, obtained by a contract with the applicant a license, at certain rates, to manufacture and use the devices covered by the application, and was later sued by the licensor for its use of a device procured from another, which the licensor claimed within his application and subsequent patent, *Held:* (*a*) That the Government was not estopped from showing, by attendant facts and circumstances, that the contract was not intended by the parties to apply to the device so used; and (*b*) that a judgment of the Court of Claims, so limiting the contract, upon facts found, was not erroneous as a matter of law.

Mr. Dean S. Edmonds and *Mr. Frederick P. Fish*, with whom *Mr. William H. Davis* was on the brief, for Electric Boat Company.

Mr. Harry E. Knight, Special Assistant to the Attorney General, with whom *Mr. Solicitor General Beck*, *Mr. Assistant Attorney General Lovett*, and *Mr. L. G. Miller*, Special Assistant to the Attorney General, were on the brief, for the United States.

APPEAL from the Court of Claims.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a suit upon a contract made between the claimant and the United States on April 2, 1912. The contract, headed "Shop License," recites that the claimant is "owner of the invention known as steam generator for automobile torpedoes covered by applications" of which it is necessary to mention only one, dated March 29, 1909; licenses the United States to manufacture and use torpedoes equipped with steam generators covered by the application to the end of the term for which patent may be granted, and binds the United States to pay at certain rates for such torpedoes. The claimant alleged that the United States had used the devices covered by claims 1, 5 and 13 of Letters Patent [1,036,080] issued upon the above application on August 20, 1912. The Court of Claims found that those devices had not been used by the United States, but that the mechanism actually used by it was practically identical with that of a rival, the E. W. Bliss Company, that had been successfully tested in the fall of 1911, before the date of the above contract and before the plaintiff had attempted but failed to satisfy the same tests.

When this contract was made the United States had not seen the applications, which were the claimant's secret. Both parties knew that the Government was dealing also with a rival concern, and the United States at least, and probably the claimant, knew that the rival had satisfied the Government's tests, which the claimant had not then done. It could not be believed that the contract meant a blind acceptance of liability for whatever might be in an undisclosed document. It did not; what it aimed at was a specific device which it was given to understand had been invented. We do not argue this at length because the proposition is accepted by the claimant.

The purpose of the license agreement was to secure to appellee the right to use the steam generator devised by Davison, regardless of any question as to the validity of patents he might obtain or as to the scope of their claims.

The dealings began with proposals for applying a system to existing torpedoes that would double their range, illustrated by a drawing showing the general arrangement of the device, identifying it but not disclosing it in detail. They ended in the contract, which went further, but undoubtedly had reference to a system the general nature of which was understood.

We must take it on this record that at the time certain elements in the construction of self-moving torpedoes were well known. The front end contained the explosive. Behind that was a chamber of compressed air that was transmitted to an engine moving the propeller through a pipe with a valve that reduced the pressure of the condensed air to the desired point and kept it constant. The moving force was enhanced by heating the air after it left the valve. This was done by passing it through a combustion chamber into which was forced alcohol or other fuel. The fuel was in a third chamber and was carried to the place of combustion by the condensed air through a second pipe from beyond the reducing valve. It was ignited when the shell was launched. More was needed to carry the torpedo the distance required to make it usable in modern warfare. It was understood that the result could be accomplished and danger to the contrivance from excessive heat avoided by the introduction of water into the combustion chamber where it would become steam. The Bliss Company had given this knowledge a practical form, and there is no warrant in the record as it comes to us for suggesting that the claimant had anything to do with the Bliss Company's success, or that the Government had any reason for thinking that it had. In deciding what the Government reasonably supposed that it was buying these facts are important and what may have been contained in the undisclosed application is of little or no weight. Whatever may have been the rights of the claimant as against the Bliss Company the Government was entitled to assume that they did not extend to the above elements, separately or combined.

Manifestly on these facts the Government is not estopped to show that its contract applied only within narrow limits. If the facts were as it had a right to suppose them to be, the contract necessarily was so limited. The Government thought that it might be that the claimant had found a more perfect way to do what was wanted and what the Bliss Company already had done, but on the record before us it would be monstrous to suppose that it was undertaking to pay the claimant for the Bliss Company product. The claimant was thought by the Government to have failed in its undertaking and therefore its device was laid aside. That device had certain peculiarities not repeated by the Bliss Company's, but the claimant relies and has to rely here upon the broad contention that the introduction of water to the combustion chamber in an effective way belongs to it, which seems unlikely in view of the previous British patent to Sodeau, in 1907, and others, and which it seems to us clearly might have been found, as by implication it was found, by the Court of Claims, not to have been the assumption or the meaning of the contract. So far as appears the use of water by the Bliss Company owed nothing to Davison, the claimant's

assignor, but very closely embodied the suggestions of Sedeau and other predecessors in the field. We cannot say as matter of law that the Court of Claims was wrong.

Decree affirmed.

Supreme Court of the United States.

PRESTONETTES, INC., v. COTY.

Decided April 7, 1924.

1. TRADE-MARKS—RIGHT OF PURCHASER TO DIVIDE OR MODIFY AND RESELL MATERIAL COVERED BY TRADE-MARK.

Defendant had a right to compound or change what it bought from C., the owner of trade-marks covering the purchased material, to divide either the original or the modified product, and to sell it so divided, and C. could not prevent or complain of its stating the nature of the component parts and the source from which they were derived if it did not use the trade-mark in doing so.

2. SAME—RIGHTS CONFERRED BY TRADE-MARK.

A trade-mark does not confer a right to prohibit the use of the word or words, but only to prohibit the use of it so far as to protect the owner's goodwill against the sale of another's product as his.

3. SAME—USE OF TRADE-MARK COLLATERALLY, NOT TO INDICATE GOODS.

Where C. registered the word "Coty" for toilet powders and perfumes and the district court allowed P. to make compacts from C.'s genuine loose powder and to sell them with this label on the container: "Prestonettes, Inc., not connected with Coty, states that the compact of face powder herein was independently compounded by it from Coty's—(giving the name of the article) loose powder and its own binder. Loose powder—per cent. Binder — per cent," every word to be in letters of the same size, color, type, and general distinctiveness, *Held* that when, as here, the name "Coty" in no way stands out from the statement of facts which unquestionably P. has a right to communicate in some form, no reason can be seen why the name should not be thus used collaterally, not to indicate the goods, but to say that the trade-marked product is a constituent in the article now offered as new and changed.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the Second Circuit.

Mr. Charles H. Tuttle and *Mr. Louis Marshall*, with whom *Mr. Isaac Reiss* and *Mr. William J. Hughes* were on the briefs, for petitioner.

Mr. Asher Blum and *Mr. Lindley M. Garrison*, with whom *Mr. Hugo Mock* was on the briefs, for respondent.

Mr. George S. Hornblower, *Mr. Raoul E. Desvernine*, and *Mr. Frederic D. McKenney*, by leave of Court, filed a brief as amici curiæ.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a bill in equity brought by the respondent, Coty, a citizen of France, against Prestonettes, a New York corporation, having its principal place of business in the southern district of New York. It seeks to restrain alleged unlawful uses of the plaintiff's registered trade-marks, "Coty" and "L'Origan" upon toilet powders and perfumes. The defendant purchases the genuine powder, subjects it to pressure, adds a binder to give it coherence and sells the compact in a metal case. It buys the genuine perfume in bottles and sells it in smaller bottles. We need not mention what labels it used before this suit as the defendant is content to abide by the decree of the district court. That decree allowed the defendant to put upon the rebottled perfume "Prestonettes, Inc., not connected with Coty, states that the contents are Coty's—(giving the name of the article) independently rebottled in New York," every word to be in letters of the same size, color, type and general distinctiveness. It allowed the defendant to make compacts from the genuine loose powder of the plaintiff and to sell them with this label on the container: "Prestonettes, Inc., not connected with Coty, states that the compact of face powder herein was independently compounded by it from Coty's—(giving the name) loose powder and its own binder. Loose powder—per cent. Binder—per cent," every word to be in letters of the same size, color, type, and general distinctiveness. The circuit court of appeals, considering the very delicate and volatile nature of the perfume, its easy deterioration, and the opportunities for adulteration, issued an absolute preliminary injunction against the use of the above marks except on the original packages as marked and sold by the plaintiff, thinking that the defendant could not put upon the plaintiff the burden of keeping a constant watch. 285 Fed. Rep. 501. Certiorari granted, 260 U. S. 720.

The bill does not charge the defendant with adulterating or otherwise deteriorating the plaintiff's product except that it intimates rather than alleges metal containers to be bad, and the circuit court of appeals stated that there were no controverted questions of fact but that the issue was simply one of law. It seemingly assumed that the defendant handled the plaintiff's product without in any way injuring its qualities and made its decree upon that assumption. The decree seems to us to have gone too far.

[1, 2] The defendant of course by virtue of its ownership had a right to compound or change what it bought, to divide either the original or the modified product, and to sell it so divided. The plaintiff could not prevent or complain of its stating the nature of the component parts and the source from which they were derived if it did not use the trade-mark in doing so. For instance, the defendant could state that a certain percentage of its compound was made at a certain place in Paris, however well known as the plaintiff's factory that place might be. If the compound was worse than the constituent, it might be a misfortune to the plaintiff, but the plaintiff would have no cause of action, as the defendant was exercising the rights of ownership and only telling the truth. The existence of a trade-mark would have no bearing on the question. Then what new rights does the trade-mark confer? It does not confer a right to prohibit the use of the word or words. It is not a copyright. The argument drawn from the language of the Trade-Mark Act does not seem to us to need discussion. A trade-mark only gives the right to prohibit the use of it so far as to protect the owner's goodwill against the sale of another's product as his. *United Drugs Co.* v. *Theodore Rectanus Co.*, 248 U. S. 90, 97; 257 O. G. 1082. There is nothing to the contrary in *A. Bourjois & Co.* v. *Katzel*, 260 U. S. 689. There the trade-mark protected indicated that the goods came from the plaintiff in the United States, although not made by it, and therefore could not be put upon other goods of the same make coming from abroad. When the mark is used in a way that does not deceive the public we see no such sanctity in the word as to prevent its being used to tell the truth. It is not taboo. *Canal Co.* v. *Clark*, 13 Wall. 311, 327.

If the name Coty were allowed to be printed in different letters from the rest of the inscription dictated by the district court a casual purchaser might look no further and might be deceived. But when it in no way stands out from the statement of facts that unquestionably the defendant has a right to communicate in some form, we see no reason why it should not be used collaterally, not to indicate the goods, but to say that the trade-marked product is a constituent in the article now offered as new and changed. As a general proposition there can be no doubt that the word might be so used. If a man bought a barrel of a certain flour, or a demijohn of Old Crow whisky, he certainly could sell the flour in smaller packages or in former days could have sold the whisky in bottles, and tell what it was, if he stated that he did the dividing up or the bottling. And this would not be because of a license implied from the special facts but on the general ground that we have stated. It seems to us that no new right can be evoked from the fact that the perfume or powder is delicate and likely to be spoiled, or from the omnipresent possibility of fraud. If the defendant's rebottling the plaintiff's perfume deteriorates it and the public is adequately informed who does the rebottling, the public, with or without the plaintiff's assistance, is likely to find it out. And so of the powder in its new form.

This is not a suit for unfair competition. It stands upon the plaintiff's rights as owner of a trade-mark registered under the act of Congress. The question therefore is not how far the Court would go in aid of a plaintiff who showed ground for suspecting the defendant of making a dishonest use of his opportunities, but is whether the plaintiff has the naked right alleged to prohibit the defendant from making even a collateral reference to the plaintiff's mark. We are of opinion that the decree of the circuit court of appeals must be reversed and that that of the district court must stand.

Decree reversed.

Mr. Justice MCREYNOLDS dissents.

ADJUDICATED PATENTS.

Red Seal

Particular description of goods.—Creamery Butter.

Claims use since Mar. 1, 1922.

Ser. No. 200,468. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE J. R. WATKINS CO., Winona, Minn. Filed July 24, 1924.

VOLATYLE

Particular description of goods.—Medicinal Compounds Suitable for the Relief of Respiratory Disorders.

Claims use since July 11, 1924.

Ser. No. 200,472. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed July 25, 1924.

Chipelt

Particular description of goods.—Pile Fabrics in the Piece.

Claims use since June 10, 1924.

Ser. No. 200,473. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed July 25, 1924.

Keramusk

Particular description of goods.—Pile Fabrics in the Piece.

Claims use since June 18, 1924.

Ser. No. 200,474. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed July 25, 1924.

Chipfur

Particular description of goods.—Pile Fabrics in the Piece.
Claims use since July 9, 1924.

Ser. No. 200,475. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed July 25, 1924.

Keramole

Particular description of goods.—Pile Fabrics in the Piece.
Claims use since July 18, 1924.

Ser. No. 200,476. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALLO M. BRAUN, doing business as A. M. Braun, Far Rockaway, N. Y. Filed July 25, 1924.

BRAUN'S
ALMABRA

Particular description of goods.—Toilet Preparations—Viz., Nail Polish and Permanent-Wave Ointment.
Claims use since Nov. 23, 1923.

Ser. No. 200,483. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) EASTMAN KODAK COMPANY, Rochester, N. Y. Filed July 25, 1924.

130

Particular description of goods.—Photographic Films.
Claims use since **Mar. 4, 1916.**

Ser. No. 200,498. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM HOLLINGSWORTH, doing business as Vigor Tone Stiles Company, Fort Worth, Tex. Filed July 25, 1924.

VSTC

Particular description of goods.—Medicine for the Treatment of Rheumatism and Stomach Trouble.
Claims use since June 1, 1924.

Ser. No. 200,563. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LAKE MILLS CANNING COMPANY, Lake Mills, Iowa. Filed July 26, 1924.

ELNORA

Particular description of goods.—Canned Vegetables—Namely, Canned Corn.
Claims use since 1894.

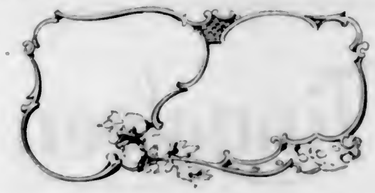
Ser. No. 200,588. (CLASS 17. TOBACCO PRODUCTS.) VETTERLEIN BROTHERS INC., Philadelphia, Pa. Filed July 26, 1924.

SABOROSO

Particular description of goods.—Cigars, Cigarettes, Smoking Tobacco, and Chewing Tobacco.
Claims use since 1887.

Ser. No. 200,590. (CLASS 17. TOBACCO PRODUCTS.) VETTERLEIN BROTHERS INC., Philadelphia, Pa. Filed July 26, 1924.

LA CORNELIA



Particular description of goods.—Cigars, Cigarettes, Smoking Tobacco, and Chewing Tobacco.

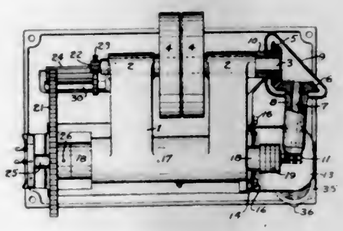
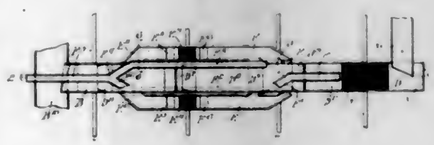
15,910. CHILD'S AND LADY'S GARMENT. ANNE COLLINS BERRY, New York, N. Y. Filed Sept. 14, 1921. Serial No. 500,720. Original No. 1,369,761, dated Feb. 22, 1921, Serial No. 81,297, filed Feb. 29, 1916. Renewed July 20, 1920. Serial No. 397,705. 10 Claims. (Cl. 2—71.)



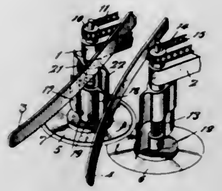
1. A garment, comprising a skirt and bloomer legs, the bloomer legs being integral with the skirt and the lower end of the skirt formed by folding the intermediate portion of the garment on a curved line to form a circular tuck or hem which extends entirely around the skirt and overhangs the upper portion of the bloomer legs in spaced relation thereto.

15,911. SANITARY MOUTHPIECE. NATHAN GELB, Newark, N. J. Filed Aug. 11, 1923. Serial No. 656,906. Original No. 1,425,958, dated Aug. 15, 1922, Serial No. 543,870, filed Mar. 15, 1922. 4 Claims. (Cl. 179—185.)



1. A sanitary mouthpiece, comprising a mouthpiece-body adapted to be attached to a telephone, or the like, said mouth-piece having a pair of externally screw-threaded portions, a member in the form of a jacket surrounding said mouthpiece-body so as to provide an annular space between said mouthpiece-body and the said jacket, said jacket having an internally screw-threaded portion screwed upon one of the externally screw-threaded portions of the mouth-piece, and an absorbent material disposed in said space, said material being adapted to be impregnated with a disinfectant material, or the like.

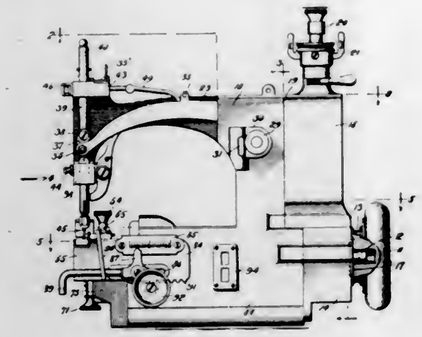
15,912. HOBBING MACHINE. KARL L. HEERMANN, Detroit, Mich., assignor to Studebaker Corporation, a Corporation of New Jersey. Filed Jan. 9, 1924. Serial No. 685,281. Original No. 1,444,247, dated Feb. 6, 1923, Serial No. 554,060, filed Apr. 17, 1922. 26 Claims. (Cl. 90—4.)



1. In a machine of the class described, the combination of a generating tool spindle and a work carrying spindle one of which is longitudinally movable angularly across the axis of the other, a stationary support in which said work carrying spindle is journalled, means for driving said spindles simultaneously in timeed relation to each other, and means including a non-rotatable member and a member rigid with said longitudinally movable spindle for moving the latter longitudinally.

15,913. PICKING SCREEN. ROBERT WILLIAM JOHNSON, deceased, late of Pittsburgh, Pa., by Roberts and Schaefer Company, Chicago, Ill., assignee. Filed Feb. 13, 1924. Serial No. 692,598. Original No. 1,431,667, dated Oct. 10, 1922, Serial No. 543,143, filed Mar. 13, 1922. 3 Claims. (Cl. 83—56.)

1. A reciprocating screen comprising a central section extending substantially from end to end of the screen and a plurality of side sections adapted to be supplied with material therefrom.

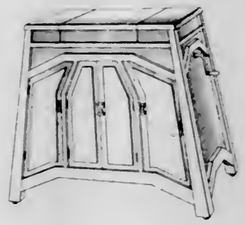


15,914. TRASH IMPELLER. GEORGE D. LUCE, Watertown, Wis., assignor to Luce Cane Harvester Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1919. Serial No. 328,065. Original No. 1,207,580, dated Dec. 5, 1916, Serial No. 108,176, filed July 8, 1916. 26 Claims. (Cl. 56—96.)

1. In combination, in a machine designed to be operated in a region containing refuse or trash, an exposed shaft and a two-part horizontally divided trash impeller therefor.

21. In combination, in a machine of the character described, an upright rotary shaft, a disc cutter mounted on the lower end of said shaft and a trash impeller on said shaft comprising fins or blades projecting in opposite directions therefrom above said disc cutter, the radial length of said fins or blades being less than the radius of said disc cutter.

15,915. SELF-LUBRICATING DUSTPROOF SEWING MACHINE. PHILIP STEINBOCK, Amityville, N. Y., assignor to Steinbock Sewing Machine Corporation, New York, N. Y., a Corporation of New York. Filed May 23, 1923. Serial No. 641,025. Original No. 1,380,120, dated May 31, 1921, Serial No. 384,027, filed May 25, 1920. 12 Claims. (Cl. 112—256.)

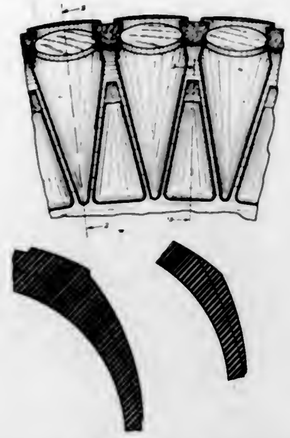


1. In a sewing machine of the character described, the combination of a pitman, an oil receptacle, a split-bearing for the pitman of the machine having an opening, and a wick entering the opening in said bearing and extending with its free end into said oil chamber, and means for guiding said wick intermediate its ends.

DESIGNS

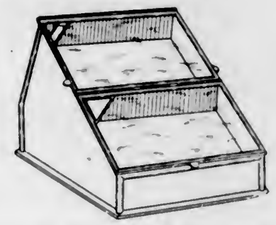
SEPTEMBER 9, 1924.

65,552. COMBINED PHONOGRAPH AND RADIO CABINET. JACOB H. WEBER, New York, N. Y. Filed Jan. 19, 1924. Serial No. 8,358. Term of patent 14 years.



The ornamental design for a combined phonograph and radio cabinet, as shown.

65,553. SPRAY TUBE FOR POWDER. FRIEDRICH WILHELM WINTER, Vienna, Austria. Filed July 15, 1924. Serial No. 10,159. Term of patent 7 years.

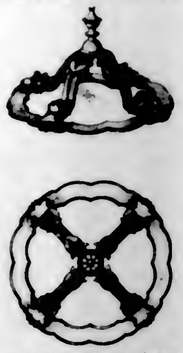


The ornamental design for a spray tube for powder, as shown.

65,554. TIRE. CHASE W. WOLFE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 16, 1922. Serial No. 3,984. Term of patent 14 years.

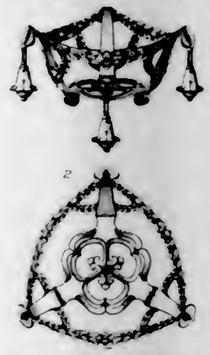
The ornamental design for a tire substantially as shown.

65,555. ADVERTISING AND VENDING CABINET. EDWARD BRUNHOFF, Cincinnati, Ohio, assignor to The Brunhoff Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 30, 1922. Serial No. 3,596. Term of patent 7 years.



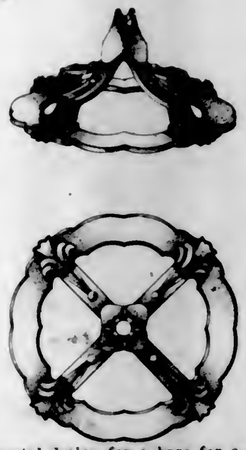
The ornamental design for advertising and vending cabinet as shown.

65,556. BRACE MEMBER FOR FURNITURE OR SIMILAR ARTICLES. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,911. Term of patent 7 years.



The ornamental design for brace member for furniture or similar articles, as shown.

65,557. BASE FOR A PEDESTAL OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,913. Term of patent 7 years.



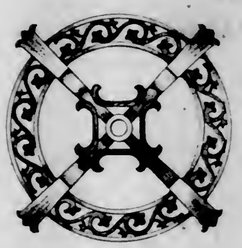
The ornamental design for a base for a pedestal or similar article, as shown.

65,558. TOP FOR A PEDESTAL OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,914. Term of patent 7 years.

The ornamental design for a top for a pedestal or similar article, as shown.

65,559. BASE FOR A LAMP PEDESTAL OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,915. Term of patent 7 years.

The ornamental design for a base for a lamp pedestal or similar article, as shown.



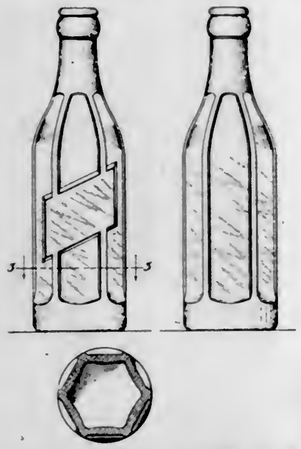
65,560. BRACKET FOR LAMP AND LIKE STANDS. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,916. Term of patent 7 years.

The ornamental design for bracket for lamp and like stands, as shown.

65,561. PEDESTAL OR SIMILAR ARTICLE. LESLIE H. BURLIN, Chicago, Ill. Filed June 19, 1924. Serial No. 9,917. Term of patent 14 years.

The ornamental design for a pedestal or similar article as shown.

65,562. BUREAU. PETER DE VRIES, Los Angeles, Calif., assignor to C. B. Van Vorst Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 10, 1921. Serial No. 491,282. Term of patent 3½ years.



The ornamental design for a bureau, as shown.

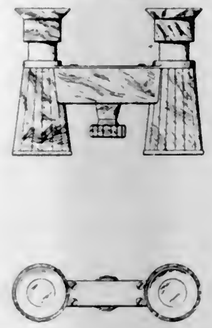
65,563. FLAG. JAMES K. DUFFY, New York, N. Y., assignor to Caribbean Fruit Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1923. Serial No. 5,906. Term of patent 7 years.

The ornamental design for a flag substantially as shown and described.

65,564. BOTTLE. MAX GLAZER, Dallas, Tex. Filed June 11, 1923. Serial No. 6,461. Term of patent 3½ years.

The ornamental design for a bottle, as shown.

65,565. BALL. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 8,959. Term of patent 14 years.



The ornamental design for a ball, as shown.

65,566. BALL. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 8,960. Term of patent 14 years.

The ornamental design for a ball, as shown.

65,567. OPERA GLASS OR SIMILAR ARTICLE. ADOLF HAHN, Far Rockaway, N. Y. Filed Apr. 29, 1924. Serial No. 9,437. Term of patent 7 years.

The ornamental design for an opera glass or similar article as shown.

65,568. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 14, 1924. Serial No. 10,144. Term of patent 14 years.

The ornamental design for a lighting unit as shown.

65,569. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 14, 1924. Serial No. 10,145. Term of patent 14 years.

The ornamental design for a lighting unit as shown.

65,570. JOKER FOR A PLAYING CARD. STANLEY F. HANZEL, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 7,985. Term of patent 14 years.

The ornamental design for a joker for a playing card, as shown.

65,571. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,964. Term of patent 7 years.

The ornamental design for a ring, as shown.

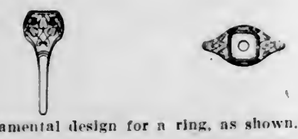
65,572. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,965. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,573. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,966. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,574. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,967. Term of patent 7 years.



The ornamental design for a ring, as shown.

65,575. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,968. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,576. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,969. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,577. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,970. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,578. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,971. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,579. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,972. Term of patent 7 years.

The ornamental design for a ring, as shown.

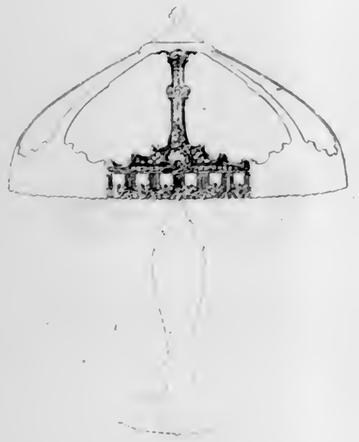
65,580. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,973. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,581. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,974. Term of patent 7 years.

The ornamental design for a ring, as shown.

65,582. RING. HARRY G. KAUFMAN, New York, N. Y. Filed June 25, 1924. Serial No. 9,975. Term of patent 7 years.



The ornamental design for a ring, as shown.

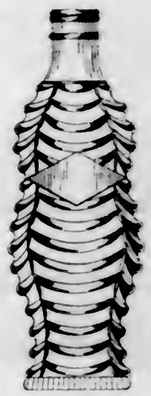
65,583. SPOON OR SIMILAR ARTICLE. MURRAY B. LEETE, Wallingford, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed Jan. 16, 1924. Serial No. 8,325. Term of patent 7 years.

The ornamental design for a spoon or similar article, as shown.

65,584. FRAME FOR LAMP SHADES. ABEL MAGUI, New York, N. Y., assignor to Royal Art Glass Co., a Corporation of New York. Filed July 9, 1924. Serial No. 10,099. Term of patent 3½ years.

The ornamental design for a frame for lamp shades substantially as shown and described.

65,585. SPINDLE FOR LAMPS, LIGHTING FIXTURES, OR SIMILAR ARTICLES. ABEL MAGUI, New York, N. Y., assignor to Royal Art Glass Co., a Corporation of New York. Filed July 9, 1924. Serial No. 10,100. Term of patent 3½ years.



The ornamental design for a spindle for lamps, lighting fixtures, or similar articles substantially as shown.

65,586. BASE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. ABEL MAGUI, New York, N. Y., assignor to Royal Art Glass Co., a Corporation of New York. Filed July 9, 1924. Serial No. 10,101. Term of patent 3½ years.

The ornamental design for a base for lighting fixtures or similar articles substantially as shown and described.

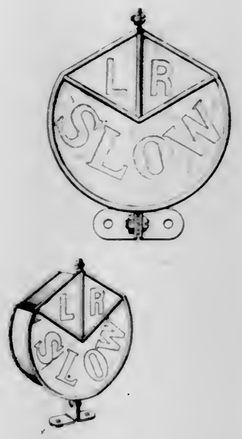
65,587. BOTTLE. GEORGE N. MAS, Lynchburg, Va. Filed June 29, 1923. Serial No. 6,610. Term of patent 14 years.

The ornamental design for a bottle as shown.

65,588. BOTTLE. GEORGE N. MAS, Lynchburg, Va. Filed June 29, 1923. Serial No. 6,615. Term of patent 14 years.

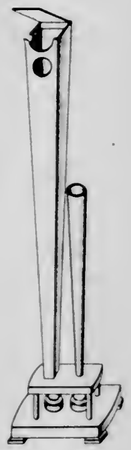
The ornamental design for a bottle, as shown.

65,589. BOTTLE. GEORGE N. MAS, Lynchburg, Va. Filed June 29, 1923. Serial No. 6,620. Term of patent 14 years.



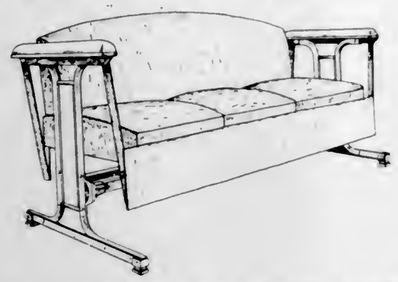
The ornamental design for a bottle as shown.

65,590. BOTTLE. GEORGE N. MAS, Lynchburg, Va. Filed June 29, 1923. Serial No. 6,621. Term of patent 14 years.



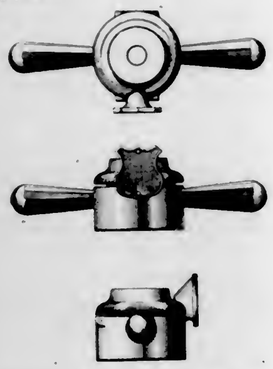
The ornamental design for a bottle, as shown.

65,591. AUTOMOBILE SIGNAL LAMP. CHARLES O. MATHEWS, Devon, Conn. Filed Feb. 14, 1924. Serial No. 8,637. Term of patent 3½ years.



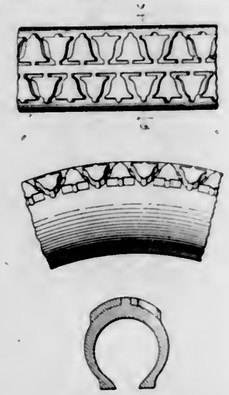
The ornamental design for an automobile signal lamp, as shown.

65,592. SOUND AMPLIFIER. LEONARD D. MORRIS, Chicago, Ill. Filed May 12, 1924. Serial No. 9,562. Term of patent 7 years.



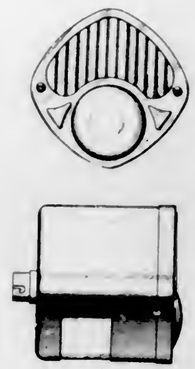
The ornamental design for a sound amplifier, as shown.

65,593. COUCH, DIVAN, OR SIMILAR ARTICLE. HARRY MINTZ, Mattapan, Mass. Filed June 14, 1924. Serial No. 9,876. Term of patent 3½ years.



The ornamental design for a couch, divan, or similar article, substantially as shown.

65,594. RADIATOR CAP. CHARLES S. PRICE, Bethlehem, Pa. Filed May 20, 1924. Serial No. 9,662. Term of patent 3½ years.



The ornamental design for a radiator cap, as shown.

65,595. TIRE TREAD. FRANK E. RUTLAND, Los Angeles, Calif., assignor to Pacific Coast Tire and Rubber Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 14, 1921. Serial No. 522,406. Term of patent 3½ years.

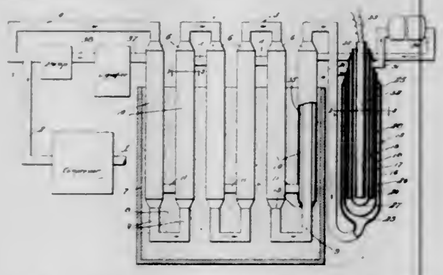
The ornamental design for a tire tread as shown.

65,596. COMBINATION TAIL AND STOP LAMP. PAUL A. STOVER, Racine, Wis., assignor to The Stover Signal Engineering Company, Racine, Wis., a Corporation of Delaware. Filed May 29, 1924. Serial No. 9,736. Term of patent 14 years.

The ornamental design for a combination tail and stop lamp as shown.

65,597. LOUD-SPEAKING DEVICE. JOHN S. TIMMONS, Philadelphia, Pa., assignor to Timmons Talker, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 5, 1924. Serial No. 10,052. Term of patent 14 years.

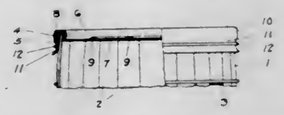
The ornamental design for a loud-speaking device, as shown.



PATENTS

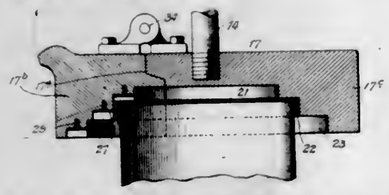
GRANTED SEPTEMBER 9, 1924.

1,507,559. METHOD OF MANUFACTURING WHITE SULPHITE CELLULOSE FROM RESINOUS WOODS. HARRY ALFTHAN, Mantta, Finland, assignor to G. A. Serlachius Aktiebolaget, Mantta, Finland, a Corporation of Finland. Filed Oct. 18, 1923. Serial No. 669,301. 4 Claims. (Cl. 92—11.)



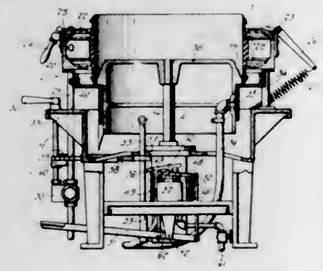
1. Method of manufacturing white sulphite cellulose from fir and similar resinous woods, comprising preparing a lye containing in solution calcium bisulphite, a sodium salt and free sulfurous acid, and performing the boiling operation with said lye at a pressure of about 5 to 6 atmospheres and an end temperature of about 130 to 150° C.

1,507,560. PROCESS AND APPARATUS FOR SYNTHESIZING AMMONIA. EDWIN H. ARNOLD, Coventry, and WILLIAM T. WAKEFORD, Providence, R. I., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 5, 1921. Serial No. 505,507. 14 Claims. (Cl. 23—21.)



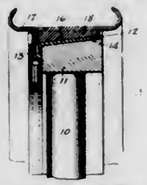
8. The process of synthesizing ammonia by continuously passing a mixture of nitrogen and hydrogen gases through a system including a synthesizing chamber and into contact with a catalytic agent contained in said chamber which comprises, bringing the incoming and outgoing gases to and from the synthesizing chamber into heat exchanging relation, and further raising the temperature of the incoming gases after they have passed heat exchanging relation with the outgoing gases and before their entry into the synthesizing chamber.

1,507,561. CLOSURE FOR BARRELS AND THE LIKE. EDWARD E. ARNOLD, Coventry, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed June 14, 1923. Serial No. 645,328. 6 Claims. (Cl. 217—89.)



1. The combination with a barrel provided with a circular depression upon the outer surface thereof located adjacent to the open end of the barrel, a closure adapted to cover the open end of the barrel and having an edge portion extending over the depression in the outer surface of the barrel, and means for drawing the edge portion of the closure within the depression to hold the closure against removal.

1,507,562. CAN OPENER. LELAND A. BABCOCK, Oak Park, Ill. Filed Oct. 29, 1919. Serial No. 334,293. 3 Claims. (Cl. 30—3.)

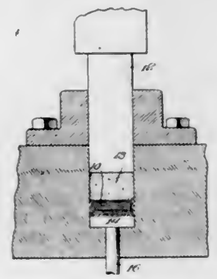


1. In a can-opener, the combination of a cutter-head having a socket to receive and fitting over one end of a can and formed of movably connected sections, and a blade carried by one of the sections and adapted to penetrate and cut the side of a can.

1,507,563. METHOD AND APPARATUS FOR MANUFACTURING TIRE CASINGS. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1923. Serial No. 656,382. 32 Claims. (Cl. 154—10.)

1. That method of manufacturing tire casings for motor vehicles which consists in, building a laminated pulley-band of strain-resisting-elements and rubber composition, shaping the band to approximately tire form, externally holding the band in approximately tire form with its inner periphery unobstructed, introducing a fluid pressure container into the casing to sustain it shaped, enclosing the casing in external molding members, and finally vulcanizing the casing with fluid under pressure within the container.

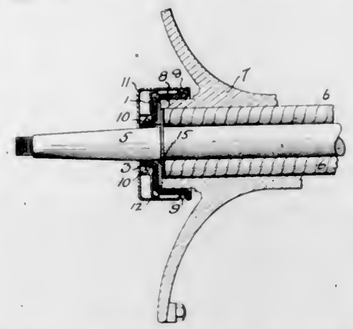
1,507,564. DETACHABLE RIM. PERRY M. ADEN, Valley Park, Miss. Filed Feb. 26, 1923. Serial No. 621,366. 3 Claims. (Cl. 301—26.)



1. A device of the character described comprising a rim having a plurality of lugs, a wheel adapted to receive said rim and having notches adapted to receive

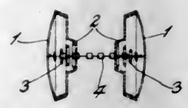
said lugs, a channel member carried by the wheel, a clamping ring adapted for movement circumferentially of said channel member for retaining the rim on the wheel, and means for preventing movement of said clamping ring, said means comprising a bolt passing through the walls of the channel member and adapted to clamp the walls of said channel member about the clamping ring.

1,507,565. PROCESS FOR THE PREPARATION OF SACCHARIN. JEAN ALTWEGG and JEAN COLLARDEAU, Lyon, France, assignors to Societe Chimique des Usines du Rhone (Anciennement Gilliard P. Monnet et Cartier), Paris, France. Filed Feb. 24, 1921. Serial No. 447,566. 2 Claims. (Cl. 260—126.)



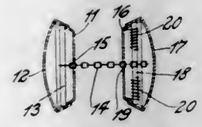
1. A process of manufacture of saccharin consisting in the oxidation of ortho-toluene-sulphamide by a mixture of sulphuric acid of more than 50% concentration with chromic acid in the presence of a compound of the ferro-chrome-manganese group.

1,507,566. COMMUTATOR BRUSH AND METHOD OF MAKING IT. VINCENT G. APPLE, Dayton, Ohio. Filed Sept. 27, 1920. Serial No. 413,217. 9 Claims. (Cl. 171—325.)



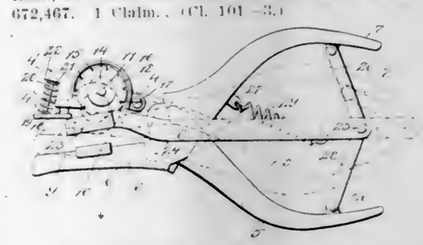
6. The method of making a commutator brush which consists in rolling a strip of reticulate sheet metal into cylindrical form; compacting the cylinder into rectangular form and coincidentally forcing graphite, incorporated with a binder, into the voids in the metal strip.

1,507,567. GREASE RETAINER FOR AXLE HOUSINGS. CARL ASCHENBACH, North Plainfield, N. J. Filed Mar. 15, 1923. Serial No. 625,332. 4 Claims. (Cl. 286—7.)



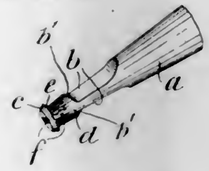
1. A device of the class described comprising a pliable cup washer having its periphery in the shape of a flaring annular flange adapted for passing over an axle housing and provided with a reduced portion in the shape of an angular flange having a central opening for passing over an axle spindle, contractile means for both the large and small flanges.

1,507,568. CUFF BUTTON. ALLAN H. BACON, St. Louis, Mo. Filed Nov. 9, 1923. Serial No. 673,712. 3 Claims. (Cl. 24—102.)



1. A cuff button comprising a pair of hollow button members, a spring enclosed in each of said button members, and a flexible connection uniting said springs.

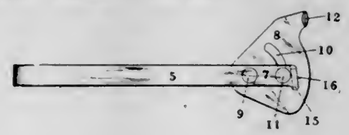
1,507,569. CUFF BUTTON. ALLAN H. BACON, St. Louis, Mo. Filed Nov. 9, 1923. Serial No. 673,713. 5 Claims. (Cl. 24—102.)



1. A cuff button comprising a pair of button members, a spring enclosed within one of said button members, and a flexible connection from said spring to the other button member.

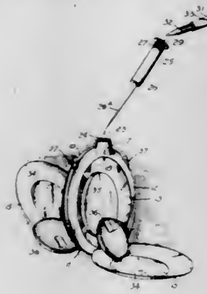
1,507,570. VALIDATING TICKET PUNCH. JAMES S. BALL, St. Louis, Mo. Filed Nov. 3, 1923. Serial No. 672,467. 1 Claim. (Cl. 101—3.)

A punch comprising an upper and lower jaw pivotally secured together, printing means secured to one of said jaws, a bifurcated arm enveloping said jaws on two opposite sides, an inking pad secured near one extremity of said arm, the other end rotatively secured to links at its other end, said links secured at their loose ends to the extensions of said jaws, a spring secured to one of said jaws at one end and to said bifurcated arm at the other, in order to normally hold said jaws in an open position.



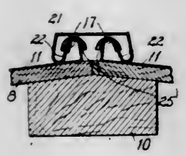
1,507,571. MOUTHPIECE OF TOBACCO PIPES, AND CIGAR AND CIGARETTE HOLDERS OR TUBES. MONTAGUE HENRY BARLING, Camden Town, London, England. Filed Dec. 14, 1922. Serial No. 606,938. 2 Claims. (Cl. 131—12.)

1. A mouthpiece for tobacco pipes, cigar and cigarette holders, having a flange portion at its outer end and a short bite portion of usual thickness immediately adjacent hereto and having lip engaging recesses on the top



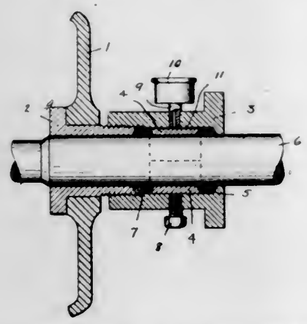
and bottom surfaces of said mouthpiece, closely adjacent to the said bite portion, said recesses being shaped so as to comfortably receive the lips of the user, the thickness of the mouthpiece between said lip receiving recesses being less than the thickness of the bite portion.

1,507,572. CAN OPENER. INSLEE T. BENNETT, Edwardsville, Ill. Filed Aug. 23, 1922. Serial No. 583,761. 1 Claim. (Cl. 30—3.)



In a device of the class described, the combination with a loop forming a handle, one end of said loop being turned down and having a serrated face forming a dog, of a plate pivoted between the arms of said loop and provided with an integral blade and also a slot formed therein between the pivot point and the blade, and a rivet in said handle engaging with said slot to form a stop.

1,507,573. VANITY CASE. RICHARD I. BIESHUNS, New York, N. Y. Filed Jan. 12, 1924. Serial No. 685,815. 5 Claims. (Cl. 132—83.)

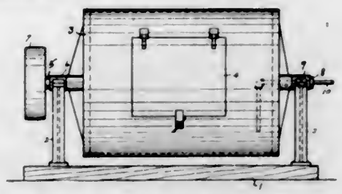


1. A vanity case, including an intermediate receptacle having a neck portion and opposite indented side walls, covers for the indented walls, a stopper for said neck portion including a projection adapted to extend into the interior of said receptacle, and a pencil member adjustably mounted in the outer end of said stopper.

1,507,574. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1923. Serial No. 635,234. 9 Claims. (Cl. 108—5.)

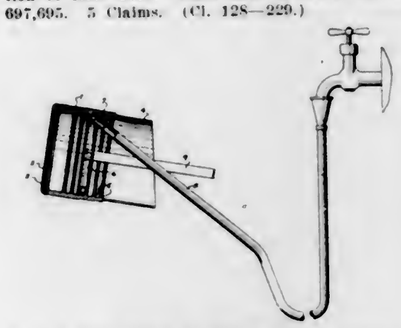
2. A flexible car roof comprising roof sheets spaced apart along their adjacent margins and having hollow ribs extending lengthwise thereof, and a seam cover straddling the ribs of adjacent sheets and having tangential contact with both walls of each of said ribs.

1,507,575. TURBINE BEARING. ALLEN G. BROUSE, Duluth, Minn. Filed Apr. 20, 1923. Serial No. 633,365. 1 Claim. (Cl. 64—24.)



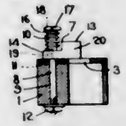
A shaft bearing comprising in combination a support, a journal sleeve extending through the support and non-rotatable therein, said sleeve being externally screw threaded upon one end thereof which protrudes beyond the support, an elongated packing nut screw threadedly mounted upon the sleeve, a split auxiliary sleeve within the nut and normally spaced from both ends thereof forming spaced annular packing spaces, packing within said spaces adjustably held therein by the reciprocation of the nut, and means cooperatively connected with one half of the split sleeve for simultaneously supplying lubricant to the packing at both ends thereof.

1,507,576. LAMP-BULB ATTACHING AND DETACHING DEVICE. EDWARD C. BROWN, Bismarck, N. Dak. Filed Oct. 1, 1923. Serial No. 666,018. 3 Claims. (Cl. 294—21.)



1. In a device for the purpose set forth, a sectional shaft, a forked member pivotally secured to the outer section thereof, oppositely disposed arms pivotally secured to the said section below the forked member, a centrally folded flexible grip having its sides passing through the forked member and secured to one of the arms, means loosely connecting the forked member with the second arm, flexible pull elements connected with both of the arms, whereby to move the forked member and the grip to open the latter to bulb receiving position when a pull is exerted upon one of said elements, and to cause the forked member to contact the sides of the grip to compress the same around the bulb received therein when a pull is exerted upon the said second pull element.

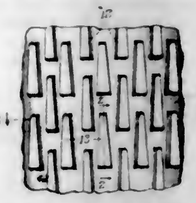
1,507,577. PROCESS OF TREATING PICKLES. JOHN M. BROWNE, Houston, Tex. Filed July 12, 1921. Serial No. 484,079. 2 Claims. (Cl. 99—1.)



2. The process of treating pickles consisting in subjecting them to salt brine, then submerging them in cold water in a closed receptacle then heating said water by forcing hot steam therein under pressure meanwhile agitating the contents thereof.

1,507,578. SPRAY DEVICE. KENNETH BURNS and JOHN W. STAFFORD, New York, N. Y., assignors to Starburn Products, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1924. Serial No. 697,695. 5 Claims. (Cl. 128—229.)

5. In a spray device, a tubular body of molded rubber having interior spray ring holding means, and an end shaped to seal when pressed against the body.

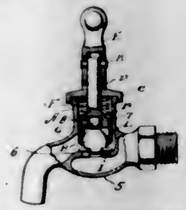


1,507,579. PICKER CHECK. VETRELL CARROLL, Lowell, Mass. Filed Mar. 5, 1923. Serial No. 622,758. 1 Claim. (Cl. 139—164.)

In a loom, the combination with a lay having a shuttle box thereon and a shuttle binder of a picker stick carrying a picker, a shouldered bolt extending vertically through the lay adjacent one end of the shuttle box and on the opposite side thereof from the binder, a picker check pivotally mounted on the bolt and situated above the lay, a spring encircling the bolt and having one end anchored thereto and the other end connected to the picker check and a nut on the bolt cooperating with the shoulder to hold the bolt in adjusted position with the spring at the desired tension.

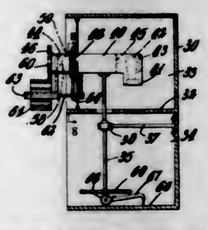
1,507,580. WELL SCREEN. WILLIAM H. CATER, Chicago, Ill. Filed Dec. 5, 1923. Serial No. 678,583. 2 Claims. (Cl. 166—5.)

1. A foraminous sheet-metal well-screen, adapted for descent in the earth during the driving of the well having a sheet-metal wall equipped with a plurality of spaced longitudinally-tapered lengthwise strips of the metal sheet positioned out of the plane of the sheet, the ends of such



strips being integral with the body of the metal sheet, thereby providing two converging slots through the metal along the opposite margins of each strip.

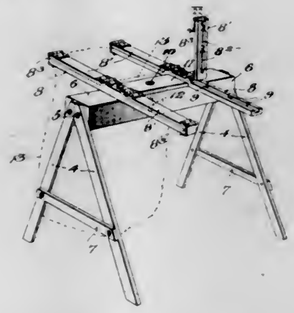
1,507,581. BLAST-FURNACE SMELTING. THOMAS WILLARD CAVERS, Nickelton, Ontario, Canada. Filed Jan. 25, 1921. Serial No. 439,870. 2 Claims. (Cl. 15—17.)



1. In the smelting of non-ferrous-metal-containing materials, the improvement which comprises introducing steam into the blast furnace, at the level not substantially above the smelting twyers, while introducing sufficient air through the smelting twyers for burning any hydrogen sulfid formed thereby.

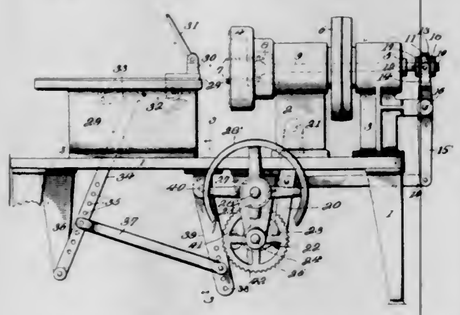
1,507,582. FAUCET. WILLARD C. CHRISTMAS, Boonville, Ind. Filed Nov. 19, 1921. Serial No. 516,492. 4 Claims. (Cl. 257—46.)

3. In a faucet, the combination with a faucet body, a partition therein and a cylinder thereon opposite said partition; of a threaded nipple in said partition forming a valve seat, a valve stem having an enlarged end in said cylinder, a ball cage on said stem, a ball valve in said cage, a pivot ball between the valve ball and enlarged end of the stem, a bonnet for said cylinder, a spring in the cylinder between the enlarged stem portion and bonnet, a handle secured to the stem and means on the bonnet cooperating with the handle to raise the handle and stem against the stress of said spring to unseat the valve-ball.



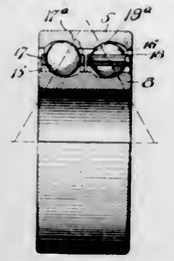
1,507,583. MOVING-PICTURE BASEBALL SCOREBOARD. GEORGE S. COLEMAN, New York, N. Y. Filed Oct. 27, 1922. Serial No. 597,348. 11 Claims. (Cl. 116—120.)

3. In an apparatus of the type described, means for indicating the travel of a ball comprising a projector adapted to throw a spot of light upon a surface repre-



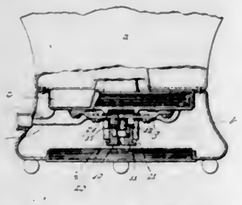
senting a playing field, and having a four-armed iris through which the light is projected, a support for said projector, means for angularly adjusting the projector on its support, and devices adapted to engage the respective arms of said iris to automatically open or contract said iris upon angular movement of said projector on its support.

1,507,584. BAG HOLDER. EDGAR L. COMBS, Gwynedd, Pa. Filed Dec. 22, 1923. Serial No. 682,315. 7 Claims. (Cl. 83—26.)



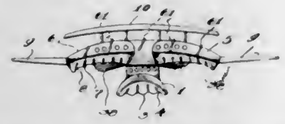
1. The combination, in a bag holder, of a frame including an approximately horizontal bar or beam and legs for supporting the same; two spaced rails pivotally secured to said horizontal bar or beam and normally positioned to extend across said bar to constitute at each side thereof a pair of approximately horizontal arms each pair adapted to support or suspend therebetween a bag with its upper end open for filling; a bag attaching means associated with each of said arms for detachably securing a bag thereto while it is being filled; means engaging said rails to secure them in their aforesaid normal positions but adapted to be disengaged from the rails to permit the latter to be turned on their pivots each to a knock-down position approximately parallel to the said bar or beam of the frame.

1,507,585. SWAGER WITH TAPER ATTACHMENT. HARMON J. COOK, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 28, 1922. Serial No. 532,439. 4 Claims. (Cl. 78—77.)



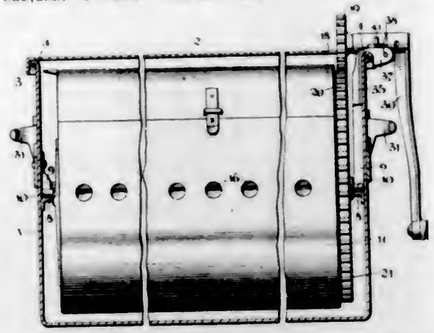
1. In a device of the class described, a plurality of dies adapted to swage a length of stock by a succession of impacts, means for progressing the stock through said dies during the swaging operation, and means for progressively altering the position of the working faces of said dies with respect to the stock during the movement of said stock whereby the stock is tapered.

1,507,586. DOUBLE-ROW ANGULAR BEARING. ELISHA H. COOPER, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 29, 1922. Serial No. 609,583. 3 Claims. (Cl. 64—59.)



1. In a ball bearing of the unit handling type, an inner ring, an outer ring, each of said rings having two continuous grooved raceways therein, the raceways in each ring being continuous and uninterrupted at the sides, the distance between the center lines of the raceways in one of said rings being greater than the distance between the center lines of the raceways in the other ring, balls in said raceways, and spacers for spacing the balls of each row apart, each spacer comprising at least two sections secured together.

1,507,587. PROTECTIVE DEVICE FOR ELECTRICALLY-HEATED UTENSILS. GEORGE E. CURTISS, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 1, 1922. Serial No. 604,314. 2 Claims. (Cl. 219—44.)



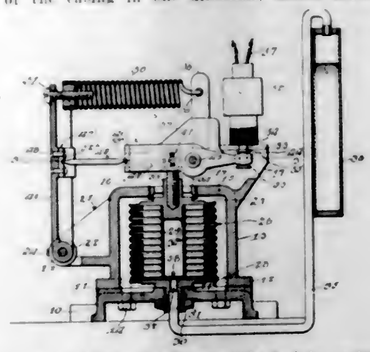
1. In combination, an electric heater, a pair of spaced terminals connected into the circuit of said heater, a holder and a connector therein having a relatively low fusing point adapted to close the circuit between said terminals, and means for preventing said holder from being brought into engagement with said terminals after said connector has been melted down.

1,507,588. AIRCRAFT. RICHARD A. DAVENPORT, Detroit, Mich. Filed June 5, 1922. Serial No. 565,881. 14 Claims. (Cl. 244—12.)

1. An aircraft comprising a load confining body portion, the bottom of said body constituting an air supported surface and being provided with longitudinally extending air channels or troughs, propelling means for said craft, a hull secured directly to the bottom of the body portion, the latter extending laterally beyond the hull hides, and having its outer longitudinal edges terminating in a downwardly and inwardly extended portion in the nature of a V-shaped outrigger keel.

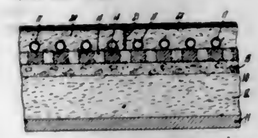
1,507,589. WASHING MACHINE. GEORGE LESLIE FERRIS, McArthur, Ohio; O. E. Vollenweider administrator of said Ferris, deceased. Filed May 8, 1922. Serial No. 559,293. 1 Claim. (Cl. 68—16.)

In a washing machine, a casing adapted to receive a cleaning fluid, a cylinder rotatably and removably supported within the casing, a driven gear carried by said cylinder at one end thereof in concentric relation therewith, a plate supported upon the end of the casing proximate to the driven gear, a bearing having a portion adapted to rest upon the plate, a drive shaft journalled in said bearing, a drive gear carried by said drive shaft in position to mesh with said driven gear when the said portions of the bearing is resting upon said plate and to be disengaged therefrom when the inner end of the bearing is swung upwardly and outwardly in respect to said plate, means for swingingly attaching the bearing at its outer end to the plate, and a pivoted latch for releasably holding the bearing superimposed upon the plate.



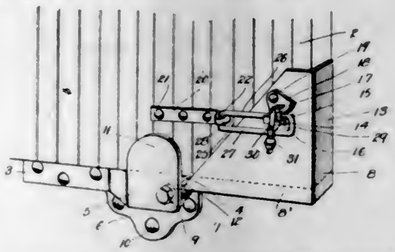
1,507,590. UMBRELLA HOLDER. ROGER W. FLAGG, Dobbs Ferry, N. Y. Filed June 21, 1922. Serial No. 569,931. 1 Claim. (Cl. 24—260.)

In a holder of the character described the combination of a main sleeve having slits therein to form clamping prongs that normally extend outwardly from the longitudinal axis of the sleeve, clamping fingers formed with the lower portions of the prongs and extending inwardly, a clamping sleeve having a flange, slidably supported on the main sleeve and enabled to be moved on said prongs, to be enabled to clamp an object simultaneously with said prongs and said clamping fingers and a supporting ring connected to the main sleeve to support it, substantially as described.



1,507,591. THERMOSTAT FOR REFRIGERATING APPARATUS. JULIUS FRANKENBERG, Chicago, Ill. Filed July 16, 1920. Serial No. 396,858. 13 Claims. (Cl. 200—140.)

1. In a device of the character described, the combination with a longitudinally extensible casing having its ends closed and fixedly supported at one end, of means constantly in communication with the casing for the passage of a suitable fluid, means within the casing and carried by the movable end thereof for limiting the movement of the casing in one direction, means adjustably

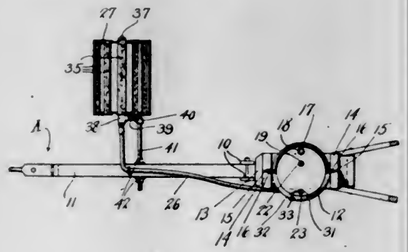


supported outwardly of said movable end to restrict its movement in the opposite direction, and an operating lever fulcrumed near said end of the casing and transversely disposed with respect to the casing and pivotally connected axially to the movable end thereof.

1,507,592. SKATING-RINK FLOOR. GEORGE C. FUNK, Brookline, and MAGNUS J. PALSON, Gloucester, Mass.; Herbert E. Smith executor of said Magnus J. Palson, deceased. Filed May 18, 1921. Serial No. 470,676. 4 Claims. (Cl. 62—12.)

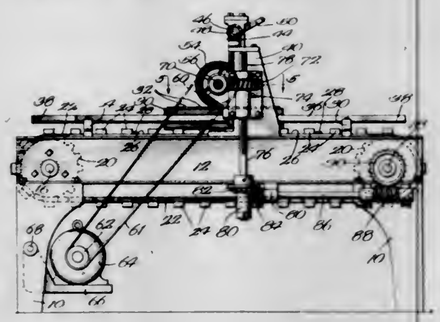
1. A floor of concrete or the like and means for varying the temperature thereof comprising a series of sections, expansion joints of elastic material separating said sections one from the other, a plurality of pipes embedded in each of said sections extending longitudinally thereof and approximately parallel to said expansion joints and arranged in a series of units, a pair of headers on opposite sides of said floor connecting the ends of the pipes of each unit together and means to cause a circulation of fluid through said pipes and headers.

1,507,593. DOOR-SECURING MEANS. ALEXANDER GALLOWAY, Kansas City, Mo. Filed Sept. 21, 1922. Serial No. 589,558. 4 Claims. (Cl. 292—286.)



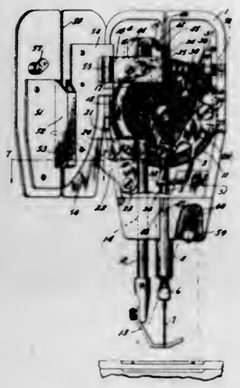
1. In combination with a box car having a sliding side door for closing a side opening therein, of a bracket having an upwardly extending guide portion for the door, a flanged cleat pivoted to the bracket and overlapping the bottom and vertical edge of the door at one corner and a fastening device carried by the door engaging a part of the cleat.

1,507,594. METHOD OF PRODUCING HARD RUBBER. WILLIAM C. GEER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,821. 27 Claims. (Cl. 18—53.)



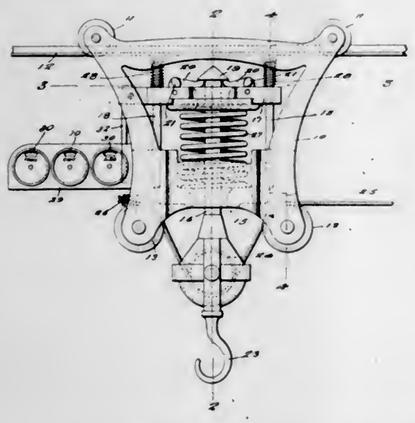
21. The method of producing hard rubber which comprises heating comminuted soft vulcanized rubber in the presence of a mixture of a nitrogenous polysulfide and a nitrogenous accelerator in an aqueous carrier.

1,507,595. ATTACHMENT FOR PLOWS. WILLIAM W. GOODE, Tuskegee, Ala. Filed Nov. 5, 1923. Serial No. 672,961. 4 Claims. (Cl. 299—30.)



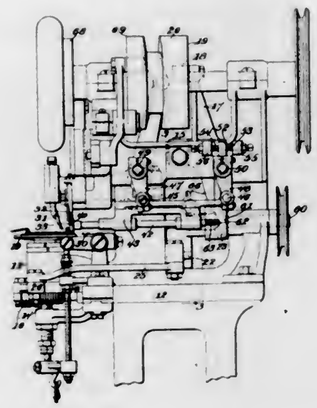
1. A plow attachment of the character described comprising a container adapted to receive a poisonous substance and supported by the plow stock, a manually operable agitator arranged within said container, a perforated distributing drum mounted for rotation upon the plow beam and arranged at one side thereof, said drum being susceptible of vertical and horizontal adjustment, a supply pipe establishing communication between the container and said drum, and a valve associated with the container and operable to control said communication.

1,507,596. BATTERY-CELL-POLISHING MACHINE. JOHN GRAVES, Madison, Wis., assignor to French Battery & Carbon Company, Madison, Wis., a Corporation of Wisconsin. Filed Feb. 25, 1921. Serial No. 447,837. 5 Claims. (Cl. 141—1.)



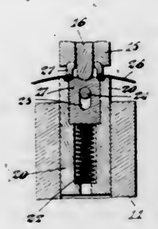
1. In a device of the class described, a movable conveyor belt, means for maintaining the load carrying portions of the conveyor belt in substantial alinement, a rotatable brush adjacent to the conveyor belt, means for varying the position of the brush to and from the conveyor belt, a single source of power, and a single power transmitting system operating through the brush to the conveyor by which said source of power simultaneously drives the conveyor belt and rotates the brush in all positions of adjustment of the brush.

1,507,597. SEWING MACHINE. CHARLES H. GREENWOOD, Canton, Ohio. Filed Feb. 15, 1923. Serial No. 619,198. 16 Claims. (Cl. 112—258.)



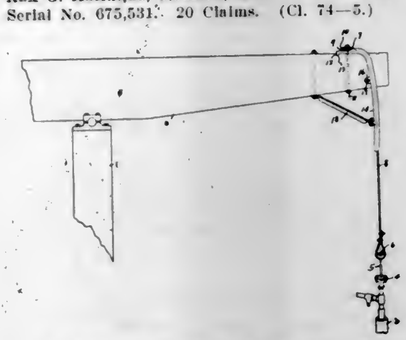
1. In a sewing machine, a head provided with a vertical slot through one side thereof, a tension device and thread guides within the head and aligned with the slot and a take-up lever within the head provided with means for automatically engaging a thread drawn through the slot.

1,507,598. COMBINED SCALE AND CARRIER. DAVID GUSTAFSON, Eau Claire, Mich. Filed June 8, 1923. Serial No. 644,248. 2 Claims. (Cl. 265—68.)



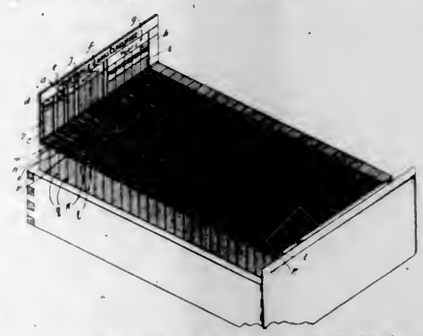
1. A carrier comprising a frame equipped with rollers and mounted upon a track, grooved pulleys journaled in said frame, a vertically movable cross head mounted within the frame, a spring supporting said cross head, dogs carried by the cross head and having limited downward movement, a stem carrying a hook and a sheave wheel, a cable trained under the sheave wheel and over said pulleys whereby to move the stem and the carriage, a head on said stem engaging said dogs for holding the stem suspended from the cross head, a scale structure mounted upon one side of the frame, and an operative connection between said cross head and the operating element of the scale.

1,507,599. INSOLE MACHINE. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 5, 1919. Serial No. 308,855. 13 Claims. (Cl. 12—20.)



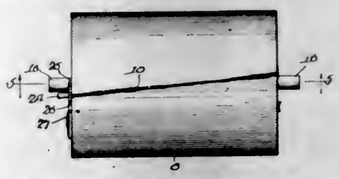
13. A machine for trimming reinforcing material lying on the feather of a ribbed insole having, in combination, an insole support constructed and arranged to sustain the feather at its margin, a gage constructed and arranged to bear against the rib, a single, continuously rotating disc knife opposite the feather and directly above said support for trimming the reinforcing material along a line spaced from the rib and devices by which said knife may be adjusted to vary the distance of the cut from the rib and also the depth of the cut.

1,507,600. FASTENER-INSERTING MACHINE. THOMAS J. HALLAM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 31, 1920. Serial No. 400,477. 22 Claims. (Cl. 153—48.)



1. Fastener-setting mechanism comprising a clenching tool the clenching shoulder of which is formed and arranged to occupy initially the fastener-receiving hole in an article of work, a work-engaging abutment normally behind said shoulder, a movable tool constructed and arranged to force a fastener against the clenching tool, the latter being arranged to yield relatively to said abutment so as to carry the clenching shoulder to a position behind the article of work, and means for limiting such yielding movement of the clenching tool so as to cause the latter to exercise its clenching function after it has yielded as aforesaid.

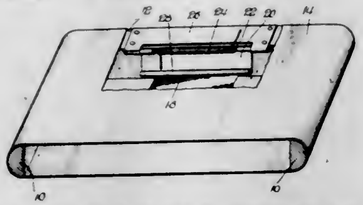
1,507,601. CABLE BEARING FOR WALKING BEAMS. REX G. HAMAKER, Houston, Tex. Filed Nov. 19, 1923. Serial No. 675,531. 20 Claims. (Cl. 74—5.)



1. An attachment for walking beams including a yoke having a cable bearing, and a pair of cable guides depending from the yoke, on opposite sides of the beam.

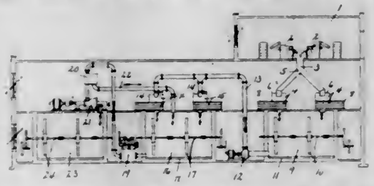
1,507,602. READY-REFERENCE TABULATING INDEX FOR FILES. ERNEST C. HEALD, Portland, Oreg. Filed Dec. 15, 1919, Serial No. 345,152. Renewed Feb. 4, 1924. 4 Claims. (Cl. 129—16.5.)

1. A file consisting of flat units massed side by side, a plurality of marks on the exposed edge of each of said file-units, and located so as to lie in columns extending crosswise of the file, the columns denoting segregated, specific items of correlated data of a subject matter, whereby the marks indicate symbolically the contents of the file as a whole, and the marks on each unit give symbolically the details of the contents of such file unit.



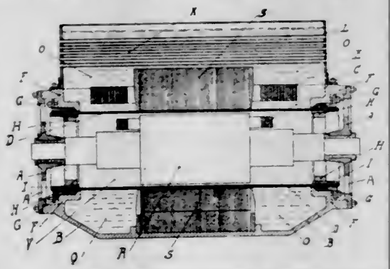
1,507,603. DEVICE FOR HOLDING OR LOCKING SANDPAPER ON THE ROLLS OF FLOOR-SURFACING MACHINES. MILTON E. HELIN and HENRY R. HAWKINSON, Chicago, Ill. Filed Feb. 28, 1923. Serial No. 621,746. 3 Claims. (Cl. 51—194.)

1. In a device of the class described, the combination with a roller having a slot in its periphery and a bearing opening in each of its ends near said slot, of a pair of spaced clamping members journaled at their ends in said openings, said members having their adjacent surfaces



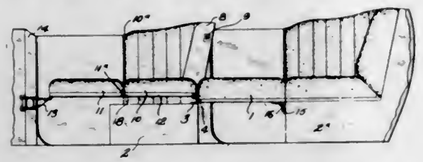
straight, a spacing member supported by one of said clamping members and located in the space between said members for holding them at one of the edges of their straight surfaces apart, and means on one of said members for turning the pair of members.

1,507,604. WINDING BOARD. ARTHUR HOLDSWORTH, Oak Park, Ill. Filed Apr. 3, 1922. Serial No. 548,967. 6 Claims. (Cl. 206—50.)



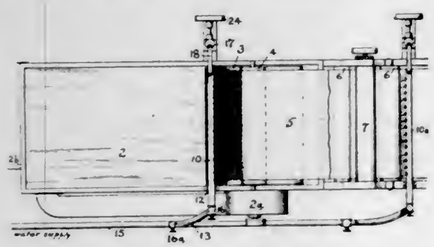
1. A winding board having, in combination, side pieces and an end piece, said end piece having a slot, and resilient means normally obstructing the inner end of said slot.

1,507,605. METHOD AND APPARATUS FOR TREATING RAGS IN THE PRODUCTION OF PAPER STOCK. J. H. HOWE and CHARLES E. STEVENS, Fulton, N. Y., assignors to Arrowhead Mills Inc., Fulton, N. Y., a Corporation of New York. Filed Feb. 17, 1921. Serial No. 445,875. 4 Claims. (Cl. 92—20.)



4. The process of treating rags, consisting in cutting the rags into relatively small pieces, feeding said cut rags upon the surface of a beater roll rotating at high speed, subjecting such cut rags combined with water to the action of the beater until reduced to half-stock condition, discharging the half stock from the beater into a half-stock chest, agitating the half stock in said chest, pumping the half stock from the chest and discharging it under high pressure upon a finishing beater roll rotating at high speed, subjecting such half stock to the action of the finishing beater until the desired consistency is reached, and discharging the stock from the finishing beater and passing it thru a Jordan engine.

1,507,606. ROTARY ELECTRIC MACHINE. KALMAN v. KANDÓ, Budapest, Hungary. Filed Sept. 17, 1920. Serial No. 411,017. 5 Claims. (Cl. 171—252.)

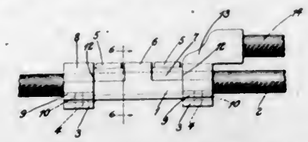


1. In an electrical device, a rotor, a stator, a shell enclosing the stator with its windings, a cylindrical tube of larger diameter than the rotor, passing through the air-gap between the stator and the rotor and extending through the field-bore of the stator, openings in the end walls of the stator-shell of larger diameter than said cylindrical tube and a detachable fluid-tight connection between said cylindrical tube and each wall of the stator-shell.

1,507,607. AUTOMOBILE BODY. FRANK JACK KELLY, Toronto, Ontario, Canada. Filed May 9, 1923. Serial No. 637,858. 4 Claims. (Cl. 155—7.)

1. In an automobile body having front and rear seats, in combination, a hinged seat back releasably secured at its upper end to the supporting framework, and a hinge connecting the lower end of the seat back to the supporting framework comprising a hinge member fastened to the framework and a hinge member fastened to the seat back and carrying angular lugs for supporting and locking engagement with one section of a two-part seat cushion, said section of the cushion resting in locked engagement upon the angular lugs of the hinge member.

1,507,608. SHOWER PIPE FOR PAPER-MAKING AND SIMILAR MACHINES. HENDERSON KIDD, Chester, Pa., assignor, by mesne assignments, to Scott Paper Company, a Corporation of Pennsylvania. Filed June 10, 1920. Serial No. 387,852. 3 Claims. (Cl. 92—50.)

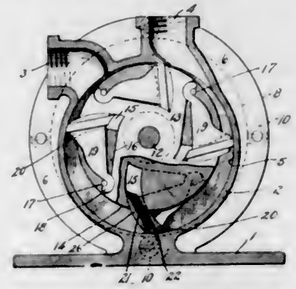


1. Means for spraying a travelling surface such as that of the drum or felt web of a paper making machine after the paper web has been removed therefrom, consisting of a longitudinally reciprocable water shower pipe having apertures along its length, a U shaped guide adjacent to one end of the shower pipe and in which the body of the pipes rests by gravity and by which it is guided, a support for the other end of the shower pipe comprising a horizontal rod in alinement with the shower pipe and slidably mounted in a stationary bearing, a flexible water supply pipe for maintaining delivery of water to the shower pipe while it is in operation, a vertical shaft having a crank at one end, a connecting rod hinged to the crank and also hinged to the shower pipe, said crank arranged in alinement with the axis of the shower pipe, a horizontal shaft geared to the vertical shaft, and means to rotate the horizontal shaft.

1,507,609. ELECTRICAL CONNECTER. SIDNEY D. KRETZER, St. Louis, Mo. Filed Sept. 22, 1921. Serial No. 502,381. 3 Claims. (Cl. 175—273.)

1. A clamp support for electrical cables, comprising a base member having a channel therein for receiving a cable, a cooperating clamp member having grooves receiving the side edges of the base member, extending

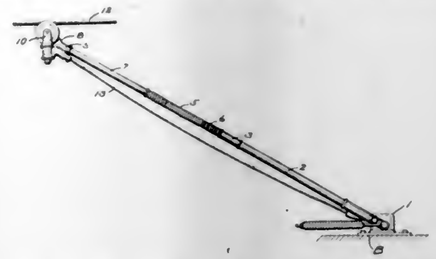
ears on the wall of the channel of the first-named member clamped over the wall of said second-named member, a socket formed in connection with said second-



named member for receiving the end of a branch cable, and laterally extending lugs on said members having registering holes for receiving fastening devices.

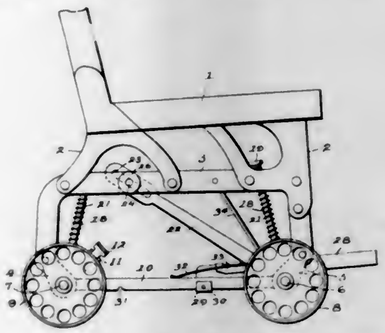
1,507,610. COLLAR BUTTON. EARNEST W. LADD, New York, N. Y. Filed July 19, 1922. Serial No. 576,037. 5 Claims. (Cl. 24—101.)

1. In a collar button, a base, a head and a shank, the shank being bent laterally from the base in a slightly inclined plane and returned in an upward direction and again bent so as to form a stud for collars to be buttoned thereon.



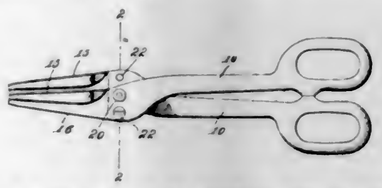
1,507,611. ROTARY PUMP. FRED A. LEIGH, Detroit, Mich. Filed Feb. 13, 1922. Serial No. 536,112. Renewed Feb. 11, 1924. 4 Claims. (Cl. 103—140.)

1. A rotary pump wherein a rotor is formed with pockets extending inwardly from the periphery thereof and is mounted eccentrically within a cylinder with piston blades carried in said pockets and movable inwardly and outwardly of said pocket, a packing carried by each piston blade with a flexible edge portion of said packing projecting inwardly from the inner edge of the blade with said flexible edge portion engaging the rear wall of the pocket, to be held by fluid pressure against said wall and prevent leakage rearwardly in the direction of rotation of the rotor, past said blades.



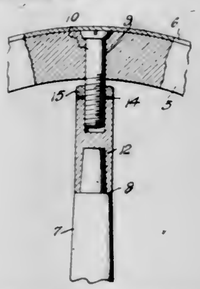
1,507,612. CURRENT COLLECTOR. ELLIS S. LINCOLN, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 14, 1921. Serial No. 500,574. 14 Claims. (Cl. 191—57.)

1. The combination with a moving vehicle adapted to operate without rails of a trolley pole, means interposed between the pole and vehicle acting to maintain the outer end of the pole in a raised position, a pair of auxiliary arms of insulating material projecting from the extremity of the pole and each arm provided with current collecting means to engage a trolley wire, each auxiliary arm universally movable and independently of the other, means interposed between each auxiliary arm and the pole to connect the arms and pole and permit



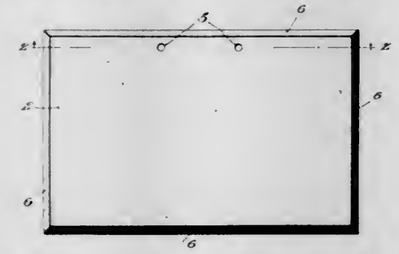
said universal movement of the arms and means for conveying the current from the collecting means to the vehicle.

1,507,613. COMBINED ROLLER AND ROCKING CHAIR. OTTO R. MILKY, Joplin, Va. Filed Apr. 23, 1923. Serial No. 633,921. 7 Claims. (Cl. 155—70.)



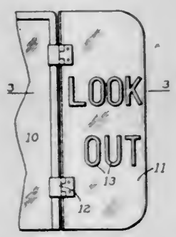
1. The combination of a chair body, a supporting frame depending therefrom, a wheeled frame arranged beneath the supporting frame, rocker-arms keyed to the shafts of the wheeled frame and pivotally connected to the supporting frame, springs extending between the wheeled frame and the supporting frame for resiliently supporting the chair body, and means for locking the chair against rocking movement.

1,507,614. SHEARS. HENRY F. MILLER, Waynesville, N. C. Filed Sept. 17, 1923. Serial No. 663,248. 2 Claims. (Cl. 30—13.)



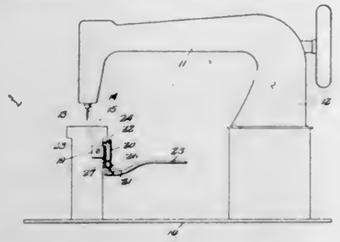
1. A cutting tool of the character described comprising a pair of crossed pivoted handles, the free end of each handle having a transverse groove, a cutting blade for each handle having a tongue adapted to be fitted in said groove, means for securing the blade to its respective handle, and said blade having its opposed edges sharpened to provide duplex cutting edges, whereby the blades can be reversed as and for the purpose specified.

1,507,615. SPOKE CONNECTION. HORACE H. MOSHER, Bristol, Ind. Filed May 19, 1923. Serial No. 639,094. 1 Claim. (Cl. 301—69.)



A wheel comprising a felly and having a spoke spaced from the felly, there being provided in the felly an opening passing transversely therethrough and alined with the spoke, a socket member mounted upon the spoke and interposed between the end of the spoke and the felly, a bolt received in the opening of the felly and having its outer end flush with the periphery of the felly, the inner end of the bolt being threaded and being received in the socket member, a jamb nut threaded upon the bolt and disposed between the socket member and the felly, and a tire rim surrounding the felly and disposed over the outer end of the bolt.

1,507,616. ELECTROTYPER'S CASE. WALKER W. MCCARROLL, New Haven, Conn. Filed Jan. 5, 1924. Serial No. 684,672. 4 Claims. (Cl. 204—6.)

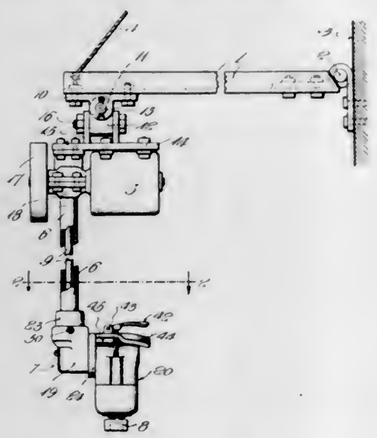


1. An electrotyper's case formed of a hard rolled aluminum plate.

1,507,617. SIGNAL DEVICE FOR AUTOMOBILES. JAMES E. MCWILLIAM, North Oxford, Mass. Filed Aug. 31, 1923. Serial No. 660,449. 3 Claims. (Cl. 40—130.)

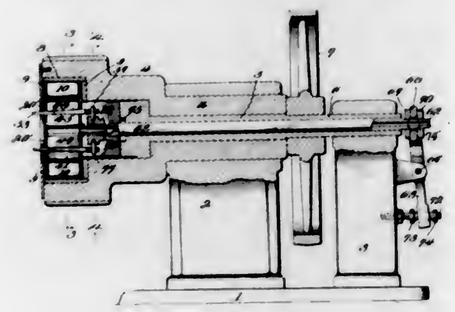
2. As an article of manufacture, a danger signal for an automobile, consisting of a side wind shield of transparent plate glass having a signal device on the front consisting of projecting characters provided with front convex colored light transmitting surfaces for the purpose described.

1,507,618. SEWING-MACHINE ATTACHMENT. OLE OLSON, Red Wing, Minn. Filed Apr. 12, 1924. Serial No. 706,720. 1 Claim. (Cl. 12—153.)



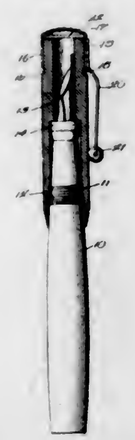
A guide for a sewing machine, to facilitate the sewing of cut-outs, tear-drops, and other holes of fanciful design, which consists of a bracket arranged beneath the throat-plate of the machine, a shaft journaled in said bracket, a lever for turning said shaft from the right to the left and vice versa, means for elevating the said shaft when the latter is turned in one direction and for lowering the shaft when turned in the opposite direction, and a gauge arm carried by the said shaft and presenting a guide element adapted to protrude slightly above the said throat-plate when the said shaft is elevated whereby to provide a bearing point or fulcrum for the edge of a cut-out, tear-drop, or other hole in the work.

1,507,619. LIQUID FUEL. ZACHARIAS OLSSON, Westport, Conn., assignor, by mesne assignments, to Burgoyne Light & Signal Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1922. Serial No. 608,100. 1 Claim. (Cl. 44—9.)



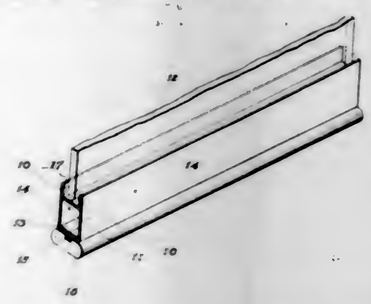
A liquid fuel consisting of kerosene oil or its equivalent hydrocarbon, naphthalene, and a heavy paraffin oil.

1,507,620. NUT AND BOLT TIGHTENING MACHINE. ALFRED EDWARD OPPENHEIMER, Moline, Ill. Filed Feb. 8, 1923. Serial No. 617,823. 9 Claims. (Cl. 74—101.)



1. A machine of the class described comprising a vertically movable elevated support, a prime mover pivotally hung from said support, a gear casing below said prime mover and a vertical hanger rigidly connecting said prime mover and said casing, gearing in said gear casing and a shaft driven thereby, and a drive shaft for said gearing extending thereto from said prime mover.

1,507,621. SWAGER WITH WEDGE MOTION. RALPH H. PERRY and HARMON J. COOK, Torrington, Conn., assignors to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 28, 1922. Serial No. 532,397. 5 Claims. (Cl. 78—22.)



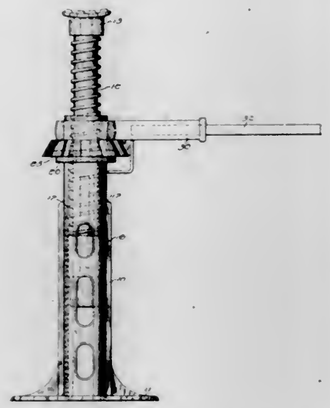
1. A rotary swaging machine including in combination, a housing, a rotary head located within the housing and having a plurality of radial grooves, a plurality of pairs of swaging dies located in said radial grooves, a backer associated with each swaging die and located in the respective groove of the rotating head containing the swaging die, wedges interposed between the swaging dies and the backer, a series of rotating members located between the housing and the rotating head and adapted to engage simultaneously the backers for operating the swaging dies, and means for simultaneously shifting said wedges for varying the radial working position of the dies.

1,507,622. PEN CLIP. ROBERT G. PILKINGTON, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed May 22, 1920. Serial No. 383,454. 6 Claims. (Cl. 24—11.)

1. In a writing instrument of the class described, in combination, a main cap having both ends open, a sealing means extending across one of said open ends, a supplemental cap fitted over said last mentioned open end of the main cap with its sides in engagement with the sides of said main cap, said supplemental cap being secured to said main cap so as to press said sealing means in close contact with the adjacent open end of the main cap.

1,507,623. WINDSHIELD FOR AUTOMOBILES. FRANCIS J. PLYM, Niles, Mich. Filed Mar. 17, 1917. Serial No. 155,421. 4 Claims. (Cl. 296—44.)

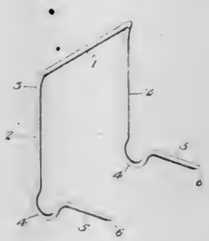
1. A wind shield casing for automobiles, comprising a single strip of metal having an integral resilient weatherstrip along its longitudinal central axis, formed by bending the strip, and having its edges bent upwardly, then inwardly and downwardly close to the upwardly bent portions of the strip, and then bent laterally in a single plane to meet substantially in a plane passing through the aforesaid axis, there being formed in said casing by said bending a wide groove adapted to receive the edge of the glass of the wind shield and a cushioning member, the latter adapted to separate the glass from the casing.



1,507,624. PROCESS FOR MANUFACTURING CONDENSATION PRODUCTS. FRITZ POLLAK and KURT RIPPER, Vienna, Austria; said Ripper assignor to said Pollak. Filed Feb. 5, 1923. Serial No. 617,164. 10 Claims. (Cl. 260—3.)

10. The process for manufacturing condensation products which comprises heating the soluble initial condensation products resulting from the action of 600 parts by weight of an aqueous solution of formaldehyde (say 40 per cent by volume) upon 100 parts by weight of urea until 60 per cent of the whole weight of the liquid are distilled off, thereby leaving a product still containing some free formaldehyde, adding to such product a quantity of urea calculated to represent one molecule of urea to each two molecules of free formaldehyde in such intermediate product, submitting the mixture after the solution of the urea to further evaporation in a vacuum apparatus at a temperature below 50 degrees centigrade to about the utmost point of viscosity at which the mass is still capable of being cast, filling the said mass into molds and then hardening it by heat, the temperature being raised in the last period of this hardening process to 100 degrees centigrade.

1,507,625. LIFTING JACK. WILLIAM B. RUNYAN, Dayton, Ohio, assignor to The Dayton Malleable Iron Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 10, 1923. Serial No. 673,946. 3 Claims. (Cl. 254—98.)



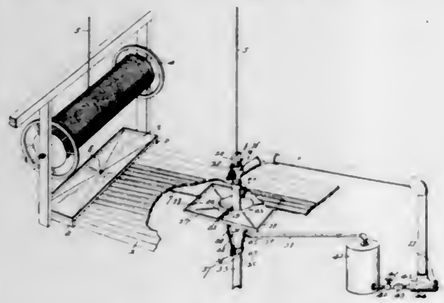
3. A lifting jack of the character described, comprising a body member having a passage therethrough, an outwardly extending bearing flange at the upper end of said body member; a screw member slidable within the passage in the body member, an internally threaded nut mounted on said screw member and having a socket in the lower face thereof for receiving said bearing flange in bearing relation, beveled teeth on said nut, a hub extension on the upper face of said nut; a handle member having a handle receiving socket in one end, and an enlargement on the other end which during operation of the device, has bearing on the upper face of the nut, an oppositely tapered passage through said handle member receiving the hub extension, the minimum diameter of

said passage being such as to slidably receive said hub extension, the tapered walls being arranged to give full bearing thereof at opposed ends on said hub extension when the handle member is rocked about the portion of minimum diameter; a tapered lug depending from said handle member and positioned to be moved into and out of cooperation with the beveled teeth as the handle mem-

ber is rocked about its portion of minimum diameter; and a depending malleable retaining lug carried by said handle member and bent over after assembling of the several parts to overlie the bearing flange of the body member to retain the several parts in assembled position and to permit bodily movement of the jack through the medium of the operating handle.

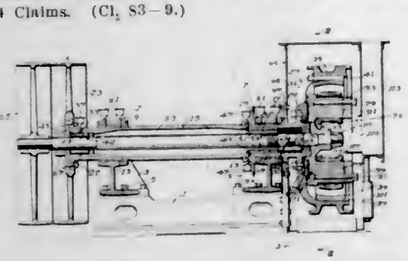
1,507,626. BOX LID OR COVER HOOK. WILLIAM L. SAXER, Dushore, Pa. Filed Jan. 4, 1924. Serial No. 684,344. 3 Claims. (Cl. 27—32.)

1. A box lid hook formed from a single piece of wire having an intermediate straight section and parallel side sections at the ends thereof, the portions of the side sections being of the same form and dimensions, each side section having a curved portion which merges with an end of the intermediate section and a straight body portion merging with said curved portion, a loop portion merging with the body portion and a straight end portion merging with the loop portion and having a pointed extremity.



1,507,627. TONGUE-SUPPORTING MEANS. OTTO SCHUPPERT, Arrington, Kans. Filed Jan. 22, 1923. Serial No. 614,280. 1 Claim. (Cl. 278—41.)

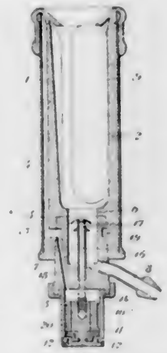
In combination with a horse drawn agricultural implement, its axle and its tongue, means for relieving the horses from the weight of the tongue comprising a pair of brackets connected with the front face of the axle, one at each side of the inner end of the tongue and below the level of the tongue, an eye bolt carried by each bracket, a spring having one end connected with the eye of each bolt, a chain connecting the inner ends



of the springs together and a hook-shaped bracket on the inner end of the tongue and on the top face thereof engaging the middle link of the chain.

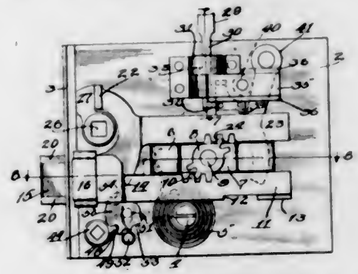
1,507,628. AUXILIARY OIL SAVER. ROBERT J. SCHUYLER, Mexia, Tex. Filed June 24, 1922. Serial No. 570,676. 4 Claims. (Cl. 166—16.)

1. An oil saver for well drilling rigs comprising a pan adapted to be mounted upon the oil pipe below the control head thereof and below the floor of the rig, said pan having a relatively large central opening, a downwardly tapering portion extending downward from said opening and at its lower end formed to be clamped upon the oil pipe, said pan being formed in two sections and having means whereby the sections may be clamped to each other, and an outlet pipe leading from the downwardly extending portion of the pan.



1,507,629. GRINDING MACHINE. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1924. Serial No. 695,226. 14 Claims. (Cl. 83—9.)

1. A grinding machine comprising, in combination, a support having bearings, an outer sleeve shaft journalled in said bearings and having a free end portion

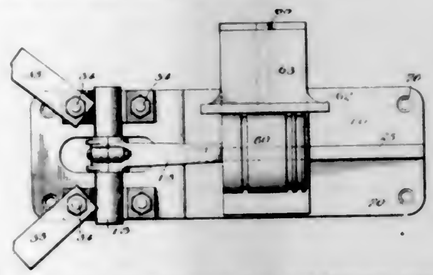


projecting beyond one of said bearings, a head fast on the end portion of said shaft, a ring runner carried by said head, an inner shaft in said sleeve shaft and projecting beyond the end portion thereof, a pusher head fast on the inner shaft, pushers carried by the pusher head, and free grinding balls adapted to be pushed along the runner by the pushers throughout an orbit and urged toward the runner by centrifugal force, and means to guide material to the runner that it may be ground between the balls and the runner.

1,507,630. PULSATOR VALVE. SVEN LEONARD SUNDBERG, Stockholm, Sweden. Filed Feb. 6, 1923. Serial No. 617,278. 3 Claims. (Cl. 31—72.)

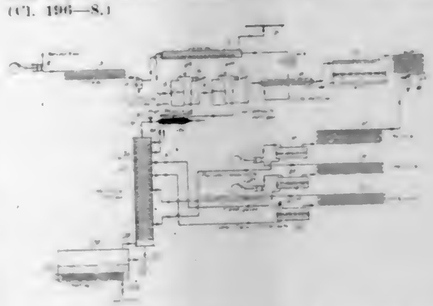
1. A device of the class described, comprising, in combination, a double-walled vessel having a variable pressure chamber between its walls, a valve casing in communication with said chamber and with the interior of the vessel, said valve casing being provided with an air-inlet port of greater diameter than that of its communication with the vessel, a reciprocatory valve member in said casing adapted alternately to close said port and said communication with the vessel, said valve being provided with a plurality of channels communicating with said variable pressure chamber and said air-inlet port, and means for placing said vessel in communication with a vacuum producing machine.

1,507,631. VEHICLE DOOR LOCK. BAYARD E. TAYLOR, Oak Park, Ill. Filed June 14, 1920. Serial No. 388,733. 10 Claims. (Cl. 70—29.)



1. A door lock comprising a latch bolt, a wedge, a mechanism for impelling said latch bolt and the wedge outwardly into a latching position, handle mechanisms operable independently of each other for retracting the latch bolt and wedge, and means locking the latch bolt against retraction by said handle mechanisms.

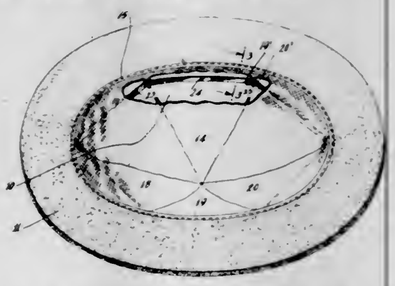
1,507,632. GOLF-CLUB TOOL. ISRAEL R. TAYLOR, Asbury Park, N. J. Filed Oct. 26, 1922. Serial No. 597,100. 4 Claims. (Cl. 15—236.)



1. A repair tool for golf clubs comprising a handle and a blade integral therewith, a fin r guard being formed at the junction between the handle and the blade, said blade being wedge-shaped in cross section, and teeth being provided along one of its edges.

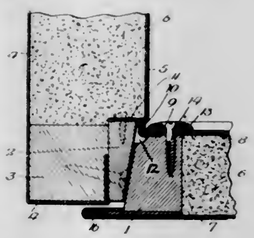
1,507,633. TESTING AND TRUING DEVICE. JOHN C. TAYLOR, Hermansville, Mich. Filed Dec. 4, 1922. Serial No. 604,840. 2 Claims. (Cl. 33—180.)

1. An apparatus for testing and straightening piston rods comprising an elongated base having upstanding sides provided with notches, a mandrel received in said notches and adapted for connection with a piston rod, a carriage slidable upon said base and extended for a substantial distance beyond one longitudinal edge of the same, a piston contact block slidably mounted on said carriage and movable transversely of the longitudinal axis of the base and provided with an upstanding piston contact plate, there being a tongue and groove connection between the carriage and the base and between the piston contact block and the carriage.



1,507,634. PROCESS OF MAKING GASOLINE. HAROLD E. THOMPSON, Clendenin, W. Va., assignor to Carbide & Carbon Chemicals Corporation, a Corporation of New York. Original application filed Aug. 29, 1921, Serial No. 496,321. Divided and this application filed Sept. 8, 1922. Serial No. 586,811. 6 Claims. (Cl. 196—8.)

1. Process of making gasoline which comprises producing from natural gas a concentrate of its heavier hydrocarbons, separating from said concentrate a more volatile fraction and a less volatile fraction, rectifying

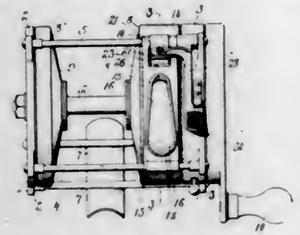


said less volatile fraction in a rectifying column to produce a liquid and a vapor, compressing said more volatile fraction, cooling it by heat-interchange with the vapor from the less volatile fraction, and expanding the material so cooled into the rectifying column at a point above the place of introduction of said less volatile fraction.

1,507,635. LADY'S AND CHILD'S HAT. BENJAMIN B. TURCHIN, Brooklyn, N. Y. Filed Dec. 2, 1921. Serial No. 519,549. 2 Claims. (Cl. 2—190.)

1. A hat comprising a rim, a crown, and a lining on the interior of said crown, said lining comprising a plurality of sections secured to each other to form a single, smooth interior surface and an elastic member attached to each of said sections, and the length of each of said elastic members being substantially smaller than the width of the section to which it is attached.

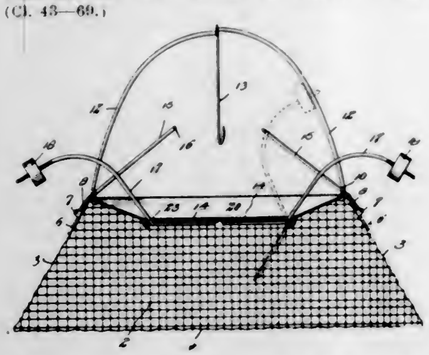
1,507,636. REFRIGERATOR-DOOR SEAL. JOHN TWARDOWSKY, Chicago, Ill., assignor, by mesne assignments, to Universe Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,514. 5 Claims. (Cl. 20—69.)



1. In combination with a door frame, and a door having a continuous recess adjacent to the inner edges thereof, a compressible sealing member of substantially L-shape cross-section having one web thereof secured to the inner face of the door so as to cause the other web to lie in alignment with the recess and to have edgewise engagement with the door frame, whereby upon such engagement the apex portions of the member may move into the recess.

1,507,637. INSECTICIDE. JAMES A. ULLMAN, White Plains, N. Y. Filed Mar. 25, 1922. Serial No. 546,805. 7 Claims. (Cl. 167—6.)

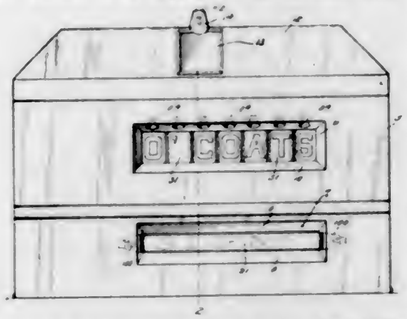
1. A composition for insecticidal use in aqueous dilution, comprising pyridine in a medium of soap forming a homogeneous mixture of jelly-like consistency capable of rapid dispersion when admixed with water.



3. A jelly-like insecticide comprising pyridine and the potassium soap from cocoanut oil and capable of very rapid dispersion in water.

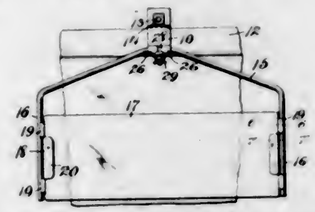
1,507,638. FISHING REEL. HUBERT C. VERHEY, Ocean City, N. J. Filed Aug. 30, 1922. Serial No. 585,140. 5 Claims. (Cl. 242—84.5.)

2. A fishing reel comprising, a frame, a spool rotatably mounted upon the frame, a braking surface formed upon the spool adapted for applying thumb pressure to retard the rotation of the spool, a thumb rest secured upon the frame adjacent to said braking surface of the spool, and said thumb rest positioned eccentrically in relation to said braking surface whereby a movement of the thumb along said rest will vary the pressure of the thumb upon said braking surface.



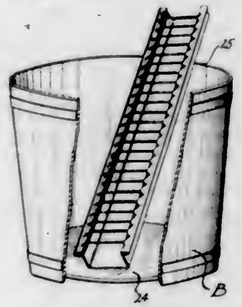
1,507,639. SMALL-ANIMAL TRAP. ANDREW J. WADDELL and WASHINGTON W. WADDELL, Holcomb, Mo. Filed Apr. 25, 1922. Serial No. 556,383. 1 Claim. (Cl. 43—69.)

A trap comprising a body, an open center frame applied to the top thereof, said frame having inclined side walls, a stop member mounted upon the frame at the outer portion thereof and disposed over the side of the frame and having an angularly disposed extremity disposed over the opening in the center of the frame, a platform hinged to the inner edge of the frame and at the same side thereof at which the stop member is mounted, a curved rod mounted upon the platform in the vicinity of the hinged edge thereof, said rod extending over the adjacent side of the frame, a weight carried at the outer end of the curved rod and normally disposed beyond the outer edge of the adjacent side of the frame, the angular extremity of the stop member being located in the path of movement of the rod when the platform is swung in a downward direction with relation to the frame, the parts being so arranged and the curvature of the rod being such that when the platform is swung down, the weight is carried to a point lying vertically between the platform and the frame and the outer edge of the adjacent side of the frame.



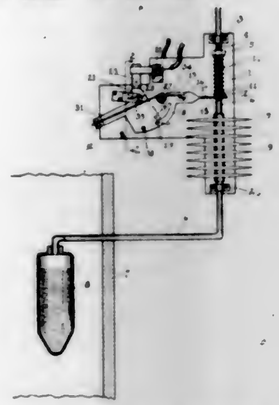
1,507,640. ADVERTISING DEVICE. FRANK WADDEY, Franklin, Tenn. Filed Nov. 19, 1923. Serial No. 675,693. 5 Claims. (Cl. 40—30.)

1. In an advertising device, a casing formed with an opening, a frame structure positioned within said casing, a longitudinal shaft journaled within said frame, means for rotating the same, a carriage rectilinearly movable in opposite directions upon said shaft, a longitudinal row of letter carrying elements slidably disposed upon the frame structure and normally positioned beneath the opening in the casing, abutments carried by said letter carrying elements adapted to be engaged by the carriage while the



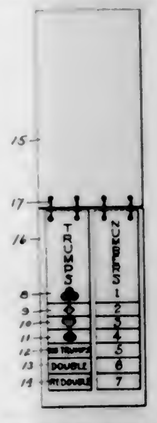
same is moving in a certain direction, means for maintaining said letter carrying elements in a raised position, and means automatically operable by the return movement of the carriage for releasing, said means for allowing said letter carrying elements to drop to their initial position beneath the opening in the casing.

1,507,641. GLARE ELIMINATOR. ALBERT H. WADELL, Newark, N. J., assignor of one-half to Carl E. Anderson, East Orange, N. J. Filed Aug. 12, 1922. Serial No. 581,292. 4 Claims. (Cl. 296—97.)



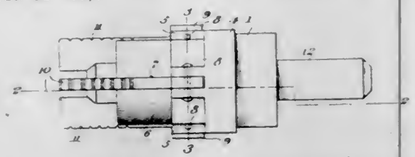
1. A glare eliminator comprising an open frame having side arms with a spring action, clips, a transparent plate between the clips, the arms being pressed against the clips and the clips being pressed against the plate solely by the spring action of the arms.

1,507,642. SEED-CORN SHELLER. JAMES A. WALKER, Lerna, Ill. Filed Feb. 25, 1922. Serial No. 539,235. 4 Claims. (Cl. 130—10.)



1. A corn sheller comprising a channel shaped member of sheet metal bent in substantially U-shaped manner to provide outstanding legs, and a seed engaging device including spaced bars affixed to and extending transversely between the free ends of said outstanding legs.

1,507,643. ELECTRIC SWITCH. JOHANN G. WALLMANN, Oakland, Calif. Filed Apr. 10, 1922. Serial No. 550,994. 1 Claim. (Cl. 200—70.)

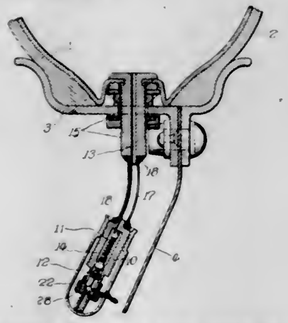


In the switch of the character disclosed, a trip lever, a shoe on said trip lever, a switch swinging member, a pair of pins on said swinging member, a spring engaging said switch swinging member at one end and connected to the pivot of said trip lever at the other end, a screw on one end of said trip lever around which said spring coils, the other end of said trip lever being adapted to be swung by the expanding member of a thermostat, one of said pins being arranged to engage said shoe and hold said switch closed until said spring is flexed by the movement of said trip lever to a point where it springs the switch open and the other pin being arranged to engage said shoe and hold the switch open until said spring is flexed sufficiently by the action of said trip lever in the opposite direction to spring said switch closed.

1,507,644. INDICATING DEVICE. SAIDER REEVE WARING, Maplewood, N. J. Filed Dec. 20, 1922. Serial No. 608,015. 1 Claim. (Cl. 116—134.)

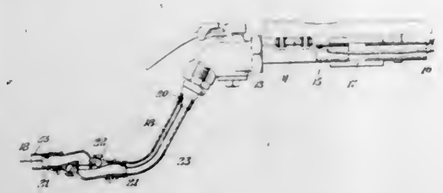
An indicating device comprising a plurality of independent groups of indicators of successively increasing size provided with indicator markings of increasing value for the successive indicators of each group, and the groups being relatively arranged and adapted to permit any indicator of any one group to be placed in effective position in conjunction with any indicator of another group to render the respective indicator markings visible on the said indicators when placed in effective position.

1,507,645. TOOL. DAVID S. WEDGEWORTH, Saucier, Miss. Filed Dec. 20, 1922. Serial No. 608,037. 1 Claim. (Cl. 81—71).



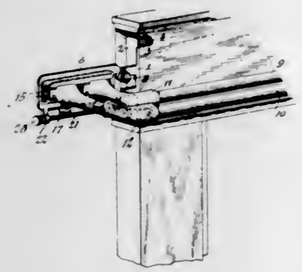
A tool for the purpose set forth comprising a head including a straight end terminating in a shoulder provided with projecting spaced ears on each of the faces thereof and having a tubular extension beyond the ears, said extension having angle slots which pass between the spaced ears, jaw members comprising blades having widened inner ends provided with elongated openings, one of said jaws being received in each of the slots, a pivot passing between the ears and through the openings of the jaws, each of said jaws having its outer edge toothed or serrated and its inner edge disposed angularly with respect to its outer edge, said head having a squared bore, a cross sectionally squared bar received in the bore and having longitudinally extending angularly disposed grooves whose inner walls are deepest at the outer ends thereof, and each of said grooves designed to receive the inner edge of one of the jaws when the bar is moved inwardly through the head.

1,507,646. SELF-SEALING INNER TUBE AND PROCESS OF PRODUCING SAME. WILLIAM W. WILDMAN, Bay City, Mich., assignor to The Wildman Rubber Company, Bay City, Mich., a Corporation of Delaware. Filed Nov. 21, 1921. Serial No. 516,674. 7 Claims. (Cl. 154—15.)



1. An inflatable self-sealing inner tube for use in tire casings, composed solely of inner and outer annular plies of elastic vulcanized rubber and a semi-annular tacky strip of crude rubber and a semi-annular solid strip of vulcanizable rubber strongly resistant to stretch superposed upon each other and vulcanized together within and to said inner and outer plies.

1,507,647. FLEXIBLE AIR VALVE FOR AUTOMOBILE TIRES. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Mar. 23, 1921. Serial No. 454,612. 4 Claims. (Cl. 152—12.)

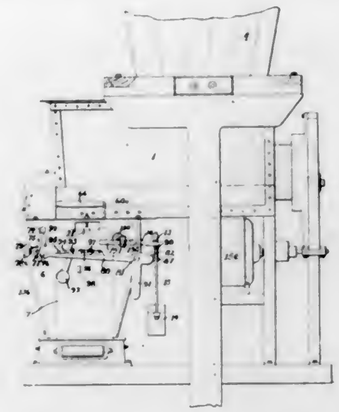


1. A one-piece metal valve stem consisting of straight inflexible segments connected by a readily flexible tubular segment.

1,507,648. TRAIN SIGNAL SYSTEM. DAVID H. WILSON, Wortendyke, N. J.; E. Pauline Wilson administratrix of said David H. Wilson, deceased. Filed Sept. 2, 1920. Serial No. 407,635. 15 Claims. (Cl. 177—352)

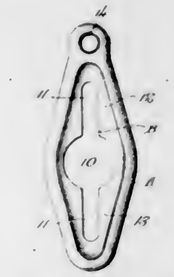
1. In a train signalling system, the combination with a car, of a metal air pipe provided with live ends and an insulated middle section, means for rigidly supporting and insulating the live ends of said pipe from the car, and means for electrically connecting said live ends.

1,507,649. SHADE AND CURTAIN FIXTURE. GEORGE WOSSOWICZ, Forks, N. Y. Filed Nov. 8, 1922. Serial No. 599,715. 1 Claim. (Cl. 156—24.)



In a fixture of the type described, an attachment element having means for securement to a window frame and an arm arranged to project laterally from said frame, a plate having horizontal angular flanges projecting from its rear face and forming an undercut rear guideway which receives said arm, said plate being thereby lengthwise adjustable upon and removable from said arm, said plate also having horizontal angular flanges projecting from its front face and forming an undercut front guideway, independent supporting arms having enlarged extensions conformably and slidably engaging with the guideway between said last named flanges, and securing screws on said plate for holding said plate and supporting arms against movement from positions to which they may be adjusted.

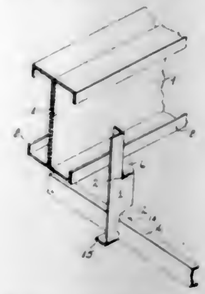
1,507,650. AUTOMATIC WEIGHING MACHINE. WILLIAM WOOLCOTT. Winchester, Ky. Filed July 31, 1920. Serial No. 400,449. 56 Claims. (Cl. 249—15.)



1. In an automatic weighing machine, the combination of a casing, a weighing hopper to receive the material to be weighed, a gate for controlling the flow of the material into the weighing hopper mounted at the bottom of the hopper, closing means acting independently of the weighing hopper for closing the gate, tripping mechanism controlled by the load in the hopper for controlling the time of operation of the closing means, said tripping

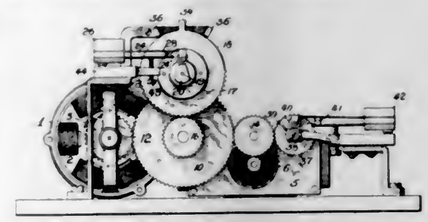
mechanism including movable parts and a relatively fixed detent co-operating therewith, and mounted on the

casing, said tripping mechanism operating when tripped, to disengage the said moving parts from the relatively fixed detent.



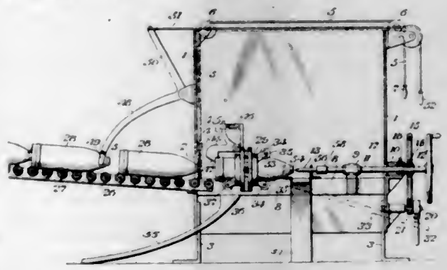
1,507,651. GRABHOOK. JAMES W. YOUNG and EDWARD LYNCH, Elmira, N. Y. Filed Sept. 7, 1922. Serial No. 588,737. 4 Claims. (Cl. 24—116.)

1. A chain grab hook of the class described, comprising an elongated flattened body casting recessed on one of two opposing faces and provided with a slot in the direction of its long axis connecting said recesses, a portion of said slot being enlarged in lateral cross-section to permit passage of chain links therethrough in any rotative position with respect to the casting and an end portion of said slot being so restricted in width as to permit only edgewise passage of chain links therethrough, the face recess being of greatest width contiguous to the enlarged slot portion and of gradually decreasing width therefrom throughout its length.



1,507,652. CEILING SUPPORT. BIRGER M. YOUNGBERG, Cleveland, Ohio. Filed July 19, 1922. Serial No. 575,924. 3 Claims. (Cl. 72—118.)

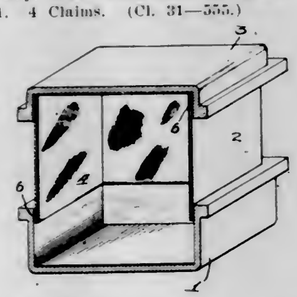
1. A ceiling support member comprising a strip having a T-shaped slot at one end forming two tongues, the upper tongue being bent at right angles to the plane of the strip and the other tongue being bent outwardly, the upper tongue being adapted to be hooked over the vertical flange of a ceiling beam, the lower tongue being adapted to be bent up against the bottom of the beam



to secure the member thereon, and means on the lower end of the member adapted for engagement with the bar to be supported.

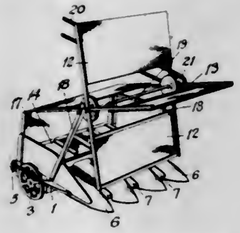
1,507,653. COMPASS RELAY TRANSMITTER. MAURICE L. ZOBEL, Rosebank, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1919. Serial No. 331,879. 11 Claims. (Cl. 77—351.)

2. In a relay transmitter, a repeater motor adapted to be controlled by movements of a sending instrument, a second motor, a cam, gearing differentially connected to said repeater motor, said second motor, and said cam, an electrical contact controlled by said cam, electrical connections between said contact and said second motor for controlling the latter, and electrical contacts adapted to be opened and closed by said second motor.



1,507,654. MACHINE FOR REMOVING THE BOOSTER CHARGE FROM HIGH-EXPLOSIVE SHELLS. GUSTAVE ALLISON, Perth Amboy, N. J., assignor to Columbia Salvage Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1923. Serial No. 634,526. 15 Claims. (Cl. 29—88.2.)

1. The combination of a casing having an aperture in one side, a conveyor entering said casing through said aperture, a door for said aperture, a pivotally mounted horizontal chuck within the casing and adapted to re-

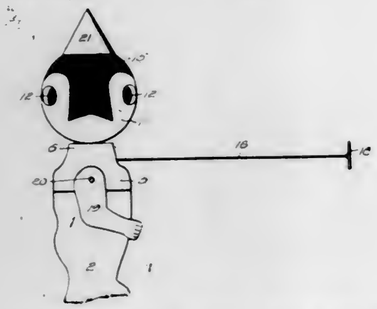


ceive a shell from the said conveyor, means for holding the shell in said chuck against a counter clock-wise rotation, a rotatable and longitudinally slidable shaft extending into said casing, a removing tool secured to the inner end of said shaft, means for rotating said shaft, and means for tilting the chuck to release the shell therefrom.

1,507,655. CHEESE BANDAGE. WINFIELD A. AUSTIN, Green Bay, Wis. Filed Nov. 12, 1923. Serial No. 674,151. 4 Claims. (Cl. 31—555.)

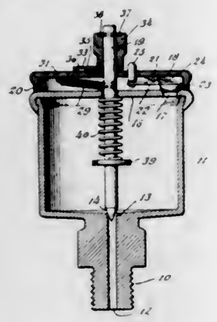
1. In a cheese mould, a hoop, a cheese bandage therein comprising a loop of cloth having its upper and lower margins contracted and folded over the upper and lower edges of said hoop for the purpose set forth.

1,507,656. FLAX-PULLER ATTACHMMENT FOR BINDERS. JOSEPH A. BARTOSZ, Turner, Oreg. Filed Apr. 8, 1921. Serial No. 459,556. 3 Claims. (Cl. 55—66.)



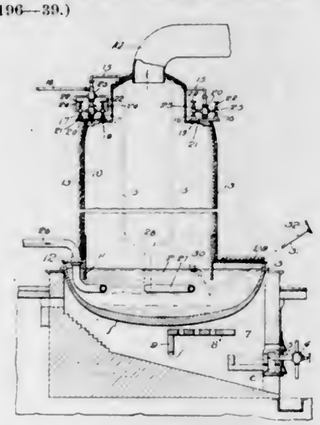
1. A flax puller attachment comprising, a frame, a plurality of flax pulling rollers journaled in the frame and projecting horizontally from one side thereof, each roller having one side flattened in accordance with Fig. V, a conveyer on the frame rearwardly of the flax pulling rollers, a reel adjustably supported on the frame, and a wheel at the end of the frame.

2. In a flax puller attachment, a frame, a plurality of bearings extending from one side of the frame to the other, a shaft journaled in each bearing, a gear at the end of the shaft outside the frame, a rubber covered roller at the other end of the shaft outside the frame, said roller being flattened on one side to substantially one half of its diameter and constituting with the adjacent roller, a flax pulling pair, a conveyer on the frame, a reel on the frame above the rollers, and a supporting wheel adjustably mounted at one end of the frame.



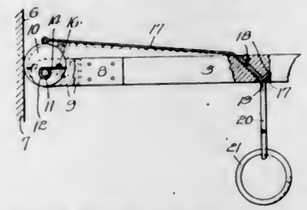
3. In a flax puller attachment, a frame, a plurality of bearings extending from one side of the frame to the other, a shaft journaled in each bearing, a rubber covered roller having one side flattened to substantially one half of its diameter, said roller forming an integral part of the shaft and extending horizontally from one side of the frame, two adjacent rollers being synchronized to form with their flattened and curved sides an alternately opening and closing pair, pointed guards mounted above the rollers and projecting with their points in advance of said rollers to guide the flax stalks into the opening pair, a reel mounted on the frame and rotating past the guards, a conveyer on the frame, and a supporting wheel at one end of the frame.

1,507,657. FIGURE TOY. EDDIE BENOIST, St. Louis, Mo. Filed Jan. 31, 1922. Serial No. 533,090. 1 Claim. (Cl. 46—40.)



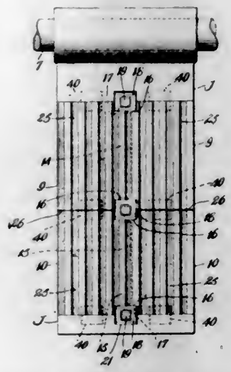
A sounding figure toy comprising a body section including integral supporting legs, said body having a socket formed in its upper end, a tubular shoulder section having a downwardly directed extension receivable in the socket of the body section for supporting the shoulder section in position, arms pivotally connected to the shoulder section, a neck section terminating upwardly from the shoulder section and provided with a laterally directed opening, a pivot pin revolubly supported by the body and neck sections, a spherically shaped head fixed to the upper end of the pivot pin to revolve therewith, a hollow cap fixed to the head, a sounding device loosely mounted upon the head within the cap, a pull cord fixed at one end to the pivot pin and capable of being wound thereupon and the free end thereof passing through the opening of the neck section, said cord when periodically pulled and quickly slackened causes the head to revolve first in one direction and then in the opposite direction.

1,507,658. OIL CUP. FREDERICK A. BERGMANN, Merrick, N. Y. Filed Feb. 10, 1923. Serial No. 618,186. 2 Claims. (Cl. 184—88.)



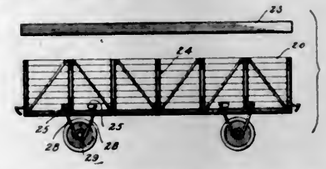
2. An oil cup having a fixed flat cover provided with an unobstructed filling hole, a level closure rotatably mounted on said cover and having a depending flange to provide a space between said closure and said cover, an arm pivotally mounted upon said closure within said space, said arm terminating in a plug adapted to engage within and seal said filling hole, resilient means contacting with said arm and cover to normally urge said plug towards said filling hole, a pin on said arm projecting through said closure, and a pair of divergent springs normally holding said closure in a position in which the plug is engaged with said hole, said closure having a contour exposing said filling hole when said cover is rotated against the action of said springs.

1,507,659. APPARATUS FOR DISTILLATION OF MINERAL OILS. ELMER E. BILLOW, Evanston, Ill., assignor of one-half to Adolphus M. Allen, Chicago, Ill. Filed May 29, 1918. Serial No. 237,198. 4 Claims. (Cl. 196—39.)



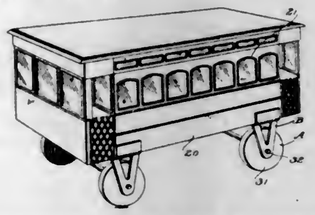
1. An apparatus for distilling mineral oil comprising an upwardly open receptacle containing a quantity of lead and means for heating said lead sufficiently to render it molten, a tower surmounting the lead container and sealed thereover to exclude air, openings in the tower at the upper part thereof, a plurality of oil injecting nozzles movably mounted adjacent each opening, arranged to be selectively registered therewith, and means for closing the opening to exclude air from the apparatus during the interchange of nozzles, said movably mounted nozzles constituting means whereby the feeding of oil through the said openings will be practically uninterrupted.

1,507,660. ROLLER-SHADE FIXTURE. FRANK M. BONHEIM, St. Louis, Mo. Filed Apr. 10, 1922. Serial No. 551,225. 4 Claims. (Cl. 156—26.)



4. In a window shade holding structure, a shade-stick having a pair of converging openings with the upper and lower faces of the shade stick, a bifurcated fixture fixed to and extending from each end of the shade-stick, a cross pin carried by the bifurcated end of each bifurcated fixture, a coiled spring encircling said pin, a shade holding roller eccentrically and rotatably mounted upon said spring, a lug carried by the bifurcated fixture for engagement with one end of the coiled spring, a lug carried by the roller for engagement with the opposite end of the coiled spring, a bifurcated cord having its outer bifurcated ends connected to the peripheral face of each shade holding roller and having its inner end directed through the converging openings of the shade stick.

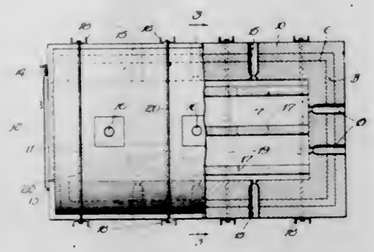
1,507,661. WEARING PLATE FOR CRUSHERS. CHARLES G. BUCHANAN, East Orange, N. J. Filed June 10, 1922. Serial No. 567,258. 2 Claims. (Cl. 83—53.)



1. A reversible wearing plate composed of material adapted to flow under pressure and comprising a generally rectangular body having a flat back surface adapted to permit expansion of the plate in all directions, a central tongue member adapted to hold the plate centrally against shifting and permit expansion of said plate in all directions, and separated surfaces at the edges of the plate formed to be gripped by holding means at such separated points on opposite edges to hold the plate against the supporting surface while permitting its expansion thereon in service.

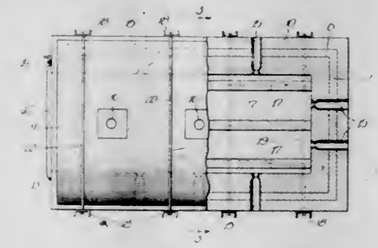
1,507,662. COMBINED PACKAGE AND TOY. LEONARD R. CARLEY, Watertown, and GEORGE H. KAY, Prospect, Conn. Filed Apr. 22, 1922. Serial No. 555,950. 5 Claims. (Cl. 46—48.)

1. A combined toy and package comprising a receptacle having a depending flange with openings or recesses therein, wire brackets adapted to engage the said flange and the side walls of said openings or recesses and be resiliently held therein, said brackets projecting beneath the said receptacle and forming axle supports, and wheels and axles rotatably mounted by said axle supports.



1,507,663. COMBINED PACKAGE AND TOY. LEONARD R. CARLEY, Watertown, and GEORGE H. KAY, Prospect, Conn. Filed Apr. 22, 1922. Serial No. 555,951. 3 Claims. (Cl. 46—48.)

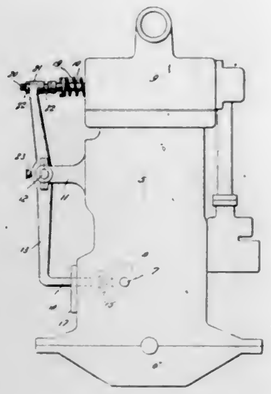
1. A combination package and toy comprising a container, wheels and axles therefor, and axle-supporting brackets having an open loop at their upper extremities



adapted to pierce the bottom wall of the container and to receive the side wall in said open loop and rigidly engage the same and support the axles and wheels.

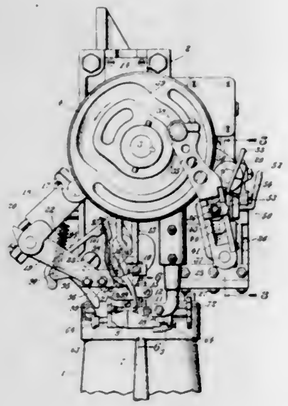
1,507,664. FURNACE OPERATION. HORACE H. CLARK, Chicago, Ill. Filed Aug. 12, 1920. Serial No. 403,001. 4 Claims. (Cl. 25—132.)

1. A method of enameling, which consists in heating a furnace chamber until a desired temperature is obtained, stopping the source of heat, placing the articles to be enameled in the chamber, withdrawing the articles from the chamber, and again applying heat to said chamber to restore former temperature thereof for the reception of another lot of articles to be enameled.



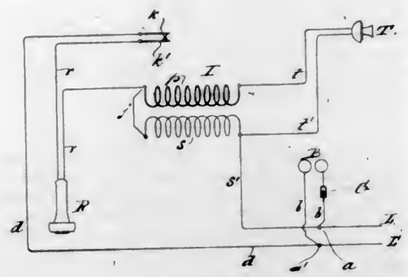
1,507,665. METHOD OF FURNACE OPERATION. HORACE H. CLARK, Oak Park, Ill. Filed Oct. 26, 1921. Serial No. 510,551. 4 Claims. (Cl. 263—1.)

1. A method of subjecting metals, refractory materials, and the like to high temperatures, which consists in heating a furnace chamber until a desired temperature is obtained, stopping the source of heat, opening the chamber to atmosphere down to the floor of the chamber, placing the articles to be treated in the chamber, withdrawing the articles from the chamber when necessary, and again applying heat to said chamber to restore temperature thereof for the reception of other articles to be treated.



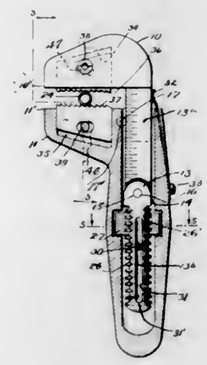
1,507,666. INTERNAL-COMBUSTION ENGINE. EDGAR LEE DAVIS, West Frankfort, Ill. Filed July 13, 1923. Serial No. 651,192. 1 Claim. (Cl. 123—90.)

In an internal combustion engine, having a cylinder and a crank casing with a cam shaft journaled therein, said crank casing being provided at its side with an opening, a hanger attached to the side of the cylinder and having a bearing, a rocker arm having a shaft which is journaled in the bearing, the rocker arm being provided with a rectangularly disposed extremity which passes through the opening in the side of the crank casing, said extremity being integral with the rocker and operatively engaging the cam shaft, a slide member having a central opening which snugly receives said extremity, guides for holding the slide member over the opening in the crank casing, and adapted to guide the movement



of the slide member, a bolt adjustably mounted at the opposite end of the rocker and engaging the stem of a valve of the engine.

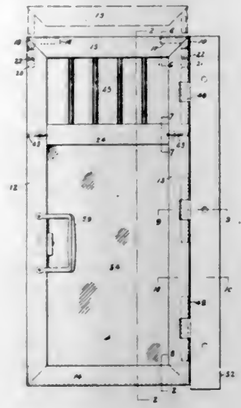
1,507,667. FASTENER-INSERTING MACHINE. STEPHEN A. DOBYNE, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed June 11, 1917. Serial No. 174,096. 40 Claims. (Cl. 1—27.5.)



33. In a machine of the class described, fastener inserting mechanism including an element mounted for movement into and out of the line of drive, a work feeding awl mounted for movement into and out of the line of drive, means for imparting to said awl successively, an initial clearing movement in the direction of the feed, a piercing movement and a feeding movement, means for increasing the feeding movement of said awl adapted to decrease the clearing movement, and means for moving said element adapted to cause the same to dwell when in the line of drive in order to permit the insertion of a fastener into the hole formed by the awl.

1,507,668. TELEPHONE INSTALLATION. EDWARD A. DRISCOLL, New York, N. Y. Filed June 15, 1921. Serial No. 477,644. 4 Claims. (Cl. 179—81.)

1. In a telephone installation embodying a central energy system the combination of a pair of line wires, a receiver, a transmitter, and an induction coil having a primary winding of low resistance and a secondary winding of high resistance, said transmitter and the primary winding of said induction coil being in series with each other but in parallel with the secondary winding with reference to said line wires.

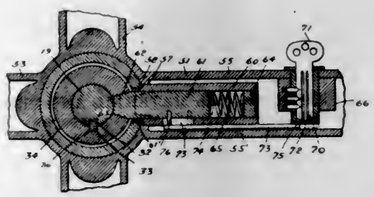


1,507,669. COMBINATION WRENCH. LOUIS G. ECONOM, New York, N. Y. Filed Mar. 25, 1922. Serial No. 546,559. 3 Claims. (Cl. 81—106.)

1. In a combination wrench, the combination of a handle having a slot formed therein, a shank adapted to be reciprocated in said slot and having a groove formed on the lower portion thereof, means for permitting said shank to have a rocking movement, means for preventing said rocking movement when desired, resilient means for maintaining and guiding the shank when reciprocated, and means for preventing the withdrawal of the shank from the slotted handle, said means comprising a set-screw adapted to abut the shank adjacent the grooved face thereof.

1,507,670. SHOWER-BATH-STALL DOOR. LOUIS F. EISELE, Philadelphia, Pa. Filed Apr. 9, 1923. Serial No. 630,698. 11 Claims. (Cl. 199—46.)

9. A door structure including a channel frame; filler strips within the channels of the frame; a panel within the channels between the filler strips, one side of the channel frame being recessed; mounting means having



sleeves fitting within the recesses, and pins secured to the sleeves and extending into the frame between the channel and the filler strip.

1,507,671. DETACHABLE RING FOR TIRE RIMS. FRANK S. GREENE, Cleveland, Ohio, assignor to The Hydraulic Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 25, 1921. Serial No. 455,597. 2 Claims. (Cl. 152—21.)

1. The combination with a rim having a flange at one side and a groove at the opposite side, said groove being imperforate, of a tire engaging ring adapted to fit into said groove, said ring being divided at one point of the abutting ends of said ring interlocking to prevent radial movement at one end with reference to the other, one of said ends, however, being capable of radial movement by external force, to separate said ends.

1,507,672. STEERING-WHEEL MECHANISM FOR AUTOMOBILES. JACOB R. GRIFFITH, Kansas City, Mo. Filed Oct. 11, 1921. Serial No. 507,015. 5 Claims. (Cl. 70—129.)

2. In an automobile, and in combination with the steering mechanism, and its actuating spindle, of a steering wheel and its hub, having an opening therein, and separate sleeves in said opening having depressions in their upper surfaces, one of which sleeves is keyed to

said spindle, and locking means to both sleeves and caps within said opening in said hub having flanges, adapted to be retained within the depression in said sleeve.

1,507,673. AGGLOMERATED FINELY-DIVIDED MATERIAL AND PROCESS OF PRODUCING THE SAME. THEODORE NAGEL, New York, N. Y. Filed Apr. 21, 1923. Serial No. 633,805. 15 Claims. (Cl. 44—16.)

1. The process of agglomerating a finely divided material which consists in mixing said material with an organic binder containing phosphorous in inorganic combination, and capable of hardening upon heating; and heating said mixture to a temperature sufficient to harden said binder.

1,507,674. PROCESS OF BRIQUETTING FINELY-DIVIDED MATERIALS. THEODORE NAGEL, New York, N. Y. Filed Apr. 21, 1923. Serial No. 633,806. 8 Claims. (Cl. 44—16.)

1. The process of agglomerating a finely divided material which consists in mixing said material with a binder containing sulphite pitch and combined phosphorus, such binder being capable of hardening upon heating; and heating said mixture to a temperature sufficient to harden said binder.

1,507,675. BINDING-FUEL MATERIAL. THEODORE NAGEL, New York, N. Y. Filed Apr. 21, 1923. Serial No. 633,807. 9 Claims. (Cl. 44—16.)

1. The process of making a binding fuel material for agglomerating finely divided substances, which is capable of hardening and becoming water-insoluble when heated, which consists in mixing an organic compound with combined phosphorus in such proportions that upon heating said mixture it will form a hard water-insoluble binder.

1,507,676. BINDING-FUEL MATERIAL FOR BRIQUETTING FINELY-DIVIDED MATERIALS AND PROCESS OF PRODUCING THE SAME. THEODORE NAGEL, New York, N. Y. Filed Apr. 21, 1923. Serial No. 633,808. 6 Claims. (Cl. 44—16.)

1. The process of making a binding fuel material for agglomerating finely divided substances which is capable of hardening and becoming water-insoluble when heated which consists in mixing an organic compound containing sulphite pitch with combined phosphorus in such proportions that upon heating said mixture it will form a hard water-insoluble binder.

1,507,677. BINDING-FUEL MATERIAL AND METHOD OF PRODUCING SAME. THEODORE NAGEL, Brooklyn, N. Y. Filed Dec. 8, 1923. Serial No. 679,304. 7 Claims. (Cl. 44—1.)

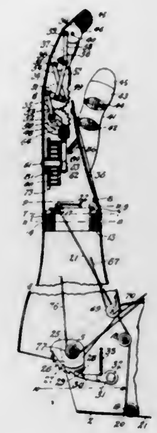
1. The method of making a binding fuel material for finely divided substances which method consists in mixing a liquid possessing adhesive properties with a material possessing drying properties in such proportions that upon incorporating with the finely divided substances, pressing and heating, said mixture will form a hard, smokeless, water-insoluble binder.

1,507,678. BINDING-FUEL MATERIAL AND PROCESS OF PRODUCING THE SAME. THEODORE NAGEL, Brooklyn, N. Y. Filed Dec. 8, 1923. Serial No. 679,305. 6 Claims. (Cl. 44—15.)

1. A method of making a hard, water-insoluble, non-volatile binding fuel material which method consists in mixing sulphuric acid or the like with a water-soluble organic adhesive material in such proportions that upon incorporating with comminuted materials, pressing into briquets and heating, the particles forming the briquets will be held together by a hard, water-insoluble, non-volatile binder.

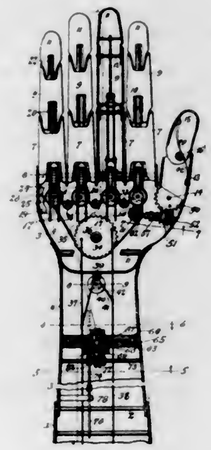
1,507,679. FUEL. THEODORE NAGEL, Brooklyn, N. Y. Filed Dec. 8, 1923. Serial No. 679,306. 10 Claims. (Cl. 44—15.)

1. The method of making a binding material for finely divided substances, which method consists in mixing a liquid possessing adhesive properties with a dilute dehydrating agent without the generation of heat, while so proportioning the ingredients of the mixture that, upon heating after incorporation with comminuted material and pressing, a reaction will result to produce hard, water-insoluble agglomerates.



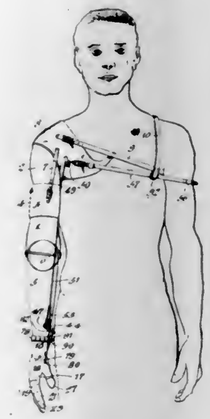
1,507,680. ARTIFICIAL LIMB. ALBERTO PECORELLA and VINCENT PATRICOLO, Buffalo, and FREDERICK H. APEL, Athol Springs, N. Y., assignors, by mesne assignments, to Livingston Artificial Limb Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 17, 1921. Serial No. 508,112. Renewed Feb. 15, 1924. 13 Claims. (Cl. 3—12.)

6. An artificial limb comprising a palm, a finger pivoted on said palm, and means for actuating said finger comprising a keeper on the palm, an adjusting bar pivoted on the finger and adapted to move lengthwise of said keeper and engage different parts of its length with the same, a guide pulley arranged on the palm above said keeper, and an operating line passing around said pulley and having two backwardly extending stretches one of which forms a releasing stretch and is connected with the rear part of the adjusting bar and the other of which forms a pulling stretch and is adapted to be operated manually, said bar having its rear part arranged between said pulley and keeper and adapted to be moved laterally out of engagement from said keeper upon drawing backwardly on said pulling stretch.

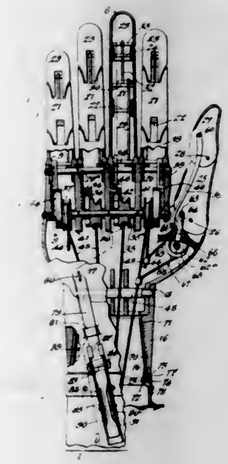


1,507,681. ARTIFICIAL LIMB. ALBERTO PECORELLA and VINCENT PATRICOLO, Buffalo, N. Y., assignors, by mesne assignments, to Livingston Artificial Limb Company, New York, N. Y., a Corporation of Delaware. Substitute for abandoned application Serial No. 241,927, filed June 26, 1918. This application filed Mar. 14, 1924. Serial No. 699,372. 11 Claims. (Cl. 3—12.)

1. An artificial limb comprising a palm, a digit having a first section pivoted on said palm, a section pivoted on said first section and a third section pivoted on said second section, and means for turning said third digit section comprising a shifting member extending from the pivotal connection between said palm and first digit



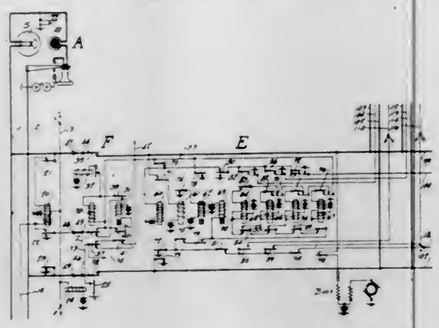
section to said third digit section on one side of the pivotal connection between the same and said second digit section.



1,507,682. ARTIFICIAL LIMB. ALBERTO PECORELLA and VINCENT PATRICOLO, Buffalo, and FREDERICK H. APEL, Athol Springs, N. Y., assignors, by mesne assignments, to Livingston Artificial Limb Company, New York, N. Y., a Corporation of Delaware. Substitute for abandoned application Serial No. 272,808, filed Jan. 24, 1919. This application filed Mar. 17, 1924. Serial No. 699,950. 16 Claims. (Cl. 3—12.)

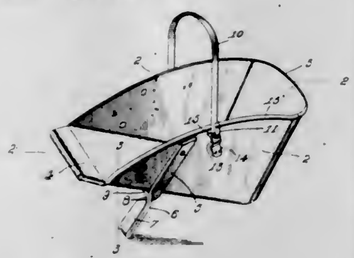
15. An artificial limb comprising a forearm, a wrist pivoted to turn on said forearm about a longitudinal axis, an arm to which said forearm is pivoted to turn laterally, and means for turning said wrist including a worm wheel connected with said wrist, and a worm meshing with said worm wheel and operatively associated with said arm to receive motion therefrom.

1,507,683. ARTIFICIAL LIMB. ALBERTO PECORELLA and VINCENT PATRICOLO, Buffalo, and FREDERICK H. APEL, Athol Springs, N. Y., assignors, by mesne assignments, to Livingston Artificial Limb Company, New York, N. Y., a Corporation of Delaware. Substitute for abandoned application Serial No. 340,330, filed Nov. 24, 1919. This application filed Mar. 18, 1924. Serial No. 700,180. 20 Claims. (Cl. 3—12.)



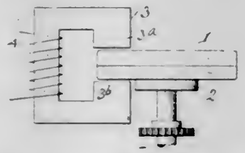
1. An artificial limb comprising a palm, a finger pivoted on the palm, and means for actuating said finger comprising a rotary cam pivotally mounted on said palm, and a link pivotally connected with said finger and operatively engaged by said cam.

1,507,684. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1921. Serial No. 489,052. 30 Claims. (Cl. 179—18.)



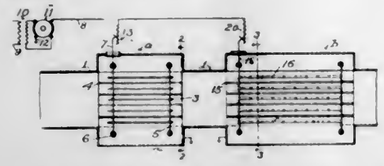
1. In a telephone system, an automatic connector switch controlled over a calling line to connect with another line as a called line, a push button at the calling station, ringing equipment in said connector con-

trolled by said push button to signal the called station, and circuit arrangements in said connector such that



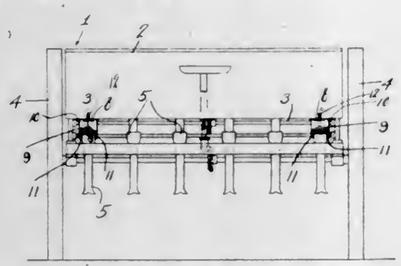
the ringing current is disconnected from the called line immediately upon the response of the called subscriber even though the said push button is still operated.

1,507,685. COAL HOD. ALFRED T. ROBINSON, Saginaw, Mich. Filed Sept. 12, 1923. Serial No. 662,313. 2 Claims. (Cl. 220—2.)



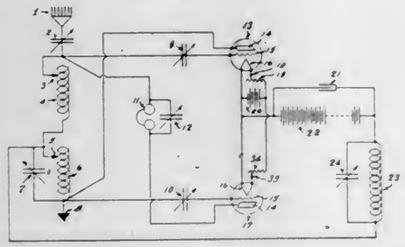
1. A coal hod comprising a substantially rectangular body, legs therefor for sustaining the bottom of the body at an inclination, said legs being constructed from a single strip of metal including side members which are secured to the sides of the body, said sides directly below the body being of a half twist and from thence extended and bent upon themselves and continued in a line with the first mentioned extensions and thence given a half twist to rest against the first mentioned twist, and the connecting element for the legs underlying the bottom of the body and secured thereto, and a bail handle pivotally connected to the sides of the body and sustained at an upward angle with respect to the body in any of its positions.

1,507,686. METHOD AND APPARATUS FOR VULCANIZING RUBBER ARTICLES. RALPH R. ROOT, Lakewood, Ohio. Filed Dec. 29, 1919. Serial No. 347,891. 3 Claims. (Cl. 18—6.)



1. The method of vulcanizing rubber articles in metal molds which consists in successively subjecting parts of the mold to the action of a magnetic field of constantly changing density.

1,507,687. METHOD AND APPARATUS FOR ELECTRICAL PRECIPITATION OF SUSPENDED PARTICLES FROM GASES. WALTER A. SCHMIDT, Los Angeles, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 15, 1920. Serial No. 430,891. 5 Claims. (Cl. 183—7.)

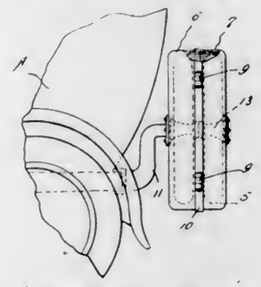


1. The method of treating independently ionized gases containing suspended particles, which consists in initially subjecting such gases to the action of a purely electrostatic field having an extended sphere of action and of high intensity sufficient to largely deionize the gases and then independently subjecting the gas thus treated separately to the action of an electric discharge.

1,507,688. GRAIN DRILL. HERMAN D. SCHUETT, Hull, Iowa. Filed Feb. 20, 1922. Serial No. 538,061. 1 Claim. (Cl. 193—9.)

In a grain drill, a feed wheel housing having an outlet, a delivery tube pivotally supported beneath and to the rear of said outlet, a cover for said tube hinged to said housing above said outlet, said cover inclining downwardly and rearwardly from said housing, and having flanges overlying and contacting with the side of the delivery tube, and a leaf spring secured to the rear of said housing and having a portion bearing on said cover.

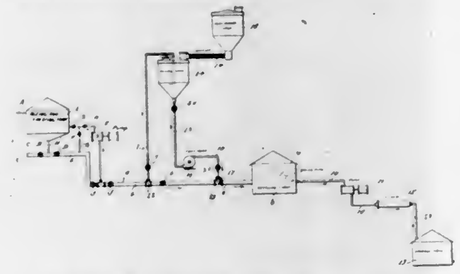
1,507,689. RADIO TELEGRAPH AND TELEPHONE RECEIVING SYSTEM. FREDERICK GRANT SIMPSON, Seattle, Wash. Filed Nov. 4, 1922. Serial No. 598,976. 16 Claims. (Cl. 250—20.)



1. Radio receiving apparatus embodying an oscillatory antenna circuit, an electric current generator, circuit means connecting said generator with said oscillatory antenna circuit, two electric valves interposed in said circuit means and arranged to permit said generator

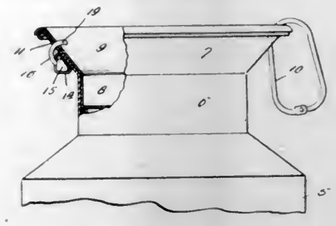
to supply uni-directional current impulses to said oscillatory antenna circuit, the circuit including said generator being adjusted to be resonant at substantially twice the frequency of said oscillatory antenna circuit.

1,507,690. PROCESS OF MAKING CALCIUM ARSENATE IN DRY POWDERED FORM. WILLIS H. SIMPSON, East Orange, N. J. Filed June 14, 1923. Serial No. 645,352. 3 Claims. (Cl. 23—13.)



1. The process of making calcium arsenate which consists in grinding calcium oxide and applying a hydrated oxide of arsenic thereto simultaneously during the grinding thereof, regulating the amount of the hydrated oxide of arsenic so applied to cause the removal of all of the free water therefrom by the calcium oxide, producing calcium arsenate in a dry powdered form.

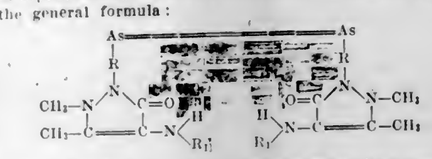
1,507,691. SPARE-WHEEL CARRIER FOR VEHICLES. CECIL SLAVENS, Mart, Tex. Filed June 5, 1923. Serial No. 643,511. 1 Claim. (Cl. 224—29.)



A carrier for spare wheels comprising a casing composed of a pair of symmetrical half-sections hingedly connected together, each section being shaped to conform to the shape of the wheel which it is adapted to contain and the outer side of each section being in the form of an open work grid, and each of said grids carrying opposed studs shaped to receive the wheel hubs, and the inner adjacent end of said studs being screw threaded to receive the usual hub cap for maintaining the wheels in place.

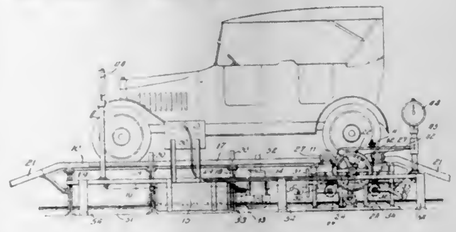
1,507,692. PROCESS OF PURIFYING LIGHT PETROLEUM OILS. FRANCIS H. SMITH, El Segundo, and GEORGE J. ZISER, Los Angeles, Calif., assignors to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed July 31, 1922. Serial No. 578,606. 2 Claims. (Cl. 196—41.)

1. The process of treating those light hydrocarbon distillates which contain compounds that, upon standing, form color bodies, which process includes aging the distillate until the distillate has developed substantially its maximum color, and then removing the produced color bodies by contacting the distillate with an adsorptive material.



1,507,693. MILK-CLOSURE FASTENER. THOMAS B. SMITH, Jr., Pocatello, Idaho. Filed Aug. 25, 1923. Serial No. 659,252. 3 Claims. (Cl. 31—78.)

1. In combination with a milk can having a cylindrical neck provided with a flared mouth, and a cover for said can comprising a cylindrical lower portion adapted to be slidably fitted into the neck and a flared upper portion adapted to contact the inner surface of the flared mouth of the can, and wherein the flared portions of the can and cover are provided with aligned openings, an angular clasp rigidly attached to the outer surface of the flared mouth of said can beneath said openings, an angular pintle snugly embraced by said clasp for pivotally mounting the pintle for swinging movement, and a rigid curved arm projecting from the pintle and adapted to move into and out of said opening.

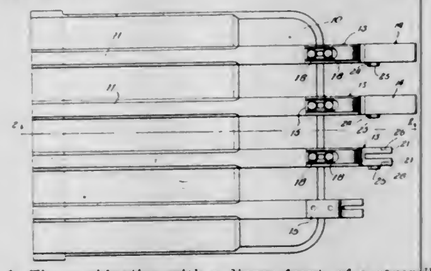


1,507,694. MANUFACTURE OF ARSENO COMPOUND OF THE PYRAZOLONE SERIES. KARL STREITWOLF, Hochst-on-the-Main, Germany, assignor to Hermann A. Metz, New York, N. Y. Filed Oct. 23, 1920. Serial No. 419,158. 6 Claims. (Cl. 260—15.)

4. As new products, the compounds of the arseno-di-(1-aryl-2.3 dialkyl-4-amino 5-pyrazolone) corresponding to the general formula:

wherein R stands for an aryl residue and at least one R_1 represents an acid group, whilst the second R_1 may be a hydrogen atom; said compounds being, when crystallized, yellow crystalline powders and forming, when combined with alkalies, yellow alkali salts readily soluble in water.

1,507,695. AUTOMOBILE TESTING AND REPAIR DEVICE. JOHN P. TEMPLEMAN and FRANK TEMPLEMAN, Chicago, Ill. Filed Nov. 12, 1921. Serial No. 514,512. 20 Claims. (Cl. 265—24.)

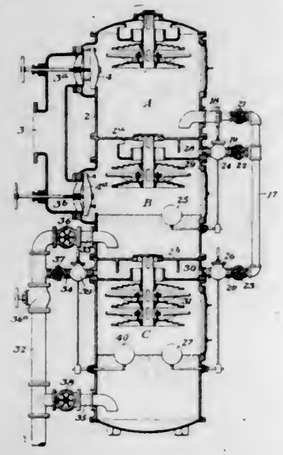


1. In a device of the character described, means to support an automobile, friction devices for engagement with each of the driving wheels of the automobile, a power testing device connected with each of said friction devices, and indicators connected with each of said testing devices.

1,507,696. APPARATUS FOR PREPARING SKINS FOR STITCHING. LOUIS P. TOSADORI, Beaver Falls, Pa. Filed June 21, 1923, Serial No. 646,800. Renewed July 28, 1924. 2 Claims. (Cl. 17—45.)

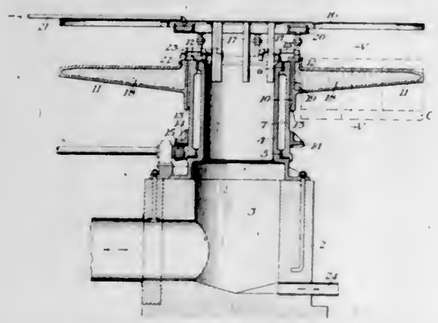
1. In a gut holding apparatus, a mandrel having a channel therein, upwardly projecting pins in said channel, a pair of separable locking strips removably held in position by said pins, and a pair of separable clamping strips adapted to cooperate with said locking strips, said strips having interengaging clamping means to clamp a plurality of gut sections therebetween for sewing and being bodily removable from the mandrel with the clamped gut sections, each clamping strip and its cooperating locking strip being bodily movable relative to the other clamping strip and its cooperating locking strip to separate the severed edges of the gut sections preparatory to stitching, substantially as described.

1,507,697. DIPPER. ERNEST EDGAR CRANE, Minneapolis, Minn., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 22, 1923. Serial No. 664,199. 4 Claims. (Cl. 37—142.)



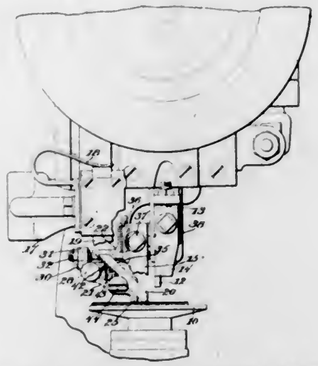
1. The combination with a dipper front, of a reversible dipper tooth base secured to the front, and a reversible dipper tooth secured to the base.

1,507,698. ICE-CREAM DISHER. WILLIAM H. CRAVEN, Philipsburg, Pa. Filed June 6, 1923. Serial No. 643,667. 1 Claim. (Cl. 226—19.)



A carton filling device comprising a substantially elongated hollow cylindrical member open at each end and adapted to receive the carton to be filled and permanently of a length greater than the length of the carton, said member having a continuous outstanding flange at the outer end thereof and further provided at its inner end with a continuous inturned portion to provide an abutment for the edge at the open end of the carton, said inturned portion extending inwardly at an angle with respect to the wall of the cylinder and a cutting blade upon the outer surface of the cylinder extending from the lower to the upper edge and at an inclination thereof.

1,507,699. APPARATUS FOR TREATMENT OF LIQUIDS. WILLIAM S. ELLIOTT, Pittsburgh, Pa. Filed Jan. 14, 1921. Serial No. 437,240. 18 Claims. (Cl. 183—25.)

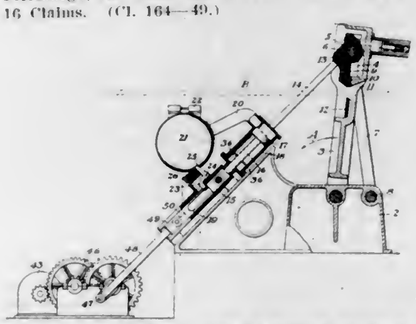


1. Apparatus for separating gases from liquids, comprising a plurality of chambers, and connections whereby at least one of said chambers may be isolated from the others at will and at least one of said chambers may be used either as a liquid heating chamber or a chamber receiving heated liquid and separating gases therefrom, substantially as described.

1,507,700. COIL CARRIER. KIRTLAND C. GARDNER, Coraopolis Heights, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1923. Serial No. 620,341. 9 Claims. (Cl. 257—1.)

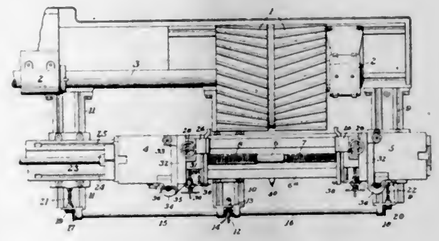
4. In a coil carrier, a fixed standard, a plurality of coil receiving arms detachably secured to said standard and extending outwardly therefrom, means for rotating said arms, and means for supplying cooling water continuously to each of said arms, substantially as described.

1,507,701. INSOLE MACHINE. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 5, 1919. Serial No. 308,856. 7 Claims. (Cl. 12—20.)



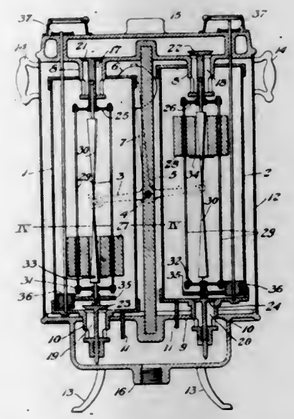
4. A machine for operating on reinforced insoles having, in combination, means for supporting and feeding the insole, a support having a flat work-engaging surface, a knife opposed to said support, for severing the reinforcing material along a line on the feather, having its cutting blade normal to the surface of said support, a presser foot also having a flat, work-engaging surface parallel to the surface of said support and bearing on the feather to predetermine the depth of cut, means whereby the projection of said blade below said foot may be adjusted so that no substantial incision will be made in the feather and means acting continually to force the work support toward the knife, said flat surface of the support being provided with a groove to receive said blade when no work is in the machine.

1,507,702. COMBINED VEHICLE BUMPER AND ROAD LIGHT. JOSEPH B. HARRIS, Buffalo, N. Y. Filed May 31, 1923. Serial No. 642,416. 6 Claims. (Cl. 240—7.)



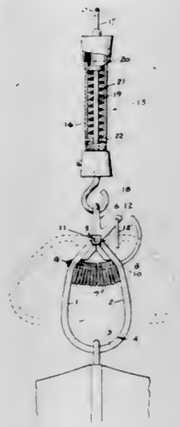
1. A combined vehicle bumper and roadway illuminator, comprising a hollow impact-member constructed to extend from side to side of a vehicle and provided in its front side with an opening, and a lamp body housed in said impact member and having its front portion arranged in said opening, to illuminate the roadway in front of the vehicle.

1,507,703. FLYING SHEARS. JULIAN KENNEDY, Jr., Pittsburgh, Pa. Filed Mar. 8, 1922. Serial No. 542,007. 16 Claims. (Cl. 164—49.)



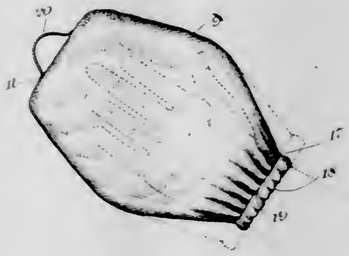
1. In a mechanism for shearing moving bodies, a movable shear frame, a plurality of shearing blades carried thereby, means exerting a continuous force for moving said frame and producing relative movement between said blades in shearing direction, and other means for producing both a return movement of said frame and a relative movement between said blades in the opposite direction, substantially as described.

1,507,704. GEAR-PLANING MACHINE. NIS LEERBERG, Edgewood, Pa., assignor to Mesta Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1920. Serial No. 421,912. 4 Claims. (Cl. 90—8.)



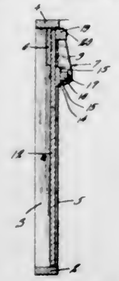
1. In a gear planing machine, the combination of a pivotally mounted tool holder having an extension thereon, two rollers on said extension and a cam mounted between and in constant contact with said rollers, and means for rotating both of said cams to rotate said holder around its pivot and means for reciprocating said tool holder.

1,507,705. LIQUID-MEASURING APPARATUS. GEORGE W. MACKENZIE, Beaver, Pa. Filed Sept. 9, 1921, Serial No. 499,563. Renewed Feb. 4, 1924. 4 Claims. (Cl. 73—28.)



1. In liquid-measuring apparatus the combination of a bucket, two vertically aligned filling and emptying valves, the said valves being provided with stems prolonged and abutting one upon the other, such abutting permitting relative rotary movement, one of the said valve stems being provided with a spirally disposed surface, a float within the bucket engaging the spirally disposed valve-stem surface, means for holding one of such inter-engaged members against rotation, an indicator operated by the relative rotary movement of float and valve stem, and means for shifting said valves to and from alternate closure, substantially as described.

1,507,706. SAFETY GRAPPLE. ANTHONY MILLER, Burlingame, and JOSEPH F. GIACOMAZZI, Soledad, Calif. Filed Mar. 21, 1923. Serial No. 626,556. 3 Claims. (Cl. 9—23.)

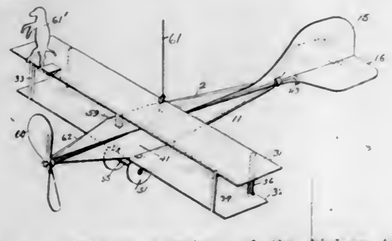


1. A safety hook comprising two hook members pivotally connected at their upper ends and arranged to overlie one another at their opposite ends, spring means associated with the hooks and tending to normlaly force them apart, an eye attached to the pivot ends of the hooks and providing for connection of the hooks with a line and means for locking the hooks against spreading apart when the eye is moved to one side of a position assumed when a pull on a line is communicated to the hook said locking means being released upon movement of the eye into upright position.

1,507,707. WASH OR DISH CLOTH. ALICE MORGANSTERN, New York, N. Y. Filed Mar. 24, 1923. Serial No. 627,286. 1 Claim. (Cl. 15—227.)

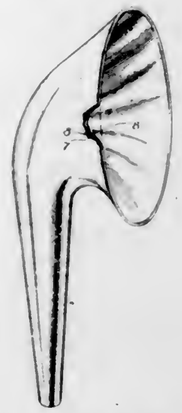
A device of the kind described comprising a laminated fabric composed of an outer absorbent fabric and an inner waterproof fabric, said laminated fabric being folded upon itself intermediate its ends, the side edges being stitched together and the adjacent portions thereof folded over the seam and again stitched together thus enclosing the free side edges of the fabric and providing a hand receiving pocket, the opening in said pocket being gathered and provided with elastic means for forming a watertight joint around the wrist of the user.

1,507,708. AUTOMATIC DOOR. ALEXANDER C. OSBORN, Clarksburg, W. Va. Filed Mar. 15, 1922. Serial No. 543,955. 1 Claim. (Cl. 20—16.)



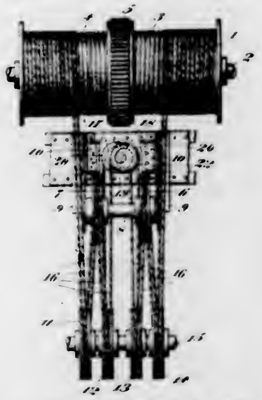
In a device of the class described, a substantially vertical frame including stiles, a sill and a lintel, a stop plate projecting downwardly from the lintel and located between the stiles, brackets on the forward edges of the stiles and projecting forwardly therefrom, means for securing theb rackets to the forward edges of the stiles, a shaft mounted at its ends to rock in the brackets, a barrier located between the shaft and the stop plate and abutting at its upper end against the stop plate, a weight secured to the barrier and located above the shaft, a cleat interposed between the shaft and the barrier, and means for securing the shaft and the cleat to the barrier, the cleat constituting means for so positioning the barrier with respect to the shaft that the weight will tend to hold the upper end of the barrier in abutment with the stop plate when the barrier is closed, the weight constituting means for holding the barrier in an open position, and the stop plate constituting a stop for the barrier, when the barrier is in open position.

1,507,709. PROCESS OF PRODUCING ALUMINUM CHLORIDE AND SODIUM SILICATE. SAMUEL PEACOCK, Wheeling, W. Va., assignor to Willis G. Waldo, Washigton, D. C. Filed Oct. 17, 1921. Serial No. 508,263. 2 Claims. (Cl. 23—13.)



1. The process of producing aluminum chloride, and sodium silicate, from naturally occurring aluminum silicates, which consists in calcining said silicates and mixing the same with sodium chloride; subjecting the mixture thus produced to a reacting temperature to produce the desired aluminum chloride and sodium silicate; passing free nitrogen over the charge to sweep out the volatile aluminum chloride and recovering said sodium silicate from the furnace, substantially as described.

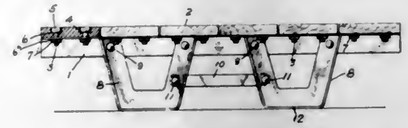
1,507,710. MINIATURE-AEROPLANE CONSTRUCTION. ARTHUR E. POHLMAN, West Allis, Wis. Filed Mar. 24, 1923. Serial No. 627,315. 6 Claims. (Cl. 46—40.)



3. In a miniature aeroplane of the biplane type, upper and lower wings connected and supported in separated position upon the fuselage by standards integral with the wings, in combination with a fuselage fixed between the wings and having a rudder and stabilizing fin integral with the fuselage.

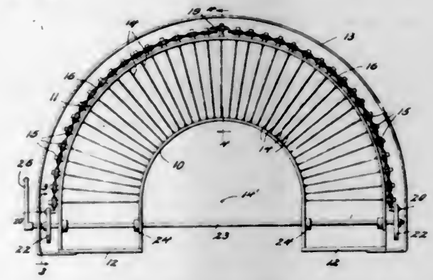
1,507,711. PROCESS OF MAKING PLASTIC ARTICLES. ALBERT E. POLLOCK, New York, and WILLIAM P. HORN, Mount Vernon, N. Y., assignors, by mesne assignments, to Inter-Ocean Radio Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 23, 1924. Serial No. 687,995. 2 Claims. (Cl. 18—56.)

1. The process of making molded horns, comprising placing a plurality of sleeves, one upon the other, on a form having the shape of the horn, each of said sleeves being made of a single piece of elastic absorbent fabric and being distended under tension upon the form, and impregnating each sleeve with hardening material after it is placed on the form and before the next sleeve is placed thereon, and then drying the sleeves.



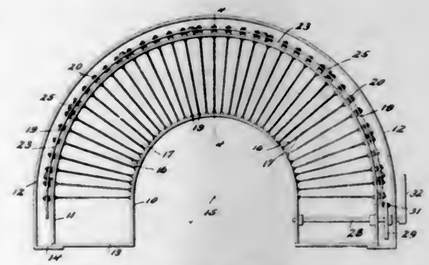
1,507,712. CABLE EQUALIZER. CHARLES S. PROUDFOOT, Westmont, Pa. Filed Apr. 18, 1922. Serial No. 555,007. 11 Claims. (Cl. 254—135.)

1. A cable equalizer comprising a pair of sheaves eccentrically mounted on a shaft which extends through them and within their peripheries with their throw arms relatively angularly disposed.



1,507,713. ELEVATING-TRUCK PLATFORM. HENRY I. RAYMOND, Jr., Indianapolis, Ind., assignor to The Enterprise Iron Works, Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 18, 1920. Serial No. 431,699. 1 Claim. (Cl. 248—41.)

In a truck platform, a pair of longitudinal frame members of angle iron each having a vertical flange and a horizontal flange, transverse load-supporting members secured to said frame members and U-shaped supports having continuous flanges at right angles to each other

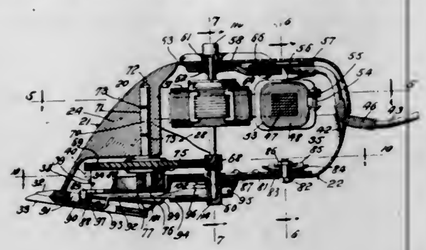


forming flat foot portions and oppositely extending leg portions attached to the vertical flanges of a frame member, substantially as set forth.

1,507,714. EYE-TESTING APPARATUS. WILLIAM P. REAVES, Greensboro, N. C. Filed May 4, 1922. Serial No. 558,493. Renewed Aug. 2, 1924. 9 Claims. (Cl. 88—20.)

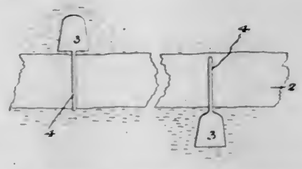
1. An astigmatic dial including in combination, a frame, a plurality of radially arranged strips having two unequal dimensions in cross section and rotatably mounted in the frame, and means to rotate the strips to cause them to appear to an observer as lines of different widths.

1,507,715. ASTIGMATIC DIAL. WILLIAM P. REAVES, Greensboro, N. C. Filed Aug. 2, 1922. Serial No. 579,235. 7 Claims. (Cl. 88—20.)



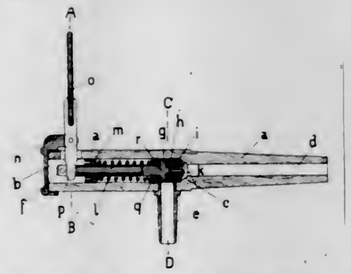
1. An astigmatic dial including in combination, a support, a plurality of blades, mounted on the support and radiating from a common center, the blades being formed in portions relatively movable to cause them to appear to an observer as lines which vary in width.

1,507,716. ELECTRIC HAIR CLIPPER. WALTER HUNT REDMAN, East Orange, N. J. Filed Dec. 31, 1920. Serial No. 434,432. 6 Claims. (Cl. 172—36.)



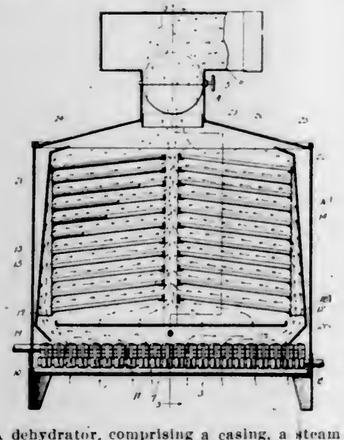
1. Mechanism of the character described for driving a tool comprising an exterior enclosing casing having laterally disposed longitudinal interior recesses, a horizontally disposed field magnet having longitudinal pole

members located in said recesses and a coil on its transverse portion, a rotary armature secured on a vertical shaft and disposed between said pole members, means for driving the tool from said vertical shaft, brushes for



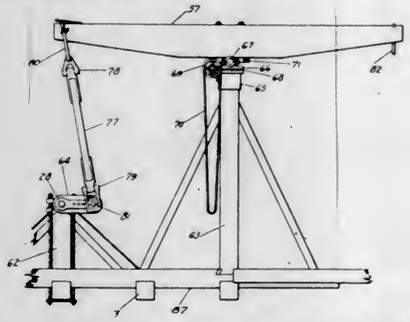
the armature, an electric current conductor leading to the field magnet coil, an electric current conductor leading to one of said brushes, and a manually operative switch adapted to complete the circuit at the other brush.

1,507,717. PROCESS FOR EXTRACTING PETROLEUM BY UNDERGROUND WORKINGS. JOHN L. RICH, Ottawa, Kans. Filed May 31, 1923. Serial No. 642,666. 6 Claims. (Cl. 262—1.)



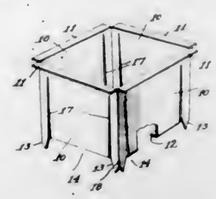
1. A process for the extraction of petroleum which comprises forming tunnels or galleries adjacent to the oil-bearing stratum, cutting narrow slits or channels from said galleries into the oil-bearing stratum, and forming depressions in said channels for the collection of the oil, from which it may be removed as desired.

1,507,718. WOODEN TAP FOR WINE, CIDER, OR THE LIKE. GEORG RILLING, Obersontheim, Germany. Filed Oct. 29, 1921. Serial No. 511,515. 2 Claims. (Cl. 251—134.)



2. A wooden tap for drawing wine, cider or the like comprising in combination with the body of the tap having a cylindrical boring at the front part, an inlet in the rear part of less diameter than said boring and a conical boring connecting said cylindrical boring and said inlet, an outlet tube branching off from said cylindrical boring adjacent said conical boring, a spring pressed cylindrical member of acid proof material located in said cylindrical boring, said member slightly less in diameter than the said cylindrical boring, a packing of suitable material at the rear end of said member adapted to seat in said conical boring, a valve stem arranged in said cylindrical boring of the body and connected to said member, an annular packing on the stem engaging the front end of the said member, a cap covering the front end of said tap, and a lever pivotally mounted in said cap and connected with said valve stem for pulling said valve stem forward so as to permit communication between said inlet and said outlet, said annular packing sealing said cylindrical boring from the inlet.

1,507,719. DEHYDRATOR. RUSH J. RITCHIE, Kansas City, Mo., assignor of one-half to Frank Spiekerman, Greenwich, Conn. Filed July 25, 1923. Serial No. 653,649. 5 Claims. (Cl. 94—39.)



1. A dehydrator, comprising a casing, a steam radiator in the bottom of the casing, a steam pipe exterior of the radiator and connected thereto, a steam pipe connected to the first named pipe and extending into the casing, a horizontal partition above the steam radiator and above the pipe within the casing, vertical partition walls spaced from opposite sides of the casing inwardly and upwardly, and rows of shelves within the casing, the rows being spaced centrally of the casing to provide a space in line with the opening in the top of the casing.

1,507,720. COMBINATION ROTARY AND CABLE TOOL DRILLING RIG. EDWARD TIMBS, Torrance, Calif. Filed Oct. 28, 1920. Serial No. 420,232. 2 Claims. (Cl. 255—3.)

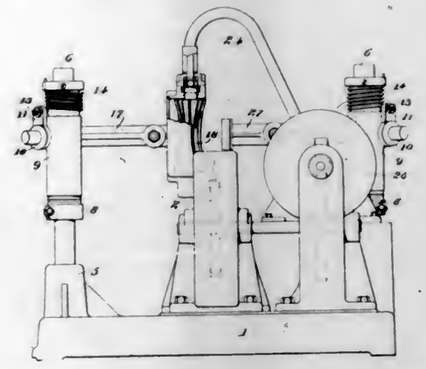
1. In a cable tool drilling rig of the class described, in combination with a single power means, adapted to drive a calf wheel, a bull wheel, and a sand reel, a swiveled walking beam and a knuckle joint pitman, adapted to operate the said walking beam by the power means, and to swing with the said walking beam when clearing the well, as set forth.

1,507,721. CORE BOX FOR CONCRETE FLOORS. GUY B. WAITE, New York, N. Y. Filed Dec. 9, 1921. Serial No. 521,091. 4 Claims. (Cl. 72—66.)

1. A core-box for concrete floor constructions adapted to be embedded and remain in the floor, said box being formed with inclined sides having top-flanges bent outwardly to permit nesting of the boxes during shipment, and bottom-flanges bent inwardly, and legs provided with teeth at their lower edges to retain the boxes in position upon temporary centering while the concrete is being poured.

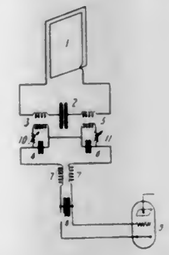
1,507,722. PLANE ATTACHMENT. JOHN AHLEN, Fargo, N. Dak. Filed Mar. 18, 1924. Serial No. 700,179. 2 Claims. (Cl. 145—5.)

1. In a plane, the combination with a stock including a sole and side walls, the sole having a transverse slot therein, a shoe including a shank, a cam plate, and a hinge barrel, the cam plate being adapted to protrude through the slot, a pivot pin detachably carried by the side walls of the stock positioned in the hinged barrel, and a spring coiled around said pivot pin and arranged to engage the shoe and the stock.



1,507,723. SPEEDWAY. ANTHONY AVERY, Royal Oak, Mich. Filed May 26, 1923. Serial No. 641,784. 1 Claim. (Cl. 104—60.)

The combination with a plurality of vehicles and means for driving the same, of a platform having spaced slots therein, centrally located downwardly extending front and rear arms secured to the vehicle, antifriction rollers carried by the arms for contact with the side walls of the slots and anti-friction devices carried by the arms and located upon opposite sides of and below the first mentioned anti-friction devices for contact with the under face of the platform adjacent the slots.



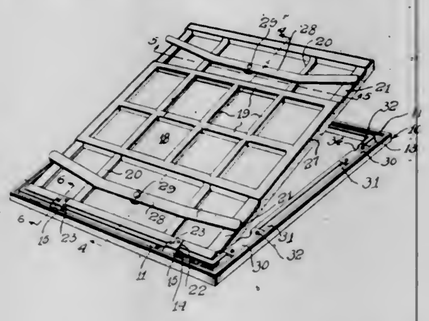
1,507,724. FISH SCALER. JAMES J. BARRY, New York, N. Y. Filed Dec. 22, 1923. Serial No. 682,245. 3 Claims. (Cl. 17—5.)

1. A fish scaling machine comprising in combination a conveyor, vertical posts positioned on opposite sides of the conveyor, horizontal arms rotatably mounted upon said posts, tension means adapted to force said arms

toward the conveyor, a pressure foot carried by one of said arms, and a scaling tool carried by the other arm.

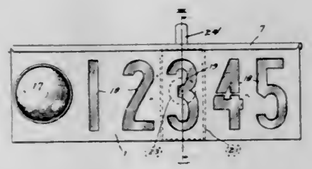
1,507,725. DOUBLY-TUNED WIRELESS RECEIVER. JOSEPH BETHENOD and MARIUS LATOUR, Paris, France. Filed Aug. 19, 1921. Serial No. 493,680. 5 Claims. (Cl. 250—20.)

1. In wireless signalling systems, a circuit tuned to a frequency greater than the signal frequency and a second circuit tuned to a frequency lower than the signal frequency, and means for opposing the currents in said circuits to prevent response of said system to sudden discharges.



1,507,726. CASKET. GOLDEN O. BRADY, Crane, Oreg. Filed Oct. 4, 1920. Serial No. 414,562. 1 Claim. (Cl. 27—6.)

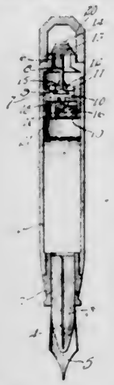
A casket having the container section provided with an interior flange integral therewith, a lining, said flange being perforated to facilitate passage of stitching therethrough to secure the lining thereto, a one-piece transparent panel adapted to rest on said flange and stitching prevented from lateral displacement by the surrounding wall of the section, said flange being located below the upper edge of said section a distance substantially equal to the thickness of the panel, an outwardly di-



rected flange at the upper edge of the section and substantially in the same horizontal plane with the panel to reinforce the sections and serve as a seat for the cover, and a cover section disposed out of engagement with said panel and attachable to said seat having its inner wall extending inwardly and upwardly over the panel.

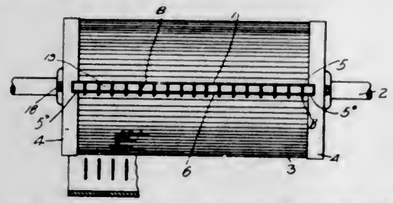
1,507,727. X-RAY CASSETTE. ARTHUR WELLS BUCK, St. Louis, Mo. Filed May 31, 1922. Serial No. 564,728. 6 Claims. (Cl. 250—34.)

1. An X ray cassette including a rectangular frame, the frame being formed with a shoulder upon one surface, and a sheet of aluminum constituting the front of the cassette having its margins bent over the edge of the frame and bent over and drawn over said shoulder, whereby the sheet of aluminum is rendered taut throughout its entire surface.



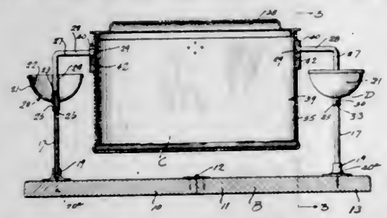
1,507,728. SIGNAL DEVICE. JOSEPH A. BURGARD, Oakland, Calif. Filed Jan. 18, 1921. Serial No. 438,071. 1 Claim. (Cl. 177—327.)

A signal device, comprising, a box casing of light proof material, a longitudinal row of symbolic apertures in one side of said casing, a battery within said casing, contact members within said casing extending the length thereof and connected to opposite poles of said battery, a movable bulb adapted to travel lengthwise of said casing and behind said symbolic apertures, and having one of its terminals in constant electrical connection with one of the contact members and means for completing an electrical connection from the other of said contact members through the other terminal of the bulb at points in its movement when it is in alinement with an aperture.



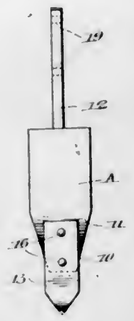
1,507,729. FOUNTAIN PEN. ARTHUR OLAUS DAHLBERG, Madison, Wis. Filed Sept. 5, 1922, Serial No. 586,279. Renewed July 16, 1924. 4 Claims. (Cl. 120—47.)

1. A fountain pen comprising a barrel, a piston slidably disposed within the barrel and having a passageway for air therethrough, a valve for normally closing one portion of said passage-way, means for simultaneously moving said piston toward the pen and for opening said valve, spring means for moving said piston away from said pen and for simultaneously closing said valve,



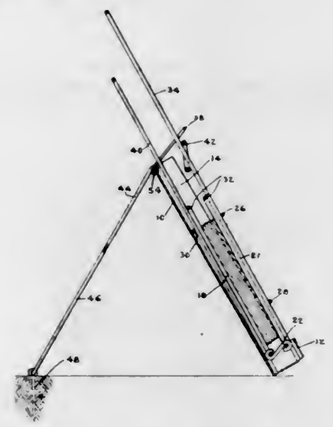
whereby ink is drawn into the barrel, and a float for closing another portion of said passage-way when the ink in the barrel reaches a predetermined height.

1,507,730. STRAW-FEEDING DEVICE FOR THRASHING MACHINES. ARCHIE THOMAS FULLER, Brampton, Ontario, Canada. Filed Sept. 15, 1923. Serial No. 662,872. 4 Claims. (Cl. 146—120.)



1. In a device of the class described, a cylinder having a longitudinal slot therein, blades having shanks engaging the sides of the slot, and reduced to form an edge shoulder at the point of junction between the blade and the shank, a rib extending from each side of the shank at its lower edge and extending normally crosswise of the slot, spacing blocks inserted in the slot between each pair of shanks and resting upon each pair of opposing ribs, and means extending crosswise of the slot for holding each block in position.

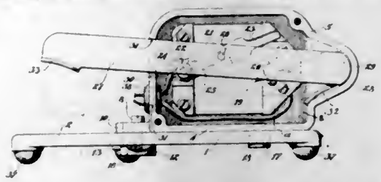
1,507,731. INSECTPROOF BREAD AND CAKE BOX. CHARLES HENRY GREGORIE, Macon, Ga. Filed May 9, 1923. Serial No. 637,796. 11 Claims. (Cl. 43—109.)



1. A device for preventing insects from gaining access to an article comprising a support including a pair of hingedly connected sections, a vertical standard carried by each of said sections of the support, cups carried by said standards, and article supporting means extending from within said cups for supporting an article therebetween.

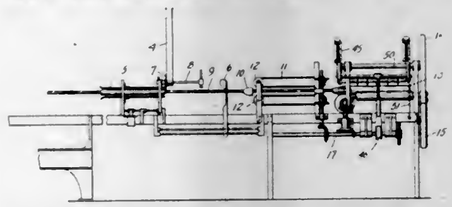
1,507,732. CULTIVATOR ATTACHMENT. THOMAS HAMMOND, Pincher Station, Alberta, Canada. Filed Aug. 3, 1922. Serial No. 579,465. 2 Claims. (Cl. 97—203.)

1. A device of the character described and in combination with a cultivator standard having a cultivator tooth fixedly secured thereon, a rectangular plate adapted to form a shield above said tooth and formed with a restricted lower end to fit between the tooth and the standard and securing means through the tooth and through the standard and said plate.



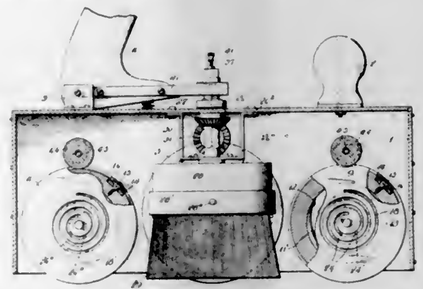
1,507,733. BROILER. HENRY O'B. HARDING, Minneapolis, Minn. Filed Sept. 17, 1923. Serial No. 663,079. 5 Claims. (Cl. 53—5.)

1. A broiler comprising a pan having a trough at its lower end, a grill having complemental members hingedly connected at their lower ends, handle members extending from the upper ends of said grill members, means for slidably attaching said handle members to said pan which permits said grill members to be rotated when slid out of said trough, and a prop pivotally attached to the upper edge of said pan, said prop having a forked upper portion adapted to be grasped by the hand to hold said pan.



1,507,734. MOTOR CONTROLLER. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 25, 1919. Serial No. 333,346. 9 Claims. (Cl. 200—6.)

1. In a motor speed controller, in combination, a base, a casing, a pedal-operated circuit controlling unit housed within said casing and means for detachably securing said casing to said base, said means being adapted for use

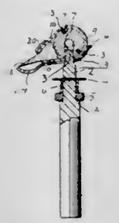


in securing the casing to the treadle-plate of a sewing machine.

1,507,735. PAPER-TUBE-MAKING MACHINE. JOSEPH W. HOLT, Brooklyn N. Y. assignor to Union Paper Company, New York, N. Y., a Corporation of New York. Original application filed Aug. 17, 1920, Serial No. 404,066. Divided and this application filed Sept. 23, 1922. Serial No. 589,994. 19 Claims. (Cl. 164—61.)

1. In a machine for making finished paper tubes and the like of predetermined lengths, the combination comprising mechanism for cutting off roughly portions of tube, means for revolving and cutting to finished sizes the cut off portions, and mechanism for automatically receiving the cut off portions and advancing them to said finished cutting means.

1,507,736. STENCILING MACHINE. JOHN WALKER INGLESBY, Norfolk, Va. Filed Mar. 26, 1923. Serial No. 627,923. 15 Claims. (Cl. 101—121.)

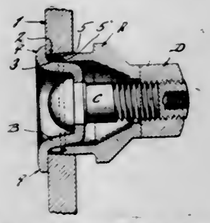


1. A stenciling machine comprising a housing, rollers mounted in the opposite ends of said housing movably supporting the same, a horizontally movable brush positioned and supported within said housing between said rollers, a reservoir upon the brush communicable with the bristles thereof, and automatically operable valve means within said reservoir for controlling the flow of marking fluid therefrom onto said bristles.

1,507,737. SAFETY RAZOR. HUGH JAMES, Montrose, Ill. Filed Mar. 3, 1922. Serial No. 540,781. 3 Claims. (Cl. 30—12.)

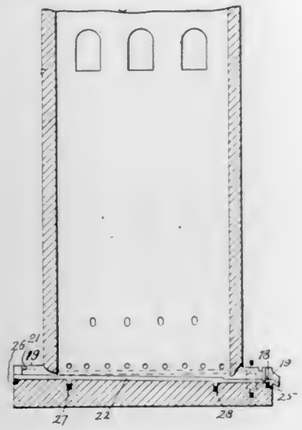
1. In a shaving implement, a hollow blade holder having converging clamping members designed to engage a blade, a core fixed within said blade holder, a guard de-

tachably connected with said blade holder, and a handle adapted to be detachably connected to said core inter-



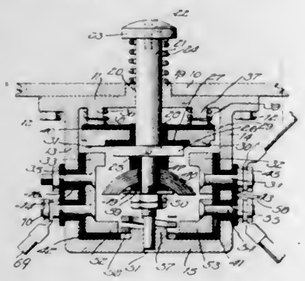
mediate its ends and in angular relation thereto, said handle being also adapted to be detachably connected to an end of said core in axial relation thereto.

1,507,738. FORCEPS. ALBERT BAXTER JOHNSON, New Britain, Conn. Filed Jan. 12, 1923. Serial No. 612,293. 7 Claims. (Cl. 32—10.)



1. Forceps for operating upon impacted third lower molars comprising a pair of pivotally connected members having each a handle on one side of the pivotal connection and a beak at the other side thereof, said beaks being generally similar in form and construction except that the one is right-handed and the other left-handed; having relatively sharply pointed tips; having a tapered form for the portion that serves as the active portion, adjacent said tips; having a wedge-shape form of cross-section for said active portion; and having as a whole a generally crescent-shape, whereby said active portions in the position for use, with the tips opposed, are directed generally divergent relatively to said tips.

1,507,739. BOILER PLUG. FREDERICK E. KEY, St. Louis, Mo., assignor to Key Boiler Equipment Company, East St. Louis, Ill., a Corporation of Missouri. Filed Apr. 8, 1921. Serial No. 459,794. 3 Claims. (Cl. 220—25.)

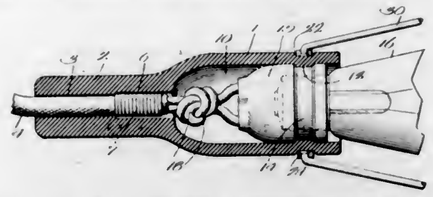


1. In a closure for tapered holes, a closure member adapted to lie in the tapered hole, said closure member having a tapered outer face adapted to lie opposite to the tapered wall of the hole to be closed, so as to provide converging tapering faces in the hole, a sealing member having an inner margin adapted to lie between said converging tapering faces, said margin having a groove in its end face to provide a contractible outer flange to contact directly with the tapered face of the hole and an expansible inner flange contacting directly with the tapered face of said closure member, and means whereby said flanges are wedged between and forced toward each other on said converging faces.

1,507,740. METHOD OF OPERATING BLAST FURNACES AND SIMILAR FURNACES. EDMUND B. KIRBY, New York, N. Y. Filed Feb. 16, 1920. Serial No. 358,969. Renewed July 14, 1924. 55 Claims. (Cl. 266—29.)

1. The method of operating a blast furnace which consists in so supplying the material to be treated and the solid fuel, that they will form separate descending contacting columns, using fuel which will not so agglomerate under heat as to impair the mobility of its particles and which has been crushed so that its particles have less average size than those of the column of material, and supplying an oxidizing blast.

1,507,741. STARTER-MOTOR-CONTROLLING MEANS. ALLEN T. KIRK, WILLIAM T. KIRK, and OBREN E. BARBER, Chicago, Ill. Filed Feb. 3, 1922. Serial No. 533,849. 11 Claims. (Cl. 219—48.)

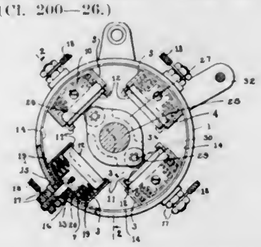


1. In a circuit controlling device, an operating member, a set of contacts, a second set of contacts, the contacts of said sets respectively being arranged to be brought successively into engagement upon continuous movement of said member, and means made operative after the contacts of the first set are in engagement and prior to the engagement of the contacts of the second set for indicating to the operator that the first set of contacts are in engagement.

1,507,742. LAMP AND GUARD HANDLE. FRANCIS C. KOLLATH and EDWARD M. SCHOENING, Chicago, Ill. Filed Nov. 17, 1923. Serial No. 675,276. 3 Claims. (Cl. 240—54.)

1. A handle for portable electric lamps and guards, consisting of a single piece of flexible rubber having a chamber for accommodating the lamp socket, and a

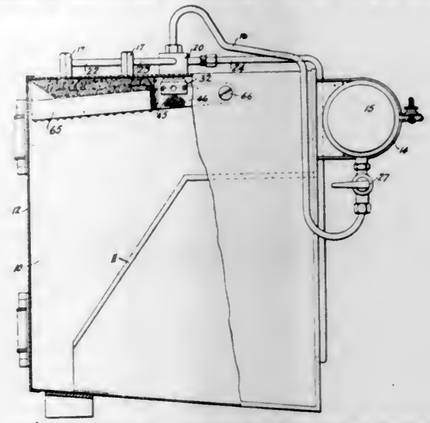
passage of reduced diameter extending from said chamber to the rear end of the handle for accommodating the electric conductors, the handle having an internal collar



near its forward end and a corresponding annular depression on the outside, the collar for retaining the lamp socket and the depression for accommodating a clamping ring for holding the collar to its work.

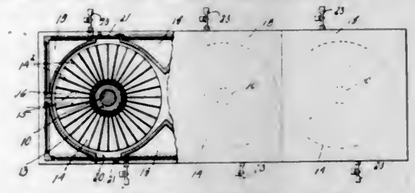
1,507,743. METHOD OF MAKING CORD TIRES. GEORGE D. KRATZ, Akron, Ohio, assignor to The Falls Rubber Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed Aug. 14, 1920. Serial No. 403,576. 5 Claims. (Cl. 154—14.)

1. In a method of making tires of the character described, the steps which consist in applying circumferentially to a suitable mandrel a strip of thread fabric, and simultaneously subjecting said strip along one side to treatment adapted to crowd the strands of such fabric together and along the other side to treatment adapted to spread such strands apart, such last-mentioned step preceding any stitching of said strip.



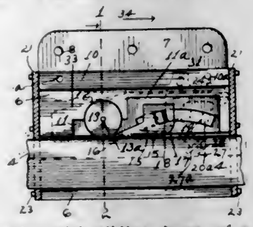
1,507,744. TIMER. FRIEDRICH LEDERER, Milwaukee, Wis. Filed Apr. 24, 1922. Serial No. 556,209. 4 Claims. (Cl. 200—26.)

3. A device of the class described comprising a housing; a hollow contact-receiving casing secured to said housing, said casing being provided with end walls having integral inturned retaining lugs, and with a readily removable side wall; a contact block slidably mounted within said casing; a plurality of springs behind said block normally urging said contact member toward said lugs; and means within said casing for spacing said springs.



1,507,745. FIRE-EXTINGUISHING DEVICE. PETER GRAHAM MACGREGOR, Pequannock, N. J., and GEORGE E. FERGUSON, Spring Valley, N. Y., assignors to Pyrene Manufacturing Company, a Corporation of Delaware. Filed Feb. 17, 1922. Serial No. 537,164. 5 Claims. (Cl. 169—2.)

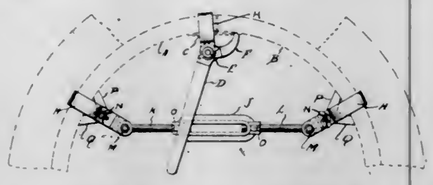
1. In combination with a receptacle for inflammable material, a tank containing fire-extinguishing fluid and mounted on said receptacle, a distributor valve mounted on said receptacle and extending therein, a supply conduit connecting said tank and valve, distributing conduits extending from said valve to various parts of said receptacle, thermally-controlled means normally effective to maintain said valve closed and prevent passage of fluid from said supply conduit to said distributing conduits, and means comprising a charge of gun-cotton



positioned within the receptacle adjacent the thermally-controlled means adapted to be instantaneously ignited directly by the heat or flame generated in any part of the receptacle to permit the valve to open.

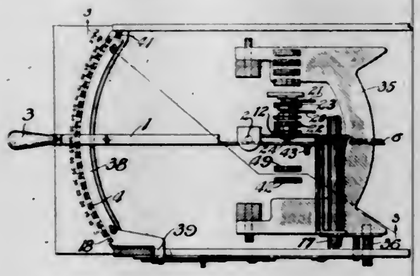
1,507,746. FIXTURE FOR SHOES OR THE LIKE. ALBERT MALSIN, Mount Vernon, N. Y. Filed July 28, 1921. Serial No. 488,149. 1 Claim. (Cl. 211—21.)

A fixture for shoes or the like, comprising a plurality of revoluble cylindrical units arranged almost tangentially relative to one another, each formed with adjustable radial compartments, show cases the inner walls of which are substantially concentric to the outer part of a unit and serve as corner pieces and intermediate show cases the inner walls of which are curved to be concentric to the outer parts of two adjoining units, said show cases being all joined to form a single casing, the different show cases being in front and back separated a space equal to the width of the outer end of a compartment to permit access to said compartment and doors for closing said spaces.



1,507,747. CAR-DOOR-FASTENING DEVICE. JOHN H. MAYFIELD, Norfolk, Va. Filed July 23, 1923. Serial No. 653,261. 1 Claim. (Cl. 292—342.)

In combination with sliding doors, of a recessed casting, roller or wheel supporting means in said recess, a wedge adapted to check said roller supporting means

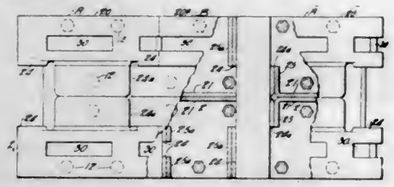


against movement, projection or lug means thereon, a curved slot for said lug or projection adapted to raise and lower said wedge, and hook or lever means adapted to engage said lug to prevent movement of said wheel supporting means.

1,507,748. RIM-REMOVING APPARATUS. GUSTAVE A. MEYER, Detroit, Mich. Filed Aug. 31, 1922. Serial No. 585,381. 1 Claim. (Cl. 157—1.)

In combination with a pair of rim-engaging members, each having a fixed jaw and an obliquely adjustable jaw, whereby rims of varying width and depth may be rigidly engaged, said pairs of rim-engaging members being adapted to be temporarily affixed about those portions of a rim selectively adjacent its meeting ends, means connecting the inner ends of said rim-engaging members for regulatably drawing them and their then connected portions of the seized rim inwardly to effect the separation of the outer surface of the rim from the surrounding inner surface of a vehicle tire.

1,507,749. CASH REGISTER. FREDERICK EDWARD MILLER, St. Louis, Mo., assignor to St. Louis Cash Register Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed May 23, 1922. Serial No. 562,984. 26 Claims. (Cl. 235—12.)

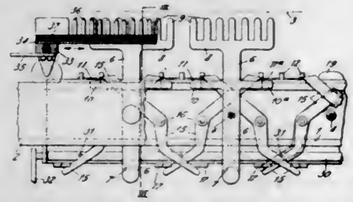


3. In a cash register, a digits counter, and two distinct mechanisms adapted to actuate said counter in adding operations independently of each other.

1,507,750. CONCRETE-ROAD FORM. CONRAD MAGNUS MOLSTAD, Fosston, Minn. Filed May 9, 1923. Serial No. 637,853. 4 Claims. (Cl. 25—118.)

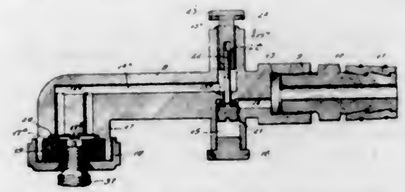
1. A device of the character described comprising a hollow tubular form, saddle members disposed within said form at each end thereof and having their supporting surfaces at a higher plane at their inner ends than at the outer ends of said saddle, and horses for supporting said saddles.

1,507,751. TRACK BELT. MATHEW B. MORGAN, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 22, 1920. Serial No. 398,262. 10 Claims. (Cl. 305—10.)



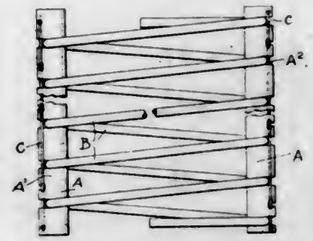
1. A track belt unit comprising two similar cup-shaped members having horizontal top and bottom portions placed side by side and secured together, the adjacent inner portions of said horizontal top portions being in a lower horizontal plane than the outer portions thereof forming a longitudinal roller guideway centrally of said unit.

1,507,752. RADIATOR ASSEMBLY. MATHEW B. MORGAN, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Jan. 11, 1922. Serial No. 528,504. 11 Claims. (Cl. 180—68.)



1. In a device of the character described, the combination with a frame, of a radiator assembly comprising a housing having an open top, a radiator unit within said housing and removable therefrom through the open top, a cap removably secured over the top of said housing and vertically removable therefrom, and means detachably securing said assembly upon said frame.

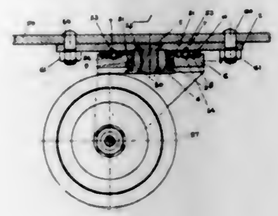
1,507,753. WARP STOP MOTION. HANS MÜLLER, Dietikon, Switzerland. Filed May 23, 1922. Serial No. 563,002. 11 Claims. (Cl. 139—352.)



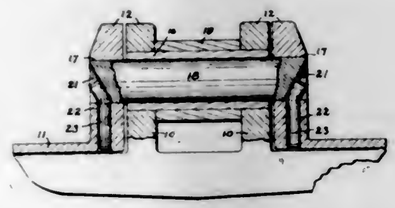
1. In mechanism for indicating the rupture of warp threads, the combination with a frame, of two movable carriers for ruptured warp threads mounted to reciprocate on said frame in a direction transverse of the longitudinal direction of the warp threads to be controlled and adapted to carry a ruptured thread in the said transverse direction, a row of prongs mounted between said carriers, arranged to move in said transverse direction and adapted to be engaged by a ruptured thread carried by said carriers and be moved thereby, and signalling lamps arranged to be controlled by said row of prongs.

1,507,754. COMBINED PNEUMATIC-TIRE INFLATING AND PRESSURE-GAUGE TOOL. MICHAEL J. MCANENY, Denver, Colo., assignor of one-half to E. N. Strom, Chicago, Ill. Filed Oct. 18, 1922. Serial No. 595,336. 3 Claims. (Cl. 152—11.5.)

3. A pneumatic-tire inflating and pressure-gauge tool comprising a casing having two sections and provided on one end with a nozzle, a valve-controlled air-pressure passage extending in one section of the casing into said nozzle, and a pressure-gauge in the other casing-section, comprising a tubular piston-housing into the forward end of which an air-passage leads through the nozzle, said housing having a gauge-slot in its opposite end, a valve in said housing normally spring-pressed to the end thereof adjacent said passage leading thereto, and a gauge-bar on the piston-stem provided with a pointer projecting through said slot and engageable with a notch in said slot to releasably lock the piston in its passage-closing position.



1,507,755. REENFORCING BAR. GEORGE C. PINGER, Bronxville, and JAMES F. CURLEY, Yonkers, N. Y., assignors to Concrete Steel Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,116. 4 Claims. (Cl. 72—76.)

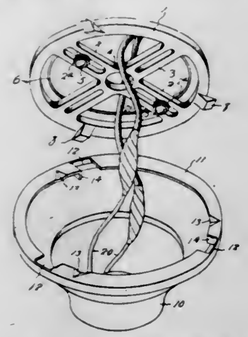


2. As a new article of manufacture, a metal reinforcement for concrete comprising a coil, one or more spacers having slots in some of which the turns of the coil are disposed, a wire between the coil and the edge of the spacer for retaining the turns in place, and recesses in the sides of some of the slots in which the wire is retained.

1,507,756. CASTER. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 16, 1921. Serial No. 522,828. 3 Claims. (Cl. 16—21.)

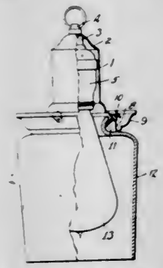
1. In a caster, a caster wheel, an inverted approximately U-shaped fork having an upper intermediate plate portion and prongs depending therefrom, a wheel axle, said axle being horizontally disposed between the fork prongs and secured thereto, said wheel being mounted on the said axle for rotation, an annular grooved bearing race in the upper surface of the said intermediate plate portion, a supporting block disposed over the said plate portion, an annular bearing race groove on the under side of the said block and in alignment directly over the first named race groove, bearing balls placed between the races, said block and said plate having centrally disposed aligned openings, that through the said block being of the least diameter, an annular bearing cone inserted through the opening in the said plate and having its inner opening in vertical alignment with the said block central opening, an outwardly extending flange on the lower end of the said cone, a circumferential bearing race groove on the outer surface of the cone near its lower end and above the said flange, an opposing race groove on the lower inner edge of the said plate opening, bearing balls between the said last named races, and bolt means passing through the said block and inner cone openings adapted to rigidly secure the said cone and block together, a recess on the under face of the said plate and concentric with the central opening therethrough, the upper end of the said cone fitting snugly into the said recess to prevent lateral displacement of the cone

1,507,757. TRACK BELT. EDWIN H. SAVAGE, Cleveland, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 11, 1922. Serial No. 574,243. 4 Claims. (Cl. 305—10.)



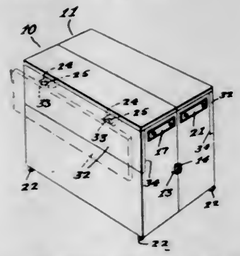
1. An endless track belt made up of a plurality of connected units, each of said units comprising rails and a shoe cast integrally together, said rails having aligned apertures through each end of the walls thereof and vertical openings extending through that portion below the apertures at one end thereof and through said shoe, a hinge pin extending through the apertures in the adjacent ends of the rails of said units, and locking means carried within the vertical openings in said rails and shoe and engaging said pin.

1,507,758. LIGHTING FIXTURE. THOMAS SCOTT, Cleveland, Ohio. Filed June 6, 1921. Serial No. 475,203. 3 Claims. (Cl. 240—87.)



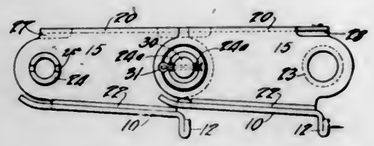
1. In combination, a base, and a lighting fixture assembly incorporating a canopy for application to the base, the base being provided with lugs, and the canopy

having flange parts that are spaced apart endwise so that the flange parts may be passed over and engaged with the lugs, the flange being provided with depressions for co-



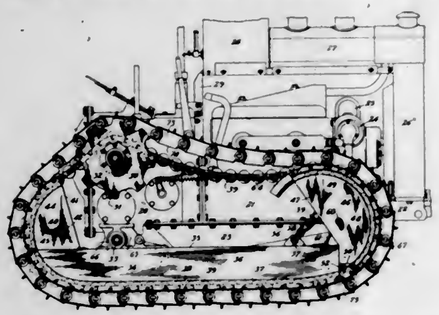
operation with the lugs to resist rotation of said canopy on said base, and means for indicating when the spaces between the flange parts are in register with the lugs.

1,507,759. COMBINATION SHADE AND LAMP HOLDER. THOMAS SCOTT and FREDERICK K. MARRZ, Cleveland, Ohio. Filed June 18, 1921. Serial No. 478,525. 2 Claims. (Cl. 240—132.)



1. In a device of the character set forth, the combination of a lamp socket, of a one piece shell enclosing and extending below said socket, the lower end of said shell being enlarged and turned upwardly to define an ornamental ring, and globe attaching means carried by the enlarged portions of said shell and disposed below said socket, said shell being adapted to be used interchangeably with a lamp shade or with a ball type of lamp, and said enlarged portion of said shell being adapted to be closed by the bulb of a ball type of lamp when so used.

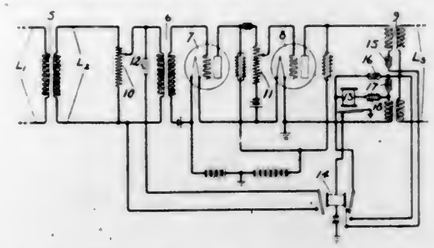
1,507,760. CABINET TABLE. EDWARD E. SUTHERLAND, Seattle, Wash. Filed Dec. 11, 1922. Serial No. 606,034. 4 Claims. (Cl. 45—16.)



1. A cabinet table comprising a casing having a plurality of compartments formed therein; support members laterally disposed and slidably mounted upon the underside of the top wall of said casing adjacent the ends thereof; extension side leaves for said cabinet table; hook members fixedly secured in spaced relation upon the upper and inner edges of said side leaves adapted to engage the outer ends of said support members to suspend said side leaves therefrom in juxtaposition to the side walls of said casing when not in use and to withdraw said support members from said casing to support said side leaves in a normally horizontal plane when in use.

1,507,761. TRACK BELT. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed July 20, 1920. Serial No. 397,785. 4 Claims. (Cl. 305—10.)

1. A track belt unit comprising, in combination, a shoe, and a rail member secured thereon formed of a single piece of sheet metal, said rail member comprising a horizontal rail plate and two integral longitudinally extended sides which are bent downward from said rail plate and are secured to said shoe,—said rail sides having near one end of the link outwardly extended aligned tubular sleeves and near the other end of the link inwardly extended aligned tubular sleeves of larger diameter,—the ends of the rail sides which carry the inwardly directed sleeves being nearer together than are the opposite ends of said rail sides and a sleeve fitted into and bridging the space between the tubular sleeves of larger diameter.

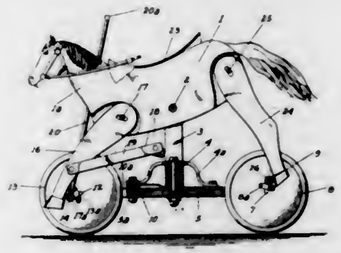


1,507,762. TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,152. 5 Claims. (Cl. 305—4.)

1. A track frame member comprising a main frame section, a rear guide section secured to said main section, a front guide section pivoted to said main section, and a bulkhead for preventing lateral movement of said front guide section relative to the main section, and means secured to said front guide section co-operating with said bulkhead to limit the pivotal movement of said section.

1,507,763. TELEPHONE-TRANSMISSION SYSTEM. DONALD F. WHITING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1920. Serial No. 350,526. 8 Claims. (Cl. 179—171.)

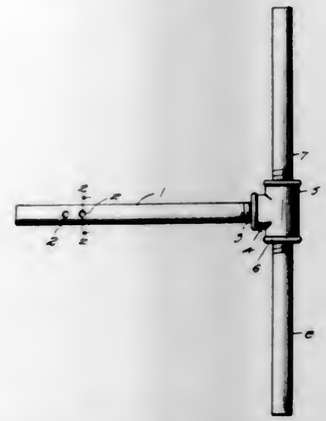
1. In a transmission system, an amplifying repeater, means for supplying signals to said repeater, means for increasing the amplification of said repeater and for altering the characteristics of the output circuit, and means



in the output circuit of said repeater and responsive to incoming signals for controlling said last named means.

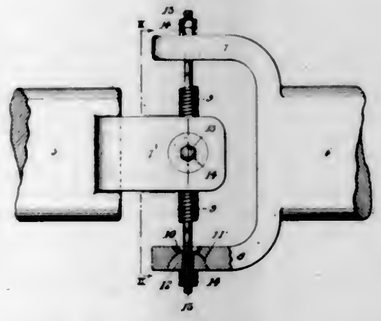
1,507,764. ROOFING MACHINE. MARVIN L. BEESON, San Diego, Calif. Filed Mar. 23, 1922. Serial No. 546,028. 6 Claims. (Cl. 219—37.)

1. A roofing machine of the class described, including a roller revolubly mounted on an axle, electrical heating elements mounted within said roller, a draft means secured to said axle and a guard partially enclosing said roller and secured to said axle.



1,507,765. MECHANICAL HORSE. WILLIAM D. BLUDWORTH, Sacramento, Calif. Filed May 14, 1923. Serial No. 638,845. 14 Claims. (Cl. 208—42.)

1. A combined galloping horse and velocipede comprising front and rear wheels, a base supported thereby, a body shaped to simulate a horse pivotally supported from the base for fore and aft rocking movement, means connecting the body with the wheels to cause the former to rock with the rotation of the wheels and hand actuated means for positively rotating the wheels.

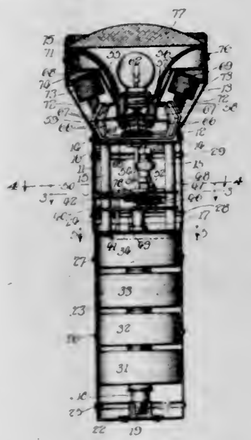


1,507,766. FENCE-WIRE SPLICING AND STRETCHING TOOL. OBIN W. BRITT, Emporia, Kans. Filed Apr. 3, 1923. Serial No. 629,606. 1 Claim. (Cl. 140—117.)

A fence-wire tool comprising a solid cylindrical bar having its one end threaded and provided with a series of transverse openings adjacent the opposite end thereof, said openings being beveled outwardly at their ends, a T-coupling having its shank portion threaded into engagement with the threaded end of said bar, the arm portions of said coupling being internally threaded, and a pair of hollow cylindrical handle members externally

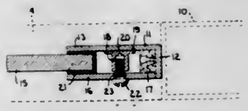
threaded at their ends and engaged with the arm portions of said T-coupling, the inner threaded end of said bar being adapted for frictional contact with the opposed inner ends of said handle members to securely hold the latter in place in the T-coupling.

1,507,767. UNIVERSAL FLEXIBLE COUPLING. ROBERT EARL CARTER, Sykesville, Md. Filed Mar. 1, 1921. Serial No. 448,832. 1 Claim. (Cl. 64—96.)



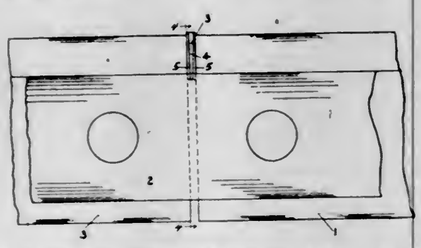
A universal flexible coupling comprising a pair of opposed outwardly and longitudinally extending arms being normally overlapped and arranged at right angles to each other, said arms provided at its free end with transverse openings providing hemispherical sockets in the outer faces thereof, hemi-spherical members universally movable in said sockets, threaded stems extending through each of said openings, springs connecting the same and means for properly adjusting the tension thereof.

1,507,768. PORTABLE ELECTRIC LIGHT. CAP B. COLLINS, Franklin, Pa. Filed July 30, 1923. Serial No. 654,505. 6 Claims. (Cl. 240—8.5.)



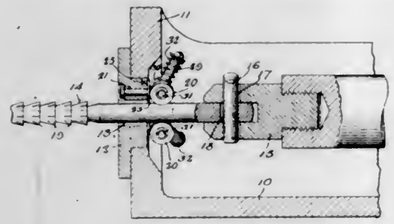
1. In a portable electric-light appliance, the combination of a portable casing, an electric-generator in

said casing, a spring-motor in said casing connected to drive said generator, a reflector in said casing enclosed



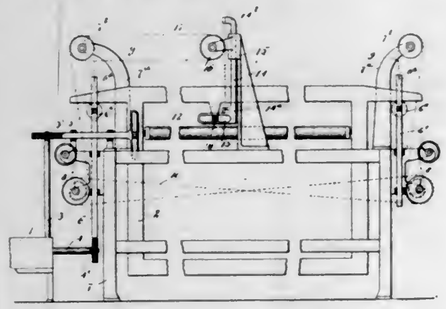
at least in part inside of said generator, an electric-lamp bulb in said reflector, and means to permit manual winding up of said motor.

1,507,769. ELEVATOR INCLOSURE AND DOOR. ROGER W. DISBRO, Cleveland Heights, Ohio, assignor to The W. S. Tyler Co., Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 25, 1921. Serial No. 464,436. 1 Claim. (Cl. 189—33.)



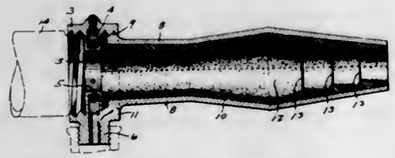
In a door or the like, a pane securing means comprising an angle plate adapted to be attached to a door frame, a spacing block in the angle of said plate, a second plate opposite the angle plate and loosely engaging said spacing block, cushioning means at the ends of the plates opposite the spacing block, a threaded socket member secured to one of the plates between the spacing block and the cushioning means, and a co-operating threaded member passing through the other plate and engaging the threaded socket member.

1,507,770. RAIL JOINT AND INSERT THEREFOR. ROY B. FEHR, Cleveland, Ohio. Filed June 6, 1923. Serial No. 643,733. 13 Claims. (Cl. 238—228.)



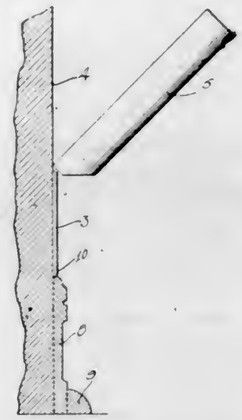
1. A rail joint comprising adjacent, aligned rail ends spaced apart, means for securing the rail ends together, and a multipart insert completely filling the space between the heads of the rails.

1,507,771. BROACH CLEANER. WALTER FERRIS, Milwaukee, Wis., assignor to The Oil Gear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 8, 1922. Serial No. 566,777. 9 Claims. (Cl. 90—33.)



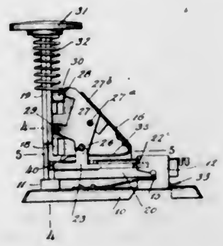
1. In a broaching machine the combination of a broach, broach reciprocating means and means mounted adjacent the path of travel of the broach for removing chips therefrom during the reciprocation thereof.

1,507,772. TAMBOUR-FRAME-DRIVING MECHANISM. JOSEF GRANZ, Plauen, Germany, assignor to Vogtlandische Maschinenfabrik, Plauen, Germany. Filed June 4, 1914. Serial No. 842,903. 2 Claims. (Cl. 112—92.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an embroidering machine, the combination with the tambour frame, of driven means for transmitting vertical motion thereto at several points of the length of and acting on the said frame directly in the vertical plane of the center of gravity thereof and spring counterbalancing means near each end of the said frame positively connected to each other and through the medium of which the several driven means are actuated simultaneously.

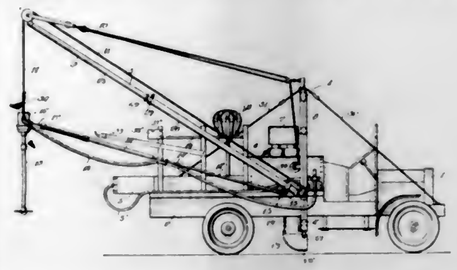
1,507,773. CEMENT-GUN NOZZLE. THOMAS HAMM, Hawthorne, Calif. Filed Jan. 15, 1923. Serial No. 612,851. 6 Claims. (Cl. 91—44.)



1. A cement gun nozzle having a cylindroidal passage provided with an annular choke shoulder adjacent its discharge end.

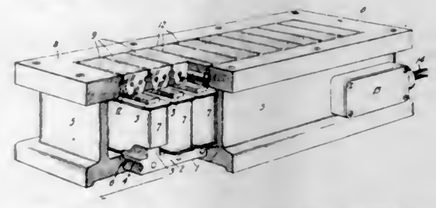
1,507,774. SHIELD. ANNA BAIN HILL, Chicago, Ill. Filed Jan. 17, 1924. Serial No. 686,841. 1 Claim. (Cl. 91—65.)

A shield of the type described comprising a relatively flat work engaging member of substantially rigid material, said work engaging member having a straight edge at the lower end thereof and having its edges at the side turned outwardly, and a handle portion formed integral with said work engaging member and extending upwardly and outwardly from said work engaging member, said handle being fashioned by rolling portions of the material of which said shield is constructed, to form a substantially tubular member, said handle being disposed entirely above and at the rear of said work engaging member.



1,507,775. STAPLING MACHINE. WILLIAM HOEHN, Brooklyn, N. Y. Filed July 11, 1923. Serial No. 650,794. 4 Claims. (Cl. 1—2.3.)

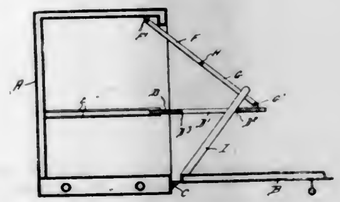
2. In a portable hand operated stapling machine, the combination of a base, a die having channeled guideways at its side faces, spring metal feed slides terminating in double jawed feed dogs, a cross bar connecting said feed slides and extending above said die and having a cylindrical central portion, a casing carrying said die and pivotally connected with said base, and a cam pivotally mounted upon said casing and provided with a notch engaging the cross bar of said slides.



1,507,776. EARTH-BORING MACHINE. JOHN M. HUMISTON, Berwyn, Ill. Filed May 13, 1921. Serial No. 469,126. 8 Claims. (Cl. 255—19.)

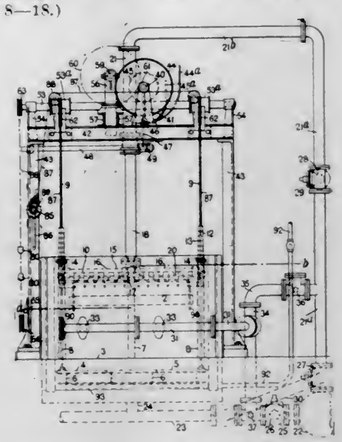
1. In combination, a truck, a derrick mounted on one side thereof, tackle for said derrick, a motor suspended adjustably for raising and lowering by said tackle, torque resisting means laterally connecting said motor to said

truck and a downwardly facing vertically axled tool operatively connected to said motor for engaging the ground.



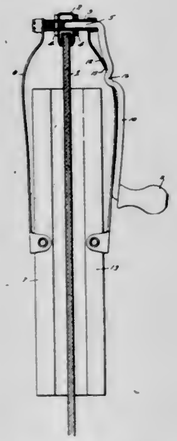
1,507,777. MAGNETIC CHUCK. SAMUEL KABASICK, New York, N. Y. Filed Apr. 9, 1919. Serial No. 288,747. 7 Claims. (Cl. 175—367.)

1. The method of making electromagnetic chucks which consists of forming a core of magnetic material, placing coils thereon, casting a base about said core, assembling the pole pieces, fixing the pole pieces with a free surface of each in substantially the same plane, and placing said pole pieces adjacent said core.



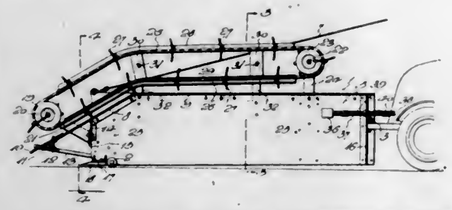
6. In an electromagnetic chuck, an element formed of laminæ having a plurality of extensions, a securing element for clamping the laminæ together, a base of non-magnetic material cast about and engaging the ends of said core, coils for said core, pole pieces extending at right angles to the plane of said laminæ, said pole pieces being placed adjacent said core.

1,507,778. SHELF-OPERATING MEANS FOR OVENS. JOHN C. KEAVEY, South Euclid, and EDWARD J. REESE, Cleveland, Ohio. Filed May 28, 1921. Serial No. 473,513. 2 Claims. (Cl. 126—340.)



1. The combination with an oven having guides on the sides thereof intermediate the top and bottom of said oven, of a shelf sliding in said guides, said shelf being longitudinally slotted at one side, a door hinged at its bottom to the bottom of said oven, an inclined arm connected to the oven door and extending in the slot in the shelf, and means for supporting the free end of said shelf when moved outwardly.

1,507,779. MACHINE OR APPARATUS FOR DYEING AND THE LIKE. JOE KERSHAW, Menston, England. Filed Aug. 31, 1921. Serial No. 497,264. 5 Claims. (Cl. 8—18.)



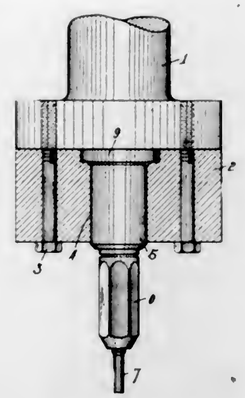
1. In an apparatus of the class described, the combination of a vat, a vertically movable bottom therein, means for raising said bottom, and means automatically operated during said raising movement for reversing the direction of movement of the bottom.

1,507,780. CLEANING DEVICE FOR WINDSHIELDS AND THE LIKE. CHARLES F. LAGANKE, Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1922. Serial No. 537,429. 3 Claims. (Cl. 15—256.)

1. In a device of the character set forth, the combination of a pair of wipers arranged for cleaning contact with the opposite sides of a windshield pane, a resilient carrying arm for each of said wipers, a spindle to which the arm of the outer wiper is directly secured and whereon the arm of the inner wiper is loosely mounted, and an operating handle extending laterally from the inner end of the spindle and by means of which the spindle may be operated, the handle and carrying arm of the inner wiper interengaging in such manner as to cause the arm to move with the handle in a lateral direction while permitting the handle to move independently of the arm in a direction perpendicular to the windshield pane, the inherent resiliency of the inner arm serving to maintain the wiper that is carried thereby in cleaning contact with the pane at all times.

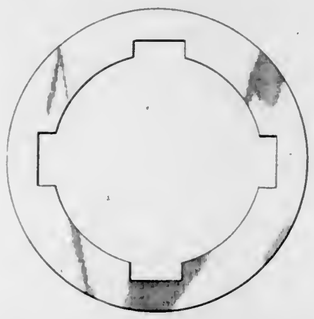
1,507,781. SNOW-MELTING MACHINE. AURELIUS LAGASSE, Fall River, Mass. Filed Oct. 5, 1923. Serial No. 666,766. 7 Claims. (Cl. 126—343.5.)

7. A snow melter comprising a transversely arched hood adapted to be moved along a snow covered surface, a plate declining forwardly from the top of said hood to a point spaced above the lowest plane of said hood, a transverse conveyor shaft mounted over the lower end of said plate, a second transverse conveyor shaft mounted over the top of the hood, an endless conveyor engaged with said shafts for carrying snow onto the top of the hood, tracks for guiding said conveyor over said plate and said top, and means for highly heating said hood to melt snow both in the latter and on its top.



1,507,782. FOUNTAIN PEN. CARL F. LITTS, Fort Madison, Iowa, assignor to W. A. Sheaffer Pen Company, Fort Madison, Iowa, a Corporation of Delaware. Filed Jan. 30, 1920. Serial No. 355,088. 14 Claims. (Cl. 120—50.)

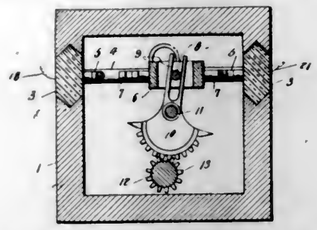
14. A self-filling fountain pen comprising a barrel; self-filling mechanism within said barrel; a feed section attached to the barrel and having an axial passage therethrough; a shoulder within said passage intermediate the ends of said feed section; a feed tube having one end extending into said passage with an end tightly engaging said shoulder forming a liquid-tight joint, said feed tube extending from said feed section and having a rectilinear bore therein extending from the inner end of the feed tube to one side adjacent the outer end of such feed tube; and a nib frictionally held in the passage of said feed section by the feed tube with the nib lying over the portion of the feed tube extending from said feed section with the feed tube fitting close to the nib around the adjacent opening of the bore of the feed tube, the nib and feed tube being arranged to permit drawing ink into the barrel upon immersing the lower ends of the nib and feed tube only in an ink supply.



1,507,783. QUICK-CHANGE PUNCH. EMMETT E. LUCE, Swanton, Ohio. Filed Jan. 21, 1922. Serial No. 530,781. 2 Claims. (Cl. 164—124.)

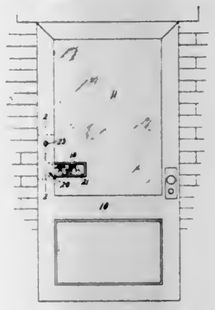
1. In a punch, a member having a socket which is spaced from the inner end of the member to form a solid wall and which extends through the outer end of the member, said socket being threaded at its central portion and having the portions thereof between the ends of the threaded portion and the ends of the socket ground to form inner and outer side bearing surfaces, a holder having an intermediate threaded portion engaged with said central threaded portion of the socket and having inner and outer ground portions to engage the respective inner and outer side bearing surfaces of the socket with a close ground fit, said holder having an axial bore, a punch point carried by the outer end of the holder, and a punch support fitted in the bore of the holder and

having one end engaged with the inner end of the punch point and having its opposite end enlarged and extending over the inner end of the holder and engaged with the said inner side bearing surface and solid wall of the socket.



1,507,784. EXHAUST OR DISCHARGE NOZZLE. JOHN H. MALIN, Peru, Ind. Filed Jan. 26, 1923. Serial No. 615,044. 1 Claim. (Cl. 162—4.)

As an article of manufacture, an exhaust nozzle for locomotives and internal combustion engines, and the like, wherever back pressure is found, or a drafting force required, having a uniform bore from end to end, and having equi-distant longitudinal slots therein, of uniform depth, extending the full length of the nozzle, each of said slots having equal and parallel side walls, and a back wall at right angles thereto.

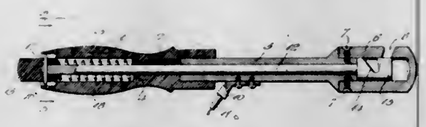


1,507,785. ELECTRIC SWITCH LOCK FOR AUTOMOBILES. CHARLES W. MITCHELL, Nashville, Tenn. Filed Dec. 7, 1922. Serial No. 605,452. 4 Claims. (Cl. 200—44.)

1. A motor vehicle switch lock including a casing, a key-operable shaft disposed therein, a shaft substantially parallel with said shaft, a gear member on the second shaft driven from the first shaft, a contact member within the casing, means slidably mounting the contact member disposed substantially at a right angle to said shaft, contacts within the casing to coact with

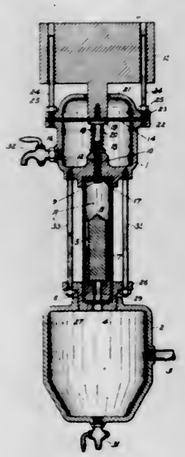
the contact member, and a pin and slot driving connection between the gear member and said contact member.

1,507,786. DOOR SIGN. MICHAEL F. MONIGAN, Rosebank, N. Y. Filed Oct. 22, 1923. Serial No. 670,110. 5 Claims. (Cl. 40—67.)



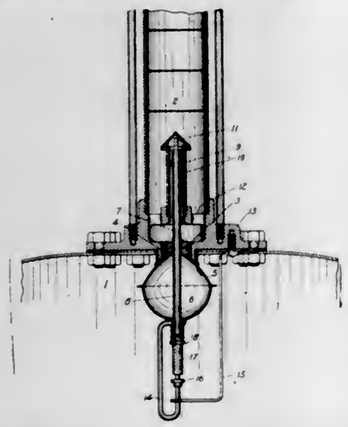
1. In a device of the class described, the combination with a door frame, a housing, attaching means for securing said housing to said door frame, a pivoted sign, coacting means on said sign and housing for holding the sign concealed within the housing, manipulative means for releasing said co-acting means, and a means for automatically moving said sign to an exposed position after operation of said manipulative means.

1,507,787. CARBIDE LAMP. JAMES M. MONTGOMERY, Bery, W. Va., assignor to Roscoe J. Ross, Western Port, Md. Filed July 2, 1923. Serial No. 649,114. 2 Claims. (Cl. 48—57.)



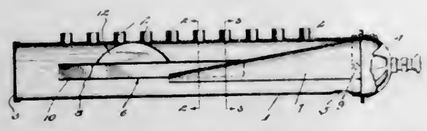
1. The combination with a receptacle having an opening in its bottom, a packed stub extending through and rotatably mounted in said opening, a cross arm secured to the lower end of said stub, and depending finger grips on the ends of said cross arm, each of said grips having an inclined edge and a substantially vertical edge whereby said grips may only be engaged to rotate said stub in one direction, the bottom of said receptacle being provided with a depending rim within which the major portion of said cross arm is located, the vertical edges of said finger grips being extended below said rim.

1,507,788. ELECTRIC WELDING TOOL. LEONARD A. MCCARTY, Jackson, Ohio. Filed Apr. 14, 1924. Serial No. 706,452. 3 Claims. (Cl. 218—8.)



1. An electric welding tool comprising an elongated insulating handle having a bore from end to end, a tubular current conducting shank projecting forwardly from said handle in alinement with its bore, said shank having an electrode seat at its front end and being adapted for connection with a current supply wire, a rod passing slidably through said shank and said bore and having means at its front end for exerting rearward pressure on an electrode to hold the latter in the aforesaid seat, and a spring within said bore of the handle exerting rearward force on said rod, the rear end of said rod projecting accessibly beyond the handle to permit the rod to be easily forced forwardly to release the electrode.

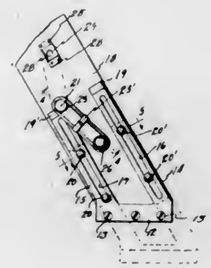
1,507,789. CONTROL VALVE. CARL H. NORDELL, Fort Wayne, Ind., assignor to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed July 20, 1922. Serial No. 576,247. 5 Claims. (Cl. 137—153.)



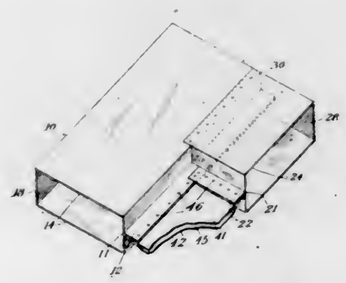
5. A control valve for withdrawing liquid in substantially uniform charges, having in combination a cylinder, a chamber and a liquid connection from said cylinder to said chamber, a piston in said cylinder formed of a plurality of parts which under the pressure of inflowing liquid co-act to form an effective piston adapted to deliver a substantially accurately measured charge of liquid from said cylinder to said chamber, one of said piston parts adapted in extreme raised position to close said connection whereupon the other part or parts fall by gravity to the bottom of the cylinder, means for allowing the liquid to escape said chamber more slowly than it enters thru said connection, a diaphragm within said chamber adapted to be flexed upwardly by the liquid forced thru said connection into said chamber; a plunger, with a longitudinal liquid passage reciprocable in said connection, means for depressing said diaphragm and means for forcing said plunger downwardly to unseat said connection closing piston part when said diaphragm has been depressed whereupon said connection closing piston part falls by gravity into co-acting contact with the other piston part or parts.

1,507,790. FLOAT-CONTROLLED COMPOUND CHECK VALVE. CARL H. NORDELL, Fort Wayne, Ind., assignor to Wayne Tank & Pump Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Sept. 12, 1922. Serial No. 587,838. 6 Claims. (Cl. 210—24.)

1. A compound check valve having in combination a main valve and a secondary valve both of said valves adapted to seat upwardly; the main valve adapted to be unseated by the weight of comminuted solid material precipitated thereon through the liquid above said valve; and means for reseating said main valve when said solid material has fallen off it; the secondary valve adapted to close a liquid conduit through said main valve; said secondary valve adapted to be seated, after the seating of the main valve, by the liquid flowing upwardly against the secondary valve on its way toward said secondary valve seat and to remain seated until the changing differential pressures above and below said compound valve permit said secondary valve to fall.



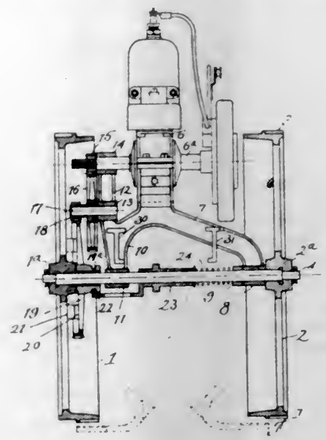
1,507,791. GAS BURNER. MORTIMER L. PACKER, Columbus, Ohio. Filed Feb. 9, 1924. Serial No. 691,597. 3 Claims. (Cl. 158—114.)



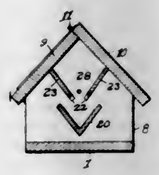
1. A gas burner comprising a casing, a pair of baffle plates disposed longitudinally therein the adjacent ends of said plates being arranged in overlapping relation and one of said plates being tapered.

1,507,792. DROP STEP. MARY PERKINS, Ypsilanti, Mich. Filed Feb. 9, 1924. Serial No. 691,617. 4 Claims. (Cl. 105—449.)

1. In combination with a vehicle having a plurality of steps, U-shaped supporting members slidably mounted on opposite sides thereof, for upward and downward movement relatively thereto; an auxiliary step carried by said supporting members; a rocker arm; means for attaching said rocker arm to said auxiliary step; a crank for operating said rocker arm for effecting upward and downward movement of said auxiliary step; and spring operated means mounted on said crank for locking said auxiliary step in either extremity of its movement.



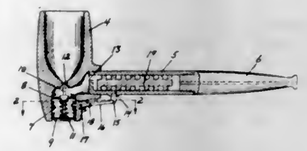
1,507,793. FIREPROOF DOOR. JACOB A. RAPPAPORT and WARREN J. WILLIAMS, New York, N. Y., assignors to Reliance Fireproof Door Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 11, 1923. Serial No. 631,298. 15 Claims. (Cl. 189—46.)



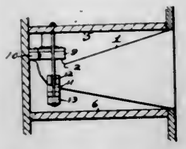
1. A fireproof door comprising a tubular stile having a plurality of cooperating flanges at the inner edge thereof, a depression being provided in each of the faces of the stile adjacent one end of the inner edge of each face at spaced distances from the flange, one of said flanges being provided with a cut-out portion adjacent the inner ends of said depressions.

1,507,794. AGRICULTURAL MACHINE. THOMAS A. REILLY and RALPH DITTY, Cleveland, Ohio, assignors, by mesne assignments, to The Federal Foundry Supply Company, a Corporation of Ohio. Filed Nov. 21, 1919. Serial No. 339,607. 3 Claims. (Cl. 180—19.)

1. In a device of the character described, the combination with a frame having a motor receiving portion, oppositely disposed bearings beneath the motor reciving portion forming a part of the frame, an axle which extends through said bearings and ground wheels secured to said axle outside the bearings, an arm extending upwardly from the frame and provided with bearing portions, the axis of said arm lying in the same plane as the axis of the motor receiving portion, said bearing portions of the arm serving to support members driven from the motor.

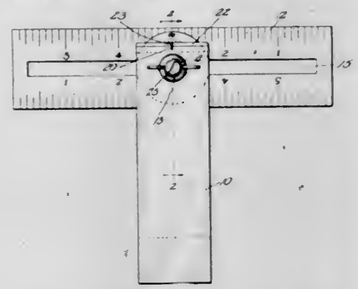


1,507,795. CHICK FEEDER. ARON W. ROCKEY, Lineville, Iowa. Filed Mar. 2, 1922. Serial No. 540,537. 2 Claims. (Cl. 119—52.)



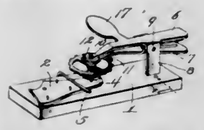
1. A chick feeder comprising a base, end walls, a roof having its lower edges spaced from the base a sufficient distance to permit the passage of small chicks only, a trough beneath the roof, and a transverse partition, one end wall and the partition being provided with means for receiving a removable reservoir and a removable device for preventing entrance of chicks to the trough.

1,507,796. SMOKING PIPE. JOHN H. SCHRODER, Minneapolis, Minn. Filed Sept. 21, 1922. Serial No. 589,641. 3 Claims. (Cl. 131—12.)



1. In a smoking pipe having a bowl and a stem secured at one end therein, said bowl having a smoke outlet and said stem having a normally closed cleaning port, a pin slidably arranged with one end near said outlet for engagement therein, a button on the other end of the pin for actuating the same, and a lever normally closing said port, said lever being actuable by said button.

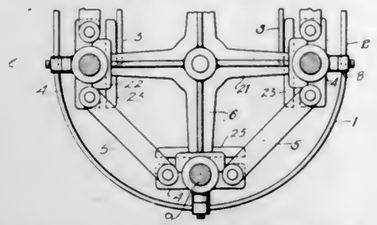
1,507,797. TONE-CONTROLLING HORN SUPPORT. BAGSTER ROADS SEABROOK, Mishawaka, Ind. Filed Sept. 3, 1921. Serial No. 498,387. 2 Claims. (Cl. 274—2.)



1. In a talking machine, a case, a horn secured to the rear wall of the case, a motor board above the horn and a support adapted to engage the underside of the horn at the neck said support being suspended from the motor board.

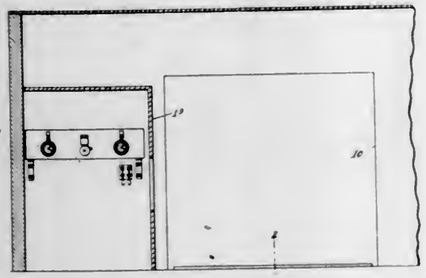
1,507,798. TRY-SQUARE. EMIEL P. SEGHERS, Chicago, Ill. Filed Apr. 26, 1922. Serial No. 556,723. 6 Claims. (Cl. 33—102.)

1. A try-square comprising a supporting block, a blade pivotally mounted adjacent one end of said block, and a circular dial mounted on the pivot of said blade and extending beyond the end of said block and arranged to cooperate with said blade to indicate the angular position thereof, said dial having graduations thereon and numerals for designating the different graduations on said dial, said numerals being positioned on said dial outside of the graduations thereon and on the portion of the dial extending beyond the end of said block.



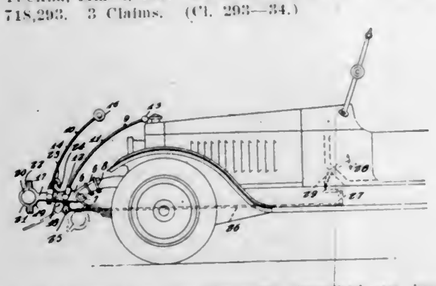
1,507,799. JEWEL-PIN SETTER. JOHN T. SHEA, Creston, Iowa. Filed Feb. 17, 1921. Serial No. 445,866. 6 Claims. (Cl. 81—6.)

1. A jewel pin setter comprising a base, means to hold the bridge in position thereon, and means secured to the base and occupying a fixed position above it to engage the roller table and to hold the balance in axially displaced relation with the bridge, said means being adapted to apply heat to the roller table.



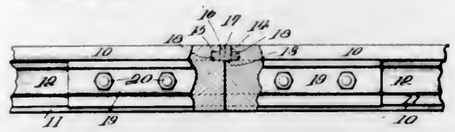
1,507,800. CONVEYER MECHANISM FOR PIE-MAKING MACHINES. DENNIS WOOD SMITH, Wilmette, Ill., assignor to Colborne Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1922. Serial No. 578,837. 2 Claims. (Cl. 198—181.)

1. A conveyer for pie-making machines comprising a plurality of pie plate carriers including upright posts and a corresponding number of rigid bars, said upright posts and bars being pivotally connected together in alternating arrangement so as to form an endless belt member movable in a predetermined horizontal path to



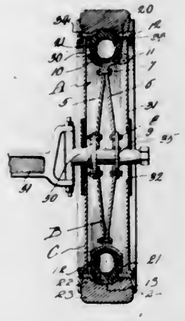
bring said carriers into position to coact with forming mechanism, and a driving sprocket membr coacting with said posts for holding said carriers in upright positions and moving them through said path.

1,507,801. REGISTER. HERMAN TEWES, Hicksville, N. Y. Filed Nov. 11, 1922. Serial No. 600,333. Renewed June 11, 1924. 4 Claims. (Cl. 234—1.5.)



1. A device of the character described comprising a pair of depressible treads normally disposed above the surface of a floor or roadway, a time operated tape divided into hours and fractions thereof, an electrically operated recording device positioned to engage the tape, a switch included in circuit with the recording device, means whereby depression of one of the treads will close the circuit and means whereby depression of the other tread will operate the switch to open the circuit.

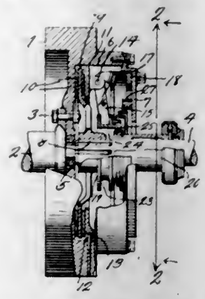
1,507,802. SAFETY DEVICE. JOHN WILLIAM STOKES TUCKER, Miami, Fla. Filed June 6, 1924. Serial No. 718,293. 3 Claims. (Cl. 293—34.)



1. In a device of the character described, an inner stationary fender and an outer movable fender, each of said fenders including supporting rods and rearwardly curved rods extending at right angles to the supporting rods, a hook member carried by the forward fender section, and a manually controlled latch member adapted to co-operate with the hook member for normally holding the movable fender section in its inactive position.

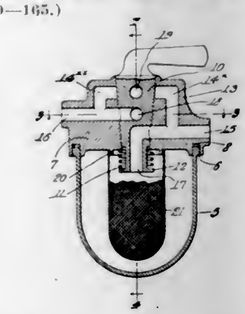
1,507,803. RAIL BRIDGE. CECIL TYMM, Louisville, Ky. Filed Aug. 18, 1923. Serial No. 658,074. 6 Claims. (Cl. 238—219.)

1. The combination of rails each having two recesses in each end thereof, one of which recesses is a continuation of the other and of a smaller bore and the bottom of the smaller recess is on the same level with the bottom of the larger recess, and a bridge interposed between the rail ends and composed of an enlarged central portion to fit a recess in an end of each rail, and cylindrical shanks of uniform diameter on opposite sides of the enlarged portion received in the recesses of the smaller bores.



1,507,804. RESILIENT WHEEL. VINCENT A. WALKUP, Apache, Okla. Filed Feb. 16, 1923. Serial No. 619,423. 1 Claim. (Cl. 152—35.)

As a new article of manufacture a resilient wheel comprising an inner wheel member including a hub having spaced annular flanges formed thereon, concavo-convex shaped disks secured to the inner surfaces of said flanges, an integral rim formed on the periphery of said disks, a pneumatic cushioning member connected to said rim, an outer wheel member including a rim having a seat formed on the inner surface thereof for receiving the cushioning member, said seat being provided with spaced openings, a seat formed on the periphery of the rim of the outer wheel member, a tread fitted in said last mentioned seat, driving lugs formed on the cushioning member fitted in said openings in the inner sent, guard disks secured to the rim of the outer wheel member arranged on each side of the disks of the inner wheel member, and flexible disks secured to the hub of the inner wheel member and contacting the outer surface of the guard disks of the outer wheel member.

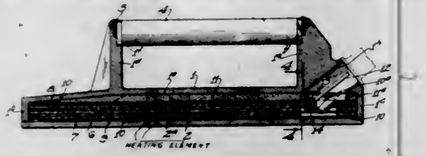


1,507,805. CLUTCH-PULL COLLAR. CLARENCE G. WOOD, Muncie, Ind., assignor to Hoosier Clutch Company, Muncie, Ind., a Corporation of Indiana. Filed July 18, 1921. Serial No. 485,638. 1 Claim. (Cl. 192—110.)

The combination with a clutch operable through the medium of pivoted levers having lugs circumferentially arranged and spaced from each other, of an annular pull collar having an annular channel therein in which said lugs are received, said channel being formed by spaced flanges, said pull collar being provided with a flange having a bevelled surface, a releasing sleeve provided with a bevelled surface engagling the first mentioned bevelled surface, a coiled spring having its inner convolution surrounding the pull collar in engagement with one of the spaced flanges and spaced from the periphery of the collar, said bevelled surfaces and spaced relation

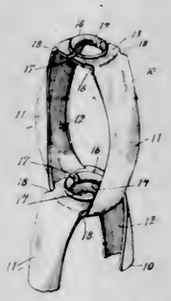
of the inner convolution of the spring forming means whereby the pull collar will be allowed to automatically accommodate itself to the position of the lugs carried by the pivoted levers.

1,507,806. GASOLINE FILTER. LINCOLN A. ZELLER, New York, N. Y.; William McKinley Zeller and Conrad Ulmer executors of said Lincoln A. Zeller, deceased. Filed Jan. 17, 1921. Serial No. 437,847. 1 Claim. (Cl. 210—165.)



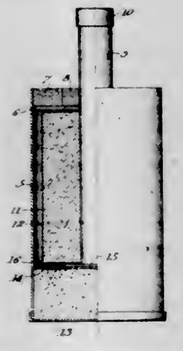
A gasoline filter comprising a cover member formed with a centrally disposed vertical tapered seat, and with top, bottom and intermediate horizontally disposed passages communicating with said seat, the top and bottom horizontal passages communicating with each other, and the intermediate and top horizontal passages communicating with each other, the cover member also being formed with a passage leading from the seat at a point in line with the intermediate passage and thence through the base of the cover member, a conical valve disposed in said seat and formed with a top horizontal passage, an intermediate horizontal passage, and a bottom passage extending horizontally and thence vertically through the base of the valve, a shoulder carried by the valve at its lower end, a spring engaging the cover member and acting upon said shoulder, a supporting member carried by the cover member and adapted to suspend a filter member, and a bowl shaped receptacle threaded at its upper end to be received by a similar threaded annular wall of the cover member.

1,507,807. ELECTRICALLY-HEATED TROWEL. MARVIN L. BEESON, Los Angeles, Calif. Filed Mar. 19, 1923. Serial No. 625,945. 9 Claims. (Cl. 219—37.)



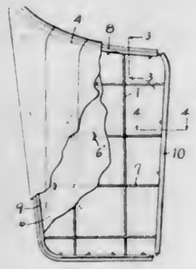
1. A trowel of the class described, including an upper casing member provided with upwardly extending handle supporting portions at its upper side and a hollow portion in its under side, a lower casing member provided with a hollow portion in its upper side, secured to said upper casing member, a handle secured to the handle

supporting portions of said upper casing member, a rendily removable heating unit positioned in the hollow



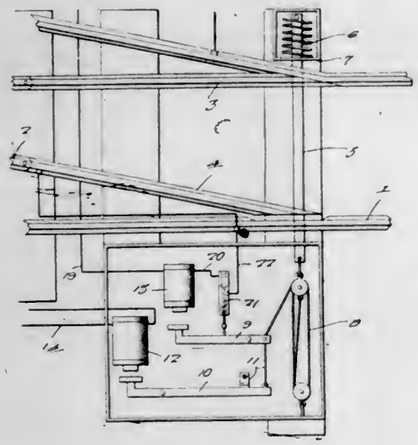
portion between said casing members and clamped therebetween, and heat insulating material positioned between said heating unit and said upper casing member.

1,507,808. FIXTURE CHAIN. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1919. Serial No. 301,948. 16 Claims. (Cl. 247—30.)



6. A separable link fixture chain comprising interengaging split links, the split portion of each link being positioned at the point of engagement with a neighboring link and being substantially flattened, other portions of each link being inturned at the edges forming an outwardly convex surface, recesses formed at the outer edges of each link at opposite sides of the split portion, and embossed points of support formed at the flattened portion for rocking support of the neighboring link in self-aligned position with the chain and with said recesses in engagement with adjacent inturned edges of the neighboring link whereby the split link is locked against spreading.

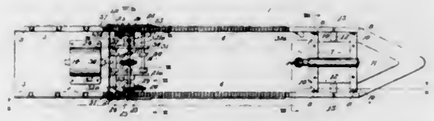
1,507,809. DRY BATTERY. HARRY F. FRENCH and RAYMOND C. BENNER, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Aug. 9, 1920. Serial No. 402,341. 8 Claims. (Cl. 204—29.)



1. A dry battery of the deferred action type having inseparable electrodes relatively movable to force electrolyte between their adjacent surfaces.

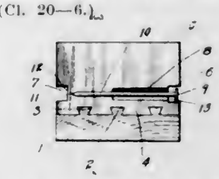
1,507,810. UPHOLSTERY UNIT FOR VEHICLE BODIES AND THE LIKE. GUSTAV O. BRANDT, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 2, 1923. Serial No. 622,423. 14 Claims. (Cl. 155—180.)

1. An upholstering unit comprising a frame member of S cross section providing an outwardly facing upholstery securing channel and an inwardly facing channel, said frame comprising top, rear and bottom members, a U-shaped front frame member, a backing panel comprising a supporting grid of crossed wires, and a panel board secured thereto, the ends of said grid wires being clamped within said inwardly facing channel and within said front frame member, and upholstering comprising a filling material and an inner and outer covering therefor, the front edges of said covering being lapped upon and secured to said backing panel board and turned inwardly over the securing means, the other edges of said coverings being clamped within said outwardly facing channel of said frame.



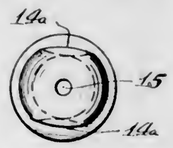
1,507,811. AUTOMATIC RAILWAY SWITCH. PERRY O. BROWN, St. Vincent, Minn. Filed Apr. 24, 1924. Serial No. 708,713. 2 Claims. (Cl. 246—225.)

1. An automatic switch structure comprising in combination with a railway track, a switch track, and movable points, spring means for holding the points at normal positions, a pair of levers pivoted adjacent the track, a magnet for each lever, a tackle for connecting the levers with the switch point moving means, means for energizing one of the magnets by a circuit completed by a vehicle moving upon the track, an open circuit connecting the other magnet with the switch and the movable



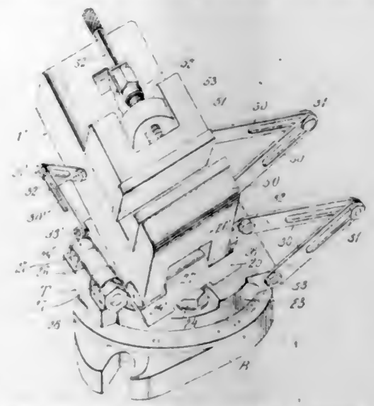
point, and a circuit closer connected with one of the levers, and adapted to close the circuit to the second mentioned magnet, when the vehicle moves upon the switch, and the first mentioned magnet is energized.

1,507,812. IRONING MACHINE. LAWRENCE BURZYNSKI, Benton, Ill., assignor of one-half to J. M. Seymour, Benton, Ill. Filed May 25, 1923. Serial No. 641,416. 4 Claims. (Cl. 68—9.)



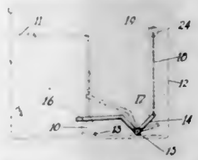
1. In an ironing machine of the type described, a board, rack bars reciprocably mounted above the board, an iron resiliently supported by said rack bars and means for reciprocating the rack bars, said reciprocating means including a motor, a train of gearing interposed between the motor and the rack bars, said gearing train including two sets of gears each set cooperating with a rack bar, a reversing gear associated with one of the gear sets, and a clutch device operable to move into alternative engagement with one or the other of the sets of gears.

1,507,813. FLOORING. CHARLES J. CARTER, Kansas City, Mo. Filed July 22, 1922. Serial No. 576,678. 1 Claim. (Cl. 20—6.)



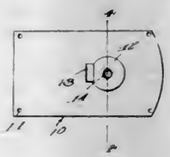
As an article of manufacture a floor section consisting of a base strip, a plurality of blocks mounted on the base strip, the blocks having aligning grooves in their opposite vertical faces for receiving splines, some of the blocks each having a recess opening from the base of one of its spline grooves and terminating short of the opposite groove, nails extending through said recesses into the block material with their heads projecting into one spline groove and their points terminating short of the other spline groove, whereby when the section is laid against a like section the nails may be driven on through the blocks and through a spline into the abutting blocks of said like section.

1,507,814. CREAM LIFTER. EDWARD C. COOLEY, Elgin, Ill., assignor to Elgin Auto Tool Company, Elgin, Ill., a Corporation of Illinois. Filed Dec. 27, 1921. Serial No. 524,950. 8 Claims. (Cl. 137—18.)



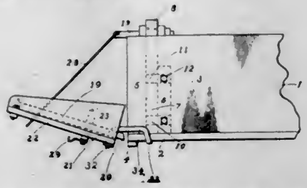
1. In a device of the class described, the combination of a tubular shell, an imperforate plug in one end of said shell, said shell having apertures therethrough adjacent the inner surface of said plug, and a second plug in the other end of said shell having a finger hold projecting therefrom and an aperture through said plug and finger hold.

1,507,815. MOUNTING FOR CLAMPS OR VISES. MATTHEW S. CUMNER, New York, N. Y. Filed Jan. 26, 1921. Serial No. 440,243. 6 Claims. (Cl. 90—60.)



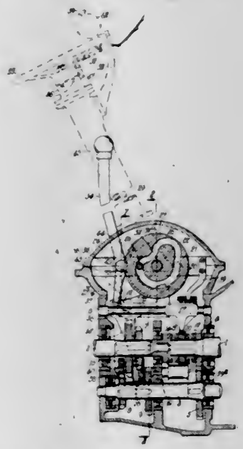
1. The combination with a clamp and a support therefor, of a turntable mounted on the support, a pair of hinges arranged at angles to each other between the turntable and clamp in a fixed position with respect to the clamp, and means cooperating with the respective hinges for securing the clamp in any given tilted position.

1,507,816. WATER-CLOSET CONSTRUCTION. GEORGE F. DAVISON, La Salle, Ill., assignor of one-half to David Riordan, La Salle, Ill. Filed Apr. 15, 1922. Serial No. 553,045. 2 Claims. (Cl. 4—52.)



1. The combination with a water closet tank, a buoyant pressure-operated flush valve, and a valve seat therefor, and manually operable means for freeing said buoyant valve from its seat to permit it to rise because of its buoyancy, of means for maintaining said buoyant flush valve submerged but a slight distance from its seat to permit a slight flow of water to prevent freezing.

1,507,817. BUTTON SNAP. MAE R. DAY, Casper, Wyo. Filed July 17, 1923. Serial No. 652,143. 1 Claim. (Cl. 24—224.)

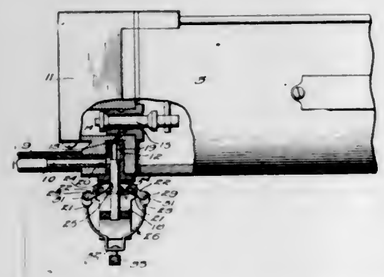


A separable garment fastener comprising a double walled member having an open slot in one wall the other wall being unyieldable and having a nib extending into said slot, and a cooperating member having an offset spring tongue equipped with a socket, said tongue being of a diameter greater than the slot in the other member and designed to enter said member between the walls thereof, said tongue having a neck operating in said slot, the socket in the tongue being designed to fit over the nib in the other member.

1,507,818. SCOOP BOARD. CHARLES DEFREESE, La Fayette, Ind. Filed Dec. 28, 1921. Serial No. 525,336. 1 Claim. (Cl. 296—58.)

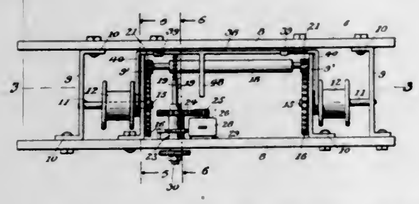
The combination with a wagon body, including a transverse brace bar, at its rear end extending beyond the sides thereof, of a scoop board, cleats secured to the wagon sides, upright supports adjustably mounted between said cleats, plates attached to said cleats for holding said upright supports in position, plate members attached to said supports, bolts mounted in said plate members, links connected to said bolts and extending through said scoop board, catches arranged on said board and adapted for engagement with said links for retaining said scoop board in closed position, bar members connected to said scoop board and with their end portions disposed at an angle in opposite directions with their vertical portions extended through openings in strap plates secured to the side members adapted for detachable connection with the wagon body for retaining said scoop board in open position, and springs for tensioning said bar members in position.

1,507,819. CHANGE-SPEED MECHANISM. JAMES FARLEY, Hertfordshire, England. Filed June 28, 1924. Serial No. 723,045. 21 Claims. (Cl. 74—57.



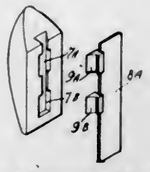
1. Change speed mechanism having in combination a driver shaft, a driven shaft, a lay shaft, a pair of gear wheels including one wheel on the lay shaft and the other on the driven shaft, a shifting member for obtaining relative movement into and out of engagement between the wheels of the pair, a constant mesh gear connecting the driver and lay shafts including a loose wheel on the driver shaft, a clutch face on the loose wheel, a clutch, an operating member for the clutch to move it into and out of engagement with the clutch face of the loose wheel, and controlling means for the clutch-operating and gear-shifting members assuring engagement of the said pair of wheels as a preliminary to the engagement of said clutch and loose wheel, whereby the said pair of wheels engage in the absence of torque on the lay shaft.

1,507,820. POWDERED BUTTER-COLORING MATERIAL FOR OLEOMARGARINE AND BUTTER. ADINO F. FILES, Maumee, Ohio. Filed Nov. 7, 1921. Serial No. 513,298. 3 Claims. (Cl. 99—13.)



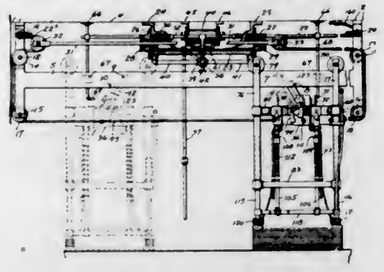
1. A dry coloring material for oleomargarine and the like, consisting of aniline colored oil and sufficient starch to absorb substantially all of the colored oil.

1,507,821. VALVE FOR WINDSHIELD CLEANERS. FRED G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to The Folberth Auto Specialty Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 20, 1922. Serial No. 545,150. 4 Claims. (Cl. 137—139.)



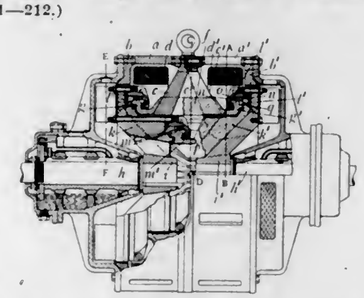
4. In a device of the character described, a valve casing, a reciprocating valve arranged in said casing, a valve stem secured to said valve, a pair of pivotally mounted arms engaging said valve stem, said arms being arranged at an acute angle to the valve stem when the valve is in open or closed position, and a substantially semicircular spring connected to said arms to exert a pressure on said stem.

1,507,822. SAFETY SWINGING SCAFFOLD. ANISE F. FRAME, South Charleston, W. Va., assignor of one-half to William Neeley, South Charleston, W. Va. Filed July 3, 1922. Serial No. 572,645. 2 Claims. (Cl. 254—167.)



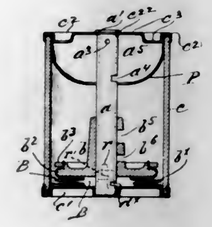
1. In an elevating and lowering mechanism for scaffolds, a frame comprising spaced parallel beams and transverse bars arranged in pairs therebetween, winding drums journaled between the pairs of transverse bars, a ratchet associated with the inner face of each winding drum, a gear having connection with the shaft of each drum, a longitudinal driven shaft supported between the inner pair of transverse bars, gear wheels carried at the ends thereof meshing with the last mentioned gears, a drive shaft disposed transversely of said beams and having connection with said driven shaft, means for rotating said drive shaft, and a rocking bar journaled on one of the beams of said frame and provided at its ends with transversely disposed pawls cooperating with the aforesaid ratchets in said drums for limiting the movement of the latter in one direction, and means for manually actuating said rocking bar.

1,507,823. ARTIFICIAL-TOOTH STRUCTURE. JOSEPH A. GARDNER, Memphis, Tenn. Filed Feb. 29, 1924. Serial No. 695,929. 9 Claims. (Cl. 32—9.)



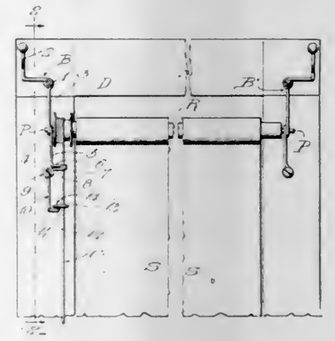
1. A tooth facing approximately one-half tooth thickness, having a groove with under cut sides in the back thereof, said groove being open at the root end of said facing and extending toward, but not to the occlusal edge of said facing, and having a portion of the said sides cut away whereby openings are provided into both ends of said groove.

1,507,824. MACHINE FOR HANDLING RUGS. JOHN W. GHEEN, Los Angeles, Calif. Filed Oct. 13, 1920. Serial No. 416,738. 5 Claims. (Cl. 212—25.)



1. In a machine for handling rugs, carpets or like articles, comprising a suspended frame with tracks therein, in combination with a carriage, adapted to run on the said tracks; a handling means in the said carriage, a cylinder, adapted to automatically run the said carriage back and forth over several piles of the said rugs, carpets or like articles; a dash pot, adapted to regulate the travel of the said carriage at the end of each stroke thereof, as set forth.

1,507,825. HOMOPOLAR ELECTRIC-CURRENT GENERATOR OR MOTOR. JAMES FRANCIS GILL and JOHN NICHOLAS CHAVIARA, Liverpool, England. Filed Nov. 28, 1923. Serial No. 677,498. 3 Claims. (Cl. 171—212.)

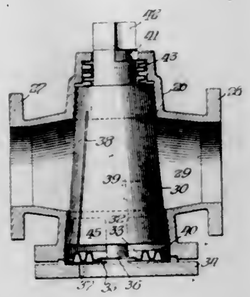


1. In dynamo electric machines of the type in which the current conducting portions of the rotor and stator are joined by a ring of mercury located in a gap between said parts, means in one of said parts whereby mercury displaced at one side of the gap is returned to the other side for maintaining an adequate amount of mercury in the gap, substantially as described.

1,507,826. SOUND-PRODUCING DEVICE FOR DOLLS, ETC. LEO J. GRUBMAN, New York, N. Y., assignor to Grubman Engineering and Manufacturing Co. Inc., New York, N. Y., a Corporation of New York. Filed Nov. 18, 1922. Serial No. 601,725. 15 Claims. (Cl. 46—46.)

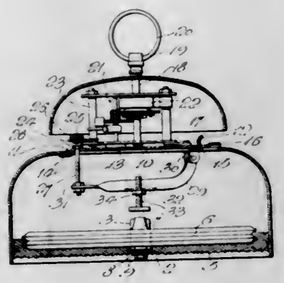
11. In a sound producing device, a casing, sound producing means enclosed within said casing including a bellows having a flexible body wall, a movable air expelling head fixed to one end of said wall, and a common closure member for the other end of the bellows chamber and one end of said casing.

1,507,827. WINDOW-SHADE FIXTURE. WILLIAM PENN HALL, Worthville, N. C., assignor of one-half to Edgar L. Yow, Worthville, N. C. Filed Mar. 19, 1923. Serial No. 626,154. 2 Claims. (Cl. 156—24.)



1. A window shade bracket formed of a length of wire bent to form a bearing for a roller pintle, the wire being extended downwardly from the bearing and bent to form a cord guide, said wire being extended downwardly from said guide and bent forwardly, backwardly and again forwardly to form an open wedge-shaped cord gripping device, the lower extremity of the wire being bent laterally to form a guard at the front end of said cord gripping device.

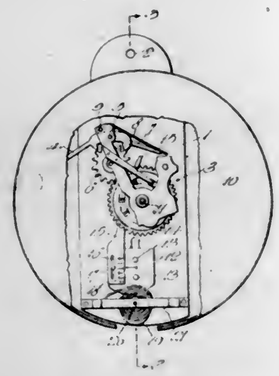
1,507,828. VALVE. PHILIP S. HARPER, Chicago, Ill. Filed Oct. 8, 1921. Serial No. 506,505. 5 Claims. (Cl. 251—98.)



1. In a valve, a body member, a rotary closing member having a bearing in the said body member and having an operating stem extending from one end thereof, a diaphragm member positioned in a plane at right angles to the axis of rotation of said rotary closing member, the said diaphragm being subjected on its side toward the

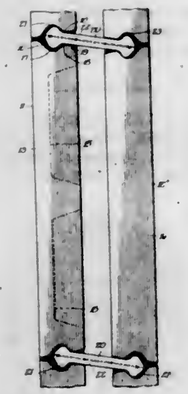
operating stem of said rotary closing member to the fluid presure within the valve, and on its other side to the

external atmospheric pressure, and means of connection between the said rotary closing member and the said diaphragm member.



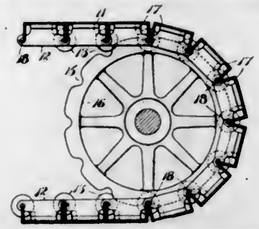
1,507,829. AUTOMATIC FIRE ALARM. FRANK P. HARTLEY, Bangor, Me. Filed Sept. 6, 1923. Serial No. 661,244. 4 Claims. (Cl. 116—102.)

3. In a device of the character described, a support, a signal carrier removably connected with said support, spring-operated signal means carried by the outer face of said carrier and including a latch normally in an operative position, a lever pivotally connected with said carrier and positioned beneath the same, a stem extending from the lever through said carrier for engaging said latch and moving the latch to a releasing position when the lever is moved upwardly, a thermostat mounted in said support, and an abutment carried by said lever and positioned above said thermostat for engagement thereby to permit movement of the lever to release the latch, said abutment being adjustably mounted for movement towards and away from the thermostat.



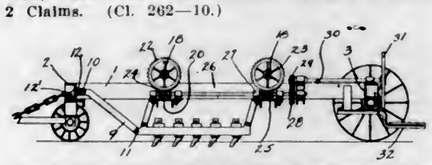
1,507,830. FIRE ALARM. FRANK P. HARTLEY, Bangor, Me. Filed Nov. 15, 1923. Serial No. 674,951. 2 Claims. (Cl. 116—102.)

1. A device of the class described comprising a support, a spring-actuated alarm mounted thereon and having a control member by means of which it is normally held against operation, a member slidably mounted on said support in spaced relation with said control member, a finger extending from said slidably mounted member to



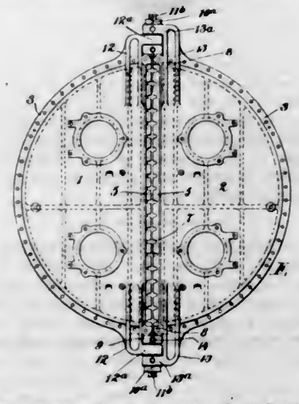
operate said control member, a cam mounted on said support for sliding said slidably mounted member, and a thermostat anchored to said support for turning said cam.

1,507,831. CONCRETE WALL CONSTRUCTION. ARTHUR G. HATCH, Duluth, Minn. Filed Apr. 5, 1924. Serial No. 704,353. 3 Claims. (Cl. 72—43.)



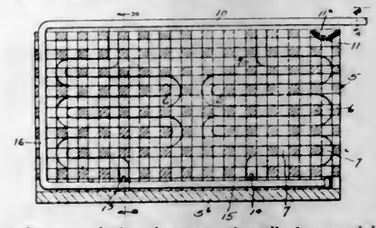
1. In a wall construction, a pair of oppositely placed walls formed of wall blocks, opposed recesses formed in the ends of juxtaposed blocks, tie blocks connecting the two walls, the tie blocks having enlarged ends fitted in the recesses formed between the adjacent blocks, the ends being smaller than the recesses whereby the tie blocks may be angularly disposed to connect walls having the block joints laterally displaced relative to each other.

1,507,832. PAN CONVEYER FOR FURNACES. KENNETH M. HENRY, San Francisco, Calif., assignor to Illinois-Pacific Glass Company, San Francisco, Calif., a Corporation of California. Filed Oct. 18, 1922. Serial No. 595,236. 2 Claims. (Cl. 193—195.)



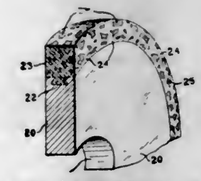
1. A pan conveyer for furnaces comprising articulated link sections, channel-shaped slats connecting opposite sections together, connecting means between adjacent slats permitting articulation and closing the space between comprising a curved flange formed on a leg of each slat.

1,507,833. ROAD SCARIFIER. JAMES B. JARMIN, Spokane, Wash. Filed Dec. 10, 1921. Serial No. 521,356. 2 Claims. (Cl. 262—10.)



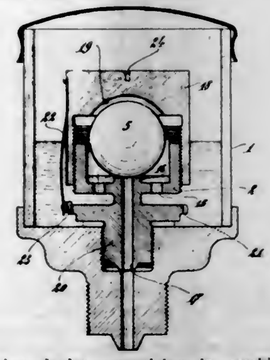
1. The combination with a wheeled frame of a drop plate having sockets therein and scraping teeth secured in said sockets arranged in staggered relation, spaced crank shafts journaled in said frame, suspending links connecting said shafts and plate and wormed gear wheels on said shafts, draft links connecting said plate and frame, a worm shaft journaled in the frame and wormed gears thereon engaging said worm gear wheels, and a hand wheel on said worm shafts.

1,507,834. STEAM CONDENSER, FEED-WATER HEATER, AND THE LIKE. JAMES ERNEST JOHNSON, Bolton, England, assignor to Hick, Hargreaves & Company Limited, Bolton, England. Filed July 3, 1922. Serial No. 572,684. 7 Claims. (Cl. 220—34.)



1. Closure means for condenser, feed heater and the like units comprising a pair of doors hinged adjacent the vertical centre line of the unit, a pair of fixed pins supported from said unit, a pair of rotatable eccentric bush members mounted around each of the fixed pins, a pair of housing members carried by each door and disposed so that each housing member is acted upon by an eccentric bush member when the latter is rotated so that in opening and closing the doors may be displaced with respect to the unit.

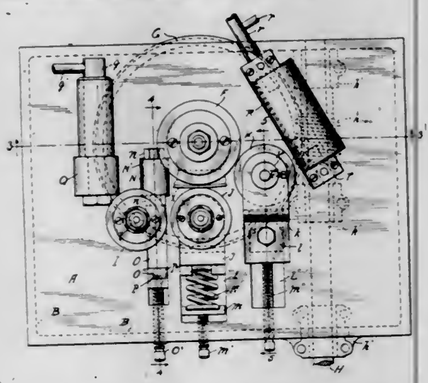
1,507,835. LIQUID-FUEL BURNER. PAUL WILMER JONES, Mobile, Ala., assignor of one-third to Glenn L. Norman and one-third to Eugene Walters. Filed June 15, 1923. Serial No. 645,660. 2 Claims. (Cl. 158—8.)



1. A burner of the character described comprising an integral cellular mass of refractory material adapted to be seated as a unit in a fire box, said mass having a closed bottom and having some of its cellular structure omitted to form sinuous passages which are in addition to the openings of the cells, a fuel supply pipe, a vaporizer for the fuel supply pipe which extends across said cellular mass and nozzles carried by said fuel supply pipe and discharging directly into the entrance ends of the sinuous passages.

1,507,836. POLISHING WHEEL. CLARENCE R. KING, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 30, 1921. Serial No. 488,615. 4 Claims. (Cl. 51—206.)

1. An abrasive article comprising a resilient cushioning body and spaced teeth of bonded abrasive grains united therewith.

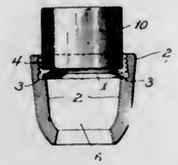


1,507,837. LUBRICATING DEVICE. CURT KNEBEL, Mannheim, Germany. Filed Jan. 8, 1921. Serial No. 436,006. 1 Claim. (Cl. 184—69.)

A lubricating device comprising in combination, an oil container, a chamber disposed near the bottom of said container and having an oil discharge channel ex-

tending vertically through the bottoms of said chamber and said container, an oil inlet extending through the bottom of said chamber and a ball on the upper end of said discharge channel adapted to close said channel, said chamber being airtightly closed but for said discharge channel and said inlet.

1,507,838. BENDING MACHINE FOR ANGLE IRONS. NIC KRUMP, Chicago, Ill. Filed Dec. 23, 1922. Serial No. 608,640. 4 Claims. (Cl. 153—55.)

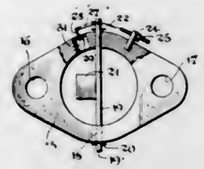


1. In a machine for bending angle iron, a plurality of vertical shafts, one thereof a driving shaft, and a plurality of rolls mounted on said shafts, in combination with means to vertically adjust said rolls, said means comprising a screw threaded hole in the upper ends of said shafts, bolts provided with corresponding screw threads fitting said screw threaded holes, means to suspend said rolls on said bolts and means to secure said bolts in a determined position.

1,507,839. APPARATUS FOR TREATING TEXTILE FIBERS. LOUIS N. LA FAYETTE, Plymouth, Mass. Filed Mar. 14, 1922. Serial No. 543,553. 12 Claims. (Cl. 8—5.)

1. In an apparatus of the kind described, a telescoping holder comprising two perforated tubes one of which is free to slide within the other, said holder being adapted to receive a plurality of bundles of textile fibers, and oppositely acting means whereby bundles placed upon said holder for treatment will be kept in substantially balanced condition.

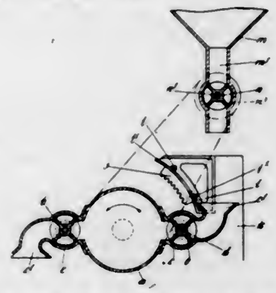
1,507,840. METHOD OF PROVIDING METAL PACKING BETWEEN TWO MEMBERS. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor, by mesne assignments, to Flannery Bolt Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 10, 1920. Serial No. 357,594. 1 Claim. (Cl. 153—32.)



The herein described method of providing a metal packing between two members, one of which has an internally threaded part to receive an externally threaded part of the other member, consisting in placing upon a shoulder at the end of the internally threaded portion a pliable metal gasket having a shape corresponding to a cross section of a hollow cone, flattening said gasket on said shoulder under pressure and simultaneously expanding it and causing it to cover said shoulder and extend beyond the free edge of the threads of said internally threaded member.

1,507,841. STAY-BOLT STRUCTURE. FREDERICK K. LANDGRAF, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 11, 1921. Serial No. 436,473. 3 Claims. (Cl. 85—1.5.)

1. The combination with a hollow member having an internally threaded portion and also an internal annular shoulder adjacent to the inner end of the threaded portion, of a metal gasket lying flatly against said shoulder and having its peripheral portion extending radially past the free edge of the threads of the threaded portion of said member, whereby said gasket is prevented from escape from said hollow member.

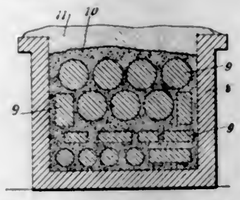


1,507,842. INTERNAL-COMBUSTION ENGINE. ALVIN A. LOETSCHER, Chicago, Ill. Filed Sept. 13, 1922. Serial No. 587,951. 2 Claims. (Cl. 137—152.)

2. In a charge forming device for internal combustion engines having a carbureter and an intake manifold, a gasket interposed between the carbureter and the intake manifold and having an auxiliary air inlet provided therein, a butterfly valve having trunnions pivotally mounted in the wall of the inlet openings and controlling the flow of air through said opening, a rock shaft rotatably mounted in the gasket and extending transversely thereacross, a vane rigidly connected with the rock shaft within the gasket and disposed to be operated upon and influenced by the gases flowing through the manifold, said rock shaft having a diametric opening, a pin secured in said diametric opening and projecting at its ends beyond the rock shaft, a spring having one of its ends connected to one end of the pin, a post carried by the gasket, an adjusting screw

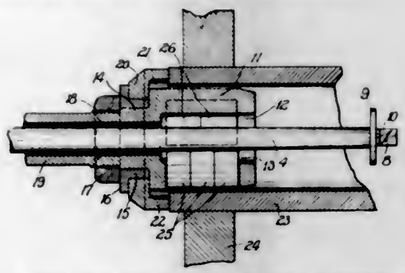
mounted on the post and engaging the end of the spring opposite to that which is connected to the pin, a link pivotally connected to the end of the pin opposite to that connected to the spring, said butterfly valve having an arm pivotally connected to the link.

1,507,843. CHARGING AND DISCHARGING DEVICE. FREDERICK DEACON MARSHALL, Westminster, London, England. Filed June 1, 1922. Serial No. 565,271. 8 Claims. (Cl. 214—18.)



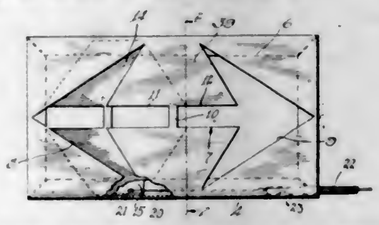
1. Apparatus for the heat treatment of materials, comprising a rotary cylinder, rotary valve means each having a plurality of radial arms carried by said cylinder, said radial arms serving to seal said cylinder, and cooperating means disposed externally to said cylinder for engaging with and intermittently rotating said rotary valve means during the rotation of said cylinder for the purpose specified.

1,507,844. TREAD FOR BOOTS OR SHOES. HERBERT T. MASON, Brookfield, Mass. Filed Sept. 7, 1923. Serial No. 661,517. 1 Claim. (Cl. 36—30.)



A tread for boots or shoes comprising a body portion of some stiff flexible material presenting an outer edge surrounding an interior cavity, a backing to said cavity of some strong material attached to the body of the tread and having a facing of rubber, means for securely fastening said rubber-faced backing to said body of the tread, a filling of some relatively soft wearing material in comparison with the material constituting said body contained within said cavity, and means for securing said filling to said rubber-faced backing in a manner whereby the filling may be removed therefrom without disrupting said backing.

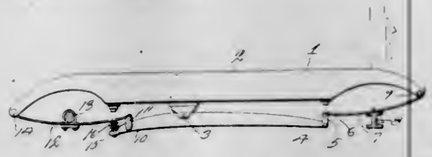
1,507,845. CARBONIZING COMPOUND AND PROCESS OF MAKING AND USING IT. STANLEY B. MATHEWSON and WALTER K. JAMISON, Springfield, Ohio, assignors to Walter K. Jamison, Stanley B. Mathewson, Howard F. Marston, Mrs. W. K. Jamison, and Mrs. S. B. Mathewson, trustees of the Lecar Carbon Company, a Trust Estate, Springfield, Ohio. Original application filed Apr. 3, 1922, Serial No. 549,274. Divided and this application filed Aug. 7, 1922. Serial No. 580,225. 4 Claims. (Cl. 148—30.)



1. The process of case hardening metals consisting in heating the metal in the presence of carbonizing material consisting of ash moisture and fixed carbon containing material volatilizable by the heat to carry the carbon into the surface of the metal to be case hardened.

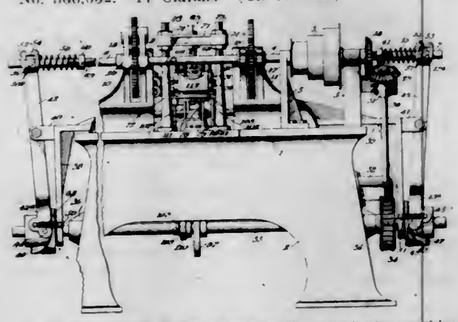
1,507,846. TUBE EXPANDER. GRAVES R. MAUPIN, Moberly, Mo., assignor to The J. Faessler Manufacturing Company, a Copartnership composed of John W. Faessler, Christinia Faessler, Louis E. Faessler, and Graves R. Maupin, all of Moberly, Mo. Filed Aug. 27, 1923. Serial No. 659,454. 4 Claims. (Cl. 153—82.)

1. A tube expander comprising a cage, a tapered mandrel extending through said cage, and a plurality of sectional rollers arranged in groups varying in number of sections located in said cage, said rollers contacting with the mandrel and adapted to be projected beyond the periphery of said cage by the action of said mandrel.



1,507,847. SIGNAL DEVICE FOR MOTOR VEHICLES. HARRY MAYER, Chicago, Ill. Filed Dec. 1, 1922. Serial No. 604,310. 1 Claim. (Cl. 116—44.)

A signal device of the character described comprising a source of light, a stationary stencil placed in front of said light having an opening therethrough in the shape of an arrow having a pointed head at each end thereof, a mov-



able element arranged to slide laterally mounted in the rear of said stencil and arranged to be entirely concealed when said movable element is midway between the tips of said arrow-shaped opening in said stencil, said movable element having slots therein arranged to register with the opening in said stationary stencil forming the shaft of said arrow, whereby said movable element when moved to either end of said stationary stencil may close that part of the opening forming the head of the arrow adjacent to the movable stencil.

1,507,848. VEHICLE SPRING. HERMAN B. MILLER, Manatee, Fla. Filed Mar. 27, 1923. Serial No. 628,086. 1 Claim. (Cl. 280—104.)

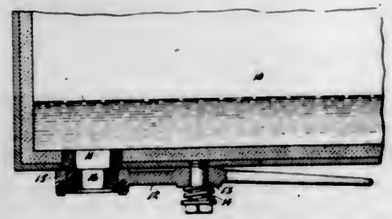
The combination with the side rail of an automobile frame, axles disposed beneath said rail adjacent its forward and rear ends, of a spring device, said device comprising an equalizing bar below the rail and pivoted intermediate its ends, semielliptic springs having their outer ends connected to the ends of the rail, said springs supporting the axles, said springs extending inwardly towards each other and having their inner ends pivoted to the equalizing bar, one of said springs being pivoted to the equalizing bar at a point spaced from its end and a coiled spring interposed between the last-named end of the spring and the adjacent end of the equalizing bar.

1,507,849. NIPPLE-MAKING MACHINE. HACKLEY MORRISON, Richmond, Va. Filed Mar. 17, 1920. Serial No. 366,662. 17 Claims. (Cl. 77—21.)

1. In a machine of the character described, the combination with a pair of alined tool spindles, of a pair of adjustable working heads in which said spindles are journalled, means for rotating said spindles, means for reciprocating said spindles toward and from each other comprising a pair of levers pivoted on said working heads, a pair of cams arranged to engage and oscillate said levers, means between the adjacent ends of said spindles for supporting blanks to be operated upon, and means for adjusting said working heads and thus varying the distance between the spindle ends so as to operate upon blanks of different lengths, said levers and cams moving together when the working heads are adjusted, whereby a constant relation between them is maintained.

1,507,850. TRUNDLING TOY. MIKE OLESEK, Cheboygan, Mich. Filed Nov. 18, 1922. Serial No. 601,744. 3 Claims. (Cl. 46—47.)

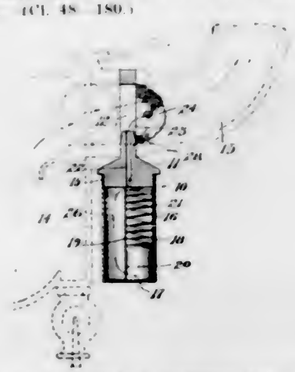
1. In a trundling toy, a handle bar, a trundling wheel journaled laterally of the outer end thereof, a cage slidably mounted upon the handle bar, cooperating means carried by the cage and trundling wheel to effect reciprocating



movement of the cage upon rotation of the trundling wheel, and a bell and striker hammers carried by the upper end of the cage and handle bar respectively.

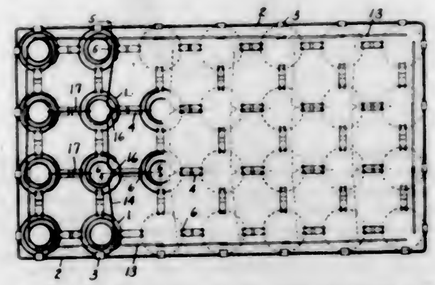
1,507,851. VEHICLE BODY AND UPHOLSTERING OR WALL CUSHION THEREFOR. CHARLES O. ORMSBEE, Flint, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Dec. 30, 1922. Serial No. 609,908. 3 Claims. (Cl. 155—184.)

1. The combination of an upholstered cushion comprising springs, a border frame having an outwardly facing upholstery securing channel, an upholstery covering having an edge provided with a finishing flap, said covering and the outer edge of said flap being clamped within said channel, said flap being folded rearwardly over the border frame and constituting a finish for the edge of the cushion, and a cross wire mounted on the back of the cushion in spaced relation to said border frame, the inner edge of said flap being secured to said cross wire.



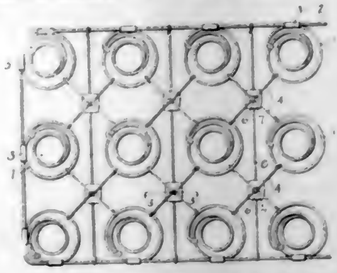
1,507,852. GLASS FEEDER. CLAUDE W. PLEUKHARP and HARRY RAYNES, San Francisco, Calif., assignors to Illinois-Pacific Glass Co., San Francisco, Calif., a Corporation of California. Filed Mar. 9, 1922. Serial No. 542,226. 5 Claims. (Cl. 49—55.)

5. The combination with a glass feeding vessel having a discharge orifice in its bottom of an arcuate plate having a central handle member and pivotally mounted on the bottom of the vessel and having sliding contact therewith



and a series of spigots, each of a different size carried by said plate and adapted to be moved into successive register with the discharge orifice whereby one spigot may be substituted for another, the plate meantime serving to cut off the flow of glass.

1,507,853. AUXILIARY AIR-INLET DEVICE. CECIL F. PRATT, San Francisco, Calif., assignor to Sphinx Products Corporation, San Francisco, Calif., a Corporation of California. Filed May 11, 1922. Serial No. 560,016. 2 Claims. (Cl. 48—180.)

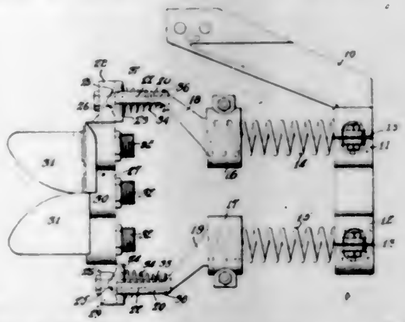


1. In combination with a carbureter and the intake manifold of an internal combustion motor, of a valve mechanism comprising a head member adapted to be secured between the flanges of the manifold and the carbureter, said head member having an opening formed therein in alignment with the bore of the manifold, a reticulate cover for said opening, a cylindrical shell fixed at one end to said head member, a valve cage fixed eccentrically in said shell and having a longitudinal slot formed therein, said shell having an inlet opening formed in its bottom below the valve cage, a reciprocable valve member in said cage, a spring in the cage normally tending to maintain said valve member over said inlet opening to prevent the admission of air therethrough, a passageway formed in the head member communicating with the interior of the shell and the interior of the manifold through said opening in the head member, whereby suction of the motor will raise said valve member and draw air into the manifold through the inlet opening of said slot and said passageway.

1,507,854. SPRING STRUCTURE. HERMAN O. REIDENBACH, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Aug. 14, 1922. Serial No. 581,744. 2 Claims. (Cl. 5—252.)

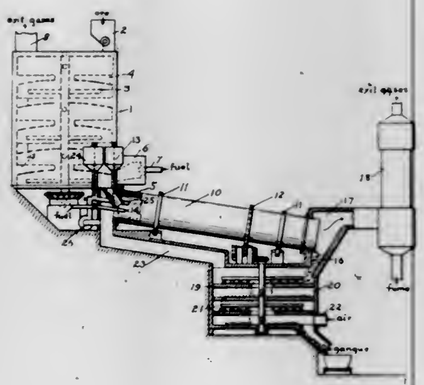
1. In a spring structure, the combination with a plurality of upright body springs, of channel-shaped bracing strips engaging intermediate coils of adjacent springs, and brace wires having their ends engaged in said channel brace strips and having intermediate parts thereof engaged with coils of intermediate springs.

1,507,855. SPRING STRUCTURE. HERMAN O. REIDENBACH, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Feb. 10, 1923. Serial No. 618,248. 3 Claims. (Cl. 5—267.)



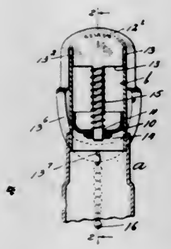
3. In a spring structure, the combination of a plurality of body springs, V-shaped tie members having their ends connected to adjacent springs and having lateral offsets in their bights, clip members disposed on said lateral offsets, and tie wires threaded through said offsets so that the clip members lie between the tie wires and tie members.

1,507,856. DEVELOPING DEVICE. CHARLES S. ROBERTSHAW, Natchitoches, La. Filed June 18, 1923. Serial No. 646,166. 10 Claims. (Cl. 95—100.)



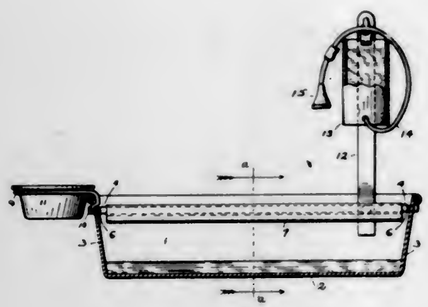
1. A developing device for use in photography, comprising a frame provided at each end with a transversely extending retaining tongue, and a shiftable separator member extending transversely of and slidably connected with said frame.

1,507,857. CONNECTER-HEAD SUPPORT. EDWARD A. ROBINSON, Montreal, Quebec, Canada, assignor of one-half to himself and one-half to Ellison Edward Workman, both of Montreal, Canada. Filed Dec. 17, 1921. Serial No. 522,983. 28 Claims. (Cl. 285—24.)



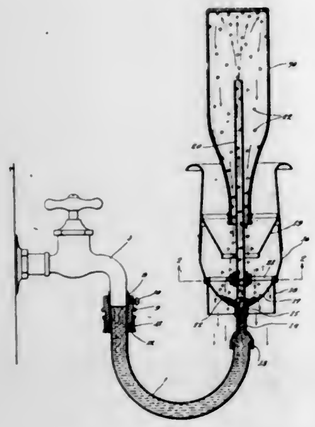
20. In an automatic train pipe connecter, a bracket and head and connections between the upper and lower parts of said head and the bracket including separate springs sustaining the entire weight of the head.

1,507,858. PROCESS FOR RECOVERING METALLIC VALUES FROM ORES. WALTER A. SCHMIDT, Los Angeles, Calif., and GEORGE M. COLVOCORESSES, Humboldt, Ariz., assignors to Western Metallurgical Company, Humboldt, Ariz., a Corporation of Delaware. Filed Feb. 20, 1922. Serial No. 537,689. 7 Claims. (Cl. 75—17.)



1. The process which consists in preheating ore by contact with hot gases, to a temperature of about 800° C. and then adding salt to the ore and further subjecting the ore to heat to volatilize metallic constituents therefrom, and subjecting the gases bearing such metallic constituents to fume collecting operation separate from the gases in the preheating operation.

1,507,859. AUTOMATIC BURNER TIP. WILLIAM SCHMITZ, New York, N. Y. Filed Apr. 28, 1923. Serial No. 635,213. 11 Claims. (Cl. 67—116.)

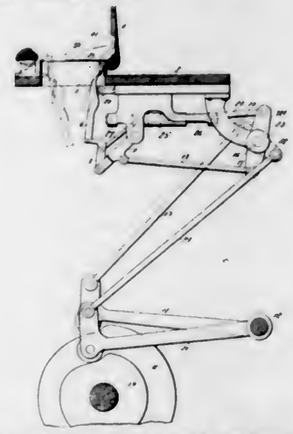


1. In a safety device for gas burners, the combination with a standard gas tip, of thermostatic means supported within said tip and a manually operable valve in said tip for controlling communication between said burner and said tip and capable of being automatically controlled by said thermostatic means.

1,507,860. BATHING APPARATUS. CHARLES G. SCHOBER, Berkeley, Calif. Filed Dec. 22, 1919. Serial No. 346,498. 1 Claim. (Cl. 4—4.)

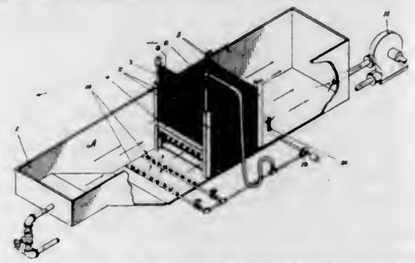
In combination with the tub of a bathing apparatus, said tub having a perforated wall, a rod hooked into said perforations and forming an outwardly projecting loop and a basin in said loop supported thereby.

1,507,861. BOTTLE WASHER. VICTOR SCHWARZ, Cleveland, Ohio. Filed Aug. 10, 1922. Serial No. 580,858. 1 Claim. (Cl. 15—95.)



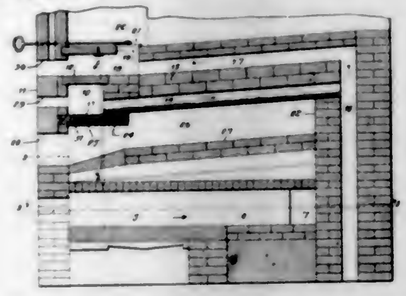
A bottle washer comprising a hollow cylindrical head portion having an annular shoulder near its lower end; a substantially cup shaped screen member arranged in the head portion and having a central opening, an annular flange carried by the screen and resting upon said shoulder, a ring arranged to retain the flange and shoulder in snug engagement, said screen having its lower end terminating within the hollow head and connected to a source of water supply, an injector tube arranged centrally in the head portion and supported by said ring, the lower end of said injector pipe being spaced slightly from the central opening in the screen, and the injector pipe being extended outwardly from one end of the hollow head portion.

1,507,862. BOTTOM MAKING MACHINE FOR FURNACES. SAMUEL B. SHELDON, Duluth, Minn. Filed Jan. 16, 1922. Serial No. 529,804. 5 Claims. (Cl. 214—18.)



1. A bottom making machine for furnaces comprising a car structure adapted to run upon charging machine tracks upon a furnace charging floor, a carriage movable relative to said car toward and from the furnace, and a dolomite gun supported from said carriage and adapted for vertical and horizontal adjustment relative to the carriage.

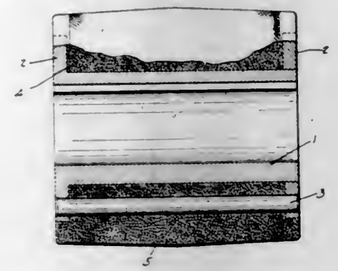
1,507,863. ENVELOPE MACHINE. WILLIAM H. SHEPPARD, Worcester, Mass., assignor to Sheppard Envelope Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1921. Serial No. 451,518. 4 Claims. (Cl. 93—72.)



1. In a machine of the kind described, a folding mechanism comprising a bed having a solid edge, said bed having slots therein and means adapted to pass through said slots to engage the under side of the work and lift it off said bed and thereafter to engage the edge of said work and push it edgewise off said bed.

1,507,864. METHOD OF LOADING. FRANCIS BETTS SMITH, San Francisco, Calif. Filed Oct. 22, 1923. Serial No. 670,101. 7 Claims. (Cl. 214—152.)

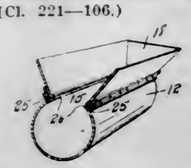
1. The method of segregating articles for transport to a point of distribution comprising the steps of promiscuously placing articles in bulk into a fluid, circulating said fluid in a manner to hold said articles in mobile suspension, progressively admitting said articles into a series of compartments immersed in said circulating fluid, removing said compartmented articles from said fluid, transporting them to another body of circulating fluid whereby they are removed from said compartments by said fluid.



1,507,865. OVEN. GEORGE P. SMITH, Baltimore, Md. Filed Nov. 15, 1923. Serial No. 674,921. 5 Claims. (Cl. 107—55.)

1. An oven comprising a fire box, a chimney, a hearth, front, rear and side walls, a flue pipe support extending from side wall to side wall and consisting of beams having their ends supported in said side walls, a plate beneath said beams and plastic material between said beams and resting upon said plate, flue pipes supported at one end by said rear wall and at the other by said support, a connection from said fire box to one end of each of said pipes and a connection from the other end of each of said pipes to said chimney.

3. An oven comprising a fire box, a chimney, a hearth, front, rear and side walls, a flue pipe support extending from side wall to side wall and consisting of beams having their ends supported in said side walls, a plate beneath said beams and plastic material between said front wall and the adjacent beam and between said beams and resting upon said plate, flue pipes supported at one end by said rear wall and at the other by said support, a connection from said fire box to one end of each of said pipes and a connection from the other end of each of said pipes to said chimney.

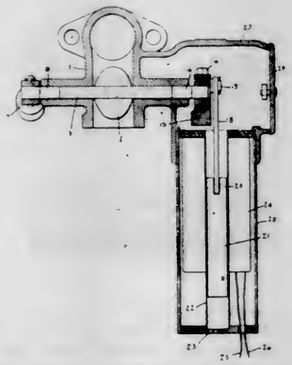


1,507,866. COMPOSITION PULLEY. FREDERICK A. STOLTE, Indianapolis, Ind. Filed Nov. 5, 1921. Serial No. 513,122. 1 Claim. (Cl. 64—17.)

A pulley comprising a metal core having an integral radially extending flange at one end, a separate flange mounted on its other end, a molded fibrous body on said core extending over said flanges and having its ends flush with the ends of the core, tie rods extending axially through said fibrous body and connecting said flanges for interlocking the fibrous body and flanges together and for securing the movable flange in position around the

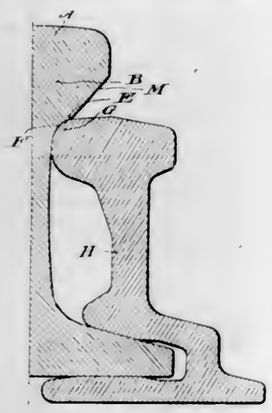
end of the core, and a fabric covering secured to the peripheral face of the body the edges of the said fabric covering being substantially flush with the peripheral face of the pulley, substantially as set forth.

1,507,867. MEASURING DRUM. ROBERT C. STUBBS, Dallas, Tex. Filed Oct. 13, 1921. Serial No. 507,409. 3 Claims. (Cl. 221—106.)



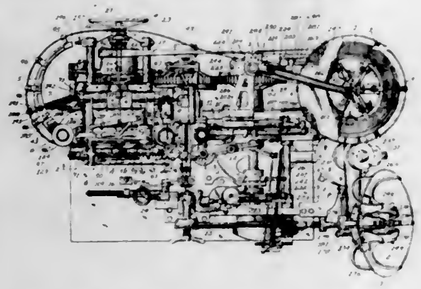
1. A measuring drum comprising a supporting frame, a hopper mounted on said frame and provided with a discharge opening in the lower side thereof, two opposite walls of said hopper having flanged bearing recesses, a tubular receptacle provided with stub shafts journaled in said frame and having an opening normally registering with the opening in said hopper and having continuous peripheral surfaces cooperating with said bearing recesses, and means for revolving said receptacle to discharge a charge.

1,507,868. PROCESS OF MAINTAINING THE MOISTURE CONTENT CONSTANT IN SUBGRADES OF PAVING AND THE LIKE. ROBERT C. STUBBS, Dallas, Tex. Filed Jan. 7, 1924. Serial No. 684,779. 4 Claims. (Cl. 94—22.)



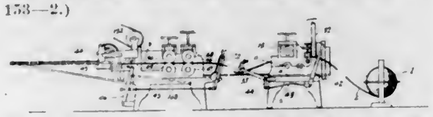
1. A process of making the moisture content constant in a subgrade under paving by forming web walls of earth on both sides of the boundaries of the subgrade by impregnating continuous sheets or portions of earth below the paving at the boundaries thereof with a water repellant material and making the web walls impervious to passage of water.

1,507,869. THROTTLE GOVERNOR. IRA T. SWARTZ, Indianapolis, Ind. Filed Aug. 4, 1919. Serial No. 315,190. 2 Claims. (Cl. 137—140.)



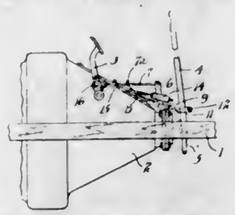
2. In an electric power system including an engine and a generator driven thereby, means for preventing momentary fluctuations of the engine speed comprising a throttle valve, a solenoid in circuit with the generator, a plunger armature connected to the throttle arranged to be moved in one direction by the solenoid and in the other by gravity, and a dashpot in connection with the armature to prevent sudden closing of the throttle on temporary failure of the solenoid, substantially as set forth.

1,507,870. RAILWAY RAIL. WILLIAM PATON THOMSON, New York, N. Y. Filed Feb. 16, 1923. Serial No. 619,467. 18 Claims. (Cl. 238—125.)



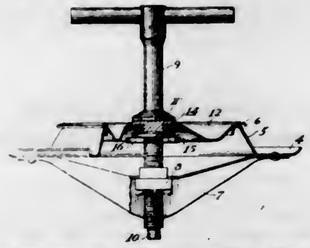
1. A rail having a substantially oblong wheel-resisting head, a rail web, and a zone interposed between said head and web, said zone having an inverted pyramidal conformation which has a truncated juncture with said web.

1,507,871. WIRE-FEEDING MEANS FOR COILING, BENDING, OR OTHER WIRE-FORMING MEANS. BERT L. VAN ORMAN, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Feb. 3, 1923. Serial No. 616,652. 39 Claims. (Cl. 242—78.)



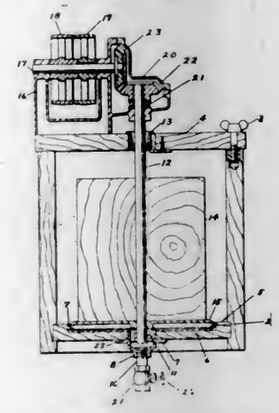
1. In a wire working machine, the combination with the feed means, of reels each adapted to receive a bale of wire and each comprising a hub member, radially disposed upwardly facing curved arms mounted on said hub member, a ring mounted on the outer ends of said arms, a cover, said arms being provided with bracket extensions at their inner ends on which said cover is supported when closed with its outer edge in spaced relation to said ring permitting the passage of a wire between the ring and cover, locking pins for holding said cover in closed position, springs acting to normally retract said locking pins, a locking plunger adapted when in projected position to actuate said locking pins to engaging position and when retracted to engage said cover for raising the same, an inclined reel supporting standard, a reel carrier rotatably mounted on said standard and having spindles for said reels disposed so that when one reel is in delivery position its axis is vertical and the axis of the other reel is inclined to facilitate loading, driving means for said carrier including a clutch, means for controlling said clutch comprising a wire guide member through which the wire drawn from the reel is passed, a plunger operatively associated with said wire guide member and adapted to be supported in one position by the wire passing through the guide member whereby upon the exhaustion of the wire said clutch is actuated to rotate said reel support, and means controlled by said plunger for automatically lifting said locking plunger whereby the cover is released and raised to permit the swinging of the support.

1,507,872. METAL-WORKING MACHINE. BERT L. VAN ORMAN, Highland Park, Mich., assignor to L. A. Young Industries, Incorporated, Detroit, Mich. Filed Mar. 12, 1923. Serial No. 624,599. 41 Claims. (Cl. 153—2.)



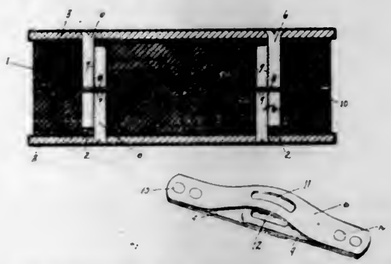
41. In a structure of the class described, the combination with a forming means, a stock preparing means, driving means for said stock preparing means, and a control means for said stock preparing means comprising a member engaging the stock between the stock preparing means and the forming means.

1,507,873. FOOT-BRAKE CONTROL. BENJAMIN W. WANDERSEE, Montrose, Minn. Filed Mar. 6, 1924. Serial No. 697,237. 5 Claims. (Cl. 74—39.)



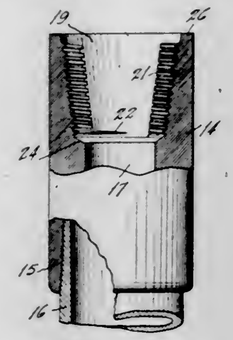
1. The combination with a Ford or other automobile having a pedal operated brake and an emergency brake, of means for holding said pedal operated brake in braking position when it is operated after said emergency brake is operated, and means for rendering said means operative.

1,507,874. ORCHARD VALVE. WILLIAM A. WATERMAN, Exeter, Calif. Filed Nov. 9, 1921. Serial No. 513,975. 4 Claims. (Cl. 137—13.)



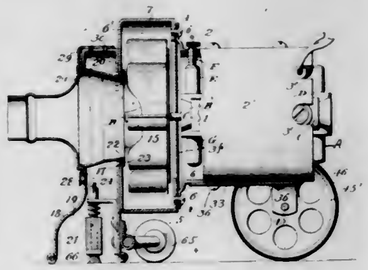
1. A valve comprising in combination a base provided with a seat, a valve stem secured to said seat so as to be moved longitudinally upon turning the stem, a valve cover through which said stem extends loosely mounted on said stem so that it may be tilted, said stem having a collar fixed thereto, said collar having a concavity opposed to said cover, and an annular gasket of ductile material interposed in said concavity and surrounding said stem, whereby upon forcing said cover upon its seat the gasket may be expanded and compressed against said stem to form a leak tight fit.

1,507,875. GLOVE-CLEANING DEVICE. ANDREW J. WEIS and JOSEPH ZIMMERMAN, Dayton, Ohio. Filed Oct. 24, 1921. Serial No. 510,091. 2 Claims. (Cl. 259—107.)



1. In a device of the type described, the combination with a casing rectangular in cross section, of a shaft projecting axially into said casing, means for rotating said shaft, a flat agitator secured to the shaft, and an inverted cupped disc attached to the bottom of the agitator and the shaft.

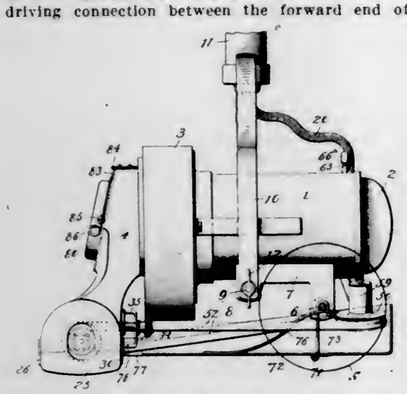
1,507,876. BINDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Kalamazoo Loose Leaf Binder Company, Kalamazoo, Mich. Filed Dec. 20, 1922. Serial No. 607,997. 8 Claims. (Cl. 281—25.)



1. The combination in a binder for sheets adapted to receive binding posts, of binding bars, binding post members mounted on said bars in coacting pairs for slidable engagement within the sheet body and having coacting interlocking teeth on their meeting edges, and a post clamping device interposed in the sheet body and comprising a bowed body member and a pair of overlapping clamping members secured at their outer ends to the ends of said body member, said body member and clamping members having aligned holes therein through which the post members are disposed, the clamping members being actuated to clamp said post members together with their teeth in interlocking engagement when said body member is straightened within the sheet body by the pressure of the sheets thereon.

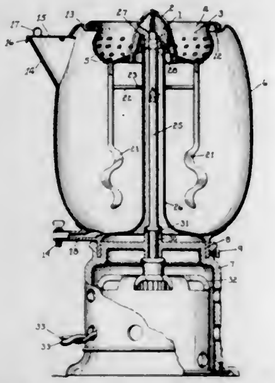
1,507,877. TOOL JOINT. ROBERT A. WILSON, Dallas, Tex., assignor to Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed June 6, 1921. Serial No. 475,470. 1 Claim. (Cl. 285—149.)

A rotary well boring box and pin comprising the combination of a pin having double threads arranged in spaced panels on diametrically opposite sides thereof, said pin having a shoulder at its upper end, and a box having a socket shaped to receive said pin and provided with double threads arranged in panels to mesh with the panels of the pin, each of the double threads upon the pin riding upon a continuous thread at the bottom of the socket, whereby the panels of the pin and box are meshed upon quarter turn of the pin.



1,507,878. VACUUM CLEANING MACHINE. MORRIS S. WRIGHT, Worcester, Mass., assignor to M. S. Wright Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1916. Serial No. 121,478. 14 Claims. (Cl. 15—16.)

5. In a portable vacuum cleaning machine having the usual dust-intake and vacuum-creating means, the combination of a motor for the vacuum-creating means, a casing for said motor, said casing having an open rear end, and a removable cap for said rear end permitting access to said motor without disturbing the dust-intake, the motor being so constructed and mounted within the casing that the same may be bodily removed without dismantling any of its parts through said open rear end of the casing.



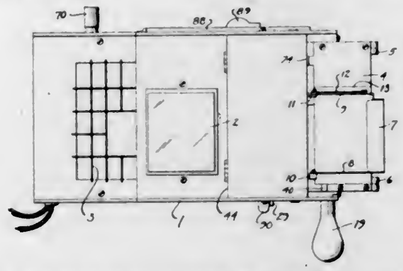
1,507,879. ELECTRIC VACUUM CLEANING MACHINE. MORRIS S. WRIGHT, Worcester, Mass., assignor to M. S. Wright Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 25, 1917. Serial No. 193,209. 27 Claims. (Cl. 15—8.)

27. In a suction cleaning machine, the combination of a vacuum chamber, a nozzle, an elongated rotatable brush in the nozzle, a drive shaft, a fan in the vacuum chamber, a driving connection between the forward end of the

drive shaft and the fan, and a driving connection interposed between the opposite end of the drive shaft and brush and connecting with the brush.

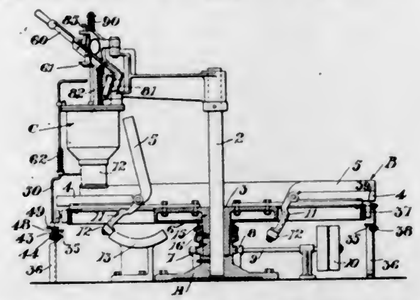
1,507,880. FRUIT-JUICE EXTRACTOR AND MIXER. ANDREW ZOUVELOS, Toledo, Ohio. Filed July 3, 1924. Serial No. 724,020. 2 Claims. (Cl. 259—23.)

1. In a fruit juice extractor and mixer, a ribbed head, a perforated receptacle connected to the head having a diameter greater than its mouth, a container for containing the head and receptacle, paddles connected to the receptacle for causing rotation of liquids located in the container, and means for causing rotation of the head, receptacle and the paddles.



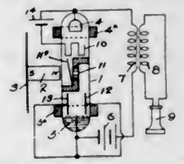
1,507,881. FIREARM. HERMAN G. ALOFS, Holland, Mich. Filed May 14, 1924. Serial No. 713,244. 7 Claims. (Cl. 42—40.)

1. In an attachment for break down guns, a storage magazine attached to one side of a gun barrel and stock, a spring therein for forcing cartridges out of the back end of the magazine, a transfer magazine pivotally mounted at the back end of the storage magazine and adapted to be made to swing over from the back of the storage magazine into position back of the gun barrel, and



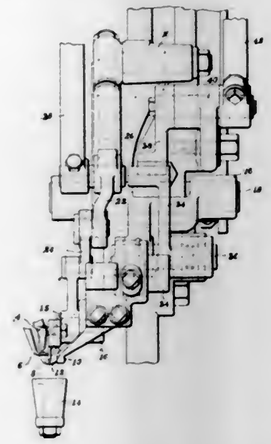
back again into position back of the storage magazine by the action of throwing the gun stock into breakdown position and again returning the stock into normal position.

1,507,882. FINGERPRINT MACHINE. ALFRED CHARLES OTTO BOCK, Brooklyn, N. Y., assignor to Fingerprint Machine Corporation, a Corporation of New York. Filed June 1, 1921. Serial No. 474,139. 16 Claims. (Cl. 41—4.)



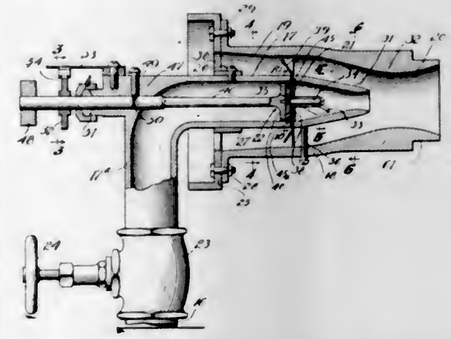
1. In a finger print recording machine, the combination with a support for a sheet upon which an impression is to be recorded, of means for feeding powder to the impressed sheet, and means for fixing the impression, said support being movable to positions where the impression is accomplished, where the powder is fed and where the impression is fixed, and means for causing a pause in the movement of the support in the powder feeding position.

1,507,883. UNIVERSAL COOKING MACHINE. HENRY A. CAMPBELL, Oakland, Calif. Filed Apr. 9, 1923. Serial No. 630,826. 17 Claims. (Cl. 219—19.)



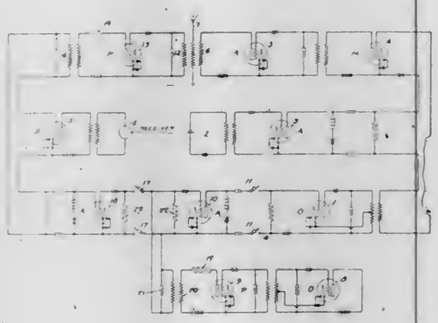
1. A machine of the character described, comprising a table, means for imparting a rotary movement thereto, a plurality of cooking units carried by the table, a cover for each unit, and means for automatically opening and closing the covers during movement of the table.

1,507,884. GASEOUS TELEPHONE TRANSMITTER. RICHARD A. ENGLER, Evanston, Ill. Filed Sept. 2, 1919. Serial No. 321,195. 11 Claims. (Cl. 179—121.)



1. A telephone transmitter comprising a plate sensitive to sound waves, a magnet mounted upon said plate and a gas or vapor path, said magnet being vibrated by said plate adjacent said path, whereby the gas or vapor becomes variable in resistance.

1,507,885. INSEAM-SEWING MACHINE. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 18, 1919, Serial No. 318,086. Renewed Nov. 21, 1923. 11 Claims. (Cl. 112—47.)



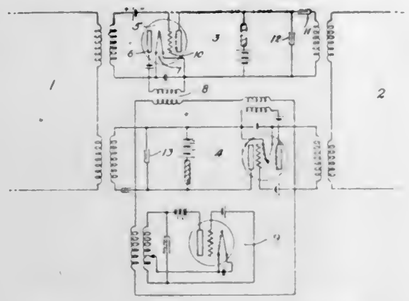
1. An inseam sewing machine having, in combination, stitch-forming mechanism, devices for guiding and intermittently feeding the shoe, and mechanism for actuating the feeding devices to give a multiple step feed to the shoe in each stitch-forming cycle.

1,507,886. GASEOUS-FUEL SUPPLY SYSTEM. THERON L. HILES, Niles, Mich. Filed June 20, 1921. Serial No. 478,804. 29 Claims. (Cl. 158—118.)

1. In a gaseous fuel supply system, the combination with a source of gas supply under pressure, a gas tube communicating with said source and having a discharge nozzle, an air tube surrounding the gas tube in spaced relation with reference thereto and having an air inlet opening at its rear end, said air tube providing an annular passageway around the gas tube and a continuing passageway forwardly of said nozzle, a fan wheel comprising turbine blades disposed in the path of gas discharged from said gas tube and adapted to impart rotation to said wheel and fan blades projecting into said annular passageway and adapted upon rotation of the wheel to force into the forward passageway a volume of air in a predetermined proportion to the volume of gas discharged from the gas tube, and means for controlling the volume of the gas thus discharged.

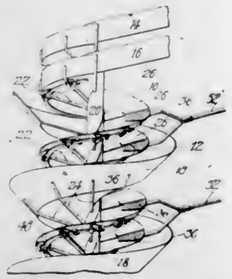
1,507,887. WAVE-TRANSFERRING CIRCUITS FOR COMMUNICATION SYSTEMS. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1916. Serial No. 101,181. 43 Claims. (Cl. 179—171.)

1. A two-way signal transmission system comprising separate channels for transmitting in each direction, a space discharge device cooperating with each channel and functioning as an essential element for maintaining efficient transmission therethrough, an electrode in each of said devices, and electrical arrangements whereby at a given instant of time one only of said electrodes is established at such a potential as to render the corresponding device inoperative and thereby render the channel with which said device is associated incapable of efficient transmission.



33. A system comprising a line, repeating means associated therewith, and means for automatically reversing the operative repeating direction of said repeating means with respect to said line while repeating without changing its circuital state of continuity with respect to said line.

1,507,888. SECTIONAL MOLD-OPERATING DEVICE. JESSE E. MCBRIDE, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 4, 1917. Serial No. 189,669. 3 Claims. (Cl. 198—177.)



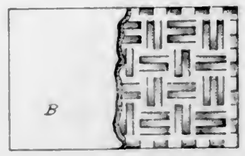
1. A combined conveyer and cover-operating device comprising an endless conveyer upon which tire molds or the like are placed, said molds having removable upper sections, of a second endless conveyer positioned above the first and having its center portion arranged in a higher plane than its end portions, said upper conveyer having a plurality of members within a space equal to that occupied by a mold upon said first-mentioned conveyer and engageable with said upper sections irrespective of the spacing of the molds upon said first-mentioned conveyer and adapted to lift said upper sections and carry the same suspended during a predetermined period of travel.

1,507,889. METHOD AND MEANS FOR REPEATING. ALEXANDER M. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1918. Serial No. 223,222. 16 Claims. (Cl. 179—170.)

1. A two-way repeating system comprising two lines, two repeater paths connected in opposition therebetween, and means supplying electromotive forces for rendering said repeater paths substantially inoperative in cyclic order.

1,507,890. SPIRAL SEPARATOR. FRANK PARDEE, Jr., Hazleton, Pa., assignor to Anthracite Separator Company, Hazleton, Pa. Filed July 28, 1923. Serial No. 654,308. 7 Claims. (Cl. 83—54.)

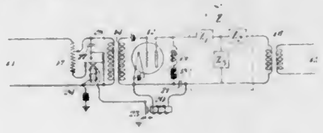
2. In a spiral separator a runway formed of a series of segmental plates overlapping along their adjacent edges, said jackets having portions spaced apart where they overlap to form an open slit, and a movable jacket arranged to be moved through said slit in an arcuate path substantially concentric with the vertical axis of the runway.



1,507,891. COMPOSITION OF MATTER FOR CARROTING FUR AND THE LIKE. CHARLES D. PARKS, Danbury, Conn. Filed June 30, 1923. Serial No. 648,849. 3 Claims. (Cl. 8—21.)

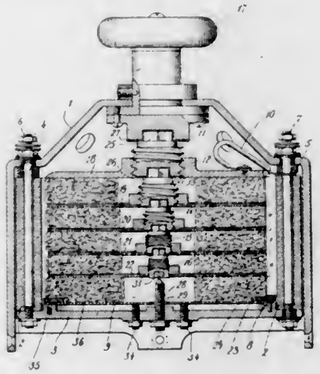
1. As a new composition of matter adapted for the carroting of fur and the like, an aqueous solution comprising sodium peroxide dissolved in water in the proportion of approximately one pound of sodium peroxide to three gallons of water.

1,507,892. TREATED FUR AND ART OF TREATING THE SAME. CHARLES D. PARKS, Danbury, Conn. Filed June 30, 1923. Serial No. 648,850. 17 Claims. (Cl. 8—21.)



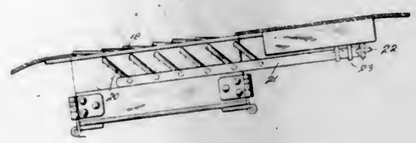
12. The herein described art of preparing fur or the like for felting which consists in treating the fur with a solution of sodium peroxide in water having a strength between 1° Baumé and 10° Baumé.

1,507,893. PLASTER BOARD. ROBERT C. RINGHOLZ, Salt Lake City, Utah. Filed Aug. 9, 1922, Serial No. 580,681. Renewed Mar. 10, 1924. 2 Claims. (Cl. 154—45.9.)



1. A plaster-board of the class described comprising a metal sheet, having a plurality of alternately adjacent convex and concave projections and recessions cut and pressed therein, leaving approximately ovate-oblong perforations in the cross section of the sheet and cover sheets of plaster on both sides of said metal sheet filling said perforations and uniting said cover sheets of plaster through the said cross-section perforations.

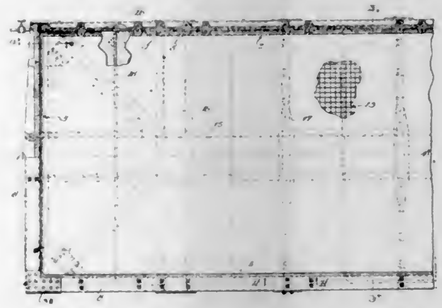
1,507,894. SIGNALING SYSTEM. CHARLES A. ROBINSON, Washington, D. C., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 17, 1921. Serial No. 523,013. 6 Claims. (Cl. 179—4.)



1. In combination, a repeater circuit adapted to amplify voice frequency currents with high efficiency and ringing current with relatively low efficiency and having an input and an output circuit therefor, means operative on the input circuit for increasing the efficiency of said repeater for ringing current, and an impedance in the output circuit for further increasing the relative efficiency of amplification of the ringing current compared to the voice frequency current.

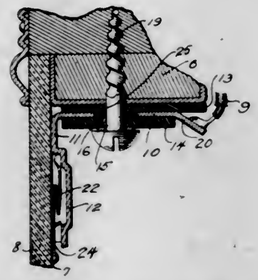
1,507,895. RHEOSTAT. FLORICEL A. ROJAS, New York, N. Y. Filed June 10, 1922. Serial No. 567,419. 19 Claims. (Cl. 219—50.)

1. In a compressible resistance rheostat, the combination of a compressible resistance material, and means for applying force at a plurality of points along the thickness of the material to vary its resistance, this force being distributed so that the material is compressed and expands as a substantially true elastic body.



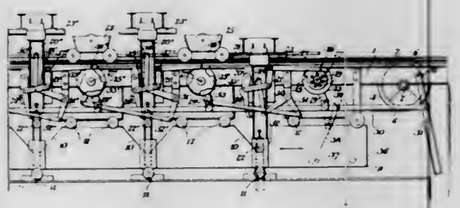
1,507,896. VENTILATING ATTACHMENT AND HEATER RECEPTACLE FOR AUTOMOBILES. WILL SCHONS, Des Moines, Iowa. Filed May 13, 1920. Serial No. 381,213. 1 Claim. (Cl. 98—22.)

A device of the class described, comprising a ventilator frame open both at its outer and its inner surfaces, and designed to be detachably secured to the body of an automobile, the frame being inserted through an opening made for that purpose in the automobile body, a series of shutters at the outer side of the frame, each pivotally connected and capable of swinging from positions overlapping each other to close the opening at the outer side of the frame to positions extending outwardly, said shutters being made progressively longer from the front toward the rear so that when opened the rear shutter will project outwardly from the rear side of the frame to a greater extent than will the front shutter, means for opening and closing the shutters, and a screen at the inner face of the ventilating frame shaped and constructed that when in an open position a heater may be inserted in the frame, and when closed it will support the heater against movement inwardly, said shutters being so shaped and designed as to support the heater against movement outwardly



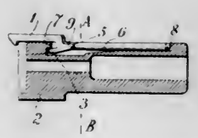
---

1,507,897. CONCRETE CAR. JOSEPH B. STRAUSS, Chicago, Ill., assignor of one-half to Charles Weinfeld, Chicago, Ill. Filed Aug. 27, 1920. Serial No. 406,379. 18 Claims. (Cl. 105—405.)



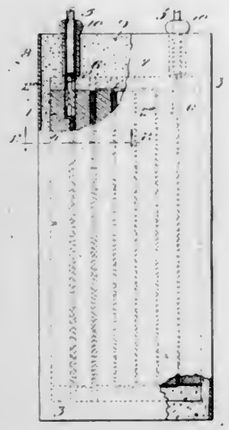
2. A concrete car comprising a metal underframe, a concrete body mounted upon said underframe, said body comprising reinforced concrete side walls and reinforced concrete end walls separate from said side walls, limiting metal members for said separate concrete ends by means of which they are held in place, and connecting means for removably connecting said end walls and side walls so that they may be disconnected for purposes of replacement.

1,507,898. FLEXIBLE CONNECTING DEVICE FOR ELECTRICAL CIRCUITS. VICTOR E. SUMMERS, Pittsburgh, Pa., assignor to Holmes Electric Protective Company, New York, N. Y., a Corporation of New York. Filed Sept. 3, 1921. Serial No. 498,373. 6 Claims. (Cl. 173—324.)



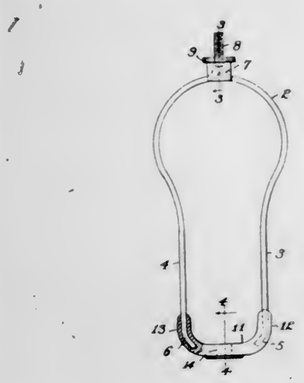
6. A device for connecting two electrical circuits, said device comprising a body portion, insulating strips covering said body portion, a tongue integral with said body portion and projecting beyond said insulated strips, the lower portion of said tongue being of concave shape, and a conductor flexibly mounted on said tongue and within said concave portion.

1,507,899. RUG-PRINTING MACHINE. JOHN TAMBERLIN, Philadelphia, Pa., assignor to The George W. Bisbon Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1921. Serial No. 515,485. 18 Claims. (Cl. 101—199.)



1. In a printing machine, the combination with a plurality of reciprocatory heads and means for locking them out of action, of means, comprising an adjustable master controller and mechanism controlled by a head or heads aforesaid, for releasing said heads in predetermined relation.

1,507,900. CARTRIDGE EXTRACTOR FOR FIREARMS. RUDOLF V. FROMMER, Budapest, Hungary. Filed Aug. 23, 1921. Serial No. 494,548. 2 Claims. (Cl. 42—25.)



1. A cartridge extractor for fire-arms comprising in combination with the breech-block, an inelastic hook-shaped member adapted to engage in a notch in the breech-block so as to be pivotally held thereby and forming a two-armed lever, and a separate flat spring engaging the rear end of the said hook-shaped member so as to hold the same in its operative position.

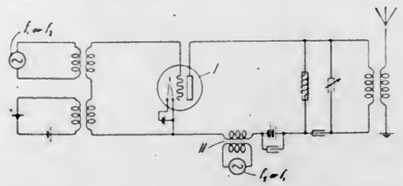
1,507,901. ELECTRIC HEATER. LOREN S. WELLS, New York, N. Y. Filed Mar. 22, 1922. Serial No. 545,634. 3 Claims. (Cl. 219—64.)

1. An electric heater comprising a refractory heat conducting body provided with grooves, and a resistance conductor within said grooves, a portion of two of said grooves being enlarged, connectors within the grooves joining line conductors to the ends of said resistance conductor, the junction of said line conductors with said resistance conductor being located within said enlarged part of said grooves, a container for said body, insulators for the line conductors, and a closure at the end of the container receiving the insulators.

1,507,902. LAMP-SHADE HOLDER. AUGUST WILLENBACHER, Hackensack, N. J. Filed Aug. 29, 1923. Serial No. 659,911. 4 Claims. (Cl. 240—128.)

1. A harp comprising a rod that is formed into a partial circle or loop with end portions projecting substantially parallel, a threaded stud adjacent the loop upper end secured by a head of cast metal that incloses a loop portion and the end portion of the stud, and a yoke having portions cast on to the end portions of the rod with an opening at the middle portion of the yoke in alinement with said threaded stem, the end portions of said rod being formed to resist withdrawal from the yoke.

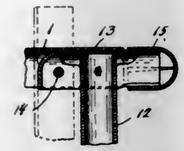
1,507,903. WRITING INSTRUMENT. MAURICE ALLAND, Atlantic City, N. J. Filed Dec. 6, 1923. Serial No. 678,855. 4 Claims. (Cl. 120—43.)



1. In a writing instrument, the combination of a pair of telescoping members, one of said members comprising a fountain pen, the other of said members comprising a magazine pencil, the pen member being provided with a pencil eraser, and the pencil member being provided with an ink eraser.

1,507,904. CAPTIVE GOLF BALL. WILLIAM HENRY ASTON, London, England. Filed Feb. 15, 1923. Serial No. 619,229. 6 Claims. (Cl. 46—4.)

1. A captive golf ball comprising a ball proper and a flexible tail for retarding the ball in its flight, the exterior surface of the ball and said flexible tail being formed all in one piece of the same material.

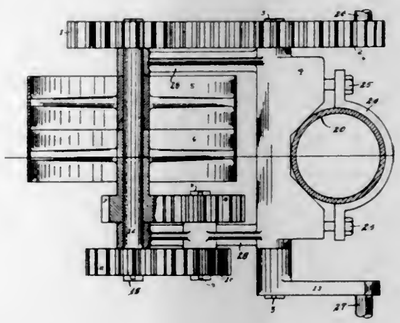


1,507,905. SIGNALING SYSTEM. WILLIAM E. BEATTY, Bayside, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1917. Serial No. 200,493. 24 Claims. (Cl. 179—171.)

4. A signaling system comprising means for supplying waves, means for supplying other waves, having a different characteristic, and a vacuum tube device for modulating individually and collectively the waves derived from said supplying means.

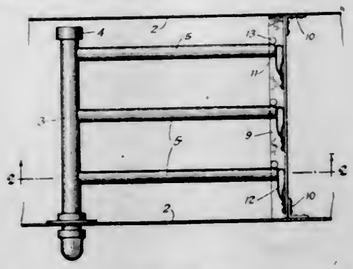
1,507,906. FOLDING COT. JULIUS L. CABLE, Boston, Mass. Filed Jan. 28, 1924. Serial No. 688,934. 1 Claim. (Cl. 5—117.)

A folding cot comprising side bars of semitubular metal, a pair of pivotally connected legs at one end of said bars, a connecting bar rigidly connected to the upper end of each leg at right angles thereto and having one end portion fitted within the end portion of one of said side bars and pivotally connected thereto to permit relative swinging thereof between a position of alignment



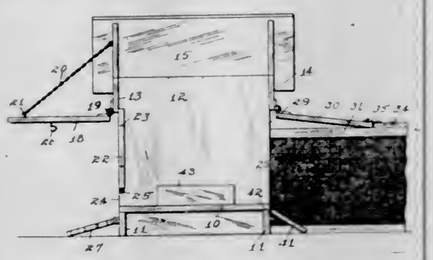
and a position at right angles, the opposite end portion of each connecting bar projecting beyond the supporting leg to form a post and an end bar having a socket in each end adapted to receive the posts of said connecting bars.

1,507,907. CALCULATOR FOR PENCILS. ALBERT B. COSAD, Oakland, Calif. Filed Aug. 23, 1923. Serial No. 658,922. 3 Claims. (Cl. 235—117.)



1. A calculator comprising a rod, stationary rings secured to said rod, a series of numbers printed on said rings, inner sleeves journalled on said rod between said rings, a series of numbers printed on said sleeves, outer sleeves journalled on said first mentioned sleeves, and means to couple said outer and inner sleeves together.

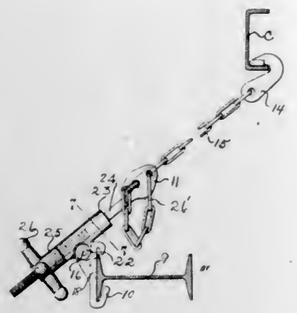
1,507,908. MECHANICAL MOTION. MATTHEW O. CRAWFORD, Belmond, Iowa. Filed Feb. 14, 1922. Serial No. 536,579. 1 Claim. (Cl. 74—7.)



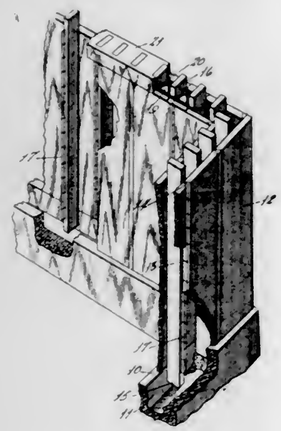
In a device of the class described, comprising a frame, means for securing the frame to a support, such for instance as a pump stock, a crank shaft mounted in the frame, a crank on one end thereof, a pulley shaft mounted in the frame, a pulley rotatably mounted on the pulley shaft, a spur gear fixedly connected to the pulley, a spur gear fixed to the pulley shaft, a train of gears arranged to transmit power from the first mentioned spur gear to the second spur gear the said second spur gear being fixed eccentric to the pulley shaft, and an elliptical gear fixed to one end of the crank shaft and in mesh with the said second gear, for the purpose as stated.

1,507,909. SPRAYING MANIFOLD. PATRICK HENRY DAVIS, Leonia, N. J., assignor to The Hamilton-Low Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 17, 1923. Serial No. 625,732. 6 Claims. (Cl. 299—58.)

1. A device of the class described, comprising a supply pipe, a plurality of spray tubes each having one end in communication with said pipe transversely thereof, and means acting on the opposite ends of the tubes for maintaining the same in contact with the pipe.



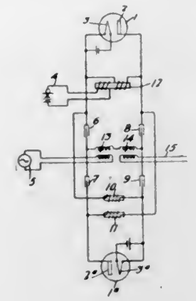
1,507,910. HATCHING AND BROODING COOP. SILAS N. DODD, Toledo, Iowa. Filed Sept. 12, 1923. Serial No. 662,253. 3 Claims. (Cl. 119—21.)



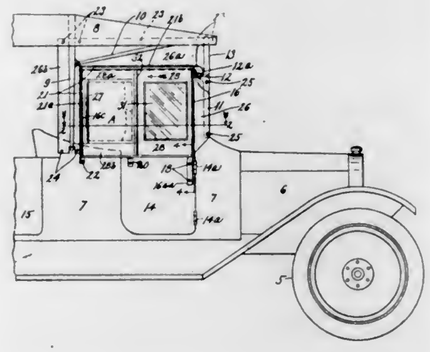
2. A coop formed with side and end members and having a suitable roof, the end members being formed narrow to form a door opening beneath them, the coop being provided with an elevated bottom, a door hinged to the lower edge of each of the end members designed to swing from an open horizontal position to a closed vertical position, means for adjustably supporting one of the doors in its elevated position, a screen door pivotally mounted in one of the door openings adapted to swing from a vertical position to a horizontal position, means for supporting said screen door in its horizontal position beneath the first said door which is adjustably mounted, said screen door being shorter than the opening in which it is mounted for the purpose of providing a passage way beneath it when closed, and a pivoted runway adjacent to the lower edge of the last said door opening, said runway being adapted to swing to a vertical position to close the opening provided beneath the said screen door.

1,507,911. GRIPPING OR FASTENING MEANS. CENO EICHMAN, Bucyrus, Ohio, assignor to Turn-Auto Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1921. Serial No. 492,919. 2 Claims. (Cl. 214—1.)

1. A gripping mechanism comprising a rail-clamp, a sleeve pivoted thereto, a hook having a shank mounted in said sleeve and adapted to be guided in said sleeve so that said shank can move to and fro in said sleeve and be held against any turning movement, the end of said shank being rounded and threaded, a nut member mounted on said sleeve and adapted to actuate said hook, a second hook having a chain connected thereto, the other end of said chain being connected to said first mentioned hook, the respective links of said chain intermediate the end thereof being adapted to be held between the jaws of said first mentioned hook, both said hooks being adapted to be urged in the same direction by the movement of said nut.



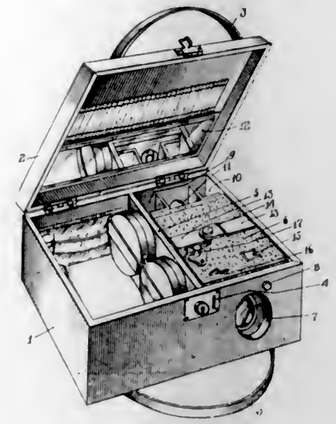
1,507,912. BUILDING CONSTRUCTION. LEONARD L. ELDRIDGE, San Antonio, Tex. Filed May 28, 1923. Serial No. 641,936. 5 Claims. (Cl. 72—16.)



1. In a building construction, a hollow wall including a plurality of oppositely arranged slabs formed T-shaped in cross section, T-shaped re-inforcing elements embedded in the slabs and projecting from the vertical edges of the tongues, the projecting portions of said elements being received in the space between the opposed slabs and cemented therein to provide the sole bonding means for said projecting portions of the reinforcing elements.

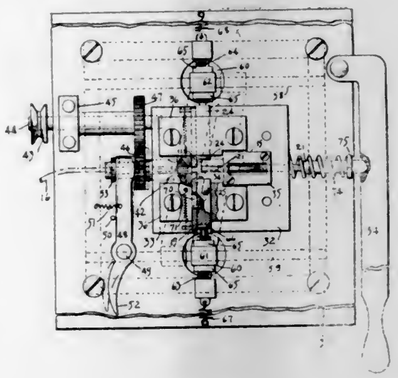
1,507,913. MODULATION OF ELECTRICAL WAVES. ALBERT L. FITCH, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,546. 8 Claims. (Cl. 179—171.)

1. A modulating system comprising an electronic discharge device normally having zero space current, an anode and a cathode therefor, means to impress a voltage of carrier frequency to be modulated, and means to impress a modulating frequency voltage across said anode and cathode.



1,507,914. AUTOMOBILE CURTAIN. OLE C. FROKE, Summit, S. Dak. Filed Dec. 4, 1923. Serial No. 678,397. 4 Claims. (Cl. 296—139.)

1. In a vehicle curtain of the class described, a quadrangular frame detachably secured on the top part of a vehicle door, and extending upwardly in a common plane with the door, a rigid, rectungular frame secured to the vehicle and adapted to receive the first frame when the vehicle door is closed, said quadrangular frame having an aperture, vertically arranged rollers one in each end of said frame, a movable belt-like curtain engaging said rollers, said curtain having an aperture adapted to register with the aperture in the frame when the curtain is in one position, a quadrangular light in the curtain adapted to cover the aperture in the frame when the curtain is moved to another position to admit light into the vehicle, means for keeping the curtain taut and means within the quadrangular frame for guiding and preventing flapping of the curtain.

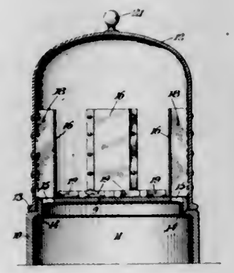


1,507,915. COMBINED VANITY AND CAMERA CASE. MAURICE GOLDSMITH, New York, N. Y. Filed Apr. 7, 1924. Serial No. 704,721. 3 Claims. (Cl. 206—15.6.)

1. A combined vanity case and camera enclosure comprising a body and a lid hinged thereto, means in the body for securing a camera therein, an aperture in one wall of the body adapted to aline with a camera lens

and a mirror secured to the inside of the lid, and adapted to reflect the rear of a camera whereby the exposure numbers may be read.

1,507,916. MACHINE FOR APPLYING TIPS TO LACINGS. FRANK P. GRANAT, New York, N. Y. Filed May 20, 1921. Serial No. 471,177. 17 Claims. (Cl. 153—1.5.)

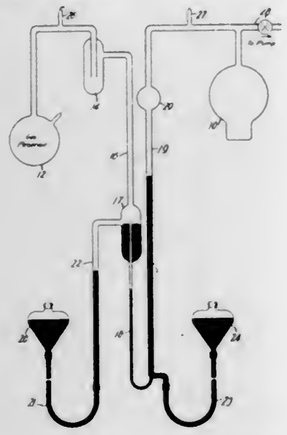


1. In a machine for attaching a tip to a lacing, the combination of a magazine for tips, a pusher-rod for positioning a tip, means for guiding the end of a lace into said tip and means for forcing portions of said tip in intimate contact with said lace.

1,507,917. COOKING UTENSIL. OTTO K. HASELAU, New York, N. Y. Filed Oct. 25, 1923. Serial No. 670,645. 9 Claims. (Cl. 126—275.)

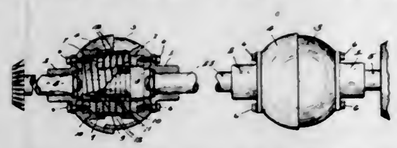
1. A cooking utensil comprising a plate adapted to be placed on a heating device, said plate being apertured to permit the hot gases to pass through the plate from

the underneath side thereof, and a removable cover adapted to fit on the top of said plate, said cover having a passageway formed therein, the bottom of which passageway registers with the aperture through the plate and the top of which passageway is located well up in the cover, whereby the hot gases are conducted through



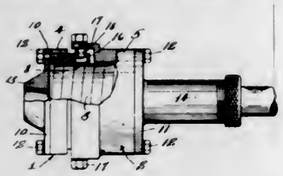
said passageway to the upper portion of the space underneath the cover and are caused to circulate downwardly about material to be cooked on the plate under the cover.

1,507,918. ADJUSTABLE SUPPORT FOR WINDOW SHADES. JULIUS G. HOWARD, Chicago, Ill. Filed Aug. 17, 1922. Serial No. 582,338. 10 Claims. (Cl. 156—26.)



9. In combination, two parallel guides, a shade roller extending between said guides, supports for said roller mounted on said guides, suspending springs for said supports, said guides having shoulders distributed along the same, catches on the said supports adapted to be interlocked with said shoulders to hold the supports against the action of the springs, a shade including a shade stick wound on the roller, and hooks on the ends of said shade stick for engaging with said catches to release the same.

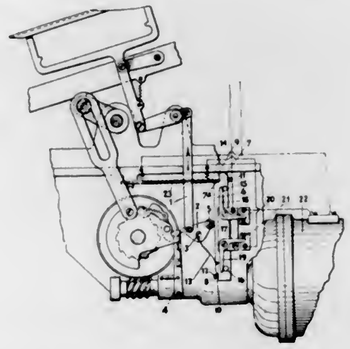
1,507,919. APPARATUS AND METHOD FOR ADMITTING GAS INTO A VACUUM. JOHN B. JOHNSON, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1922. Serial No. 607,187. 7 Claims. (Cl. 23—3.)



1. The method of conveying gas which comprises admitting gas into one end of a capillary tube, adjusting the length of the column of gas thus admitted, isolating said column of gas and discharging said column of gas from the opposite end of said tube.

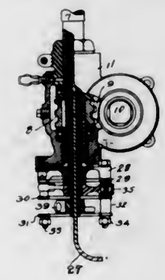
1,507,920. FLEXIBLE COUPLING. MAXWELL R. KARGE and FERNAN O. CONILL, Phoenix, N. Y. Filed Nov. 27, 1920. Serial No. 426,841. 5 Claims. (Cl. 64—96.)

1. A flexible coupling comprising a pair of headers members, one being formed with a socket and the other with a ball in the socket, and a spring located within the ball and socket and housed thereby and secured at one end to the socket member and at its other end to the ball member for transferring torque from one member to the other, substantially as and for the purpose set forth.



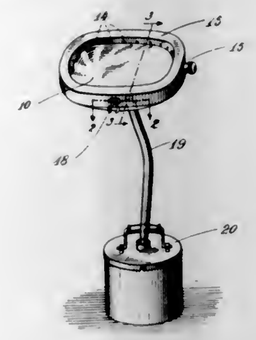
1,507,921. FLEXIBLE COUPLING. MAXWELL R. KARGE and FERNAN O. CONILL, Phoenix, N. Y. Filed Nov. 27, 1920. Serial No. 426,842. 7 Claims. (Cl. 64—96.)

1. A flexible coupling comprising a pair of headers having means for connection to shafts to be coupled together, and a coiled torsion spring fixed at its ends to the headers respectively, the headers including sleeve members encircling the coiled spring and plug members



located within the spring, one of said members of each header being connected with the corresponding member of the other header by an interlocking lost motion connection, substantially as and for the purpose set forth.

1,507,922. ELECTROMOTIVE DRIVE FOR CALCULATING MACHINES. MARTIN LIEDL, Berlin-Steglitz, Germany. Filed Dec. 24, 1921. Serial No. 524,753. 4 Claims. (Cl. 161—1.)

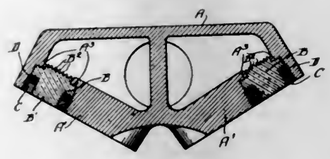


1. In an electromotive drive for calculating machines in combination with a machine key and an electric time switch in the circuit of the electric motor for automatically breaking the current after a predetermined period from the last actuation of the machine key, a bimetallic member, a heating coil surrounding said member and adapted to be switched into the circuit by the actuation of the machine key, an automatic switch member to interrupt the heating current and disconnect the motor after the bimetallic member has cooled down, and means in connection with the said automatic switch member, to prevent the cutting out of the motor as long as the machine key is depressed.

1,507,923. MOTOR-CONTROLLING MECHANISM. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed May 3, 1923. Serial No. 636,394. 19 Claims. (Cl. 74—39.)

1. Controlling mechanism for the spark and throttle of an engine, comprising telescoping supporting members; manipulating means connected to said members at one end; a gear casing near the other end of said members; a bracket at the other end of said members below the casing; controlling means for the spark and throttle carried by the members below the bracket; and interacting parts mounted upon the bracket and controlling means for holding the latter in adjusted position.

1,507,924. BEDPAN. ANNIE N. MABRY, New York, N. Y. Filed May 17, 1923. Serial No. 639,612. 4 Claims. (Cl. 4—112.)

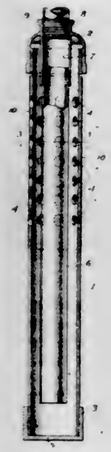


1. A flushable bed pan having a fluid reservoir provided with perforations facing the pan proper, means normally closing the perforations and operating means for releasing said closing means at will.

1,507,925. CIGARETTE. HENRY HALL MARSHALL, Jr., Garden City, N. Y. Filed Jan. 10, 1923. Serial No. 611,847. 2 Claims. (Cl. 131—52.)

1. The combination with a cigarette of customary manufacture, of a soluble coating for the tip thereof.

1,507,926. WATER-GAUGE GLASS. CLARENCE M. MENDENHALL, New Rochelle, N. Y. Filed Oct. 26, 1923. Serial No. 670,823. 3 Claims. (Cl. 73—54.)



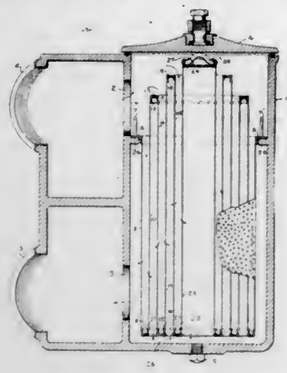
1. A water level gauge consisting of a chambered metallic casing formed with one or more windows each of which is circular in cross section except for shoulder portions of the casing at the inner side of each window and at opposite sides of the axis thereof, and a bull's-eye sight glass mounted in each window with the side portions of its inner face abutting against said shoulders and having the portion of its inner face between said shoulders formed with a series of vertical prisms extending from top to bottom of said face.

1,507,927. DEVICE FOR SCREENING WATER. GEORGE L. MILLER, Seattle, Wash., assignor of one-half to Ida S. Freeman, Portland, Oreg. Filed Dec. 14, 1921. Serial No. 522,427. 2 Claims. (Cl. 210—170.)

2. In a well water strainer, an outer casing having a closed lower end, the upper portion of said tube being provided with inlet openings spaced longitudinally and circumferentially of the tube and the lower portion

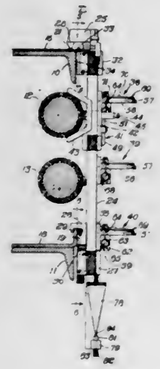
of the tube being unperforated and adapted to be embedded in the bottom of a well with the perforations terminating above the well bottom, screening means for said perforations, an inner tube in the outer tube terminating adjacent the closed lower end of the outer

tube, and a coupling having a cap portion engaging the upper end of the outer tube, a sleeve portion engaging the upper end of the inner tube, and a neck portion for engaging an outlet pipe whereby fluid in the outer tube may pass up through the inner tube and sleeve into the outlet pipe.



1,507,928. DEVICE FOR THE PREVENTION AND TREATMENT OF DEFORMED FEET. DUDLEY J. MORTON, Philadelphia, Pa. Original application filed Mar. 2, 1915, Serial No. 11,453. Divided and this application filed Apr. 5, 1920. Serial No. 371,531. 7 Claims. (Cl. 36—71.)

1. A device for correcting pronation of the foot, consisting of a flat plate formed to be positioned beneath the sole of the foot, having an integral upwardly directed extension arranged to bear against the inner side of the foot approximately opposite the astragalo-scaphoid joint, said device functioning to resist the inward movement of said joint during the period in which the heel is bearing weight.

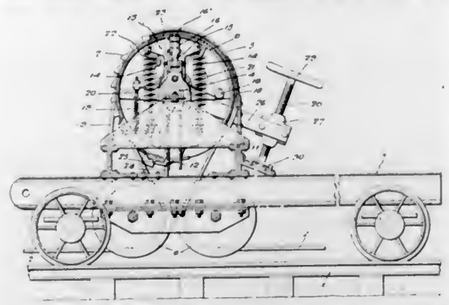


7. A cvice adapted to be inserted in the shoe for correcting pronation of the foot, comprising a flat portion formed to lie beneath the sole of the foot, and a portion extending upwardly from said flat portion in the region of the astragalo-scaphoid joint and adapted to contact with the inner side of the foot approximately opposite said joint to resist the initial movement thereof when the body weight is imposed upon the heel.

1,507,929. STRAINER. CHARLES D. MOSHER, New York, N. Y. Filed Nov. 22, 1920. Serial No. 425,856. 7 Claims. (Cl. 210—193.)

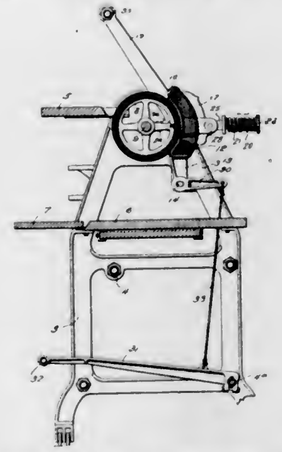
1. In a strainer of the class described, concentric strainer members forming chambers opened alternately entirely around the same at the tops and bottoms thereof, a chamber around said members having side inlet and outlet at the top and bottom respectively.

1,507,930. GAUGING DEVICE. JOHN MCDONOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1922. Serial No. 551,291. 6 Claims. (Cl. 33—182.)



1. A device for checking the position of one member with relation to another member, comprising a supporting element adapted to be removably secured to one of the members, elements movably carried by said supporting element and adapted to engage the other member, and means actuated by the engagement of said movable elements with said member to be checked for indicating the position thereof with relation to the other member.

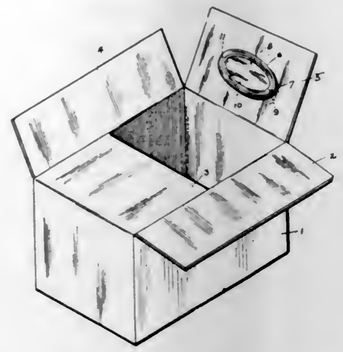
1,507,931. HOIST. WALTER PROCKTER, Huntington, W. Va. Filed Dec. 30, 1921. Serial No. 525,862. 4 Claims. (Cl. 187—13.)



3. In combination with a car and its track, a safety cable placed along the track, a master sheave, a pair of sheaves placed close together adjacent the master sheave for holding the cable in a loop around the master sheave, a brake associated with the master sheave, spring means for holding the brake in applied position,

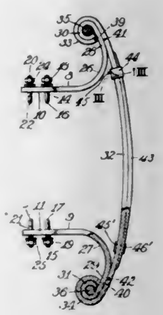
toggle links for holding the brake in inoperative position, a governor on the master sheave having a part arranged to engage a part on one of the links for moving the links when the speed of the master sheave exceeds a

certain point, a handle associated with the toggle links for braking them by hand and manually operated means for applying the brake independently of the governor and links.



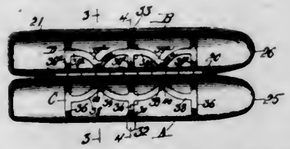
1,507,932. CLOTHES-IRONING MACHINE. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1920. Serial No. 420,471. 3 Claims. (Cl. 68—9.)

1. In an ironing machine, the combination of a frame, an ironing roll journalled therein, a shoe cooperating with said ironing roll, spring means for yieldingly holding said shoe in cooperative engagement with said roll, cam members secured to said frame and said shoe respectively and adapted when in one position to permit the shoe to be pressed against the roll and in other positions to move and hold the shoe away from the ironing roll at different and comparatively large distances to permit the ready insertion of pieces to be ironed, and auxiliary means acting directly upon said shoe for moving said shoe slight distances away from the roll against the tension of said spring means, said auxiliary means effecting a separation of said cam members.



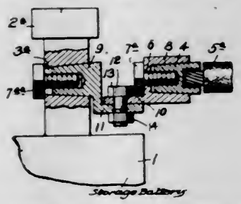
1,507,933. HUMIDIFIER. RICHARD O. ROBLIN, Rochester, N. Y., assignor to Roblin Demerath Co., Inc., a Corporation of New York. Filed Mar. 8, 1923. Serial No. 623,815. 2 Claims. (Cl. 131—30.)

1. A humidifier for a box comprising a metal frame, an absorbent cake cast in the frame to form an integral part thereof, prongs provided on said frame and forming an integral part thereof, said prongs being adapted to penetrate the wall of the box the portion of the prongs



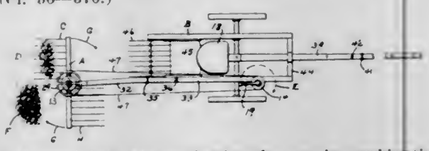
projecting through the outside of the box being adapted to be bent over to firmly clamp the absorbent cake and its frame within the inside of the box.

1,507,934. BUMPER FOR MOTOR VEHICLES. SAMUEL C. ROWLAND, Crawfordsville, Ind. Filed July 21, 1921. Serial No. 486,499. 4 Claims. (Cl. 293—55.)



3. In a motor-vehicle bumper, the combination of a pair of arms comprising each a main portion and a laterally-curved forward portion and also a base portion, said portions being integrally connected together and the forward portion being slightly elastic laterally and having an ear formed integrally on the rear side thereof, each base portion having a plurality of apertures therein spaced apart, securing devices in said apertures respectively to rigidly secure the base portion in place, two pivot-bolts in said ears respectively in vertical arrangement and having each a head on its top supported upon the ear, washer-nuts on the lower ends of the pivot-bolts respectively and extending outward beyond the adjacent ears, a curved elastic main bar having two portions adjacent to its opposite ends arranged against the convex sides of the curved portions respectively of said arms, said main bar having two ears integral therewith and arranged on the rear side thereof that embrace the ears on said arms respectively and are bodily supported upon said washer-nuts respectively, a curved spring-plate arranged on the convex side of said main bar and extending to portions thereof opposite to the curved portions of said arms respectively, and two clamps arranged on said main bar and said spring-plate opposite to the curved portions of said arms respectively to be thrust to and resisted thereby.

1,507,935. CIGAR CASE. JOSEPH H. SANDERSON, Babylon, N. Y. Filed Mar. 28, 1922. Serial No. 547,367. 3 Claims. (Cl. 206—41.)



1. In a case the combination of a cup shaped bottom member, a cup shaped top member hinged to the bottom member, a flexible tray for each of the members, each tray comprising a plurality of semi-circular arms, braces connected to said arms and means to fasten the braces to their respective cup shaped members.

1,507,936. STORAGE-BATTERY TERMINAL. FRANCIS G. SCHMITT, Leetsdale, Pa. Filed Mar. 26, 1920. Serial No. 369,015. 3 Claims. (Cl. 173—259.)

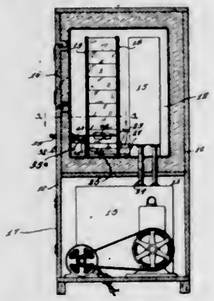
3. The combination with a storage battery terminal and circuit wire, of a non-corrodible detachable member removably attached to the battery terminal, and having a flat tongue projecting therefrom, a non-corrodible detachable member removably attached to the terminal of the circuit wire and having a tongue projecting therefrom, and means for clamping the said tongues into intimate contact with each other.

1,507,937. RAKE ATTACHMENT FOR AGRICULTURAL IMPLEMENTS. JAMES WADDLE SCOTT, Falcon, Colo. Filed July 6, 1922. Serial No. 573,143. 3 Claims. (Cl. 56—370.)

2. A revolving rake mechanism for use in combination with a farm implement, flexible means for attaching said rake to said implement, actuating hand-power means for revolving said rake and ratchet means for holding said rake in operative position.

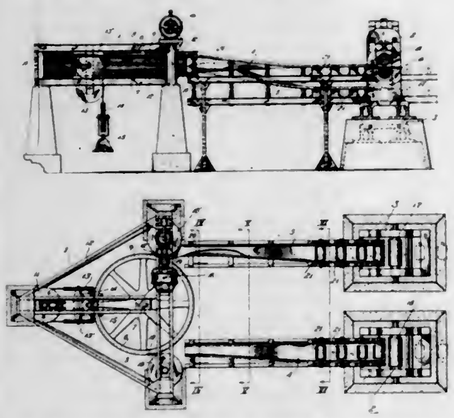
1,507,938. METHOD OF TREATING VEGETABLE IVORY. EDGAR SHANTZ, Rochester, N. Y. Filed Apr. 17, 1923. Serial No. 632,794. 6 Claims. (Cl. 79—1.)

3. The method of treating vegetable proteid or "ivory" which consists in soaking it in a mixture of water and glycerine, and then drying the surplus water from the material.



1,507,939. METAL-PUNCHING MACHINE. GEORGE P. THOMAS, Glenshaw, Pa. Filed Mar. 28, 1923. Serial No. 628,203. 8 Claims. (Cl. 164—117.)

1. In a machinery for punching an irregular line of holes in a metal blank, the combination of a punching machine equipped with a laterally-movable cooperating punch and die, a table extending from opposite sides of the punching machine for supporting a blank, means for moving the blank through the punching machine, a guide longitudinally movable by said blank-moving means in



alignment with the advancing blank, and means for connecting said guide to said punch and die for moving them laterally as the punching operation proceeds.

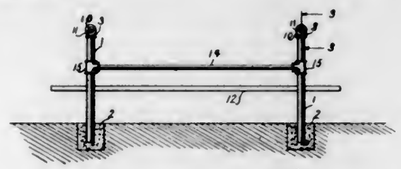
1,507,940. REFRIGERATOR. THORWALD THORSON, Forest City, and EDWIN O. THORSON, Akron, Iowa. Substitute for application Serial No. 500,396, filed Sept. 13, 1921. This application filed Feb. 7, 1924. Serial No. 691,312. 6 Claims. (Cl. 211—8.)

1. A cooling chamber having an opening communicating with its interior, a door for said opening, a drawer slidably mounted in the bottom of said chamber adapted to be slid from a position within the chamber to a position outside of the chamber, a magazine in said chamber adapted to contain a vertical column of cartons in such a manner that the bottom carton of said column will rest in said drawer when it is in its inner limit of movement, means for gripping a portion of the cartons in said column and slightly elevating them and retaining them in the elevated position as the said drawer is moved to its outward limit of movement, and means outside of said chamber for operating the last said means.

1,507,941. ROLLING-MILL REPEATER. ARTHUR J. TOWNSEND, Canton, Ohio. Filed Jan. 14, 1921. Serial No. 437,312. 2 Claims. (Cl. 85—37.)

2. A rolling mill repeater including a drum rotatable on an axis at an angle to a horizontal plane, and an endless cable belt operating around one side of the drum, for carrying a strip or the like around the drum.

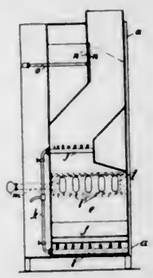
1,507,942. STABLE VACCINE. CARL TROESTER, Berlin-Lichterfelde, and HERMANN EMDE, Berlin-Lankwitz, Germany, assignors to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed May 1, 1923. Serial No. 635,975. 4 Claims. (Cl. 167—7.)



1. As new articles of manufacture vaccines, consisting of suspensions of bacteria containing a water soluble hexamethylene-tetramine preparation.

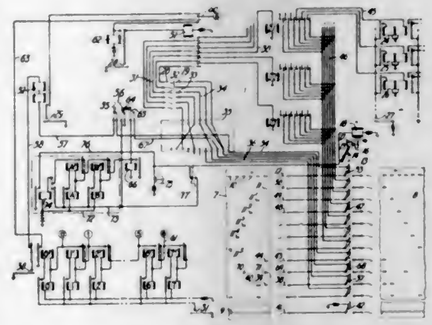
2. As new articles of manufacture vaccines, consisting of suspensions of bacteria containing hexamethylenetetramine.

1,507,943. FOAM COMPOSITION FOR EXTINGUISHING FIRES. LEWIS B. VAN LEUVEN and HARRY C. VAN LEUVEN, Woodbury, N. J., assignors to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed Nov. 9, 1922. Serial No. 599,913. 2 Claims. (Cl. 3—5.)



1. A composition for use in connection with a solution of a mildly acid character, for extinguishing fire, consisting of sodium bicarbonate, quebracho extract, quillaya bark extract, sufficient quantity of the ingredients being used to produce a foam and kept in complete solution in water by the admixture of not less than 0.15% of caustic alkali.

1,507,944. PLAYGROUND APPARATUS. WINFIELD WILLIAMS, San Jose, Calif., assignor to J. F. Patterson and Hortense Bean, a Copartnership, under the name of Patterson-Williams Mfg. Co., San Jose, Calif. Filed July 29, 1922. Serial No. 578,454. 3 Claims. (Cl. 155—61.)



1. In playground apparatus, two pairs of spaced vertical bars defining the corners of an oblong rectangular figure, parallel hand bars connecting the pairs of vertical bars, a seat member arranged below the plane of said hand bars, and parallely arranged swinging means for supporting the ends thereof between said pairs of vertical bars.

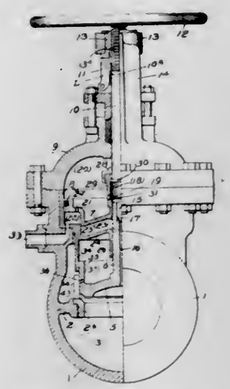
1,507,945. DRYING APPARATUS. HARRY SIDNEY WOOD, London, England. Filed Jan. 27, 1923. Serial No. 615,230. 5 Claims. (Cl. 34—19.)

1. A drying apparatus comprising in combination, a drying chamber means for suspending clothes in said chamber, a duct for admitting air to said chamber, a second duct placed at the side of said drying chamber that is provided with a passage at the bottom thereof communicating with said second duct, heating means disposed in said first named duct for heating the air admitted to said drying chamber and a second heating means disposed in said second duct for drawing the heated air from said drying chamber into said second duct through the aforesaid communicating passage.

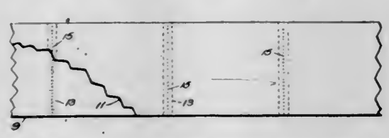
1,507,946. SWITCH-CONTROL CIRCUITS. JAMES J. WYNNE, Roselle Park, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,581. 9 Claims. (Cl. 179—27.)

1. In combination, a switch having a plurality of operative positions, means for locking said switch in at least one of said positions, an electromagnet for releasing said switch whereby it may be operated, a circuit for said electromagnet including a source of current and a normally open contact, a normally open starting circuit, and a set of counting relays for controlling said normally open contact, said counting relays being under the control of said starting circuit and operable to interpose a delay in the closure of said normally open contact following the closure of said starting circuit.

1,507,947. DENTAL CLASP. HUGO ADERER, East Orange, N. J. Filed Dec. 6, 1923. Serial No. 679,010. 7 Claims. (Cl. 32—12.)



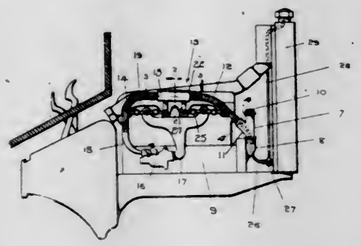
1. A dental clasp comprising a band and a tail-piece, said band having integral therewith tail-piece engaging means, said tail-piece having an end thereof at an angle to the plane of said tail-piece, said tail-piece having an opening therein through which said tail-piece engaging means is adapted to be inserted and means to prevent the separation of the tail-piece and the band.



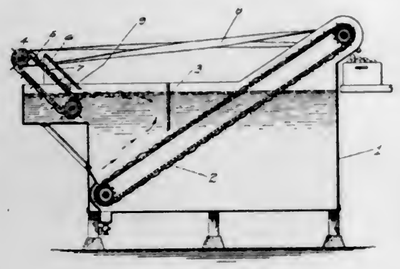
1,507,948. TRIPLE-CUSHIONED VALVE. EDWARD V. ANDERSON, Monessen, Pa., assignor of one-half to Charles E. Golden, Crafton, Pa. Original application filed July 6, 1917, Serial No. 179,009. Patent No. 1,370,260, dated Mar. 1, 1921. Divided and this application filed Apr. 12, 1920. Serial No. 373,145. 6 Claims. (Cl. 251—142.)

3. A valve mechanism comprising a casing having a fluid passage therethrough, a valve mounted to control said passage and adapted to seat by movement in a direction opposed to that of normal flow of fluid through the

passage, a partitioning member fixed in the valve casing and having a guide opening, the valve being mounted on a stem extending through said guide opening, a cylindrical skirt carried by said partitioning member, a peripheral integral flange extending from the rear side of the valve and slidably interfitting with the said skirt, whereby the rear of the valve is screened from pressure pulsations on the outlet side of the valve.

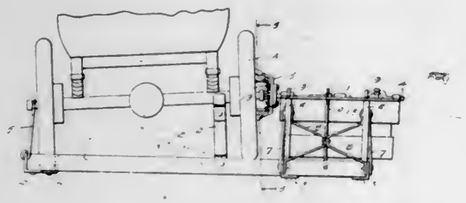


1,507,949. ELASTIC PAPER SHEATHING AND METHOD FOR PRODUCING THE SAME. EDWARD H. ANGIER, Framingham, Mass. Filed Feb. 24, 1922. Serial No. 538,921. 18 Claims. (Cl. 93—1.)



1. The method of making elastic bag-shaped articles, consisting in adhesively uniting two layers of paper on transverse lines at spaced intervals, craping the united layers and dividing the product at points intermediate the margins of the adhesively united areas.

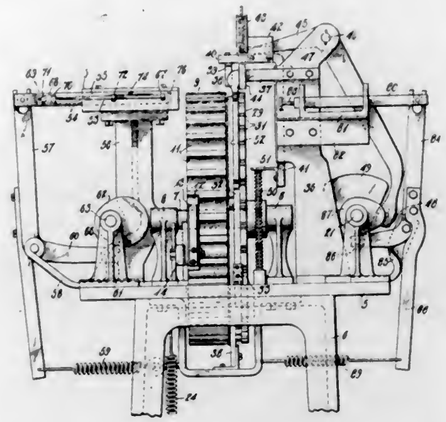
1,507,950. AUXILIARY FUEL SUPPLIER. SAMUEL EARL BLIZZARD, Indianapolis, Ind. Filed Mar. 20, 1923. Serial No. 626,383. 4 Claims. (Cl. 123—25.)



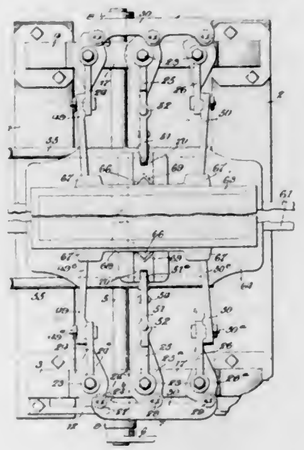
1. In a device of the character described, a conduit to communicate with an engine crank casing to receive vapors therefrom, a second conduit to communicate with the intake of the engine, and a mixer between and connecting said conduits and having an air inlet port and an aspirator nozzle communicating with the firstnamed conduit and extending across said port toward the second conduit.

1,507,951. DEVICE FOR REMOVING LEAVES FROM FRUIT-CLEANING LIQUID. JERRY BUCKLEY, Mills, Calif. Filed Feb. 13, 1924. Serial No. 692,498. 1 Claim. (Cl. 130—32.)

A means for separating foreign material from fruit including a liquid containing tank, a vertical partition wall extending part way into the tank, a conveyor extending to a point near the bottom of the tank and passing closely adjacent the lower edge of the partition wall and to a point outside the tank, a second conveyor extending into the liquid near the surface thereof and to a point outside the tank, the direction of movement of the latter conveyor being the reverse of that of the first named conveyor so that the current of the liquid set up by the movement of the first conveyor will strike the partition wall and be deflected toward the second conveyor whereby when the fruit is emptied into the tank between the second conveyor and the partition wall such current will carry the floatable material associated with the fruit toward the second conveyor by which it will be carried out of the tank, while the clean fruit will fall upon the first conveyor and be carried from the tank thereby.



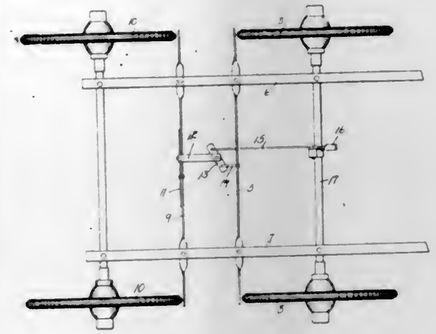
1,507,952. ENGINE JACK FOR BURNING IN BEARINGS. CHARLES P. CHRISTENSEN, Blair, Nebr. Filed Feb. 23, 1923. Serial No. 620,683. 6 Claims. (Cl. 29—89.5.)



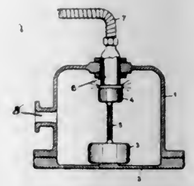
1. An engine jack of the character specified comprising a base having a pan at one end and an engine support at the opposite end, a pivoted axle support adjacent the engine support, means for clamping the engine to the support, and means for coupling the crank shaft of the engine to the drive wheel of the motor vehicle.

1,507,953. SWAB-ASSEMBLING MACHINE. PETER CODINA, Jersey City, N. J., assignor to The Dauber-Swab Co., Inc., Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 31, 1923. Serial No. 616,132. 10 Claims. (Cl. 29—84.)

1. A swab assembling machine, comprising an intermittently rotated carrier for one of the swab elements, and a carrier for the other element arranged concentrically with the first named carrier and rotating synchronously therewith, means to position the elements on their respective carriers in substantial alinement one with the other, and means to fixedly connect these elements while in the carriers.



1,507,954. LIFTING MECHANISM FOR MOLDING APPARATUS. EUGENE MACON COLE, Charlotte, N. C. Filed May 12, 1922. Serial No. 560,464. 24 Claims. (Cl. 22—48.)

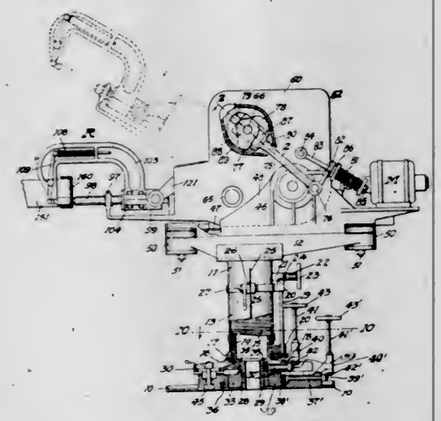


1. The combination with a flask comprising the usual drag and cope, of a pair of pivoted arms mounted adjacent thereto, and means for first swinging said arms horizontally into position to engage the cope and and then elevating said arms so as to cause them to engage and lift the cope.

1,507,955. BABY CARRIAGE. GEORGE E. DANN and GEORGE S. GREENE, New Haven, Conn., assignors to The Rattan Mfg. Co., New Haven, Conn., a Corporation. Filed Feb. 1, 1924. Serial No. 689,860. 2 Claims. (Cl. 188—20.)

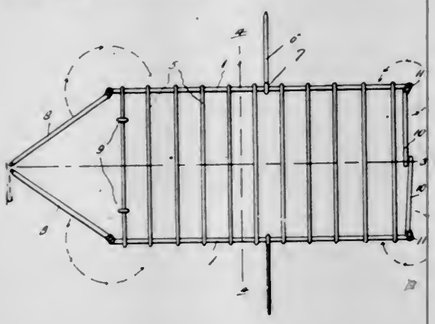
1. In a baby carriage, the combination with the running-gear thereof, of two flexible brake-bars having their ends adapted to be engaged with the tires of the front and rear wheels, the forward brake-bar being provided with a reinforcing leaf, and means for simultaneously flexing the brake-bars, whereby their ends are moved into engagement with the rims of the wheels.

1,507,956. SOUND PRODUCER. ALARD DU BOIS-REYMOND, deceased, late of Plon, near Kiel, Germany, by Eleonore du Bois-Reymond, administratrix, Hamburg, Germany, assignor to Signal Gesellschaft mit beschränkter Haftung, Kiel, Germany. Original application filed Apr. 6, 1923, Serial No. 630,421. Divided and this application filed Apr. 15, 1924. Serial No. 706,792. 5 Claims. (Cl. 116—27.)



1. In a sound transmitter, a vibratory structure of definite natural frequency, a sound radiator directly attached to said structure, and means for causing a unidirectional stream of fluid to impinge on said vibratory structure to set it in vibration and thus actuate said radiator.

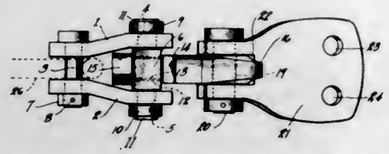
1,507,957. COMPOSITION WALL FOR CASKETS. ARTHUR W. EDWARDS, Sacramento, Calif. Filed Sept. 29, 1920. Serial No. 413,614. 1 Claim. (Cl. 27—3.)



A burial casket moulded and compressed to shape of fibrous plastic substance consisting of rice straw, paper and wood pulp, the walls and bottom of said casket having connected sheets of reticulated reinforcing material embedded therein.

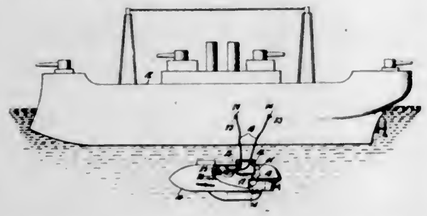
1,507,958. RIVET-HEADING MACHINE. THORVALD HANSEN and REIMAR C. F. KURTZE, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Oct. 14, 1921. Serial No. 507,737. 28 Claims. (Cl. 78—48.)

1. In a riveting press, a movable riveting head provided with a set of riveting dies, in combination with automatically operating means for moving the head to position the dies in operative relation to the work, and means for actuating the dies when so positioned to perform a riveting operation upon the work.



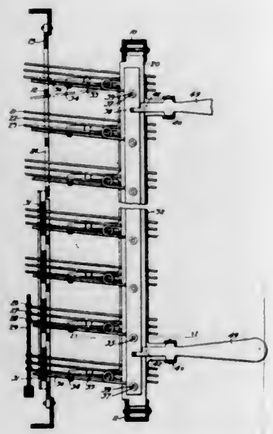
1,507,959. CAMP STOVE. VIRGIL H. HAYWORTH, Santa Fe, N. Mex. Filed Dec. 3, 1923. Serial No. 678,240. 3 Claims. (Cl. 126—29.)

1. A camp stove including a pair of side plates, a plurality of grate bars pivotally secured to said side plates and holding them in spaced relation, said side plates and grate bars forming a chamber, a pair of end plates hinged to one end of the side plates and adapted for association to form draft regulating means at one end of the side plates and the chamber formed thereby, and a pair of doors hingedly connected to the other ends of said side plates adapted for positioning relative to each other to assist in controlling the draft passing through said chamber.



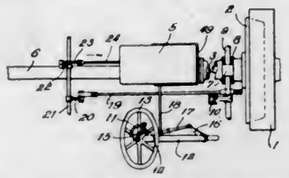
1,507,960. LOGGING EQUIPMENT. PETER S. HEINZINGER, Monroe, Wash. Filed Oct. 23, 1922. Serial No. 596,377. 3 Claims. (Cl. 294—82.)

1. A device of the class described, comprising a swivel block, a pair of links having ends pivotally connected with the opposite sides of the block and means for connecting their other ends with a main line cable, a plate having a shank swivelly fixed in the block and having an opening in its upper portion providing connection for a



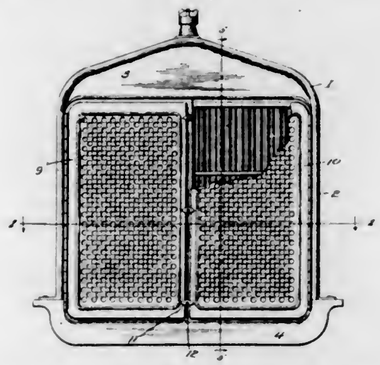
haul back cable, a second plate pivotally fixed to the lower portion of the first plate and having openings therein for receiving butt line connecting devices.

1,507,961. WARCRAFT. JOHN HERON, New York, N. Y. Filed July 19, 1922. Serial No. 576,013. 1 Claim. (Cl. 114—16.)



A war-craft including a submarine having attaching cables provided with magnets for attachment to the side of an enemy vessel, said cable providing suction pipes whereby the cables may be attached by suction in the event of failure of the magnet.

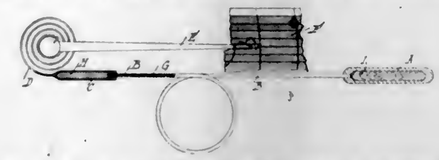
1,507,962. JIG FOR ASSEMBLING COORDINATE SWITCHES. FRANK H. HIBBARD, Arlington, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 20, 1923. Serial No. 652,750. 6 Claims. (Cl. 29—84.)



1. A jig for assembling a switching device, said jig comprising a bar, a plurality of laterally extending arms thereon, and means on each of said arms for retaining springs in tensioned position during the assembly of the switch.

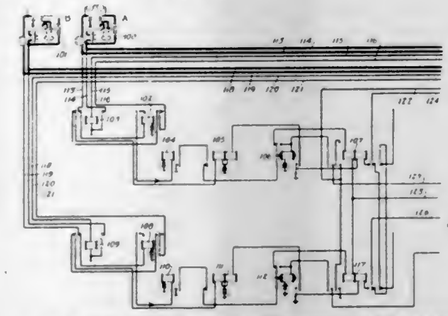
1,507,963. MECHANICAL SHIFTING MEANS FOR SPEED-TRANSMISSION MECHANISMS. LOUIS C. HUCK, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,167. 18 Claims. (Cl. 74—58.)

1. A device of the character described comprising front and rear shifting members for effecting gear shifts in an associated variable speed transmission mechanism from neutral position to the meshing connections, front and rear neutralizing members severally associated with said front and rear shifting members and serving to effect gear shifts from meshing connections to neutral position, means for varying, at will, the transverse positions relative to said speed transmission mechanism of said front and rear members whereby preselection in gear shifts may be effected, and means for moving said front and rear members relatively to, and longitudinally of, one another whereby the preselected gear shift in said associated speed transmission mechanism may be made subsequent to restoring any interfering gear shifts to neutral position.



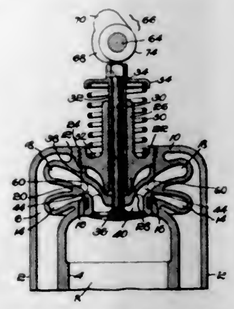
1,507,964. AUTOMOBILE RADIATOR. THOMAS G. HUDSON, Marion, Ind. Filed July 26, 1921. Serial No. 487,011. 3 Claims. (Cl. 257—125.)

1. In an automobile radiator, vertically opposed substantially channel-shaped members, a water tank at the upper and lower ends of said members, circulating tubes between said tanks, hinge knuckles integral with the front side of each of said members, a pair of vertically positioned perforated cover plates having hinged knuckles formed in their outer side edges and aligning with the knuckles of said members, means in connection with said knuckles for hinging said plates to said members, means for securing said plates in closed position, and a perforated cover plate at the rear of said members.



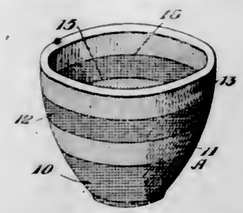
1,507,965. TUBE OR CONDUIT FOR THE TRANSMISSION OF MOVEMENT BY MEANS OF LIQUIDS. HAROLD WILLIAM IBBOTT, London, England, assignor to Negretti and Zambra, London, England. Filed Oct. 20, 1920. Serial No. 418,321. 1 Claim. (Cl. 13—52.)

The combination of a thermometer bulb, a tube extending therefrom, a core located within the tube and formed of a material having a smaller coefficient of expansion than has the material of which the tube is formed, a cylinder in communication with the end of the tube remote from the bulb, a block located within the cylinder and formed of a material having a smaller coefficient of expansion than has the material of which the cylinder



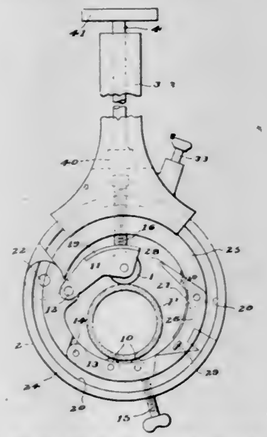
is formed, a liquid filling the bulb and the interstices between the tube and the core and between the block and the cylinder and means for registering the movements of the liquid in the cylinder.

1,507,966. TELEPHONE SYSTEM. FRANK S. IRVINE, Long Island, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 11, 1920. Serial No. 409,694. 11 Claims. (Cl. 179—18.)



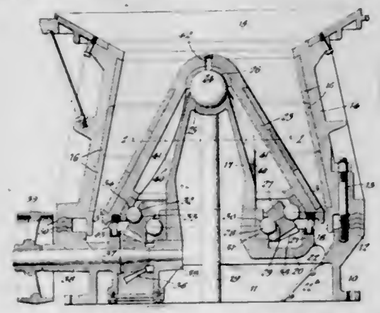
1. In a telephone system, subscribers' lines arranged in a plurality of groups, a plurality of groups of automatic switches, each group of switches arranged to normally serve a different one of said groups of lines, a register, and means responsive to the initiation of a call in any of said groups of lines when all the switches of all of said groups of switches are busy for operating said register.

1,507,967. INTERNAL-COMBUSTION ENGINE. OSCAR C. JANSSEN, St. Louis, Mo. Filed June 28, 1917, Serial No. 177,463. Renewed Feb. 7, 1924. 11 Claims. (Cl. 123—79.)



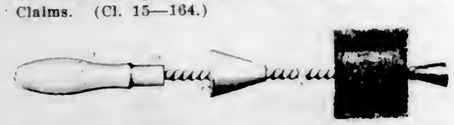
11. In an internal combustion engine, a cylinder, a two diameter valve bore in the head, inlet and exhaust ports in said bore, a two diameter slide valve with an offset closure for the exhaust port, a puppet valve seated thereon, inlet and exhaust chambers having ports leading into the slide valve and communicating therethrough with the cylinder.

1,507,968. MEASURING BOWL. RICHARD R. JOHNSON, Great Falls, Mont. Filed Mar. 31, 1922. Serial No. 548,519. 7 Claims. (Cl. 73—166.)



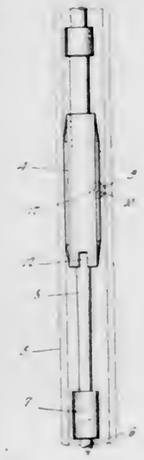
1. A measuring bowl including a series of superposed rings of contrasting colors joined together to form the bowl, the joined edges of said contrastingly colored rings forming a series of graduations within the bowl.

1,507,969. RATCHET PIPE CUTTER. DAVID KILGOUR, Jr., Seattle, Wash. Filed Aug. 17, 1923. Serial No. 657,911. 4 Claims. (Cl. 81—192.)



2. A pipe cutter including a ring rotatable about its center, said ring being formed of two hingedly connected segments, and a latch pivoted upon one segment and engaging the other segment to secure their free ends together, and movable toward the center of the ring to release.

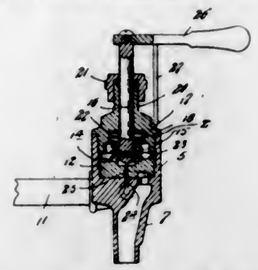
1,507,970. ORE CRUSHER. ARTHUR A. LAZIER, Buffalo, N. Y. Filed Jan. 24, 1923. Serial No. 614,676. 8 Claims. (Cl. 83—10.)



1. In a crushing machine, the combination of a shell, a supporting post extending into said shell, an oscillatory crushing member suspended from said post, means for oscillating said member, and means for holding the latter against rotation relative to said post.

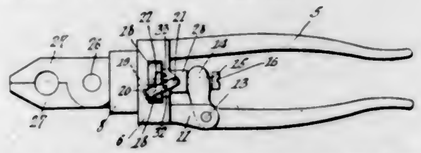
1,507,971. BOTTLE WASHER. LEWIS LOMP, Baltimore, Md. Filed Aug. 20, 1923. Serial No. 658,385. 2 Claims. (Cl. 15—164.)

1. The bottle washer which includes a screw, a brush on the screw, a handle journalled on the screw and held against longitudinal movement relative to the screw, a nut meshing with the screw and movable along said screw to rotate the screw and brush, and a frusto-conical member of relatively soft and elastic material having an axial passage through which said screw extends, said nut being imbedded within said conical member and secured against rotation relative to the latter, substantially as described, for the purpose specified.



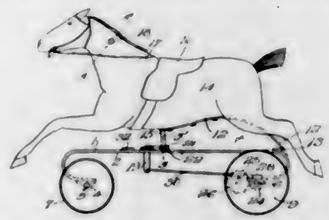
1,507,972. PUMP ATTACHMENT. LEONARD LOOP, Tulsa, Okla. Filed Dec. 31, 1923. Serial No. 683,706. 3 Claims. (Cl. 166—1.)

1. In a device of the character described, well tubing, a sucker rod including a tapered section adapted to move within the tubing, a body portion mounted on the tapered section and having a lateral opening, a roller supported by the body portion and having a peripheral groove engaging the tapered section, and said tapered section adapted to move the roller to set up a binding action between the well tubing and tapered section and restrict movement of the sucker rod.



1,507,973. WATER FAUCET. GEORGE A. MOHN, Pottstown, Pa. Filed Feb. 17, 1923. Serial No. 619,575. 1 Claim. (Cl. 251—88.)

A faucet comprising a casing having spaced inlet nozzles and an outlet nozzle positioned midway between the inlet nozzles, said casing having a valve chamber and being provided with a duct which communicates with one of the inlet nozzles and having an end portion disposed vertically and centrally in the valve chamber, a valve member located in the valve chamber and adapted to turn therein and move longitudinally thereof, said valve being provided with a centrally located duct which permanently registers with the duct located in the bottom wall of the valve chamber, the valve casing being provided with openings which register with the inlet and outlet nozzles and the valve chamber, a hood for the casing, a valve stem passing through the hood and loosely connected with the valve member and having its axis aligned with the openings in the valve member, a spring interposed between the hood and the valve member and being under tension with a tendency to normally hold the valve member toward the bottom of the valve chamber, the valve member being provided at its lower portion with an arcuate channel adapted to be moved to

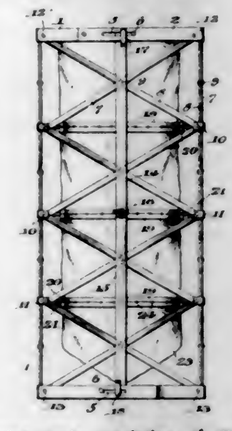


a position out of register with both of the inlet openings in the bottom of the valve chamber and being of such length that it may be simultaneously brought to register with the outlet nozzle of the valve chamber and either of the openings in the bottom wall of the valve chamber which communicate with the respective inlet nozzles.

1,507,974. RATCHET PLIERS. CHARLES E. NORTHUP, Philmont, N. Y. Filed Dec. 10, 1923. Serial No. 679,689. 5 Claims. (Cl. 294—36.)

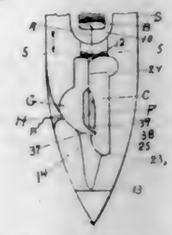
1. In a tool, a pair of handle sections, a head formed on one end of one handle section, a housing rotatably mounted within the head, a pair of jaws, means extending through the housing for supporting the jaws, one of said handle sections having pivotal connection with the head, means for supporting the last mentioned handle section and jaw supporting means, whereby movement of the handle will cause the jaws to move through the housing, and means in the housing cooperating with the jaws for moving the jaws with respect to each other.

1,507,975. CHILD'S VEHICLE. JOHN ROBIE PARKER, Winnipeg, Manitoba, Canada. Filed Feb. 16, 1923. Serial No. 619,406. 6 Claims. (Cl. 208—42.)



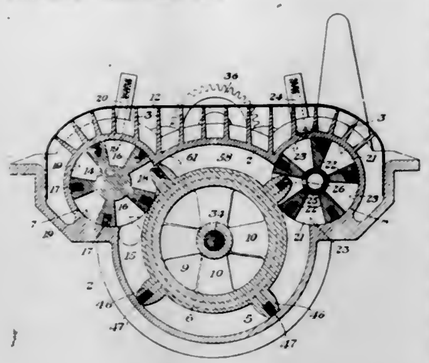
1. The combination with a wheeled frame, said frame presenting a foot rest, of an operator's seat carried by the frame and adjoining the foot rest, said seat being mounted to permit an up and down movement thereof in the direction of a wholly vertical arc, a clutchless wheel driving mechanism carried by the frame and an operating connection between the seat and the wheel driving mechanism whereby the vertical movement of the seat is utilized to actuate the wheel driving mechanism.

1,507,976. PADDING FOR USE IN PRESSING OPERATIONS AND THE LIKE. JOHN ROSS, Richmond Hill, N. Y. Filed July 12, 1921. Serial No. 484,253. 2 Claims. (Cl. 68—9.)



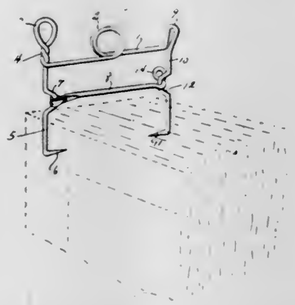
2. A padding for use in pressing operations and the like comprising a layer of unwoven yielding nonmetallic wadding provided with perforations for the passage of steam, a layer of open-work textile fabric arranged at each side of said layer of wadding, and rows of stitching for holding said layers in assembled relation.

1,507,977. SHIPPING CRATE. GEORGE W. SCHAEFER, Los Angeles, Calif. Filed Oct. 25, 1921. Serial No. 510,198. 6 Claims. (Cl. 220—6.)



1. A shipping crate consisting of upper and lower adjustable frames, a plurality of pivotally connected pairs of slats forming the sides thereof, a plurality of longitudinal strips extending lengthwise of the crate and secured at either end to the end frames of the crate to hold the crate in its extended position, and a bag suspended within the crate.

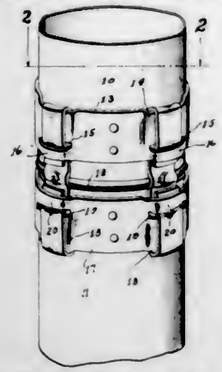
1,507,978. SHUTTLE. ISAAC SNOW, Lawrence, Mass. Filed Apr. 14, 1922. Serial No. 552,685. 6 Claims. (Cl. 139—223.)



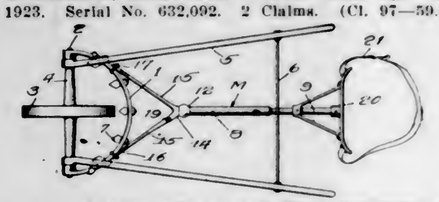
6. The combination in a shuttle having an eye, a bobbin chamber and a threading chamber in continuation thereof which connects with the eye; of a guide plate so fixed to the side of the threading chamber opposite the eye as to extend slopingly down into the threading chamber, and a hook guide in extension thereof; with a nose block on the side of the threading chamber next the guide eye which has a nose extending forward of the guide eye thence down and back towards and over the guide plate and having at the back a stop hook and a vertical thread pin.

1,507,979. ROTARY ENGINE. WERNER I. STAAF, Pittsburgh, Pa. Filed Jan. 26, 1922. Serial No. 531,843. 7 Claims. (Cl. 123—13.)

1. In a rotary internal combustion engine, a casing having an inlet and exhaust, a rotor constituting both the driving element and the gas compressing element, a rotary valvular abutment cooperating with said rotor at one side thereof, a second rotary valvular abutment cooperating with said rotor, means for positively rotating said abutments, and means within one of said abutments cooperating with said intake and serving as a compressed gas receiving chamber, substantially as described.



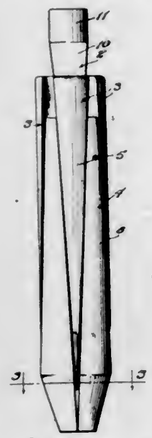
1,507,980. BOOK HANGER. HENRY J. VETTER, New York, N. Y. Filed Dec. 11, 1922. Serial No. 606,081. 1 Claim. (Cl. 45—58.)



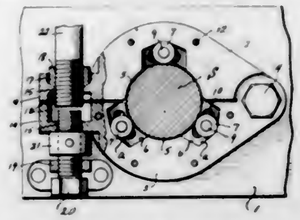
A hanger for books comprising a body member provided with two relatively movable bars, said bars being provided with inwardly directed and opposed penetrating members, a holding bar carried by one of the first named bars and provided with a hook member engageable with the second of the first named bars for holding the first named bars against separating movement, an eye member carried by one end portion of the body member to provide a supporting means, the opposite end portion of the body member being provided with an outstanding arm.

1,507,981. WELL-CASING COUPLING. HENRY B. WINTERS and JOHN E. MCCORMICK, Elkhart, Kans.; said Winters assignor to said McCormick. Filed Dec. 17, 1920. Serial No. 431,400. 1 Claim. (Cl. 285—161.)

The combination with casing sections telescopically connected, one of said sections having an annular shoulder abutting against the adjacent edge of the other of said sections; of collars secured on the sections at the adjacent ends thereof, radial stirrups integral with said collars extending between the edges thereof, keepers on the stirrups formed on a longer radius than the stirrups, and coupling straps passing under the stirrups and having their free end portions bent back over the remote edges of the stirrups and engaged through the keepers.

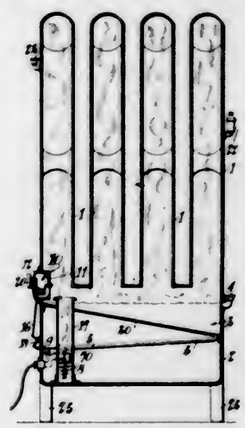


1,507,982. AGRICULTURAL IMPLEMENT. CHARLES E. ANDERSON, Devils Lake, N. Dak. Filed Apr. 14, 1923. Serial No. 632,092. 2 Claims. (Cl. 97—59.)



1. In combination with an agricultural implement of the walking type, a push element associated therewith comprising an elongated member, a body engaging yoke carried by the outer end of the member, a head, an articulated connection between the head and the elongated member, diverging arms carried by the head, one of said arms having swinging movement relative to the other, and means associated with the outer end portions of each of the arms for connecting the same to the implement.

1,507,983. EXPANSIBLE PLUG FOR OIL WELLS. HARRY M. ANDERSON, San Antonio, Tex. Filed Apr. 18, 1923. Serial No. 632,911. 2 Claims. (Cl. 166—13.)



2. An expansible well plug comprising an assemblage of mating elements of substantially rectangular and triangular cross sections respectively having their outer faces rounded transversely whereby the assemblage is substantially of cylindrical form, the inner faces of the rectangular sectioned elements being located in planes inclining downwardly toward the axis of the assemblage whereby to provide a downwardly tapered bore of polygonal cross section, and an expanding mandrel fitting in the bore.

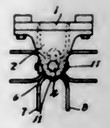
1,507,984. LOCKING DEVICE. LOUIS A. BORNE, Milwaukee, Wis. Filed Sept. 10, 1923. Serial No. 661,979. 4 Claims. (Cl. 188—80.)

1. In combination with a shaft, members extending across opposite sides of the shaft, means for supporting said members for relative swinging movement one toward the other, means for moving said members one toward the other, and wedging means carried by the members for coaction with the shaft upon movement of the members one toward the other.

1,507,985. PORTABLE SELF-HEATING RADIATOR. FRED C. BROWN, Seattle, Wash. Filed Oct. 20, 1922. Serial No. 595,877. 5 Claims. (Cl. 237—7.)

3. A portable heater of the character described, comprising a radiator body which includes a plurality of hollow uprights and a water receiving chamber below the said uprights with which the open bottoms of the hollow uprights communicate, the water chamber having a bottom that inclines downwardly from one end of the radiator to the other end thereof, the radiator having a water inlet, a vaporizing tube located beneath the high end of the water chamber bottom and projected upwardly through the said high end of the bottom to discharge the vapor above the water level of the radiator, a heat generator located within the vaporizing tube, a spray pipe that projects into the radiator and into the vaporizing tube, a nozzle on said tube for discharging onto the heat generator, a connection between the low end of the water chamber and the spray pipe, a valve in such connection, means for energizing the heat generator, the said means including a cutout, and a lever device mounted upon the radiator and connected with said valve and with said cutout and adapted for simultaneously cutting out the heat generator and the spray pipe under one adjustment and restoring the said spray pipe and the heat generator to their operative condition under another adjustment.

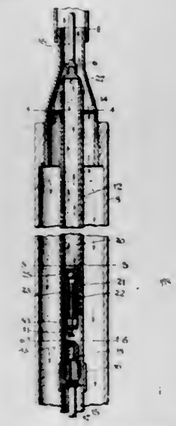
1,507,986. ROTARY WELL-DRILLING MACHINE. WALKER TULLY CAVENDER, Sabinal, Tex. Filed Dec. 21, 1921. Serial No. 523,955. 2 Claims. (Cl. 255—28.)



1. In a device of the class described, a tubular drill stem; a carrier wherein the stem is rotatable; a drill carried by the drill stem; a coupling; and a water conduit rotatable in the coupling and located in the stem, the conduit being connected to the drill independently of the stem, whereby when the stem breaks, the conduit will cease to rotate in the coupling, thereby notifying an operator of the breaking of the stem.

1,507,987. PROCESS OF PREPARING OXY COMPOUNDS OF TANTALUM. HUGH SPENCER COOPER, Cleveland, Ohio, assignor to Kemet Laboratories Company, Inc., a Corporation of New York. Filed June 8, 1922. Serial No. 566,858. 12 Claims. (Cl. 23—13.)

1. Process of preparing oxy-compounds of tantalum from material containing tantalum and iron, which comprises forming a mixture of the chlorids of tantalum and iron, and then hydrolyzing the tantalum chlorid while inhibitating hydrolysis of the iron chlorid.

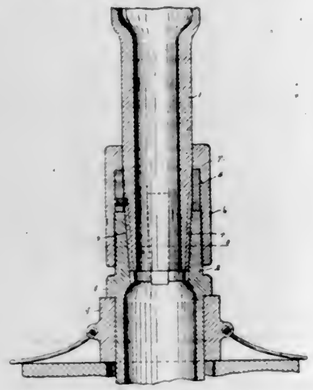


4. Process of preparing a mixture of tantalum and iron chlorids which comprises treating a material containing tantalum and iron with chlorin at a temperature above 450°. C.

1,507,988. PULVERIZER. DMYTRO CYGANCZUK, Winnipeg, Manitoba, Canada. Filed Oct. 13, 1920. Serial No. 416,712. 6 Claims. (Cl. 92—215.)

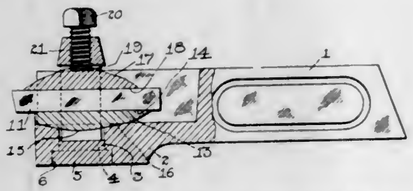
1. A pulverizer in the form of a roller and comprising end axles and a plurality of similar toothed lengthwise extending sections, the sections being substantially U-shaped in cross section and grouped around the axles and fastened together by bolts.

1,507,989. SAND PUMP. HERBERT H. DEFENBAUGH, Copan, Okla. Filed Apr. 13, 1923. Serial No. 631,896. 2 Claims. (Cl. 103—179.)



1. A pumping apparatus for wells comprising a sand receiver, a working barrel arranged in the sand receiver, a plunger of tubular formation having a working fit in the barrel and provided at its lower end with a valve, the upper portion of said plunger being provided with lateral discharge openings, the plunger being provided above said discharge openings with a rounded head by means of which the settling sand is directed into the receiver, the upper end of the working barrel being beveled to scrape the plunger free of sand as the plunger enters the working barrel and to direct the sand into the sand receiver and a standing valve arranged in the lower portion of said working barrel.

1,507,990. SCREW DRIVER. DONALD C. DONALDSON, Lovell, Wyo. Filed June 14, 1923. Serial No. 645,382. 1 Claim. (Cl. 145—61.)

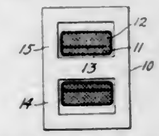


In a screw driver, a flexible armor tube, a flexible drive shaft extending through the tube, a sleeve upon one end of the tube, a handle fixed to the shaft at said end of the tube, a cap upon the handle, a thimble swiveled within said cap rotatably fitting in said sleeve forming a connection between the handle and sleeve and receiving the drive shaft therethrough, and a bit connected with the shaft at the opposite end of the tube.

1,507,991. TOOL JOINT. CHARLES R. EDWARDS, Houston, Tex. Filed Oct. 14, 1919. Serial No. 330,555. 1 Claim. (Cl. 285—122.)

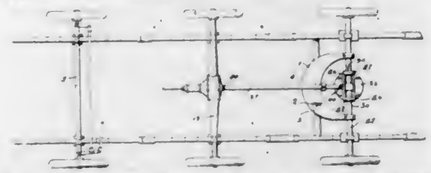
A tool joint, including two pipe sections whose ends abut, one of said abutting ends being reduced and thickened and the other abutting end being upset and formed with thickened walls which are externally threaded, interlocking shoulders carried by said abutting ends, said shoulders being spaced apart and arranged in staggered relation, the shoulders of one end fitting between the shoulders of the other end, a ring-like nut threaded onto said reduced end, a coupling fitted around said reduced end, said coupling being sleeve-like in form and having one end formed into an inwardly extending annular flange which engages against said nut and having its other end internally threaded and thus adapted to be screwed onto the outwardly threaded upset end of the other section and a set screw by means of which said ring-like nut is locked against unscrewing.

1,507,992. TOOL HOLDER. EMORY E. ELLIS, Orange, Mass. Filed Dec. 21, 1921. Serial No. 523,952. 8 Claims. (Cl. 29—98.)



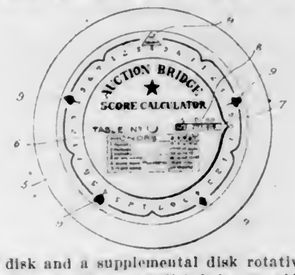
1. A tool holder comprising a head provided with a pair of alined curved seats, a member turnable in said head and provided with a tool receiving opening adapted to register with said seats, members for clamping a tool in said opening at different angles with respect to said seats, and means for applying pressure to said members between said seats.

1,507,993. PROCESS FOR THE PRODUCTION OF ALUMINA AND NITRATES. HANS JOACHIM FALCK, Notodden, and THOR MEJDELL, Skoien, near Christiania, Norway, assignors to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Feb. 27, 1922. Serial No. 539,761. 2 Claims. (Cl. 23—13.)



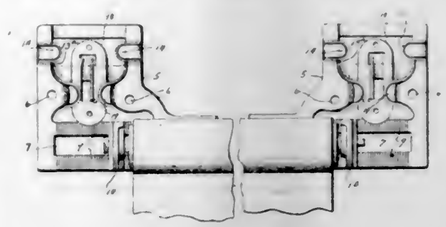
1. Process for the production of alumina and nitrates which consists in forming a mixture of nitrates containing aluminum nitrate, mixing such mixture of nitrates with an alumina-containing material in such a quantity that the resulting mixture will not melt during the subsequent heating, heating said resulting mixture in the presence of a basic substance and working the product of the heating operation for the recovery of alumina and nitrates.

1,507,994. ELECTRIC CIRCUITS. FRANK EDWIN FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 1, 1921. Serial No. 512,147. 8 Claims. (Cl. 178—44.)



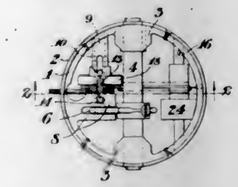
5. In combination, a line, an amplifying device, and means for giving said device an approximately flat gain characteristic over a wide range of frequencies present in said line, said means comprising a transformer associated with said device and having a core of such a reduced cross section at one portion thereof as to cause an appreciable leakage flux.

1,507,995. VEHICLE. MARTIN J. FURLONG, Houston, Tex. Filed July 3, 1923. Serial No. 649,303. 4 Claims. (Cl. 180—22.)



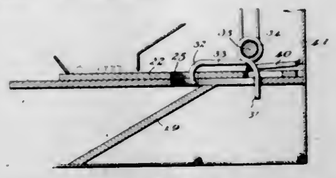
1. A vehicle comprising a frame, an axle operatively supported by the frame for bodily swinging movement about a vertical axis, said frame having relative lateral movement with respect to the axle, a forwardly directed plate carried by the axle and provided with a slot, and a member fixed with respect to the frame and disposed through the slot, whereby relative lateral movement between the frame and axle will impart swinging movement to the axle.

1,507,996. AUCTION-BRIDGE SCORE CALCULATOR. CLYDE H. GOUDELOCK, Charlotte, N. C. Filed Jan. 25, 1924. Serial No. 688,514. 1 Claim. (Cl. 235—85.)



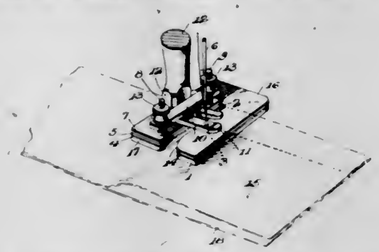
A base disk and a supplemental disk rotatively mounted thereon, the supplemental disk being provided with an edge pointer and with a radial slot adjacent thereto and the main disk being provided with a series of five groups of bid figures around the margin of the supplemental disk, each of these groups being designated by a trump symbol, said main disk being also provided underneath the supplemental disk with five groups of radially-arranged figures indicating the value of the tricks in the various trump suits.

1,507,997. CURTAIN-POLE AND SHADE BRACKET. WILLIAM HARTLEY, Elwood, Ind. Filed Feb. 14, 1923. Serial No. 619,022. 3 Claims. (Cl. 156—24.)



3. In combination with a base plate carrying a shade roller supporting member and adapted for attachment to a window frame, said base plate having a recess in its outer face opening from the top of the base plate and adapted for snug reception of the base plate portion of a conventional curtain pole supporting bracket, and lugs at opposite sides of said recess projecting toward each other and overhanging the bottom of the recess to retain the curtain pole supporting bracket in said recess except upon upward displacement of said curtain pole supporting bracket, said recess being of a width to accommodate the relatively large base plate of a double curtain pole supporting bracket, and a second recess in the outer face of the base plate of the shade roller supporting bracket at the lower end of the first named recess, and lugs at opposite sides of the second recess projecting toward each other, and overhanging the bottom of said second recess to retain the base plate of a curtain pole supporting bracket in said recess except upon upward displacement of said curtain pole supporting bracket, the last named recess being of a relatively narrow width for snug reception of the base plate of a conventional form of single curtain pole supporting bracket.

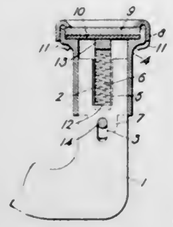
1,507,998. JOINT FOR ELBOWS AND KNEES OF ARTIFICIAL LIMBS. CYRIL GEORGE HOARE, Clapham, London, and THOMAS CHARLES WATERS, Crofton Park, England. Filed Feb. 27, 1924. Serial No. 695,552. 5 Claims. (Cl. 3—12.)



1. An improved joint for elbows and knees of artificial arms and legs, comprising a concentric metal ring in the bucket of the lower end of the upper member of the arm or leg, having an inwardly projecting rib with a hole or gap near or in its inner edge, a rotatable shaft connected by straps to the lower member of the arm or leg and having a fixed disc or sector of a disc with a number of holes or gaps near or in its edge so mounted on the shaft that the disc or sector overlaps the rib and moves past the side thereof when the shaft is rotated and each hole or gap in the disc or sector successively registers with that in the rib, a bolt or blade adapted to engage in the registering holes or gaps, and means operable by a complete to and fro movement of the shoulder, hip or hands either to enter or withdraw said bolt or blade into or from one or other of the holes or gaps in the disc or sector to lock the lower member of the arm or leg in any one of its various adjusted positions or to release it therefrom.

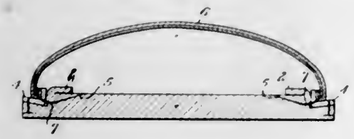
1,507,999. VENDING MACHINE. HOWARD HUBBARD, Dill, Okla. Filed Oct. 27, 1922. Serial No. 597,363. 2 Claims. (Cl. 144—58.)

1. A vending machine including a manually shiftable slide having an article receiving slot and a coin receiving aperture, a magazine opening downwardly upon the slide, a stationary supporting plate on which the slide is shiftable, having a slot with which the said slot of the slide is normally registered, and having a coin releasing aperture with which the coin receiving aperture of the slide is registrable upon forward movement of the slide, and a controlling member mounted to swing vertically above the rear portion of the slide, having a hook depending through said slots of the slide and its supporting plate to hold the slide from movement, and also having an arm normally depending through the forward portion of the coin receiving aperture of the slide for engagement and actuation by a coin within said aperture.



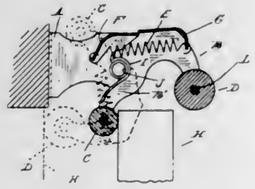
1,508,000. HEMSTITCHING AND PICOTING ATTACHMENT FOR SEWING MACHINES. CHARLES DEAN KENNEDY, Corpus Christi, Tex. Filed Jan. 13, 1923. Serial No. 612,509. 3 Claims. (Cl. 112—179.)

1. A hemstitching device adapted to be attached to the presser foot of a sewing machine comprising a flat plate having a slot extending for a portion of the length of the plate and transversely of the work feeding means of the machine, one edge of the mouth of the slot being flared for admitting the work, said plate being provided with a vertical needle passage opening into the central portion of the slot from one edge of the slot, plates of varying thicknesses similar in construction to the base plate adapted to be superimposed upon said plate, threaded studs rigidly secured to the base plate in spaced relation and located upon one side of the slot, alining spaced perforations in the superimposed plates adapted to receive the spaced threaded lug, a clamping bar provided with spaced perforations adapted to receive the threaded studs, and nuts on the threaded studs for forcing the clamping plate in rigid relation with the presser foot of a machine.



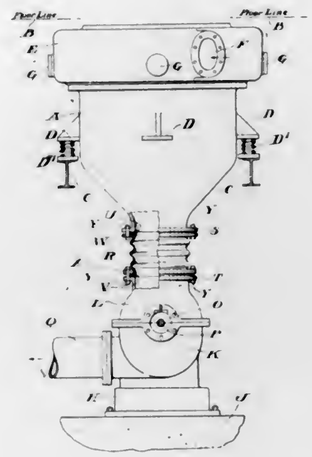
1,508,001. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 11, 1919. Serial No. 337,118. 5 Claims. (Cl. 197—103.)

1. In a typewriting machine, the combination with a key-lever having a recess extending downward from the upper edge thereof to serve as a chamber for a spring, of a sleeve fitted over the key-lever for sliding movement up and down thereon, a character plate or disk supported by and closing the upper end of the sleeve, a spring seated in the recess in the key-lever within the



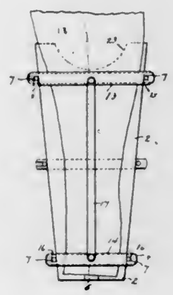
sleeve and bearing at its upper end against the character plate, and means for holding the character plate against upward displacement, by the spring, relative to the sleeve.

1,508,002. SHOE AND METHOD OF MANUFACTURING THE SAME. FIORENTINO MACCARONE, Rochester, N. Y. Filed Jan. 4, 1923. Serial No. 610,635. 1 Claim. (Cl. 36—18.)



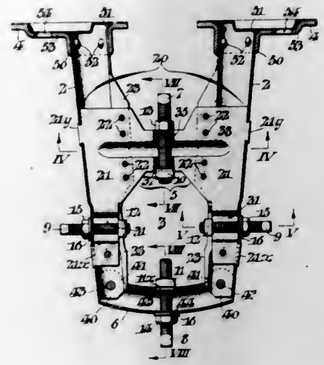
A turned shoe comprising a sole having a channel at its upper edge, a flange portion formed integral with the sole and bent backwardly from said channel so that it overlies and contacts with the top of the body portion of the sole so as to stiffen the sole, the flange portion being pressed against the body portion of the sole to set it, a welt arranged in said channel, the body of the sole having an inclined cut commencing inwardly of said backwardly bent flange portion and extending downwardly beneath the same, and an upper located above the welt and attached to the welt and sole by stitches extending through the welt and to the bottom of said inclined cut, said stitches extending through the body portion of the sole at a point considerably beneath said backwardly bent flange portion.

1,508,003. DOORCHECK. GEORGE W. MALLORY, Blenheim, Ontario, Canada. Filed May 10, 1922. Serial No. 559,738. 5 Claims. (Cl. 292—216.)



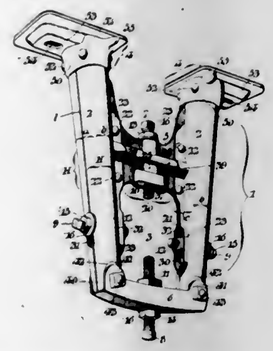
1. A door check comprising a bracket member and a rockable member, the one embracing the other, a struck-out pivot flange on the one member, and a segmental struck-out pivot flange on the other member laterally engageable with said first-mentioned flange.

1,508,004. EXPANSION JOINT FOR CONDENSERS. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 13, 1920. Serial No. 430,414. 5 Claims. (Cl. 60—64.)



1. The combination of a condenser, resilient supports upon which said condenser rests, a removal pump separately and rigidly supported beneath the condenser, and an expansion joint in the form of a corrugated cylindrical expansion-member connecting said condenser and removal pump.

1,508,005. MULTIPLE GARMENT PRESS. REINHOLD BARTELL, Newark, N. J. Filed Oct. 14, 1921. Serial No. 507,676. 2 Claims. (Cl. 100—57.)

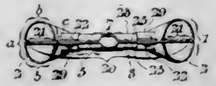


1. In a garment presser, the combination of a presser board adapted to receive and support a plurality of garments thereon, cleats arranged at intervals upon the lower face of said board, upright rods connected to the extended ends of said cleats, and a garment holding device comprising a pair of bars each adapted to engage a pair of said rods, and an elastic connection between said bars to hold said device in place upon a garment to permit the same to be stretched and shaped preparatory to pressing.

1,508,006. SHAFT HANGER. RUSSELL H. BOWEN, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,780. 15 Claims. (Cl. 64—14.)

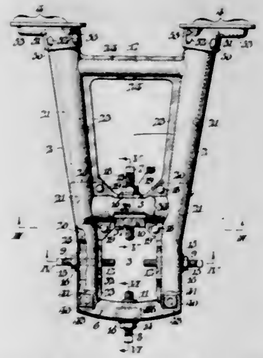
1. A sheet metal hanger comprising a hollow leg, with back, sides, and belly formed of a single piece of bent sheet metal, reinforced and stiffened, sidewise of the hanger, by an internal longitudinal web extending from above the shaft opening of the hanger downward as far as the lateral bearing-support of said leg.

1,508,007. SHAFT HANGER. RUSSELL H. BOWEN, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,781. 54 Claims. (Cl. 64—14.)



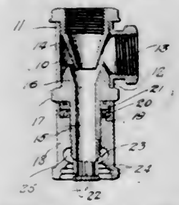
1. A sheet metal hanger comprising a hollow leg, with back, sides, and belly, reinforced and stiffened, sidewise of the hanger, by an internal longitudinal web extending from above the shaft opening of the hanger downward as far as the lateral bearing-support of said leg.

1,508,008. MANUFACTURE OF SHAFT HANGERS AND BLANKS FOR SAME. RUSSELL H. BOWEN, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 1, 1921. Serial No. 497,782. Renewed Feb. 13, 1924. 20 Claims. (Cl. 29—150.)



1. A process of fabricating a sheet metal hanger piece which comprises embossing outer portions of opposite margins of a couple of sheet metal blanks, turning up

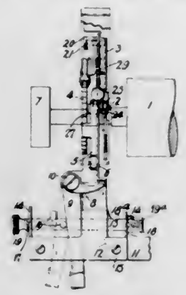
said margins in correspondence with the overall width of the hanger piece to be produced, superposing and securing together a couple of the resulting pieces, bending the margins of said pieces on inward toward their



respective intermediate portions by flexure between the regions of the aforementioned embossing and turning up, and securing the thus retroverted portions of the blanks to said intermediate portions.

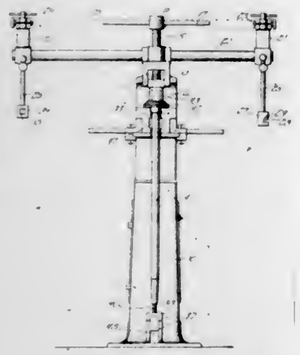
1,508,009. SHAFT HANGER. RUSSELL H. BOWEN, Philadelphia, Pa., assignor to The American Pulley Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1922. Serial No. 601,446. 33 Claims. (Cl. 64—14.)

1. A sheet metal hanger comprising a hollow leg reinforced and stiffened, sidewise of the hanger, with an integral internal longitudinal flange projecting inward into the interior of the leg from the external leg wall; said flange being narrower than the leg and enclosed therein by said external wall behind the junction of flange and wall, as well as at either side.



1,508,010. ADJUSTABLE SHOWER NOZZLE. EVERETT CIRCLE, Coalton, Okla. Filed June 13, 1922. Serial No. 567,897. 3 Claims. (Cl. 299—140.)

3. A spraying device including a discharge tube having longitudinal slots in the sides of its discharge end, and a sleeve adjustable longitudinally on the tube and having a flaring mouth and an inwardly directed circumferential lip traversing the slots longitudinally, the sleeve having a circumferential groove inwardly of the lip, and circumferential grooves outwardly of the lip.

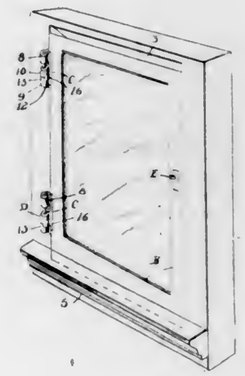


1,508,011. TYPEWRITING MACHINE. CORNELIUS B. CORCORAN, New York, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Dalaware. Filed July 27, 1920. Serial No. 399,356. 17 Claims. (Cl. 197—114.)

1. In a line-spacing mechanism for typewriters, the combination with a platen, of means for moving the platen, comprising a pawl, a line-spacing lever, a pawl-carrier in the path of movement of the line-spacing lever to be operated thereby to impart line-spacing movement to the pawl, means acting through the pawl-carrier for setting the pawl to different positions to control the

line-spacing movement of the platen, and means independent of the pawl-setting means for arresting said line-spacing lever in various normal positions spaced to correspond with the setting of said pawl for different line-spacing movements of the platen.

1,508,012. AXLE STAND. FRANK DANIELSON, Chicago, Ill. Filed June 24, 1920. Serial No. 391,307. 14 Claims. (Cl. 29—89.)



14. In a device of the character described, a base, movable and stationary jaw members, means for moving said movable jaw member toward said stationary jaw member to clamp an axle between said jaws, said stationary jaw member being provided with an extension having a transverse opening, a shaft mounted in said opening, a pair of supporting members mounted on said shaft and provided with means to clamp the same to said shaft at any desired point, and handles for operating said clamping means, one of said handles being provided with an opening having a beveled portion therein for engagement between two adjacent teeth of a gear free to turn on said axle to prevent turning thereof.

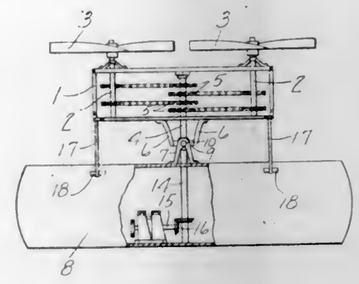
1,508,013. HINGE. GEORGIANNA W. DE WATERS, Pittsburgh, Pa. Filed Mar. 28, 1923. Serial No. 628,225. 3 Claims. (Cl. 16—143.)

1. In a hinge for casement windows and the like, the combination of a pintle barrel to be mounted on the frame and a pintle barrel to be mounted on the sash and axially superimposed on the frame barrel, and a pintle extending through said barrels, the upper end of the frame barrel having a socket adjacent to the frame, and next in the direction of opening the sash an upwardly extending abutment followed by a second socket

which is followed by a second abutment which also forms the rear wall of the first socket, and the lower end of the sash barrel being provided with a depending abutment which seats in the first named socket of the frame barrel when the sash is closed, thus preventing the sash from swinging open until it is first raised and said sash barrel abutment being adapted to impinge upon the first abut-

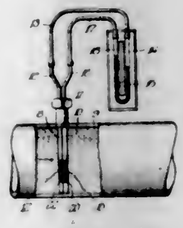
ment of the frame barrel when the sash is raised and is being opened, and said sash barrel abutment being further adapted to be lowered into the second socket of the frame barrel when the sash is opened to prevent the sash swinging from its position until it has been first raised, said sash barrel being also provided with an upwardly recessed socket to receive the first named abutment of the frame barrel when the sash is closed.

1,508,014. DEVICE FOR MAKING HAIR GOODS. ALBERT DITTRICH, Muhlhausen, Germany, assignor to Julius Pauly, Incorporated, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,481. 1 Claim. (Cl. 132—56.)



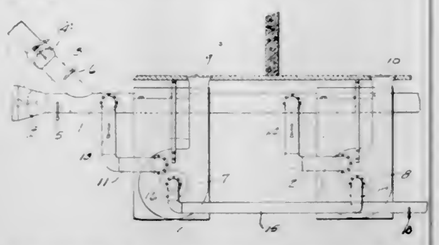
A device for making artificial hair goods comprising a column, pins located on the said column, reels mounted upon the said pins and having notched discs adjacent the said column, locking pins mounted upon the said column and adapted to engage the said notched discs when the said reels are slid upon their respective pins towards the said column, a second column and a wind-up peg revolubly mounted upon the said column.

1,508,015. PROCESS OF DILUTING ACIDS. JAMES ERNEST EGLESON, Ridley Park, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1922. Serial No. 594,732. 5 Claims. (Cl. 23—1.)



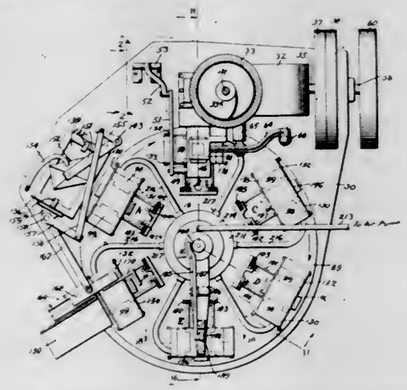
1. In the art of diluting sulfuric acid, that improvement which comprises cooling a product of dilution at a point remote from the point of dilution and then feeding the thus cooled product to the point where dilution takes place.

1,508,016. MECHANISM FOR FLYING MACHINES. WALTER M. ELLIS, Endeavor, Wis. Filed Apr. 5, 1923. Serial No. 630,175. 5 Claims. (Cl. 244—19.)



1. A mechanism of the character described comprising in combination with the body, engine and essential parts of a flying machine, a propeller or wheel-wing frame adapted for horizontal disposition over the said body, a central transmission shaft and a plurality of outer propeller or wheel wing shafts journalled through the frame perpendicular thereto and operatively connected together, propellers or wheel wings mounted on the outer shafts in a common plane, a vertical drive shaft centrally journalled in the body in line with the transmission shaft and operatively connected with the engine, a universal joint centrally connecting the wheel wing from above with the body below, one part or element of said universal joint consisting of a ring provided with radial pivots arranged in the same plane and having an open center, and operated to articulate and mutually support the two parts of the airship, the other part or element being located exactly centered and actuating within the outer part and at the same point of flexure as the outer or articulating point and operatively connecting the drive shaft with the transmission shaft, and guy ropes attached to the outer lower part of the wheel wing frame and extending thence into the body to a central point of control for flexing the wheel wing system or frame at the will of the driver and thus directing the movement of the airship.

1,508,017. PITOMETER. FREDERICK W. GREVE, West Lafayette, Ind. Filed Dec. 11, 1922. Serial No. 606,320. 1 Claim. (Cl. 73—167.)



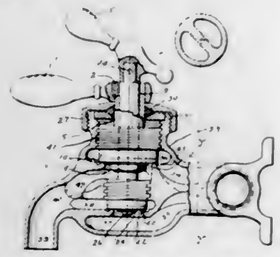
A pitometer comprising a pair of juxtaposed tubes adapted for use with a differential gage, said tubes being each provided upon its side opposite to the adjacent tube with pressure receiving openings throughout substantially the effective length of the tube, and a shingle sheath enclosing the two tubes provided with openings registering with the openings in the tubes, the sheath serving to maintain the tubes in fixed parallel relation and to protect the tubes.

1,508,018. HEATING AND VENTILATING SYSTEM. DAVID LEONARD HAMPTON, Fort Worth, Tex. Filed Nov. 9, 1923. Serial No. 673,784. 1 Claim. (Cl. 98—27.)

An apparatus of the kind described, comprising a main air pipe horizontally extended; a hot air pipe extended from the main pipe; draft fans and dampers mounted in the main pipe and the hot air pipe; blowers mounted along the main pipe; branch hot air pipes connecting the main pipe with the blowers; dampers in the branch hot air pipes; a cold air pipe; and branch cold air pipes connecting the cold air pipe with the blowers.

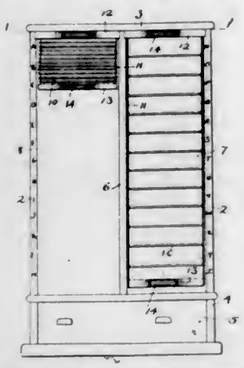
1,508,019. PACKAGING MACHINE. HERBERT M. HILL, New York, N. Y., assignor to Phenix Cheese Company, a Corporation of New York. Filed Aug. 30, 1922. Serial No. 585,330. 8 Claims. (Cl. 93—7.)

1. The combination, with a stationary framework, a turntable mounted thereon and revolubly step-by-step, and a package wrapping platform carried by said turntable and so positioned thereupon as to stop successively in a predetermined position, of stationary guides mounted upon said framework and located adjacent the position in which said package wrapping platform stops, a plunger slidably mounted upon said guides, a pair of blades carried by said plunger and movable relatively to said stationary guides and to each package wrapping platform as it stops in said predetermined position, for the purpose of engaging protruding portions of the wrapper of a partially formed package, in order to fold and smooth said protruding portions of the said wrapper.



1,508,020. HOLDER FOR STACKS OF SHEETS. PAUL H. HORWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed July 6, 1923. Serial No. 649,891. 2 Claims. (Cl. 214—29.)

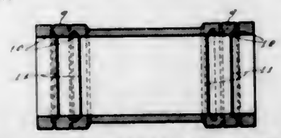
1. The combination of a support, a stack of sheets carried thereby, alternate sheets in said stack being off-set and projecting beyond each other in opposite directions, and an apertured pressure exerting member resting upon the projecting portions of said stack and thereby tilting



the terminal sheet to project its free edge through said aperture and thereby facilitate the removal of said terminal sheet from said stack.

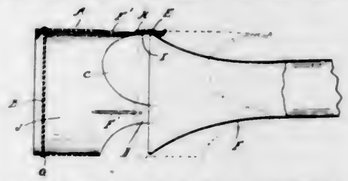
1,508,021. DOUBLE FAUCET. EINO E. LAKSO, Fitchburg, Mass. Filed Jan. 2, 1923. Serial No. 610,206. 2 Claims. (Cl. 277—18.)

2. In a combination hot and cold water faucet having separate valves, an outlet and separate inlets in the body; said body being cast in one piece having two distinct valve elevating threaded holes concentrically bored on different planes.



1,508,022. FILING CABINET. EDWARD FRANCIS MILES, Lewiston, Me. Filed July 15, 1921. Serial No. 484,887. Renewed Jan. 29, 1924. 1 Claim. (Cl. 45—2.)

A filing cabinet including a casing open at the front and having a plurality of compartments, and provided at the top of each of the compartments with opposite horizontal supporting ways, a supporting slide and a set of collapsible shelves for each of the compartments supported by said slide, said shelves being flexibly connected at their side edges and collapsible upwardly from the bottom of the cabinet towards the said slide in removing

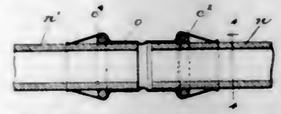


the set of shelves from the compartment, the said slide being extended laterally beyond the side edges of the shelves and having its extended side edges supported by, and slidable inwardly and outwardly in the said ways, said set of shelves being suspended in its expanded condition from the said slide.

1,508,023. PIPE CONNECTION. JOSEPH G. MOOMY, Erie, Pa., assignor to Mary H. Moomy, Erie, Pa. Filed Apr. 21, 1922. Serial No. 555,801. 3 Claims. (Cl. 285—90.)

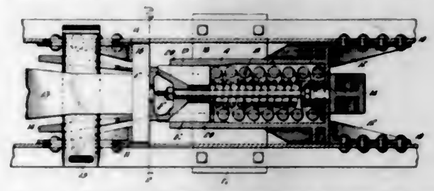
1. A pipe connection having an expansible rubber engaging annulus, said annulus having internally opening inwardly inclined slits extending into the walls of the annulus, the slits being relatively thin and the intervening walls between the slits relatively thick and the walls of the connection adjacent to the slits being cylindrical.

1,508,024. MUTE FOR WIND INSTRUMENTS. WILLIAM A. MCARTHUR, Detroit, Mich. Filed July 3, 1922. Serial No. 572,741. 5 Claims. (Cl. 84—400.)



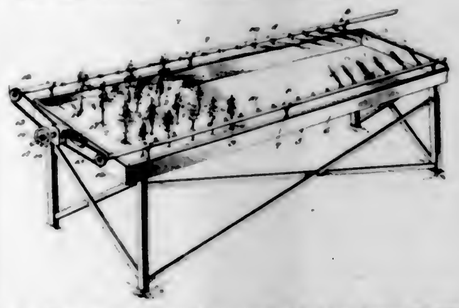
3. A mute attachment for a horn including a sleeve closed at one end, and means projecting forwardly from the open end of said sleeve for detachably securing the same to said horn, said sleeve having a greater diameter than the bell of said horn whereby said sleeve may receive the bell of said horn.

1,508,025. SHOE AND HEEL THEREFOR. JAMES MCDONOUGH, Cleveland, Ohio, assignor of one-half to William R. McDonough and one-half to Harry A. McDonough, both of Cleveland, Ohio. Filed Feb. 28, 1921. Serial No. 448,587. 3 Claims. (Cl. 36—34.)



1. A shoe having a sole and heel portion and a heel lift attached to the heel portion with its breast edge disposed at substantially right angles to a line extending from the center of said tread portion of the heel lift to the ball of the shoe with the center line of the heel lift coinciding with the line which is at right angles to the breast of the heel, the ground engaging portion of the heel lift being equally and symmetrically disposed on opposite sides of its center line.

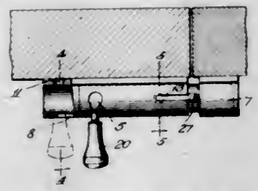
1,508,026. CLUTCH FOR AXIAL TRACTION. WARREN NOBLE, Providence, R. I., assignor to Tubular Woven Fabric Company, Pawtucket, R. I., a Corporation of Rhode Island. Filed Mar. 15, 1919. Serial No. 282,900. 3 Claims. (Cl. 285—163.)



3. A clutch for axial traction comprising inner and outer members arranged for relative movement in the axial direction, one of said members having oppositely inclined circumferential surfaces converging toward the contiguous surface of the other member and forming therewith included tapering chambers or grooves, and flexible binder rings contained in said chambers constructed to roll on the bounding surfaces thereof when axial relative movement takes place, one of said rings being resiliently compressible.

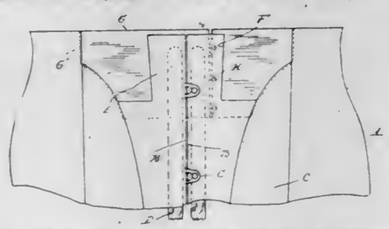
1,508,027. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 8, 1921. Serial No. 499,205. Renewed July 21, 1924. 11 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a friction shell; of a spring resistance; two sets of friction-shoes each comprising a plurality of shoes and all cooperable with said shell; and a wedge common to all of said shoes, said wedge and shoes of one set having inwardly converging wedge faces extending at one angle with respect to the axis of the mechanism, said wedge and shoes of the other set having cooperating inwardly converging wedge faces extending at a different angle with respect to said axis.



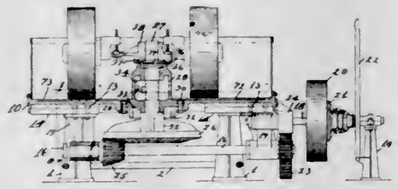
1,508,028. WATER-DISTRIBUTING DEVICE. WILLIAM ROBINSON, Morton Grove, Ill. Filed Jan. 20, 1922. Serial No. 530,590. 2 Claims. (Cl. 209—72.)

1. A water distributing apparatus for hot house plants comprising a pair of spaced parallel water distributing pipes having inwardly directed nozzles, sprocket wheels



secured on the ends of said water distributing pipes, sprocket chains trained about said wheels respectively and means to operate said sprocket chains for simultaneously rotating said water distributing pipes in opposite directions.

1,508,029. BOLT. SAMUEL SEGAL, New York, N. Y. Filed Jan. 29, 1920, Serial No. 354,766. Renewed July 22, 1922. Serial No. 576,867. 8 Claims. (Cl. 292—67.)

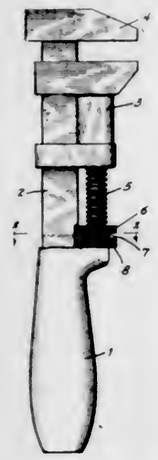


4. In a bolt, a barrel having a hole and a slot therein, a bolt-bar adapted to slide within said barrel and provided with a hole extending through the body thereof adapted to register with the hole in the barrel, a shoulder on said bolt-bar adjacent said hole, an operating knob for actuating said bolt-bar, a pin carried by said operating knob adapted to slide within the slot in the barrel and extending within the hole in the body of the bolt-bar, a head on said pin and a concealed spring encircling said pin and engaging the head thereof and said shoulder and adapted to automatically project said pin into the hole of the barrel to lock the bolt-bar against movement.

1,508,030. CORSET. JOSEPH SIEGEL, Detroit, Mich., assignor to American Lady Corset Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 10, 1921. Serial No. 436,035. 6 Claims. (Cl. 2—37.)

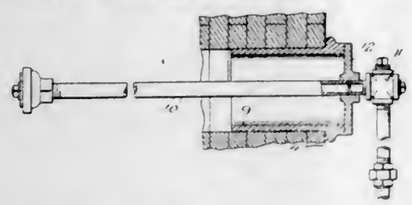
1. A waist-embracing garment having detachably connected vertical edges and having openings formed in its top portion at each side of said edges providing upstanding portions marginal to said edges, members secured to said garment at the remote edges of said openings and closing the latter, and means for detachably securing said members together in rear of one of said upstanding portions.

1,508,031. FOUNDRY-SAND MIXER. HERBERT S. SIMPSON, Chicago, Ill. Filed Sept. 10, 1921. Serial No. 499,620. 5 Claims. (Cl. 83—73.)



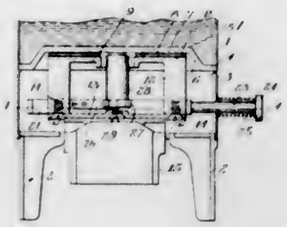
1. In a mixing machine, a pan having a central opening surrounded by an annular flange, a turret having an annular base flange seated upon said first mentioned flange, a shaft journalled in said turret, a spider secured upon the upper end of said shaft, a pair of vertically adjustable mullers supported upon opposite sides of said spider, and segmental-shaped wear plates on the bottom of said pan adapted to be removed through a vertical adjustment of said mullers.

1,508,032. CORROSION-RESISTING FERROUS ALLOY. WILLIAM H. SMITH, Cleveland, Ohio, assignor to Ludlum Steel Co., Watervliet, N. Y., a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,650. 13 Claims. (Cl. 75—1.)



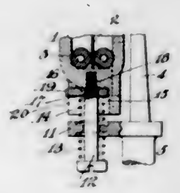
1. A substantially nickel free alloy containing at least 40% of iron, not less than 15% of chromium, .04% to 12% of titanium, and an appreciable quantity of manganese not in excess of 2%.

1,508,033. WRENCH. THOMAS B. TIEFENBACHER, New York, N. Y. Filed Mar. 21, 1923. Serial No. 626,450. 2 Claims. (Cl. 81—210.)



1. In a wrench, a fixed jaw and a movable jaw adapted to cooperate therewith, a nut for moving said movable jaw and a spring having one end encircling said nut and the other end anchored in a fixed part of the wrench, said spring exerting pressure of a constant nature against said nut in a direction transverse to the plane of said nut.

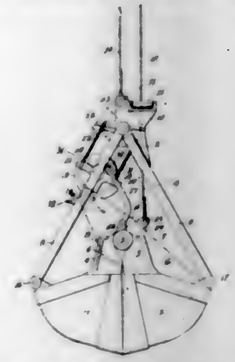
1,508,034. GAS FILTER. FRITZ FREDERICK UEHLING, Passaic, N. J. Filed Apr. 18, 1922. Serial No. 555,516. 3 Claims. (Cl. 183—44.)



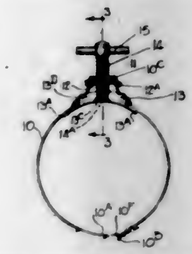
3. The combination with a filter, of a pipe connected thereto, a supporting frame for the pipe and filter consisting of a cylinder mounted in a gas chamber, and a cover for said chamber having a central opening in which the aforesaid pipe is secured, together with means for clamping the cover to the cylindrical frame, and an external gas-conveying conduit or main likewise connected with the central opening in the frame cover.

1,508,035. FUSIBLE SWITCH. WEEDEN B. UNDERWOOD, Rochester, N. Y., assignor to Wilmot Castle Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 9, 1922. Serial No. 580,767. 6 Claims. (Cl. 219—43.)

1. An electrically heated container having a bottom soldered to the side walls thereof and provided with a central upwardly projecting portion spaced from the side walls to provide a channel in proximity to the side walls the central upwardly projecting portion having a pocket in its underside, heating means having an electrical heating element arranged in the pocket and provided with means having a normal tendency to cut off the heat, and a fuse device for restraining such tendency, subject to the influence of the central portion of the bottom of the conductor, so that when said central portion becomes dry, such fuse device will release the controlling means before the liquid in the channel adjacent the side walls is evaporated.



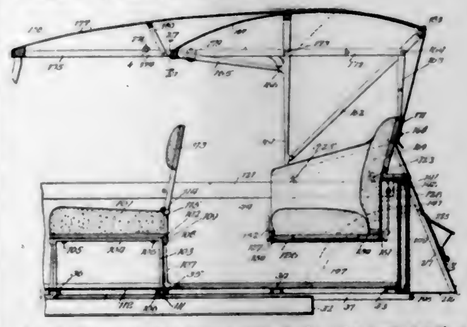
1,508,036. SOUND-REPRODUCING APPARATUS. ANTHONY VASSELLI, Newark, N. J., assignor, by mesne assignments, to General Phonograph Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,478. 1 Claim. (Cl. 274—35.)



An article of the class described, comprising a sound-box casing, a diaphragm, a stylus arm attached to the diaphragm, a rearward extension on said stylus arm having a perforation, a bolt passing through the perforation, said bolt being threaded into said casing, a second thread on the bolt, the second thread having a faster pitch than the first thread, a nut engaging the second thread, an elastic element between the head of the bolt and the extension, and an elastic element between the extension and the nut, whereby the elements will be simultaneously acted on, said casing provided with a slot, and a lug on the nut protruding into the slot for preventing rotation of the nut.

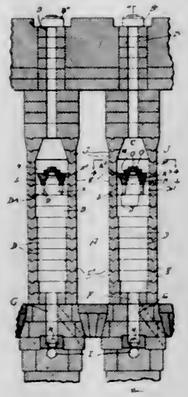
1,508,037. CLAMSHELL BUCKET. WILLIAM M. VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed Dec. 4, 1923. Serial No. 678,374. 14 Claims. (Cl. 37—184.)

1. A lever arm bucket comprising in combination a pair of coaxially mounted head sheaves, a sheave block pivoted on the lever arm, a sheave mounted in said block upon an axis which is canted with respect to the pivot of the sheave block and an operating cable reeved between said sheaves, said cable, said pivot for the sheave block and said axis for the sheave in said block all cooperating to maintain substantially straight leads for the cable regardless of the constantly varying relation between the head sheave and the block sheave during actuation of the bucket.



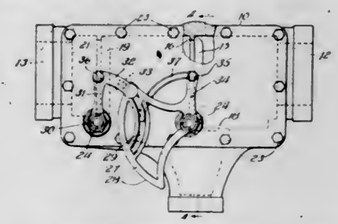
1,508,038. CLAMP. CHARLES VITEK, Maywood, Ill., assignor to Benjamin A. Tetzlaff, Green Bay, Wis. Filed July 5, 1921. Serial No. 482,621. 2 Claims. (Cl. 24—19.)

1. A hose clamp comprising a flexible band extending around one-half of the circumference of the hose, a bridge embracing the other half of the circumference of the hose, a nut held between a bent portion of said band and a screw extending thru said band and thru said nut and having its end in engagement with said bridge.



1,508,039. AUTOMOBILE BODY. FREDERICK A. WEGNER, Goshen, Ind. Filed Nov. 8, 1920. Serial No. 422,407. 6 Claims. (Cl. 296—65.)

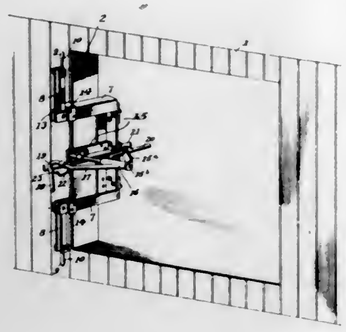
1. In a convertible automobile body, the combination of a vertically collapsible front seat with folding support beneath and having a back hinged to fold on top of said seat whereby the seat is dropped right side up



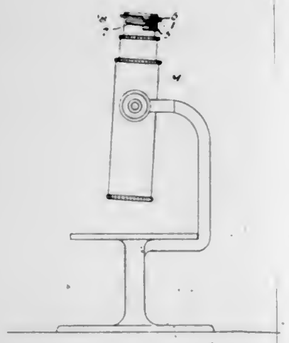
to the lowered position, a slidably adjustable rear seat, slide ways on the side walls for said slidable seat, said front seat being collapsible vertically from the usable position and said slidable rear seat being adjustable from its rear position to a front usable position, said front usable position of said rear seat being that occupied by said front seat when in usable position.

1,508,040. HORIZONTAL FLUE. LOUIS WILPUTTE, New Rochelle, N. Y., assignor of two-thirds to Alice A. Wilputte, New Rochelle, N. Y. Filed Sept. 25, 1923. Serial No. 664,694. 11 Claims. (Cl. 202—9.)

1. In a coke oven heating wall formed with vertical flues and a flue space or spaces connecting adjacent ones of said flues at their upper ends, the improvement which consists in a brickwork portion of said wall shaped to provide a port between each vertical flue and the space to which its upper end is connected which is substantially smaller in cross section than the flues itself and comprises portions adjacent the sides of the heating wall.



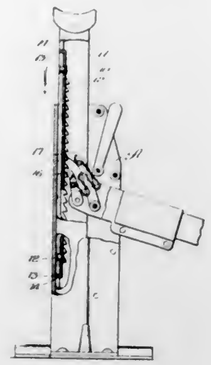
1,508,041. STRAINER AND FISH TRAP FOR WATER LINES. HUGO R. WINTON, Chicago, Ill., assignor of one-half to Charles T. Denker, Timmins, Ontario, Canada. Filed Aug. 21, 1922. Serial No. 583,085. 10 Claims. (Cl. 210—167.)



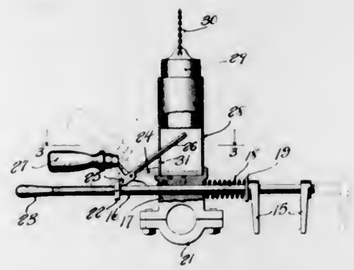
1. A water line connection having a main passage and a by-pass, a plurality of strainers arranged across the main passage to strain the water passing therethrough and adapted to swing in position across the by-pass, and means to insure that one strainer will always be across the main passage.

1,508,042. MAIL-BAG CATCHING AND DELIVERING APPARATUS. AUSTIN AMIOT, Stockton, Ohio. Filed Aug. 26, 1921. Serial No. 495,500. 2 Claims. (Cl. 258—14.)

1. In a device of the class described, a support, a frame hinged thereto, supporting arms pivoted to the upper and lower portions of said frame and adapted to support a bag therebetween, an auxiliary frame on the first mentioned frame intermediate the aforesaid arms, a rod supported between the free ends of said auxiliary frame, a catching and receiving arm pivoted on said rod and adapted to be disposed into a horizontal catching position, and means associated with said arm for engagement with a portion of the auxiliary frame for limiting the pivotal movement of said arm in one direction.



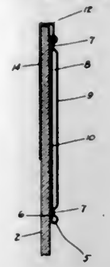
1,508,043. ATTACHMENT FOR OPTICAL INSTRUMENTS. FRANK LEE BARROWS, Moscow, Idaho. Filed June 17, 1920. Serial No. 389,658. 3 Claims. (Cl. 88—40.)



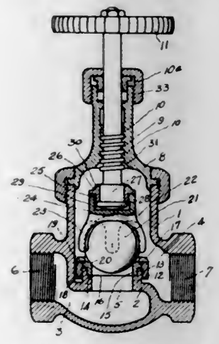
1. In a device of the character described, in combination with an optical instrument, an auxiliary lens correcting the refractive error of the person using the instrument, and a mount for said lens including an annular disk having an annular upstanding flange, a lower ring of felt carried on the disk and engaging the lower marginal edge of the auxiliary lens, an upper ring of felt engaging the upper edge of the auxiliary lens and carried thereby and a cap having a threaded engagement with the upstanding flange and compressing the upper ring of felt to retain the auxiliary lens in position.

1,508,044. JACK. JOHN W. BATE, Racine, Wis. Filed Jan. 25, 1922. Serial No. 531,700. 2 Claims. (Cl. 254—109.)

1. In a jack, a casing, a lifting member slidable therein, said member having a U-shaped cross-section, a rack secured within said member, and lifting mechanism including pawls operable on said rack, said rack comprising a strip of U-shaped cross-section having notched edges, said sections facing in the same direction, there being an appreciable space between the notched edges of the racks and the inner sides of the flanges of the outer section.



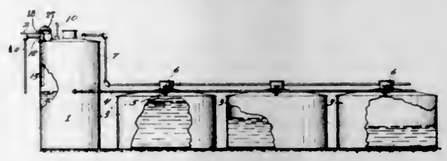
1,508,045. THERMOSTATIC CONTROL FOR VOLATILE FLUID PUMPS. EDGAR A. BIENENSTOK, Milwaukee, Wis., assignor to Milwaukee Tank Works, Milwaukee, Wis. Filed July 22, 1922. Serial No. 576,908. 9 Claims. (Cl. 8—8.)



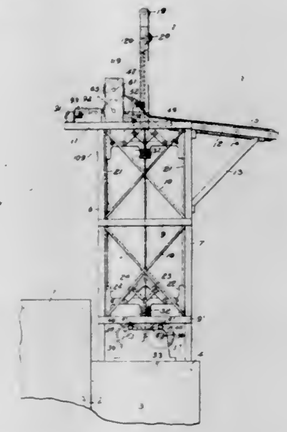
4. In a dry cleaning system the combination of a series of units for holding a volatile fluid, pipes connecting said units, a pump for circulating said fluid through said pipes, power delivery means for said pump, mechanism for controlling the delivery of power to said pump, and a series of spaced thermostatic devices positioned adjacent said units and pipes and controlling the operation of said mechanism.

1,508,046. MEANS FOR MOUNTING CERTIFICATES OR TAGS ON VEHICLES. BÖRRE H. BÖRRESON, St. Paul, Minn. Filed Nov. 28, 1921. Serial No. 518,353. 5 Claims. (Cl. 40—11.)

1. The combination, with a vehicle wind shield, of a certificate or license holder comprising a frame adapted to fit the surface of one side of the shield, and wire fingers on said frame for gripping the surface of the opposite side of the shield and having comparatively long bearings on said shield.

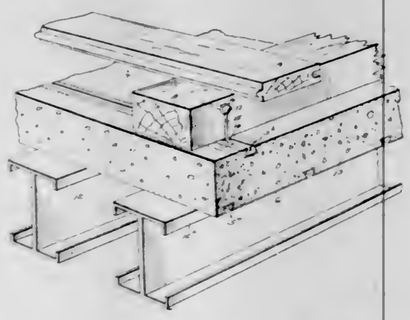


1,508,047. VALVE. THOMAS BOWLER, North Vancouver, British Columbia, Canada. Filed Apr. 14, 1924. Serial No. 706,367. 1 Claim. (Cl. 251—46.)



A valve comprising a valve chest, a valve seat therein, a ball valve co-operating with said seat, and a vertically movable valve spindle provided at its lower end with fingers T-shaped in cross section between which the said ball is seated extending below the ball axis, the part of said fingers below the axis being originally straight and then bent inwardly to hold the ball as in a claw with the rib of the T facing inwardly.

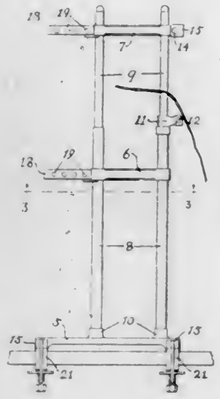
1,508,048. VAPOR CONSERVATION SYSTEM. CHARLES P. BUCK, Topeka, Kans. Filed Feb. 20, 1922. Serial No. 538,084. 2 Claims. (Cl. 220—85.)



1. A vapor conservation system, comprising oil-receiving and stock tanks, valve-controlled pipes connecting the tanks, one of the pipes being arranged to convey oil from the receiving tank at an intermediate point thereof to the stock tank, and the other to convey vapor from the stock tank to the receiving tank above the level of the oil therein, a vapor-withdrawing pipe communicating with the receiving tank near but above the level of the oil therein, and means actuated by an increase in the vacuous condition of the receiving tank, to partially or wholly close the said vapor-withdrawing pipe.

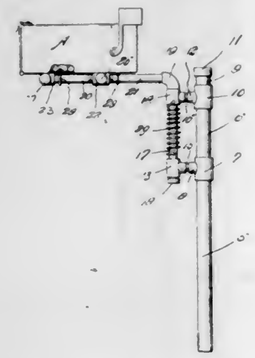
1,508,049. APPARATUS FOR DRAWING SHEET GLASS. THOMAS B. CAMPBELL, Jr., Pittsburgh, Pa. Filed Dec. 23, 1921. Serial No. 524,531. 14 Claims. (Cl. 49—17.)

6. A sheet-glass drawing apparatus comprising a framework, a plurality of vertically reciprocating drawing frames adapted to intermittently grip the sheet being drawn, means for moving the drawing frames upwardly at a uniform and constant speed, means for keeping at least one of said frames reciprocating upwardly at all times, and means for causing said frames to move downwardly at a greater speed than during their upward movement.



1,508,050. METAL LATH. HUGH C. CARROLL, McKeesport, Pa. Filed Dec. 2, 1922. Serial No. 604,531. 1 Claim. (Cl. 72—116.)

A metal lath made from a single piece of flat metal and comprising a plurality of parallel dove-tailed hollow ribs and outstanding flanges along the free edges of said ribs, laterally extending connecting portions lying in the plane of and integral with said flanges, said dove tail portions being spaced apart a distance materially greater than their own width.

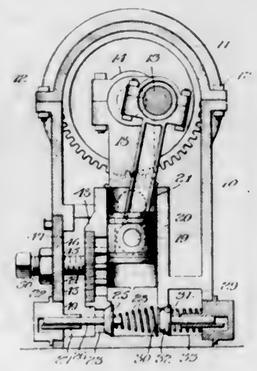


1,508,051. ADJUSTABLE COMBINATION GOLF BAG AND LUGGAGE CARRIER FOR AUTOMOBILES. WALTER J. CARROLL, Detroit, Mich. Filed Dec. 18, 1923. Serial No. 681,424. 2 Claims. (Cl. 224—29.)

1. In a luggage carrier, the combination with base plate having tubes secured thereto, of a U shaped frame having tubes or rods secured thereto and adapted to move longitudinally within the base plate tubes, means for locking the movable section in any desired position, supporting feet provided with suitable holes located on

the base plate and on the outer U shaped frame and clamps provided with an extension rod fitting in the holes provided in the supporting feet.

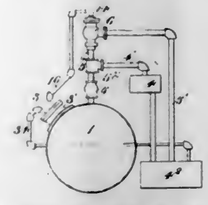
1,508,052. MAIL-BOX SUPPORT. WILLIAM R. HASTINGS, Leavenworth, Kan. Filed Nov. 13, 1923. Serial No. 674,526. 1 Claim. (Cl. 232—40.)



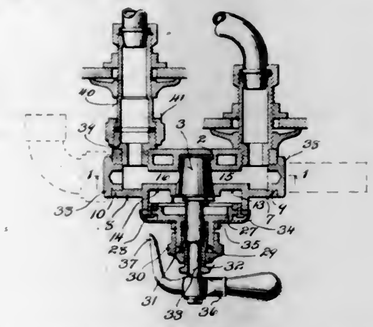
In a mail box support of the character described, a post comprising a relatively long lower pipe section, a relatively shorter intermediate pipe section, a still shorter upper pipe section, and a pair of spaced T-fittings connecting said sections in a vertically aligned end to end relation, a second pair of T-fittings, a nipple rigidly connecting each of said last named T-fittings with one of the first named pair of T-fittings, a bracket including horizontal and vertical arms, the vertical arms of the bracket being journalled in the second named pair of T-fittings, means to rigidly secure a mail box upon said horizontal arm, yieldable means associated with said vertical arm and one of said second named pair of T-fittings for normally yieldingly holding the horizontal arms in outwardly swung position relative to the post, said horizontal arm comprising a pair of sections joined in end to end relation by a four way fitting, a T-fitting upon the outer section of said horizontal arm, and horizontal laterally extending pipe sections secured in the lateral branches of the last named four way and T-fittings to form cross bars upon which the mail box rests.

1,508,053. CIGARETTE HOLDER AND CASE. WILLIAM M. HICKS, Cranford, N. J. Filed May 12, 1921. Serial No. 468,936. 7 Claims. (Cl. 131—10.)

6. In combination with a hollow cylindrical casing; a clutch element mounted for reciprocation therein, said element comprising a cylindrical body having frictional contact with the inner wall of the casing, a spring neck and an open head; means to limit the extent of movement of the element within the casing; and a cigarette holder comprising a stem having an outwardly extending collar and a receiver telescoping the stem, said stem making a binding frictional contact with the spring neck and the collar acting as a stop to limit extent of insertion of the stem into the head.



1,508,054. PUMP. ARTHUR C. HOPKINS, Niles, Mich. Filed June 23, 1923. Serial No. 647,295. 4 Claims. (Cl. 103—37.)

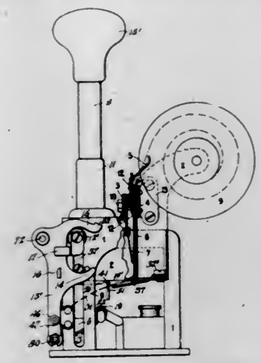


1. A pump having a cylinder, a piston reciprocable therein, inlet and outlet valves for said cylinder, a series of openings in the walls of said cylinder which are successively uncovered by said piston as it reciprocates and means for adjustably closing said openings.

1,508,055. FLUID-LEVEL REGULATOR. ELY C. HUTCHINSON, Oakland, Calif., assignor to Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed May 10, 1922. Serial No. 559,904. 5 Claims. (Cl. 103—41.)

1. In combination with a receptacle for receiving the supply of fluid, a source of fluid supply, a fluid conveying line leading therefrom, said line branching to connect through one branch with the receptacle and through another branch affording a return to said source of supply, a pump within said fluid conveying line, an unloader valve within the branch line returning to the source of supply and closing against the pump pressure, a check valve within said other branch line, a fluid pressure connection between the receptacle and one side of said unloader valve, a valve operated by the receptacle fluid pressure and controlling the admission of pressure into or the release of pressure from said connection, and a master valve operated by the level of the fluid in said receptacle for controlling the operation of said first valve.

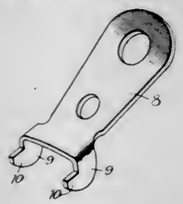
1,508,056. VALVE. CHARLES F. JANSEN, Milwaukee, Wis. Filed Mar. 26, 1924. Serial No. 701,965. 6 Claims. (Cl. 277—7.)



1. A mixing valve comprising a main casing having a hollow interior and having a pair of inlet openings and an outlet opening, tubular members carried within said casing and extending inwardly from said inlet openings, a central valve socket seat communicating with said tubular members, a valve seated within said socket and controlling communication of said tubular members with the interior of said casing, and means carried directly by said valve for controlling the total flow irrespective of the seating of said valve.

5. A mixing valve comprising a hollow casing having an outlet opening, a valve mechanism located within said casing, said casing having diametrically opposed pairs of inlet openings with the members of each pair arranged at right angles to each other, any of said inlet openings being adapted to receive supply pipe fittings, and plugs screwed into the unused inlet openings, whereby the valve may be used in any one of a plurality of positions.

1,508,057. DEVICE FOR SEVERING AND APPLYING STAMPS OR THE LIKE TO ENVELOPES OR OTHER SURFACES. FRANZ KASPAR, Prague, Czechoslovakia. Filed Aug. 20, 1923. Serial No. 658,421. 2 Claims. (Cl. 216—28.)

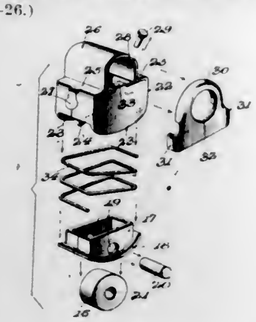


1. A device of the class described for severing and affixing postage stamps, labels and the like supplied in strip form comprising in combination with the casing of the device a feed brush consisting of separate resilient small rods placed side by side and having their ends bent and suitably ground off, a fixed holder for said brush, a movable plunger having a strip guiding passage formed therein and a resilient strip-retaining device, the brush

ends sliding in the said passage and on the return movement of the plunger engaging with the perforations of the strip and holding the latter thus unrolling the strip

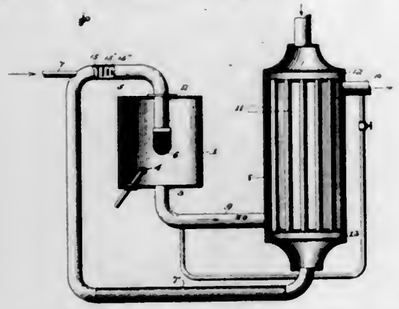
from its roll, the said strip being already held in the upper part of the passage by the pressure of the aforesaid resilient strip retaining device against the rear wall of the said passage.

1,508,058. KEY. JOSEPH KOMOROUS, Riverside, Ill., assignor to Parisian Novelty Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 19, 1922, Serial No. 569,546. Divided and this application filed Apr. 26, 1923. Serial No. 634,774. 4 Claims. (Cl. 70—9.)



1. A key for the purpose described, comprising a body portion having legs spaced apart with forwardly projecting portions extending lengthwise of the key and disposed in a plane offset below said body portion.

1,508,059. BRUSH. JOSEPH KOMOROUS, Riverside, Ill., assignor to Parisian Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,671. 3 Claims. (Cl. 15—193.)

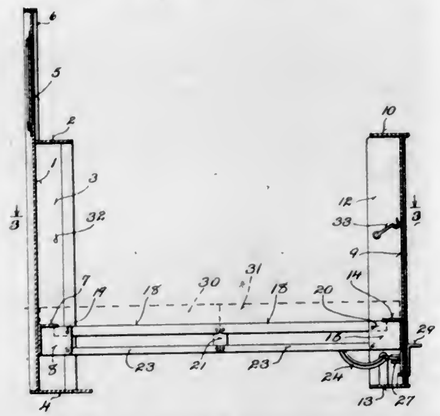


1. A brush comprising, in combination, a body portion of set plastic material having bristles embedded therein, a retaining band surrounding said body portion and provided at its upper end with an outwardly-extending peripheral flange, the body portion extending substantially flush with the upper edge of the band whereby the band is reinforced against flexure in the crimping of the cover, and a cover for said body extending over the top of said body and crimped into engagement with the flange of said band.

1,508,060. DISTRIBUTOR. ELMER J. LEE, Bangor, Pa. Filed Nov. 11, 1922. Serial No. 600,416. 2 Claims. (Cl. 200—26.)

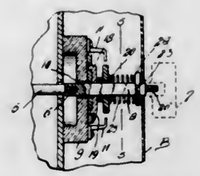
1. A rotor for timer shafts consisting of a rectangular support having its sides and ends formed by the bent portions of a single piece of material and open at its base, the meeting ends of said section of material at one side of the support being recessed and the other side of the support having an integral extension curved across the top of the support and forming with the upper edges of the ends of the support a shaft bearing, said extension having at its free end an angular tongue projecting into the recessed portion of the first mentioned side of the support, a contact roller, a rectangular flanged holder in which the contact roller is journaled and which is movable into the support through the lower open end of the latter, and a spring within the support engaging said roller holding to tension the latter and the roller.

1,508,061. PROCESS OF AND APPARATUS FOR THE MANUFACTURE OF NITROGEN OXIDE. GEORGE A. PERLEY, Durham, N. H. Filed Oct. 23, 1919. Serial No. 332,792. 3 Claims. (Cl. 23—1.)



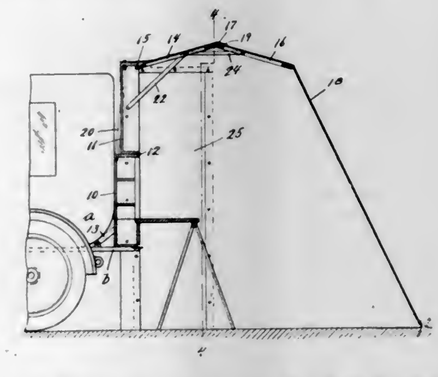
1. The process of making nitrogen oxide, which consists in preheating an oxidizing medium, including oxygen and substantially free ammonia, to a temperature in excess of 400° C., through heat interchange relations with the exit gases of a previous oxidation reaction, then admixing a fluid medium including ammonia with said oxidizing medium and passing the gases through a structure composed of a material which is not an energetic oxidizing catalyst of the mixture, then passing the mixture over an energetic catalytic agent at a sufficient speed to substantially prevent the oxidation of ammonia to elemental nitrogen.

1,508,062. METHOD OF PRODUCING DENTAL PLATES. MENDEL PIANKO, Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,957. 1 Claim. (Cl. 32—4.)



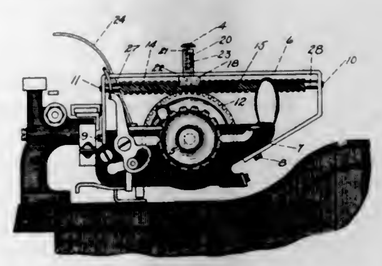
The herein described method of producing a dental plate which consists in taking an impression of the mouth, coating the impression, while wet, with a shellac solution, making a positive from the shellacked surface of the impression, applying a coating of graphite or other suitable metal to the second impression while wet from the negative pole of an electroplating apparatus, and setting up an electrical current through the apparatus to plate the impression with a desired metal.

1,508,063. CONVERTIBLE BED. CHARLES F. RADATZ, Kenosha, Wis. Filed June 21, 1923. Serial No. 646,791. 1 Claim. (Cl. 5—154.)



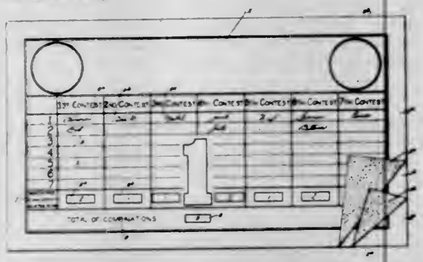
A foldable bed comprising a head piece and a foot piece each having inwardly projecting top, side and bottom portions adapted when the bed is folded to form a continuous top side and bottom portion of a dresser-like article of furniture, a body portion hingedly joined adjacent its ends to the head and foot pieces and composed of two half sections hinged together adjacent the center of said body portion, a lever hinged to the foot piece and adapted to contact with one of the half sections of said body portion, and a foot actuated projection extending through said foot piece and operatively connected to said lever.

1,508,064. TIME CONTROL SWITCH. LESTER W. RADMAN, Buckhannon, W. Va. Filed Feb. 21, 1923. Serial No. 620,328. 2 Claims. (Cl. 200—35.)



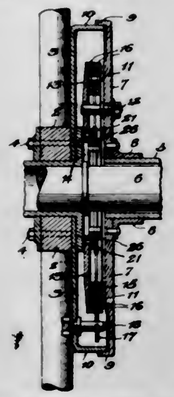
1. A time control switch for attachment to an alarm clock including a casing formed for receiving a portion of said clock, a base member removably mounted on the rear wall of the clock having an opening therein in line with the alarm spring winding shaft, a shaft section extending through the opening in the base member and removably connected with the spring winding shaft at one end and projecting through an opening in the casing at the other end for removably receiving a winding handle, a pair of contacts mounted on said base member at opposite sides of that said shaft section, a cam disc mounted on the base member having an opening receiving said shaft section, a cam member mounted for rotation with said shaft section and for cooperation with the cam of said cam disc, a contact member mounted for rotation with the shaft section having contact arms for engagement with the contacts on said base member for closing the circuit between said contacts, and resilient means mounted on the shaft section and engaging the contact member for normally forcing said contact member, and said cam member toward said base member for holding said contact member in position for cooperative circuit closing relation with the contacts on the base, and said cam member for cooperation with the cam disc.

1,508,065. AUTOMOBILE TOURIST TENT. WILLIAM T. RAMSDELL, Haverhill, Mass. Filed May 11, 1923. Serial No. 638,158. 9 Claims. (Cl. 190—1.)



1. In combination with a box, a lid therefor pivoted to the upper side thereof and arranged to be supported thereon in upright position, removable connections for retaining the lid in said positions, a tent spreader mounted at one end on said lid, means for holding said spreader in an angular position relative to the lid, and a tent arranged to be supported by said spreader.

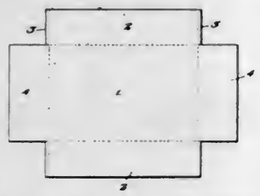
1,508,066. INDICATING DEVICE FOR TYPEWRITERS. JOHN J. REINHOLD, Marietta, Pa. Filed Mar. 10, 1923. Serial No. 624,160. 3 Claims. (Cl. 197—189.)



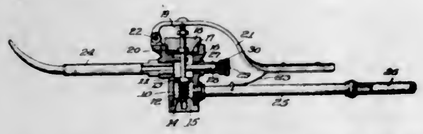
1. In a printing machine, the combination with a platen adapted to feed a sheet of paper to the printing elements, of a scale adapted to coact with the end of said papr and indicate the distance from said end to the point where the printing is produced, a gear adapted to rotate through movement of said platen, a threaded shaft adapted to rotate through rotating movement of said gear, a second scale, the garduations of which corresponds with the graduations of the first said scale, and a pointer adapted to move along said second scale through rotating movement of said threaded shaft, the movement of said pointer relative to said second scale being adapted to correspond with the movement of the end of said paper relative to the first said scale.

1,508,067. COMBINATION ENTRY FORM FOR GAMES OR CONTESTS. ERNESTO D. REYES, San Juan, P. R. Filed Dec. 8, 1922. Serial No. 605,566. 4 Claims. (Cl. 283—66.)

1. A combination entry form for contests or games, comprising a sheet provided with delineated contest spaces and means indicating the several contests to which said spaces are respectively devoted, each said space having provision for recording the names of a plurality of selections as possible winners in the contest represented by said space, smaller delineated spaces associated, one with each of said first spaces, each to receive a figure representing the number of the entries selected to win in the one of said first spaces associated therewith, said sheet also having a delineated space to receive a figure representing the number of possible combinations of winners in the various contests from the selections of winners recorded in all of said first spaces.



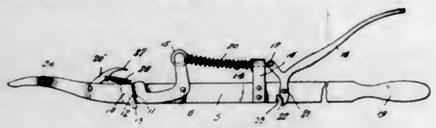
1,508,068. FRICTION BRAKE. WILLIAM W. ROACH, Philadelphia, Pa. Filed Nov. 1, 1922. Serial No. 598,278. 7 Claims. (Cl. 188—71.)



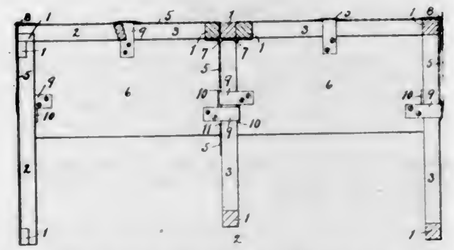
1. A friction brake for automobiles, comprising a fixed plate, a friction ring connected to rotate with the part to be braked, a non-rotary disk on the other side of said ring, said ring and disk being movable axially relatively to said plate, and means to draw said disk towards said plate to grip said ring between them, said means comprising a bolt operatively connected to said disk and passing within said ring and through said plate, a cam sleeve rotatable on said bolt, a conjugate cam sleeve secured to said plate, and means to turn said rotatable sleeve.

1,508,069. ASBESTOS CONTAINER AND METHOD OF MAKING THE SAME. THOMAS ROSE, Ambler, Pa. Filed Nov. 9, 1922. Serial No. 599,766. 3 Claims. (Cl. 229—3.5.)

1. A box having inherent rigidity in its wall structure, said box being made from a blank of asbestos material cut to form the bottom, sides and ends of the box body, the sides and ends of the blank being folded into contact at the corner portions of the box and said contacting portions, while in a plastic state, being welded together by a pressure sufficient to cause the material of the blank to coalesce into integral homogeneous welded unions.

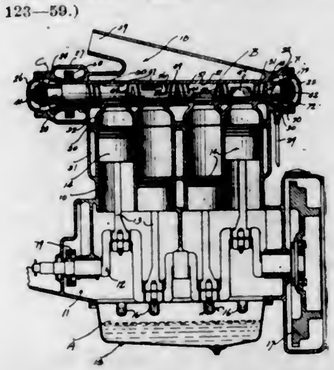


1,508,070. DENTAL SYRINGE. JOSEPH G. ROSEN, Chicago, Ill. Filed Oct. 19, 1923. Serial No. 669,489. 2 Claims. (Cl. 128—239.)



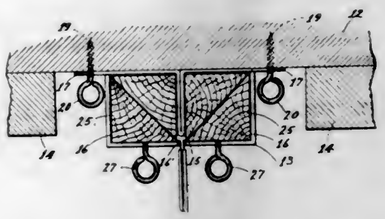
2. A syringe comprising a body having inner and outer chambers, a valve between said chambers, a spring normally holding said valve on its seat, a lever for lifting said valve, a pipe leading from one of said chambers and adapted to be connected to a source of water supply, a nozzle communicating with the other chamber, means for gradually feeding a solid chemical to said other chamber, a flexible diaphragm adjacent the end of said valve, and a plunger on the opposite side of said diaphragm for operating said valve.

1,508,071. WIREWORKING TOOL. FRANK R. SANDSTRUM, Dexter, Kans. Filed July 25, 1923. Serial No. 653,647. 1 Claim. (Cl. 140—123.6.)



An implement of the class described comprising a handle member, a pair of spaced parallel wire clamping members pivoted to the handle member at opposite sides of the latter, said handle member projecting forwardly beyond said clamping members and having rigid jaws upon opposite sides of its projecting portion to form shoulders cooperating with the forward ends of said clamping members to produce wire clamps at opposite sides of the handle, the projecting portion of the handle being bifurcated, and a pivotal wire clamping member mounted in the bifurcation of the handle, and a fixed jaw member mounted in the bifurcation of the handle member forwardly of said pivotal wire clamping member and cooperating with the latter to provide a forward wire clamp, said pair of parallel clamping members being of bell crank form in elevation and connected at their rear ends by means of a circular connection, a guide fixed upon the handle member rearwardly of said pair of clamping members, a link slidable through said guide and having its forward end pivotally engaged with the circular connecting member, a spring encircling said link between the guide and a pair of clamping members for normally maintaining the latter in clamping position, and an angular lever pivoted to the handle member and to the link rearwardly of the guide and adapted to be grasped by one hand of the operator together with the adjacent portion of the handle member for releasing said pair of clamping members against the action of said spring.

1,508,072. FOLDING BOOTH. ALBERT M. SCHAPPA and ROBERT GOWDY, Westfield, Mass., assignors to The Planet Company, Westfield, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1920. Serial No. 414,737. 1 Claim. (Cl. 20—3.)



A folding booth comprising an intermediate frame, a pair of back frames hinged thereto and adapted to fold against opposite faces of said intermediate frame when collapsed, end frames hinged respectively to said back frames and adapted to fold against the outer faces of the latter upon being collapsed, each of said frames consisting in part of vertical and horizontal rails, panels secured to portions of said frames, the panel on said intermediate frame being slotted at a predetermined point therein, removable shelves provided with slots in the end edges thereof, said slots being arranged out of longitudinal alignment with respect to one another, and hook members secured to said shelves and extending beyond the end and rear edges thereof adapted for engagement with certain of the horizontal rails of said frames to lock the latter in set-up and extended position, the end hooks being arranged in offset relationship but in longitudinal alignment with the opposite end slots, and the inner opposed end hooks of said shelves being adapted for disposition through the slot in the panel to permit said hooks when positioned on the intermediate frame to be received in the slots of the contiguous shelves.

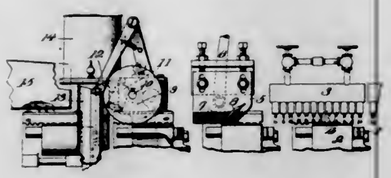
1,508,073. LUBRICATING SYSTEM FOR ROTARY-VALVE MOTORS. HERBERT SCHEEL, St. Louis, Mo. Filed Oct. 8, 1921. Serial No. 506,446. 8 Claims. (Cl. 123—59.)

1. In an internal combustion engine having cylinders and inlet and exhaust passageways, a rotary valve having intake and exhaust ports therein and a passageway extending longitudinally therethrough, adjustable anti-friction means supporting said rotary valve at the ends thereof within the engine, means providing an enclosed compartment at each end of said rotary valve within which said anti-friction means are disposed, said compartment being in communication with said passageway of said valve, and means for directing lubricant through said valve passageway and said compartments over said anti-friction means.

1,508,074. WINDOW SCREEN. MARGARET SMITH, Owen Sound, Ontario, Canada. Filed Sept. 5, 1922. Serial No. 586,297. 5 Claims. (Cl. 156—38.)

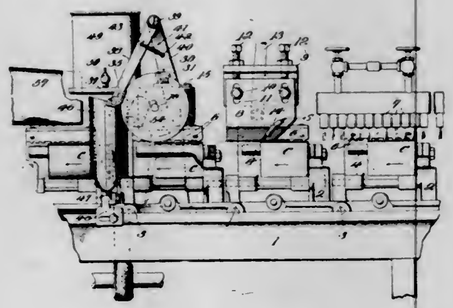
2. An adjustable sectional screen comprising supporting and guiding members adapted for detachable mounting on window casing; said supporting and guiding members being formed with parallel pockets of rectangular form in end elevation and having a common opening at their inner connecting corners; screen sections arranged in upper and lower pairs having their meeting vertical edges overlapped whereby said sections may slide upon one another; said sections having outer vertical frame members arranged for sliding engagement in said pockets of the supporting and guiding members; said upper and lower pairs of screen sections being adjustable vertically of the window and independently of one another; and means for securing said pairs of screen sections in adjusted position within said supporting and guiding members.

1,508,075. COMBINATION FLATIRON SUPPORT AND HOT-WATER BOTTLE. ANTON R. STEFANIK, Milwaukee, Wis. Filed Mar. 18, 1921. Serial No. 453,246. 1 Claim. (Cl. 68—27.)



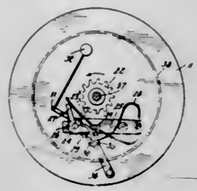
A flat iron support and hot water bottle comprising a circular member having spaced upper and lower walls, a threaded filling sleeve opening into said member, a closure cap internally threaded and adapted to be screwed upon said sleeve, said cap having a vent adapted to be uncovered when said cap is partially unscrewed from said sleeve, the upper wall having a plurality of ribs thereon.

1,508,076. PROCESS OF SOLDERING METAL PARTS. WILLIAM J. TAYLOR, Jr., Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed June 30, 1922. Serial No. 572,061. 1 Claim. (Cl. 113—112.)



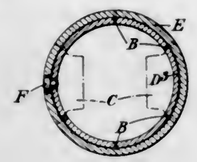
The process of soldering the side seam of a metal can body comprising moving said side seam of the can body into contact with means for applying molten solder thereto, causing a heated member having capillary attraction for solder to contact with the seam while the solder is still molten, and rotating said heated member in a di-

rection opposed to the direction of travel of said can body, whereby said rotating member is given a sliding contact with the metal parts for aiding in the distribu-



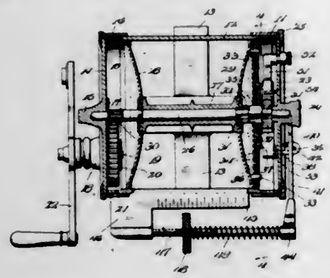
tion of the solder, bonding the metal parts to the seams, and recovering the surplus solder taken up by said rotating member.

1,508,077. SOLDERING MACHINE. WILLIAM J. TAYLOR, Jr., Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed June 30, 1922. Serial No. 572,062. 14 Claims. (Cl. 113—97.)



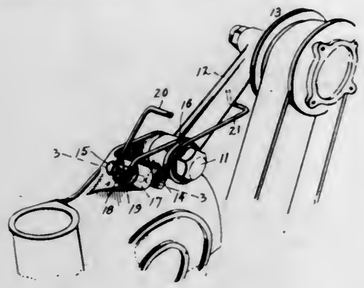
1. A soldering machine including in combination, means for moving the can bodies endwise through the machine, means for applying solder to the side seam, an auxiliary disk disposed so as to make contact with the side seam, means for rotating said disk at the point of contact in a direction opposed to the direction of travel of the can body, whereby said disk distributes the solder and takes up by adhesion the surplus solder.

1,508,078. FISHING REEL. JOSEPH TIMKO, New York, N. Y. Filed Nov. 24, 1922. Serial No. 602,981. 4 Claims. (Cl. 242—84.6.)



1. A fishing reel, comprising a rotating member for the line, a relatively fixed element rotatably supporting said member, a ratchet wheel attached to said rotating member, a click co-operating with said wheel mounted on said fixed element, an audible signal operated by said click, and means capable of rendering said audible signal inoperative without disturbing the operative position of said click relative to said ratchet wheel.

1,508,079. PISTON. ARCHIBALD HENRY MONTGOMERY JOHN WARD, Mereworth, near Maidstone, England. Filed Mar. 31, 1924. Serial No. 703,222. 6 Claims. (Cl. 74—108.)



1. The combination with an engine piston of a split bearing ring thereon which has a clearance from the piston on the nonpressure faces only of the piston.

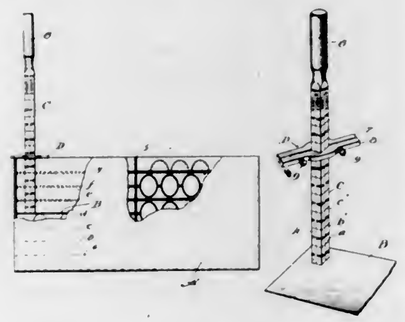
1,508,080. FISHING REEL. HURON D. WISE, Huntley, Minn. Filed Aug. 16, 1923. Serial No. 657,794. 2 Claims. (Cl. 242—84.7.)

1. A fishing reel including a frame, a spindle journaled thereon, means for rotating the spindle, a spool journaled upon the spindle, a clutch forming a driving connection between the spindle and the spool whereby the spool may turn independently of the spindle, a lever mounted upon the frame to coact with the clutch for tightening the clutch, a spring pressing the lever against the clutch, and means for adjustably tensioning said spring.

1,508,081. FAN-BELT TIGHTENER. TAT H. BEAN, Amarillo, Tex. Filed Nov. 17, 1923. Serial No. 675,303. 2 Claims. (Cl. 267—1.)

1. The combination with the swinging fan pulley arm of a Ford engine and the arm adjusting screw thereof of a spring secured in place by said screw and having means to engage said arm, the spring having a stop member to limit the movement of said arm in the direction which the spring tends to move it.

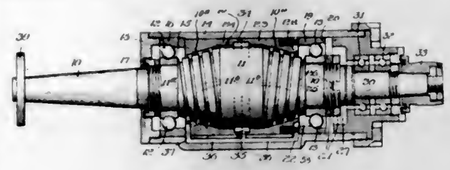
1,508,082. GAME RACK. LOUIS BOEFFLER, Oakland, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Dec. 8, 1923. Serial No. 679,352. 7 Claims. (Cl. 46—55.)



1. A game rack comprising a sheet of fibrous material folded into prismatic form, and means for holding the sheet in folded position.

1,508,083. MANUFACTURE OF STEEL. FRANK E. CLARK, New York, N. Y. Filed Dec. 16, 1920. Serial No. 431,294. 4 Claims. (Cl. 75—27.)

1. In the making of steel the process which comprises holding it molten on a basic hearth under a highly siliceous deoxidizing slag and replacing said deoxidizing slag by a slag lower in silica.

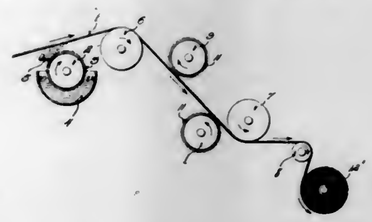


1,508,084. EGG GAUGE. OLIVER D. COLLIS, Clinton, Iowa, assignor to The Collis Company, Clinton, Iowa, a Corporation of Iowa. Filed Mar. 29, 1922. Serial No. 547,624. 3 Claims. (Cl. 33—143.)

1. A gauge for determining the number of eggs contained in a case, said eggs being arranged in layers, alternate ones of which have each the same number of eggs therein, which number differs from the number in the intermediate layers, said gauge comprising a post having means at its lower end adapted to rest upon the topmost layer of eggs contained within the case, and a cross head extending laterally from the post and adjustable thereupon for resting upon the upper edge of the case, there being spaced graduations on the post adjacent one of which the cross head will lie when rested upon the case edge, the spacing and marking of the graduations being such as to indicate both the number of eggs contained in the topmost layer during any stage of the packing operation, and also the total number of eggs contained in all of the layers below the gauge, substantially as described.

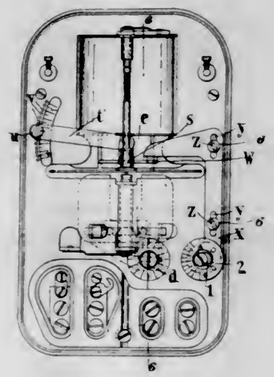
1,508,085. SPEED SHAFT. SIDNEY R. COOPER, Chicago, Ill., assignor to U. S. Ball Bearing Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1921. Serial No. 489,938. 7 Claims. (Cl. 64—47.)

1. In combination, a shaft having an enlarged center, a radial bearing on each side of and independent of said enlarged center, a housing closely surrounding said center whereby an oil film may be maintained between the



center and housing to steady the shaft, and spiral grooves on said center for forcing oil into the space between the center and housing.

1,508,086. ROTARY FAN. RALPH F. CRAWFORD, Salina, Kans. Filed July 2, 1923. Serial No. 649,072. 4 Claims. (Cl. 170—159.)

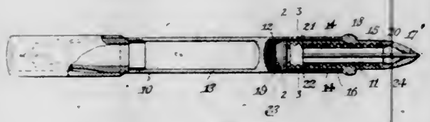


1. In a rotary fan, radial blades having each a forward portion having an angular relation to the axial line of the fan, and a rear portion including the balance of the blade and approximately equal in extent to said forward portion and having the major part thereof disposed in an arc subtending an angle equal to that subtended by said forward portion and said axial line.

1,508,087. PROCESS FOR TREATING PAPER. DAVID B. DAVIES, Green Bay, Wis. Filed Nov. 22, 1923. Serial No. 676,322. 5 Claims. (Cl. 92—68.)

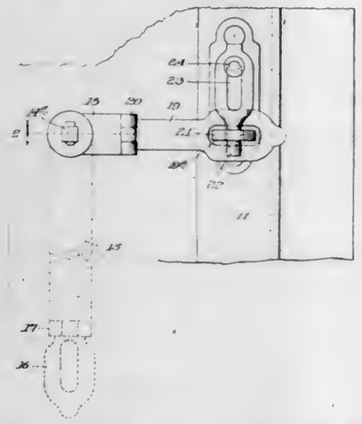
1. The process of teaseling paper which comprises supplying the paper with a predetermined amount of moistener, and producing a fuzz upon the paper after it has been moistened by striking a large number of spaced points along the surface of the paper.

1,508,088. ELECTRICITY METER. SEBASTIAN ZIANI DE FERRANTI and GEORGE WALL, Hollinwood, England, assignors to Ferranti, Limited, Hollinwood, England. Filed Jan. 21, 1921. Serial No. 439,008. 5 Claims. (Cl. 171—264.)



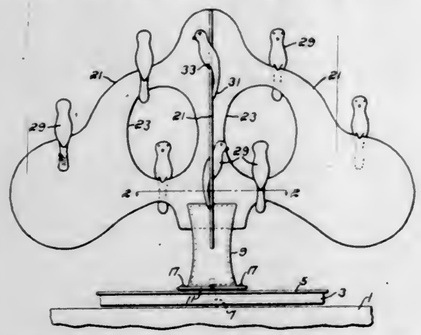
4. Means for adjusting the full load setting of an electrical instrument including a movable electro-magnet mounted in proximity to a rotatable conducting member, and means for rocking said electro-magnet about a fixed axis in a direction substantially at right angles to the plane of the conducting member.

1,508,089. PREPARATION OF PLATES FOR PRINTING BY GREASY INK. MARIANO DE SPERATI, Turin, Italy. Filed Nov. 2, 1922. Serial No. 598,676. 12 Claims. (Cl. 95—5.4.)



1. A method of producing plates for printing with greasy ink, consisting in exposing, developing and fixing a gelatino-silver haloid sensitized layer to obtain an image thereon, sensitizing said layer by a bath of an alkali bichromate, exposing the layer to light from the back to render insoluble the bichromated gelatin in the zones acted on by the light during such exposure, washing said layer and treating it with a substance adapted to convert the silver contained in said image into a compound having a light colour.

1,508,090. WRITING INSTRUMENTALITY. ALBERT L. DETRICK, Jersey City, N. J. Filed Nov. 4, 1922. Serial No. 599,096. 2 Claims. (Cl. 120—18.)



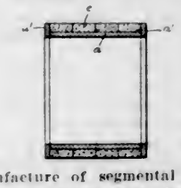
1. A writing instrumentality comprising a pen-holder having a hollow end, a pencil having a head at one end which is insertable into said hollow end, means embodied by said hollow end and said head for holding said head against turning, spaced guides carried by said head, a lead pusher movable between said guides, a barrel capable of being turnably carried by said hollow end, and means between the barrel and the lead pusher for effecting the movement of said lead pusher.

1,508,091. DOOR FASTENING. HARRY F. DIESEL, Chicago, Ill., assignor, by mesne assignments, to Equipment Devices Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 31, 1923. Serial No. 683,664. 3 Claims. (Cl. 292—281.)

1. In combination, a door, a pin journalled therein, a bar secured to each end of said pin, said bars being set at different angular positions with respect to the axis of said pin, staples secured to the jamb of the door, hasps carried by said bars whereby one or the other of said hasps may selectively engage a staple while the other hasp is held out of engagement with its staple, and means for securing said hasps on said staples.

1,508,092. GAME. MARION A. DOWNES, West Roxbury, Mass. Filed Mar. 9, 1923. Serial No. 623,963. 10 Claims. (Cl. 124—16.)

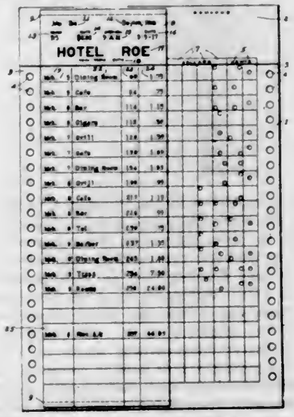
1. The combination with a phonograph turntable, of a device to be rotated, said device having one or more vanes for causing atmospheric resistance to rotation thereof, and a roller support for said device for causing rotation of said turntable or of a record placed on said turntable to be transmited to said device and permiting relative rotation between said device and said turntable or record.



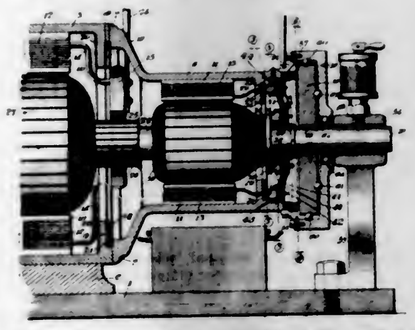
1,508,093. GRAPHOPHONE MOTOR. OSCAR P. ERHARDT, West Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 15, 1918. Serial No. 222,648. 9 Claims. (Cl. 74—26.)

1. In combination, a phonograph turntable and a motor for driving the same and means for supporting the motor

with the pulley thereof in contact with the upper surface of the turntable, including a substantially U-shaped supporting base having standards rising from the legs thereof, and a motor mounted on said standards.

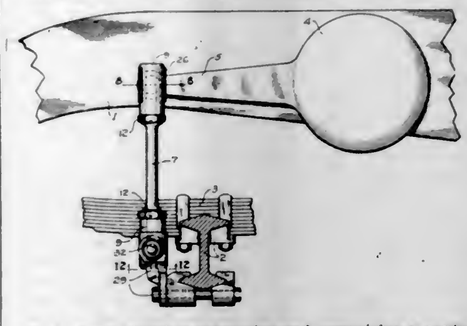


1,508,094. PRODUCTION OF FRICTION DISKS, WASHERS, BRAKE LININGS, AND THE LIKE. ALEXANDER MILLER FENTON and THOMAS HENRY CROWTHER, Cleckheaton, England, assignors to Scandinavia Belting, Limited, London, England. Original application filed Dec. 9, 1921, Serial No. 521,243. Divided and this application filed May 9, 1923. Serial No. 637,888. 2 Claims. (Cl. 91—68.)



1. The manufacture of segmental linings for use as friction surfaces in brake-shoes, brake-straps and the like, by forming, upon a bobbin or drum furnished with co-axial retaining plates, a winding of fibrous material composed of yarn, impregnated with a suitable binding agent, drying and hardening the wound mass, cutting the same into rings of the required width and the latter into segments of the required length.

1,508,095. COMBINED RECORD SHEET AND RECEIPT. FREDERICK LINCOLN FULLER, Bridgeport, Conn., assignor to The National Cash Register Company, Dayton, Ohio. Filed May 5, 1919. Serial No. 294,841. 14 Claims. (Cl. 282—27.)

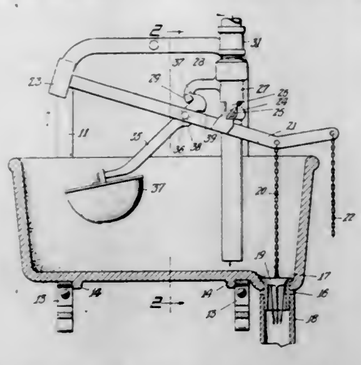


1. A combined record sheet and receipt comprising a member capable of being perforated, aligning means, a portion of said member being spaced with regard to said aligning means whereby it is capable of being perforated in definite parts of any desired space whereby the identity of the perforations may be determined, another portion thereon for the reception of itemized transactions in writing, a receipt form and means detachably connecting the same to said sheet.

1,508,096. ELECTRIC MOTOR GENERATOR. WILLIAM ROBERT GARNER, Erie, Pa. Filed Nov. 26, 1919. Serial No. 340,787. 13 Claims. (Cl. 173—36.)

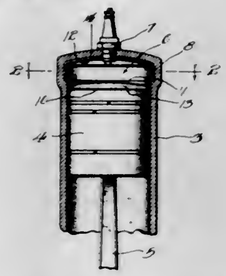
3. The combination, of a stationary shell, with a peripherally flanged main wheel, with means by which it is secured to the shell, and a rotating armature shaft disposed longitudinally of the shell, with an auxiliary wheel keyed thereon, between the end of the shell and the main wheel, with suitably disposed anti-friction means for sustaining end and peripheral thrusts.

1,508,097. SHOCK-ABSORBER CONNECTING ROD. ROBERT H. HASSLER, Indianapolis, Ind. Filed Oct. 16, 1922. Serial No. 594,921. 2 Claims. (Cl. 267—9.)



1. A shock absorber connecting rod comprising a center rod having threaded end portions engaging threaded thimble members, said thimble members forming housings for ball joints of which the ball members are adapted to be secured to a vehicle frame and axle respectively, and means for locking said thimbles in their respective operative positions.

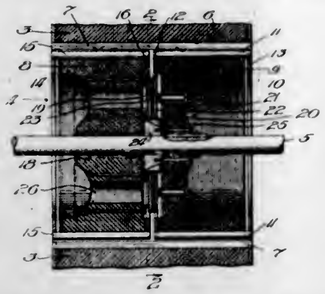
1,508,098. FLUSHING CISTERN. FERDINAND HASTRICH, Camperdown, near Sydney, New South Wales, Australia. Filed Oct. 22, 1923. Serial No. 670,147. 2 Claims. (Cl. 4—41.)



1. In a flushing cistern, a service valve, a flush release valve, a pull lever, a cam-shaped lug carried by said lever and pivotally mounted on and adapted to operate said service valve, an operating member carried by one end of said lever, means connecting said end of the lever with the flush release valve, a counterweight carried by the

opposite end of said lever, a trip lever pivoted directly to said pull lever, a stationary lug, a latch carried by one end of the trip lever engageable with the stationary lug to maintain the second mentioned end of the pull lever in elevated position, and a float carried by the opposite

end of the trip lever adapted, when the water in the cistern attains a predetermined level, to swing said trip lever relative to the pull lever whereby to disengage the latch from the lug and permit the second mentioned end of the pull lever to descend.

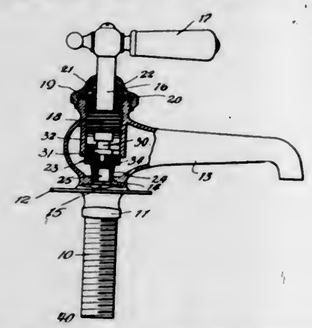


1,508,099. INTERNAL-COMBUSTION ENGINE AND THE LIKE. JOHN B. HAWLEY, Jr., Colorado Springs, Colo. Filed Feb. 28, 1923. Serial No. 621,737. 7 Claims. (Cl. 123—191.)

1. The combination with the piston head and the walls and roof of the combustion chamber of an internal combustion engine, of a backing of plaster of Paris or the like substantially one-fourth inch thick on said surfaces, a coating of brass or the like substantially ten thousandths of an inch thick on said plaster of Paris backing, and a coating of silver or the like on the exposed surfaces of said brass or the like, whereby there is established a relatively thin covering of brass or the like for each of said surfaces attached thereto over substantially all of said surfaces and yieldable with respect to said surfaces with changes of temperature, and whereby said silver coating serves effectively to prevent adhesion of carbon to said surfaces, substantially as described.

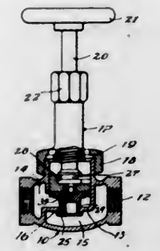
1,508,100. INDUCTION MOTOR AND THE LIKE. JOHN B. HAWLEY, Jr., Colorado Springs, Colo. Filed Mar. 14, 1923. Serial No. 624,941. 4 Claims. (Cl. 172—120.)

2. In an induction motor, the combination with a stator adapted to generate a rotating magnetic field, of a shaft extending longitudinally therethrough, two independent squirrel cage rotor sections mounted on the shaft and within the stator and subject to the magnetic influence of the stator, a rigid driving connection from one of said rotor sections to the shaft, and a non-rigid driving connection between the other rotor section and the shaft permitting said rotor section to turn with



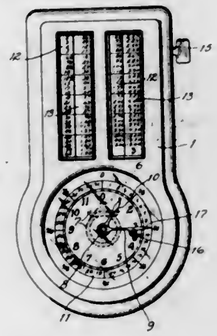
respect to the shaft when subjected to more than normal full load torque and preventing such turning when said rotor section is not subjected to more than normal full load torque, substantially as described.

1,508,101. METHOD OF SINTERING FINE ORES AND THE LIKE. ANDERS HOLMBERG, Stockholm, Sweden, assignor to Allmanna Ingeniorsbyran H. G. Torulf, Stockholm, Sweden. Filed Jan. 22, 1923. Serial No. 614,292. 1 Claim. (Cl. 75—17.)



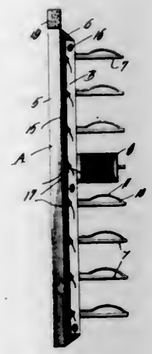
Method of sintering fine ores in sintering pans, consisting in charging the sintering pan with layers of ore containing different percentages of fuel in such manner that the fuel gradually decreases from the top to the bottom, igniting the charge at the upper surface and combusting the fuel by a downwardly induced current of air.

1,508,102. VALVE AND THE LIKE. EDWARD E. HOLT, Chicago, Ill., assignor to Holt Auto Devices Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,424. 7 Claims. (Cl. 251—27.)



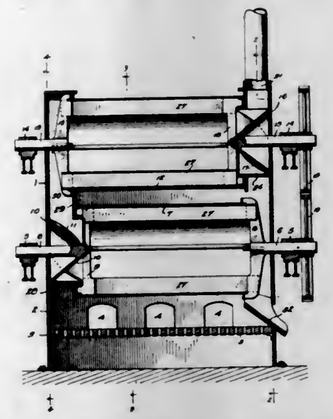
1. A faucet comprising in combination a vertical water connection, a chamber above the same, a horizontally extending spout in connection with said chamber, a horizontal partition between the vertical connection and the chamber, a central circular port in said partition, said port having a valve seat tapering from the chamber to the water connection, a circular guide depending downwards within the chamber above the position of said port and terminating substantially above the position of the partition to permit a free flow of water to the spout, a stem extending upwardly from the chamber, an operating handle thereon, said stem being screw threaded with respect to the upper portion of the chamber whereby rotation of the stem raises or lowers it, and a valve plug in conjunction with the lower end of said stem and operable thereby towards and from the valve seat aforesaid, said plug including an upper cylindrical portion working within the circular guide and guided thereby, a swivel connection between the upper portion of the plug and the stem, and a circular tapered flange on the lower end of the plug adapted to wedge into and seal against the tapered valve seat aforesaid when the stem is forced downwards, substantially as described.

1,508,103. VALVE AND THE LIKE. EDWARD E. HOLT, Chicago, Ill., assignor to Holt Auto Devices Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1922. Serial No. 575,425. 7 Claims. (Cl. 251—159.)



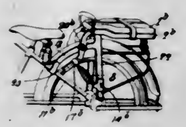
1. A valve including in combination a partition having a circular tapered port, a stem in alignment with said port, a circular valve plug, and a circular guide partition surrounding the stem and plug and of size to guide the plug in its movements towards and from the port, the plug including in combination a metal base block having in its upper face a profiled groove for the swivel and removable connection therewith of the lower end of the stem, and also being provided with a central through perforation, and a flange element of Monel metal having a central neck extending through the perforation of the base block and riveted thereinto, and having a circular tapering flange to seat into the port in wedging fashion, substantially as described.

1,508,104. REMNANT-INDICATING POINTER FOR MEASURING MACHINES. GREENE CARLTON HOSCH, St. Louis, Mo., assignor to The Measuregraph Company, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 30, 1922. Serial No. 548,244. 2 Claims. (Cl. 33—133.)



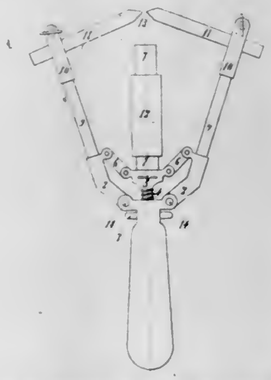
1. In a machine for measuring the length of remnants, or of fabric pulled from a roll and having a measuring roller, and a marker for the measured fabric located beyond said roller in the direction of the pull of the fabric, the combination of a length indicating scale, a pointer movable over said scale for indicating the length of a piece of fabric drawn from a roll, and an auxiliary pointer fast with said pointer and having its indicating point located at a distance from the indicating point of said pointer to represent a plus measurement to the amount indicated by said pointer corresponding to the distance between the axis of said roller and said marker.

1,508,105. THREAD HOLDER. ANNA M. KAMLA, Glasgow, Mont. Filed July 31, 1923. Serial No. 654,944. 5 Claims. (Cl. 242—139.)



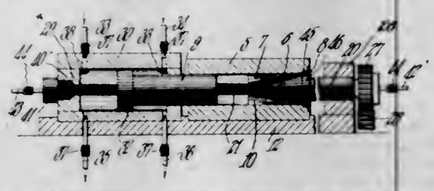
1. A spool holder comprising an elongated rectangular shaped base plate, a pair of longitudinally extending rows of outstanding spindles carried by one face of the base plate for receiving spools of thread, and thread cutters carried by the longitudinal edges of the base plate adjacent to each spindle.

1,508,106. DRIER. CLOYD E. LEECH, FRANK O. SEIDELL, and JOSEPH H. BENSON, Lima, Ohio. Filed June 5, 1922. Serial No. 565,800. 7 Claims. (Cl. 34—5.)



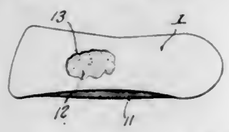
4. In a device of the character described, a casing, a pair of revolving drums mounted in said casing, an inlet compartment adjacent one end of one of the drums, a receiving compartment arranged between the other end of said first named drum and the inlet end of the other of said drums, cones arranged in said inlet compartment and said receiving compartment to deliver material to said drums, means for heating said drums, a stack communicating with said inlet compartment, and means for delivering material to said inlet compartment.

1,508,107. DEVICE FOR TANDEM SEATS FOR MOTOR CYCLES. JENS LILLESØE, Holte, Denmark. Filed Sept. 3, 1921. Serial No. 498,524. 5 Claims. (Cl. 208—24.)



1. In passenger seats for motor-cycles, a bottom frame adapted to be connected to a motor-cycle, a top frame provided with double armed levers pivotally connected to said bottom frame, a spring arranged between one of said levers and the bottom frame, means for adjustably connecting one end of said spring to one arm of the lever, and adjustable means for connecting the other end of said spring to the bottom frame.

1,508,108. SOLDERING OR WELDING TOOL. LAMBERTO LOMBARDI, Rome, Italy. Filed Apr. 21, 1923. Serial No. 633,813. 3 Claims. (Cl. 219—8.)



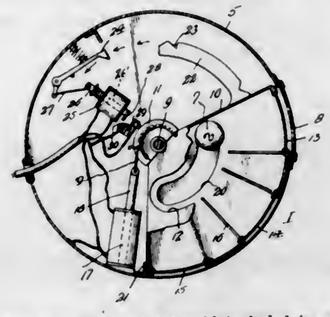
1. A tool for welding or soldering comprising a handle adapted to be gripped by the operator, arms pivotally connected to the handle and provided at their ends with clamps, electrodes secured in said clamps and having their points arranged in close proximity to each other, an electro-magnet arranged between said arms and movable axially toward and away from the points of the electrodes, and a single means for simultaneously adjusting the points of the electrodes toward and away from each other and for moving the electro-magnet toward and away from said points.

1,508,109. MIXING MACHINE. EARLE C. LOVEJOY, Springfield, Mass. Filed Oct. 2, 1922. Serial No. 591,899. 13 Claims. (Cl. 18—2.)

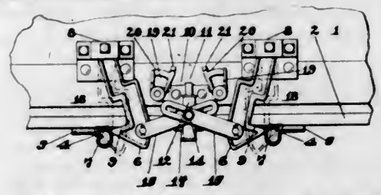
1. In a machine for operating upon viscous material, a receptacle for the material to be operated upon, provided with an outlet port for said material, a driven roll within said receptacle for acting upon the material therein said roll providing a tapering mixing passage for said material, and means for applying pressure to said material while being acted upon by said roll, said outlet port being arranged at one end of said roll and in alinement with the direction of the forces derived from said pressure applying means that the material will be discharged through said port immediately after being acted upon by said roll.

1,508,110. ARCH SUPPORTER. ABRAHAM MAYER, Milwaukee, Wis. Filed Mar. 23, 1923. Serial No. 627,031. 1 Claim. (Cl. 18—48.)

The method of making waterproof, resilient arch supports comprising thoroughly mixing ground cork with rubber cement into a free plastic mass, roughly molding this freely plastic mass to the approximate contour of an arch support, allowing the roughly moulded mass to nearly set, moulding the nearly set mass under pressure to the exact contour of the arch support, and allowing complete setting to occur while the material is in the exact contour.



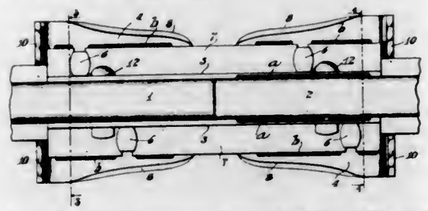
1,508,111. ARTIFICIAL BAIT. HENRY MEYER, Clinton, Ind. Filed Jan. 29, 1923. Serial No. 615,605. 4 Claims. (Cl. 43—39.)



1. A weedless fish bait comprising a tubular collapsible body, open from end to end, a rigid bushing extending through said opening and forming a chamber within said body between the opposed walls of said body and bushing, and a hook inserted through said bushing and prevented against longitudinal movement therein, the prongs of said hook extended outwardly from the center and reversely bent to lie closely adjacent the exterior of said body below its greatest diameter.

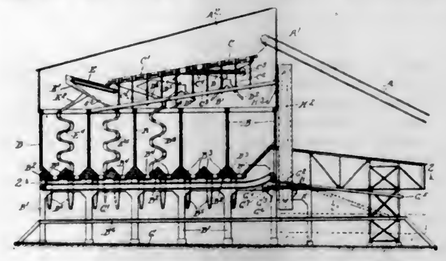
1,508,112. MOTION-SIGNAL AND REAR-VIEW LIGHT FOR MOTOR VEHICLES. LEANDER MICHAELSON, Dollar Bay, Mich. Filed Oct. 11, 1923. Serial No. 667,951. 1 Claim. (Cl. 177—327.)

In a motion and rear view signal for motor vehicles, a casing, a segmental hollow signal element pivotally mounted for vertical swinging movement within the casing, a solenoid mounted within the casing and operatively connected to said signal element for raising the latter, latch means normally operative to arrest upward swinging movement of the signal element to an intermediate motion indicating position, a second solenoid within the casing operatively connected to said latch means for releasing the latter to allow the signalling element to swing to its extreme upper position, means to cause illumination in the rear of the vehicle upon movement of said signal element to its uppermost position, means operated by the second named solenoid upon energizing the same for completing the circuit to said first named solenoid, said first named solenoid being included in a circuit embodying a normally opened switch adapted to be closed upon movement of the gear shift lever of a motor vehicle to any of its forward speed positions, the circuit of said first named solenoid further including a normally closed switch adapted to be opened upon operation of the brake applying pedals of the motor vehicle, said second named solenoid included in a circuit including a normally opened switch which is adapted to be closed upon movement of the gear shift lever to reverse gear position.

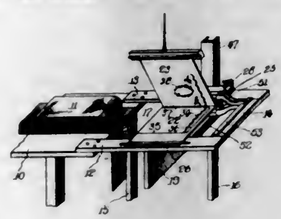


1,508,113. DOOR-OPERATING MECHANISM. FRANK E. MILLER, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Nov. 29, 1922. Serial No. 603,979. 21 Claims. (Cl. 105—308.)

1. In a dump car, a discharge door, a plurality of spaced members movable into and out of supporting positions with said door, and slidable means arranged between said members, for moving said members out of supporting positions with said door, simultaneously.



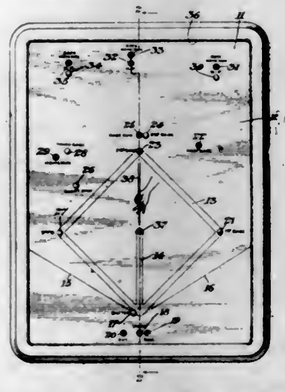
1,508,114. RAIL JOINT. JOHN ROSCOE MILLWARD, Tenafly, N. J. Filed Jan. 7, 1922. Serial No. 527,640. 8 Claims. (Cl. 235—164.)



2. A rail joint structure comprising the rails, oppositely positioned splice bars connecting the rail ends and a base plate underlying a portion of the splice bars, each of the splice bars being connected to one rail end only and to the base plate by a welding operation.

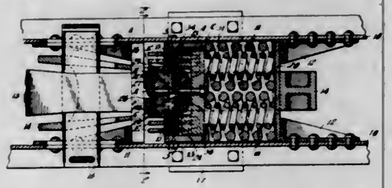
1,508,115. APPARATUS FOR LOADING COAL. FRANK E. MUELLER, Chicago, Ill., assignor to Roberts and Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 7, 1922. Serial No. 580,051. 14 Claims. (Cl. 214—16.)

1. In a material handling installation adapted to be aligned along and above a railroad track, a plurality of storage bins longitudinally aligned above said track, material feeding means in the bottom of each of said bins, a substantially horizontal conveyor aligned beneath said bins and feeding means and adapted to receive material from all of them, a loading boom adjacent one end of said horizontal conveyor and adapted to receive material therefrom and means for raising and lowering said boom.



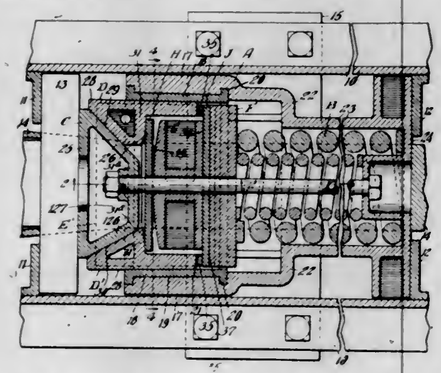
1,508,116. STENCILING MACHINE. STANLEY MANTUS, Oak Park, Ill. Filed Sept. 19, 1921. Serial No. 501,574. 32 Claims. (Cl. 101—123.)

1. In a stenciling machine, the combination of a pair of stencils, one of which is adapted to swing with respect to the other to permit an article to be stenciled to be arranged between them, and an inking device cooperating with said stencils to apply the designs of said stencils upon opposite sides of the article to be stenciled.



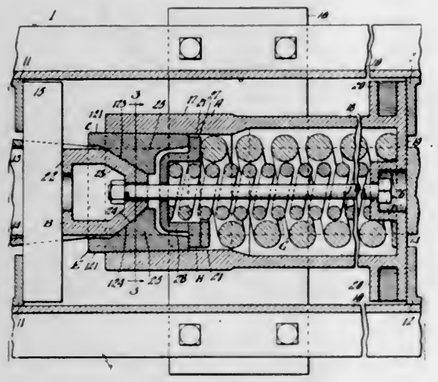
1,508,117. GAME APPARATUS. WILLIAM F. NIEMEYER, Brooklyn, N. Y., assignor of one-half to Thomas J. Shearer, Brooklyn, N. Y. Filed Mar. 17, 1923. Serial No. 625,726. 2 Claims. (Cl. 46—61.)

1. A game apparatus comprising a board having a playing surface representing a baseball diamond thereon, a peg fixed in position at the home plate, and recesses or pockets in the playing surface behind the said peg



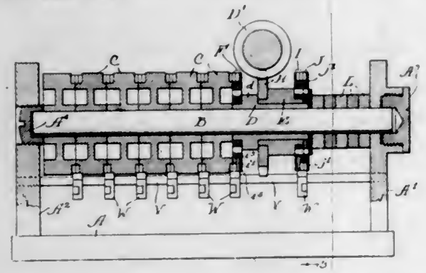
in such positions that a ball struck by a cue in the hands of a player and moved from a position designating the pitcher's box must just clear the said peg on one side to be lodged in one of the said pockets and must just clear the peg on the other side to be lodged in another of the said pockets.

1,508,118. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 8, 1921. Serial No. 499,207. Renewed Apr. 10, 1924. 10 Claims. (Cl. 213—33.)



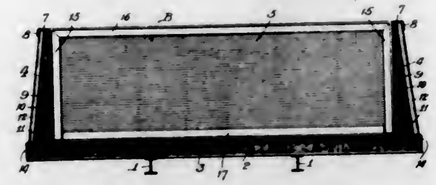
1. In a friction shock absorbing mechanism, the combination with a column-load-sustaining member; of a plurality of relatively stationary friction elements anchored to said member against movement longitudinally thereof but responsive to transversely applied pressure; a plurality of relatively longitudinally movable friction elements intercalated with said stationary elements; a spring resistance; and a pressure-transmitting and transverse-pressure-creating system cooperable with said intercalated friction elements, said system including, a plurality of cooperable wedge elements having cooperating sets of faces, certain of which are inclined at a wedge-acting angle and certain at a non-wedge-acting angle with respect to actuating forces applied substantially parallel to the line of movement of the wedge system relatively to said member and one of said elements being provided with both wedge acting and non-wedge-acting faces and being adapted to receive the actuating forces, said sets of faces on the wedge elements acting reversely during release under forces exerted transversely from the intercalated friction elements.

1,508,119. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 7, 1922. Serial No. 580,008. 9 Claims. (Cl. 213—32.)



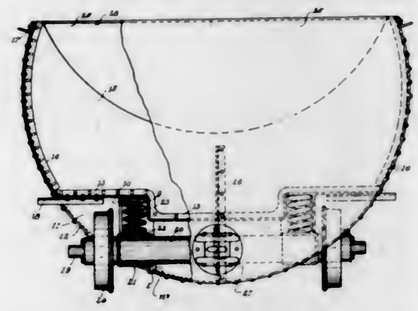
1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces; of opposed friction shoes cooperable directly with said shell friction surfaces; pressure-receiving and transmitting wedging means extended between the shoes, said means and shoe on one side of the axis of the shell having engaging faces extending at a keen angle with respect to said axis, said means and opposed shoe on the other side of said axis having cooperating faces inclined at a blunt relensing angle with respect to said axis; a spring resistance; and means interposed between said spring resistance and the shoes for automatically balancing the spring pressure on the shoes.

1,508,120. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Nov. 10, 1923. Serial No. 673,875. 10 Claims. (Cl. 213—32.)



2. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces; of diametrically opposed pairs of friction shoes within the shell, each of said shoes being provided with a wedge face, and the wedge face of one shoe of each diametrically opposed pair being keener than the wedge face of the opposed shoe; a spring resistance; and spreader means having a plurality of wedge faces, each face thereof cooperating with the face on one of said shoes.

1,508,121. REVOLUTION COUNTER. JOHN K. OLSEN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed June 2, 1922. Serial No. 565,501. 5 Claims. (Cl. 235—123.)

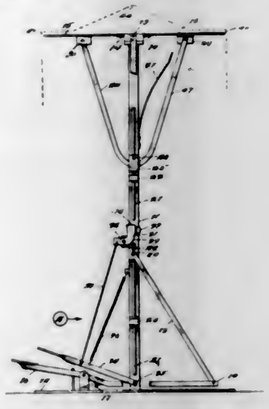


1. A revolution counter comprising a standard and a main shaft or axle supported thereon for carrying the counter wheels rotatably side by side on said shaft; a sleeve on said shaft; an initial mutilated speed-reducing gear rigid as to rotation with said sleeve at the end thereof adjacent to the initial counter wheel; a reduced-speed gear fast on the other end of said sleeve; a second sleeve rotatively mounted on the first mentioned sleeve and longitudinally stopped thereon; a prime driven gear rigid as to rotation with said second sleeve proximate to the first mentioned mutilated or speed-reducing gear of the first sleeve, and a speed-reducing or mutilated gear fast on the other end of said second sleeve.

1,508,122. VEHICLE BODY. JACOB H. PRESS, Chicago, Ill., assignor to Jacob Press Sons, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,572. 5 Claims. (Cl. 296—28.)

1. In a structure of the character stated, longitudinal supports, transverse supports resting thereon, a box structure resting on and secured to the transverse supports, a cover-plate along the sides of the box, resting on and secured to the transverse supports and bracing posts secured to the cover-plate external to the box and adapted to brace the sides of same against lateral forces, the upper edges of the sides of the box being turned over to form inverted troughs, and the upper ends of the bracing posts fitting snugly within these troughs to assist in furnishing a rigid brace for the sides of the box.

1,508,123. MINE CAR. ERSKINE RAMSAY, Birmingham, Ala. Filed Oct. 21, 1921. Serial No. 509,436. 18 Claims. (Cl. 105—364.)



6. A car body having spaced transversely opposite openings in its bottom, axles extending transversely above the bottom and projecting through said openings, and internal members forming coverings for said openings, and housings for said axles.

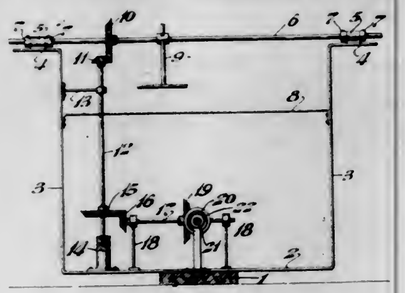
1,508,124. PROCESS FOR PRODUCING MOLDED PRODUCTS. LINWOOD T. RICHARDSON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 3, 1918. Serial No. 237,903. 12 Claims. (Cl. 18—55.)

5. The process of producing articles containing a phenolic condensation product which comprises; causing a reaction, in the present of a condensing agent, of a phenolic body and a methylene body in such proportions as to provide for combination of only substantially one-half of the phenolic body with methylene substance, mixing the product so obtained with an inert filler and with sufficient methylene substance to provide for subsequent combination of the remainder of the phenolic body, subjecting the mixture to a drying operation, cold molding the mixture and subsequently heat treating the molded product.

1,508,125. BAG-BOTTOM-FORMING MACHINE. FRANCIS T. ROBINSON, Brooklyn, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed May 26, 1923. Serial No. 641,535. 33 Claims. (Cl. 93—31.)

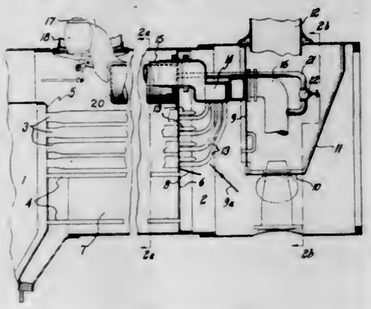
1. A machine for forming bottoms in formless bottom bags, comprising a standard, spreaders carried by the standard and collapsible to receive the bag, and means to move the spreaders into a position to spread the bag.

1,508,126. SHAKER RECEPTACLE. WILLIAM RULLISON, Rahway, N. J., assignor to Merck & Co., New York, N. Y., a Corporation of New York. Filed Feb. 21, 1924. Serial No. 694,256. 5 Claims. (Cl. 221—62.)



1. In a shaker receptacle, a receptacle having a perforated cover, a manually slidable plate having perforations adapted to register with the perforations in the receptacle cover, a loop-spring struck-out from the plate and depending therefrom with the free end of the spring lying in the same plane as the plate, and guide arms on said plate inclosing and cooperating with the free end of the spring to constitute a guide for the plate.

1,508,127. BOAT-PROPELLING MECHANISM. VINCENZO RULLO, Eddystone, Pa. Filed Jan. 14, 1921. Serial No. 437,328. 3 Claims. (Cl. 115—24.)

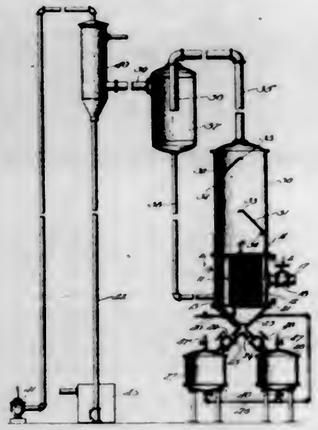


1. In a boat propelling mechanism, a power operated upper shaft, a vertical shaft operated thereby, a lower bearing for said vertical shaft, into which the lower end of the latter is stepped, a lower horizontal shaft,

gearing common to the last mentioned shafts, a propeller shaft made in sections, the inner section being geared to said lower horizontal shaft and the outer pro-

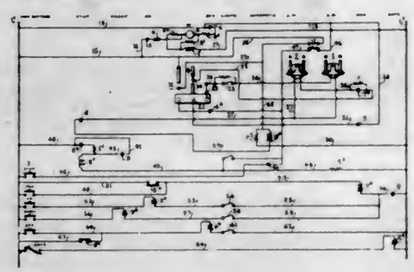
peller shaft section being slidably mounted in said inner section, a propeller on the outer section of said propeller shaft, and fastening means common to said sections to enable them to rotate as a unit.

1,508,128. DRIFTING DEVICE. GILBERT E. RYDER, Leonia, N. J. Filed Feb. 28, 1922. Serial No. 539,858. 6 Claims. (Cl. 121—137.)



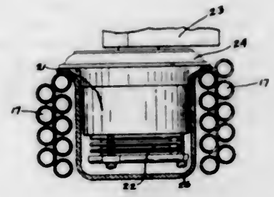
1. In a locomotive equipped with a superheater, the combination of the superheater; a dry-pipe to deliver steam from the boiler to the superheater; a steam-pipe to deliver steam from the superheater; throttling means to control the flow of steam through the dry-pipe, superheater, and steam-pipe; a closed chamber whose outer surface is in contact with the boiler contents; and a pipe through which the interior of said chamber communicates with the steam-pipe beyond the throttling means.

1,508,129. HORSESHOE CALK. OSCAR C. SANDERS, Galway, N. Y. Filed Oct. 17, 1923. Serial No. 669,141. 1 Claim. (Cl. 168—42.)



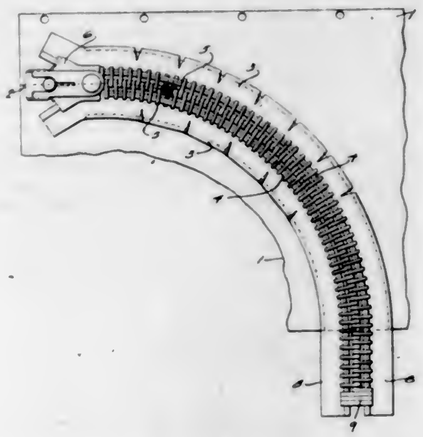
As a new article of manufacture, a calk comprising a shell including a body and a stem, said body provided with a recess and said stem being threaded throughout its internal length, a rubber section provided with a threaded pocket in the recess of said body, said threaded pocket registering with the threaded internal portion of said stem, and a cylindrical anchor section externally threaded throughout its entire length and positioned in the threaded stem and also in the threaded pocket of the rubber section, substantially as shown and described.

1,508,130. EVAPORATOR. WALTER E. SANGER, Chicago, Ill., assignor to Wurster & Sanger, Chicago, Ill., a Partnership Firm. Filed Feb. 3, 1922. Serial No. 533,780. 8 Claims. (Cl. 159—27.)



1. A calandria comprising a cylindrical casing having an arcuate partition therein for separating said calandria into two compartments, upper and lower heads closing the compartment adjacent the concave side of said partition and forming a heating chamber, tubes extending through said heating chamber and opening outside of said heads, said tubes having their axes arranged in parallel arcs, and arcuate baffle plates interposed between said tubes for directing a heating medium about the various tubes in said heating chamber, some of said baffle plates extending inwardly from the walls of said heating chamber and spaced to form a central passage while others are spaced inwardly from said walls to provide outer passages.

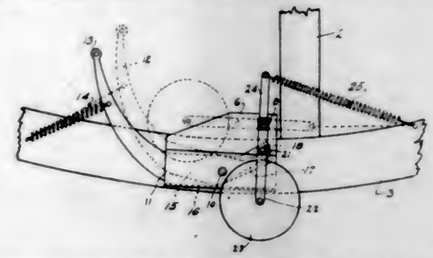
1,508,131. MOTOR CONTROLLER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 11, 1922. Serial No. 593,681. 7 Claims. (Cl. 172—179.)



1. In a motor controller the combination with starting and stopping means including means to effect stopping upon failure of voltage and to insure against restarting pending manual operation of a part thereof, of other means including a part requiring manual operation in addition to the aforementioned manual operation to effect restarting following failure of voltage.

1,508,132. REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 26, 1923. Serial No. 653,969. 9 Claims. (Cl. 297—8.)

1. A thermostat comprising a heat conducting vessel, a heat conducting fluid having a negligible co-efficient of expansion at operating temperature and positioned within said vessel, and an element movable in response to change in temperature and immersed in said fluid.

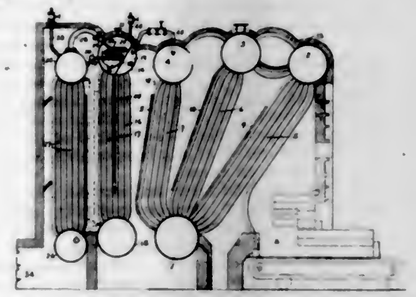


1,508,133. FASTENER. GIDEON SUNDBACK, Meadville, Pa., assignor to Hookless Fastener Company, a Corporation of Pennsylvania. Original application filed Apr. 2, 1917, Serial No. 159,139. Divided and this application filed Aug. 15, 1921. Serial No. 492,621. 17 Claims. (Cl. 24—205.)

1. In a body having meeting edges, means secured to and distributed along the length of said respective edges for connecting the same, means movable progressively along said edges to control said connecting means, and an extension constituting in effect a continuation of said edges for receiving said movable means when said edges are disconnected, whereby to increase the separation.

1,508,134. ROLLER ATTACHMENT FOR ROCKING-CHAIRS. THOMAS B. BARNETT, Birmingham, Ala. Filed Jan. 30, 1924. Serial No. 689,550. 3 Claims. (Cl. 155—188.)

2. In a roller attachment for rocking chairs, a pair of angle brackets attached to the chair rockers, a rocker shaft mounted in said brackets and carrying rollers mounted eccentric to the shaft axis, spring means tending to hold said rollers in inoperative position, a latch pivoted to one bracket, a pin movable with the rocker shaft and adapted to be engaged and held by said latch with the rollers in operative position, and spring means to force the latch

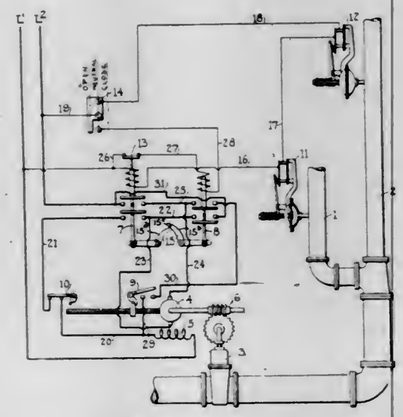


into engagement with said pin, said latch having a rearward projection convenient to be kicked up by the foot to disengage the pin, as and for the purposes described.

1,508,135. TREATMENT OF BRIGHT-SURFACED MATERIALS. HARRY BLOUNT, Oak Park, and HERBERT MORTLOCK HALLSWORTH, La Grange, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1921. Serial No. 502,956. 11 Claims. (Cl. 263—6.)

1. Annealing apparatus comprising in combination containers for the articles to be annealed, an annealing tube sealed against ingress of an oxidizing atmosphere and comprising a heating chamber and a substantially dry cooling chamber co-extensive with each other, the heating chamber being provided with guides for the containers and the cooling chamber being sloped downwardly from the heating chamber to the discharge end, anti-friction rollers in said cooling chamber for the containers, and means adjacent the open end of the heating chamber for feeding said containers into and through the annealing tube.

1,508,136. ECONOMIZER. BENJAMIN BADOUD, Perth Amboy, N. J., assignor to The Super-Heater Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 29, 1920. Serial No. 377,655. 4 Claims. (Cl. 122—444.)

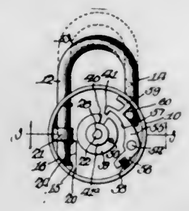


1. In apparatus of the class described, the combination of a boiler; an economizer section; means to supply feed water to it, and means to convey water from it to the boiler; a second economizer section; means to bring the waste gases from the boiler into contact first with the first and then with the second section; and means to transfer heat from the water in the second section to the feed water without mingling the two and before the feed water is heated by the gases coming into contact with the first section.

1,508,137. BUMPER. WAYNE E. DUNSTON, Kalamazoo, Mich., assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Oct. 31, 1921. Serial No. 511,744. 7 Claims. (Cl. 293—55.)

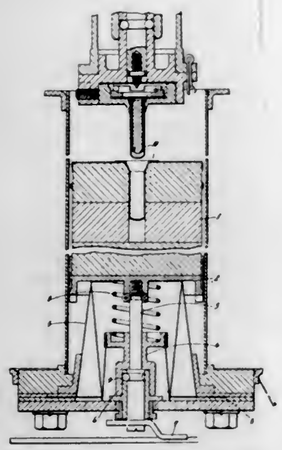
2. A bumper comprising a bar having a rear section and a front or impact section comprising a pair of vertically spaced bars offset from said rear section, and a bridging clamping device secured to the said bars and extending rearwardly and secured to the said rear section.

1,508,138. CONTROLLER FOR MOTOR-OPERATED VALVES. EDWARD T. FOOTE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 8, 1920. Serial No. 364,116. 9 Claims. (Cl. 137—139.)



1. In a controller for a valve to be utilized in a water distribution system or the like, the combination with an operating motor for said valve, of a pair of electro-responsive switches adapted to effect line connections for said motor for operation in reverse directions respectively, manual control means for said switches, means for effecting operation of one of said switches independently of said manual means, and associated means adapted upon said independent operation of said switch to render said manual control means ineffective for control of the other switch pending restoration of said independently operated switch to its former condition.

3. In a reversing controller for electric motors in combination, a pair of electromagnetically operated switches adapted to establish line connections for the motor for operation in reverse directions respectively, one of said switches being arranged to control the energizing circuit of the other switch and voluntary control means for said switches adapted to be rendered ineffective upon extraneous interruption of the energizing circuit of said former switch.



1,508,139. LOCK. GEORGE D. FULL, Waukegan, Ill. Filed July 30, 1923. Serial No. 654,571. 2 Claims. (Cl. 70—113.)

1. In a lock of the class described, the combination with a casing having a pair of openings, of a shackle having one of its prongs longer than the other, the shorter prong provided with an angular recess near its end and having its end beveled, said longer prong being rotatably and slidably mounted in one of said openings and having means to restrict its movement outwardly, said shorter prong adapted for insertion into and withdrawal from the other of said openings, a plurality of superimposed and spaced disk-tumblers centrally mounted in the casing for rotation and each having a recess in its periphery and co-operating means for imparting rotary movement one to another, a locking and releasing pawl pivotally mounted in the casing near the end of the shorter prong of the shackle, said pawl having an arm extended between the

tumblers and the opening in the casing for said shorter prong and having at its end an inwardly extended projection to fit in said recesses of the tumblers when in register and on its outer surface an angular projection for engagement with the beveled end and angular recess of said shorter prong, means connecting the pawl and casing for normally holding the pawl out of contact with the tumblers and in locking engagement with the shorter prong of the shackle, a dial plate surrounding a portion of the outer tumbler and closing the end of the casing adjacent to said tumbler, and an indicator for registering with the graduations on the dial plate.

1,508,140. SUBMARINE MINE. ALBAN LEWIS GWYNNE, Portsmouth, England, assignor to Vickers Limited, Westminster, England. Filed July 15, 1921. Serial No. 485,038. 9 Claims. (Cl. 102—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

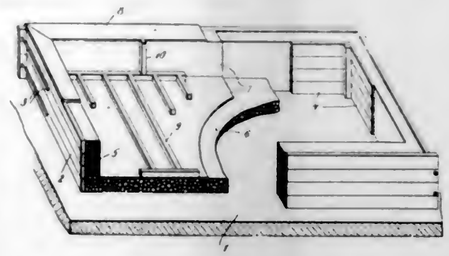
9. In a submarine mine, in combination, a primer charge, a detonator in normal safety position remote from said primer charge with respect thereto and hydrostatically operative means adapted to produce relative movement between said detonator and the primer charge.

1,508,141. CLAMP FOR MULTIPLE-BAR BUMPERS. HERBERT S. JANDUS and WAYNE E. DUNSTON, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 19, 1923. Serial No. 675,524. 8 Claims. (Cl. 293—55.)

8. A clamp for multiple-bar bumpers comprising a plurality of substantially C-shaped clamping members each adapted to engage the opposite edges of a bar, and means for securing said members together in substantially vertical alignment.

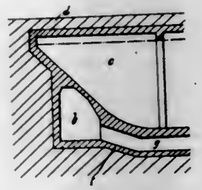
1,508,142. TRUNK. ERNEST NORBERT KENNEDY, London, England. Filed Mar. 23, 1923. Serial No. 627,097. 2 Claims. (Cl. 190—47.)

1. A trunk of variable capacity comprising a lower box-shaped part and an upper box-shaped part having front and rear walls substantially parallel with one another and inclined with regard to the top and bottom of the trunk, the cross section of the latter being rhombic in combination with extensible hinges and fastening devices securable in any position and attached respectively to said front and rear walls, so that the trunk may be opened, or closed and locked, in any extended or in the fully telescoped position.



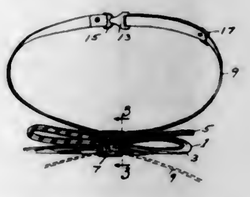
1,508,143. CLIP FOR COLLAPSIBLE TUBES. EVERETT H. KNEEN, Ansonia, Conn. Filed Apr. 7, 1923. Serial No. 630,559. 2 Claims. (Cl. 221—60.)

1. A clip for collapsible tubes, formed on one side with a series of inwardly-projecting lugs and on the opposite side with a series of inwardly-extending sockets in line with and facing said lugs.



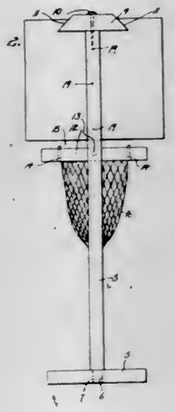
1,508,144. SULPHUR-CONTAINING STRUCTURE AND METHOD OF MAKING SAME. WILLIAM HOFFMAN KOBBÉ, New York, N. Y., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Nov. 24, 1923. Serial No. 676,871. 13 Claims. (Cl. 18—425.)

1. The method of making structures composed at least in part of a compound of intimately mixed sulphur and finely divided carbonaceous material which comprises appropriately confining a mass of aggregate material, filling the voids throughout the mass of aggregate material with the compound of intimately mixed sulphur and finely divided carbonaceous material in a molten condi-



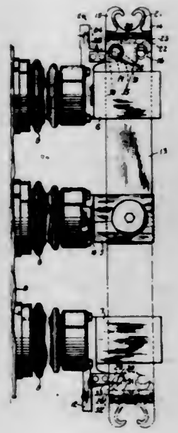
tion, and permitting said compound to solidify in situ whereby the aggregate material and sulphur compound are bonded together to form a monolithic structure.

1,508,145. LARGE-SIZED OIL TANK. RUDOLF KOLWES, Berlin, Germany. Filed Sept. 4, 1919. Serial No. 321,717. 2 Claims. (Cl. 72—13.)



1. An oil tank of large capacity sunk in the ground and comprising an inner concrete oil vessel with walls adapted to be subjected only to the pressure of the oil, an outer concrete shell with walls adapted to be subjected only to the pressure of the earth, passages situated inside the outer shell and surrounding the side walls of the inner vessel, other passages located beneath the sole of the inner vessel, said passages being adapted to accommodate persons desiring to inspect the said walls, and heating devices arranged in the passages first named and adapted to keep the temperatures in the said passages and in the inner vessel practically equal, whereby uneven internal stresses in the said walls are diminished or prevented.

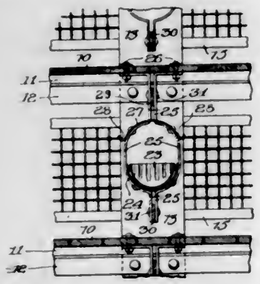
1,508,146. NECKTIE. CHARLES MACKO, Chicago, Ill., assignor to George G. Richter, Chicago, Ill. Filed Feb. 16, 1924. Serial No. 693,210. 3 Claims. (Cl. 2—151.)



1. A reversible necktie comprising two bows positioned back-to-back, a loop encircling the bows and secured to each bow, a band within the loop and adapted to pass around the wearer's collar, the band having a slidable connection with the loop whereby it may be slid around within the loop to expose one or the other of said bows.

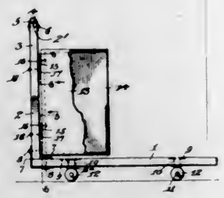
1,508,147. TOY BASKET-BALL GAME. CHARLES HOLBROOK VINAL, Mystic, Conn., assignor to Harry U. Rosenthal and Solomon Luber, both of New York, N. Y. Filed Feb. 21, 1923. Serial No. 620,361. 3 Claims. (Cl. 46—59.)

1. A toy basketball game, having a base provided with a socket, a standard removably mounted in the said base, a cross-piece secured to the standard and provided near its ends with sockets, a basket-hoop having ends removably inserted into the said sockets in the said cross-piece, a basket mounted upon the said hoop, and means for connecting the inner edge of the basket with the standard.



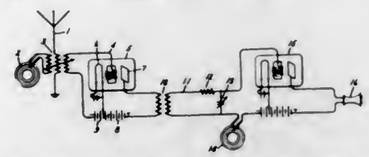
1,508,148. SWITCH. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1921. Serial No. 446,258. 12 Claims. (Cl. 200—169.)

1. The combination with a switch blade and contact jaws therefor, of a stationary member, and an operating handle for the blade movably mounted thereon and provided with a portion that engages the stationary member to move the blade with respect to the jaws when the handle is moved with respect to the blade in a direction tending to move the blade out of the jaws.



12. In an electric switch, the combination with a stationary contact member, a movable contact member pivoted adjacent to its one end and, at its other end, adapted to engage the stationary contact member, and an operating lever pivotally supported on the movable contact member, said operating lever being pivoted intermediate its ends and having one end adapted to effect a camming engagement with a fixed member and its other end serving as a handle whereby the said operating lever may be rotated about its pivot to force the movable contact member out of engagement with the said stationary contact member.

1,508,149. TROUGH PROTECTOR. WILLIAM F. ABBOTT, Chicago, Ill., assignor, by mesne assignments, to Equipment Devices Company, a Corporation of Maine. Filed July 22, 1921. Serial No. 486,795. 3 Claims. (Cl 119—12.)

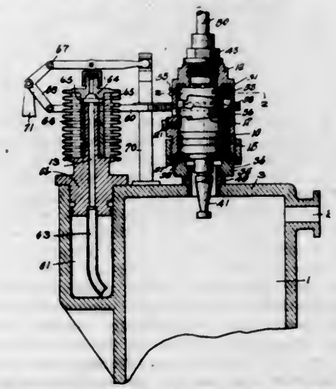


1. In a poultry car containing coops at opposite sides of an aisle, a trough supported between each pair of adjacent coops, and a canopy supported above each trough for preventing refuse from dropping into the trough, said canopy acting as a barrier between adjacent coops.

1,508,150. CHILD'S VEHICLE. HAROLD KESSLER ALBUS, St. Joseph, Mo. Filed June 8, 1923. Serial No. 644,182. 1 Claim. (Cl. 46—51.)

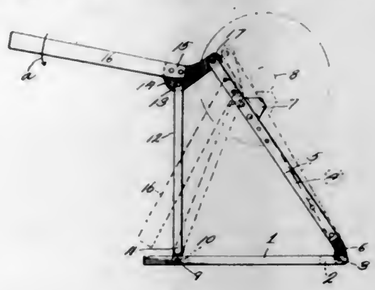
In a toy of the character described, a relatively long narrow wheeled platform, a handle carrying standard carried thereon, said standard being of the same width at the base as said platform and of less width at the central and upper part thereof, a pair of superposed strap members secured to the inner face of said standard, the upper of said strap members being offset intermediate its ends to provide an upper slot, and the lower of said strap members being offset between its center and each end to provide a pair of lower slots, a package receptacle, a depending tongue member having one end inset for engagement with the upper portion of said receptacle and adapted to engage with its free end said upper slot, and a pair of tongue members having one of their ends offset and secured side by side near the lower portion of said receptacle, and adapted to engage with their free said pair of lower slots.

1,508,151. WIRELESS SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Apr. 19, 1916, Serial No. 92,156. Patent No. 1,465,961, dated Aug. 28, 1923. Divided and this application filed July 15, 1918, Serial No. 244,840. Renewed July 12, 1920. Serial No. 395,762. 21 Claims. (Cl. 250—8.)



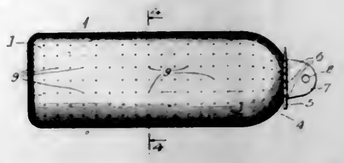
3. The method of receiving wireless signals which consists in combining the signaling current with a current having a frequency differing therefrom by an amount above audibility, producing from these currents an alternating current with a frequency corresponding to the difference between the frequencies of the two currents, accumulating the energy of the last named alternating current during a plurality of successive cycles and selectively detecting the energy thus accumulated.

1,508,152. SQUIRREL-CAGE WINDING FOR ALTERNATING-CURRENT MOTORS. PHILIP L. ALGER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 4, 1922. Serial No. 558,409. 5 Claims. (Cl. 172—120.)



3. An alternating current motor comprising cooperating stator and rotor members, said rotor member comprising a cylindrical laminated core provided with rectangular partially closed slots in its periphery, a plurality of squirrel cage windings having common end rings and having rectangular bars in each of said slots at different radial depths therein and rectangular bars of magnetic material between said squirrel cage bars abutting against said end rings.

1,508,153. INTERNAL-COMBUSTION ENGINE. ERL V. BEALS, Boston, Mass. Filed June 26, 1920. Serial No. 391,933. 3 Claims. (Cl. 123—25.)

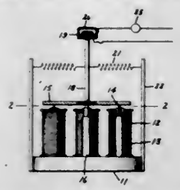


1. In combination with an internal combustion engine, a device for injecting water into the engine cylinder comprising a chamber adapted to contain water, an explosive pressure actuated displacer, a positive stop for said displacer and means the operation of which is dependent upon the temperature of the cylinder walls for controlling the travel of said displacer.

1,508,154. VEHICLE JACK. WILLIAM W. BELLAMY, Oakland, Calif. Filed Apr. 24, 1924. Serial No. 708,746. 1 Claim. (Cl. 254—113.)

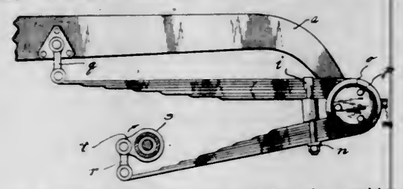
A vehicle jack comprising a horizontally disposed base, an upwardly and rearwardly extending axle engaging member, the lower end of said axle engaging member being curved and having its end pivotally mounted in a bifurcation of the base, an upwardly extending bar, said bar having its lower end pivotally mounted on the rear end of the base, said bar and upwardly and rearwardly extending axle engaging member having their ends pivotally connected at spaced points to a plate, said plate having connected thereto an upwardly and rearwardly extending handle at an angle to the plate, said handle being secured to the plate over the upper end of the upwardly extending bar and adapted to engage the upper end of the upwardly extending bar upon an axle raising operation for limiting the movement of the handle and maintaining the handle out of engagement with the bar, an axle engaging block carried by the upwardly and rearwardly extending member, and disposed in a plane whereby when the handle is folded onto the upwardly and rearwardly extending bar said handle will be disposed to one side of the block.

1,508,155. MEAT-FOOD PRODUCT AND METHOD OF MAKING SAME. JACOB H. BERG, Chicago, Ill. Filed Aug. 1, 1922. Serial No. 578,886. 8 Claims. (Cl. 17—45.)



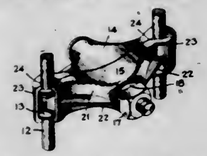
1. A meat food product consisting of a casing made of dehaired animal hides and a filling of chopped meat, the product being processed to render not only the meat-filling but also the hide edible.

1,508,156. MEANS FOR INDICATING SLIPPAGE OF WHEELS. ELMER F. BLISS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 20, 1919. Serial No. 318,740. 2 Claims. (Cl. 177—311.)



2. In combination, a plurality of sets of motors, a plurality of coils arranged symmetrically about a circle, one for each armature of said motors, each of said coils connected across its corresponding motor armature, a core for each coil, a cross-shaped member of magnetic

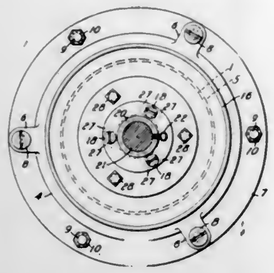
material having a plurality of arms corresponding in number and position with the said coils, a point pivot for said member at its center, a cylindrical contact carried by said member, a stationary cup shaped contact enclosing said cylindrical contact, means for normally holding said cross-shaped member away from all of the



cores with said contacts disengaged, the coils for each set of motors being arranged diametrically opposite each other, whereby the cross-shaped member is attracted from its normal position to operate said contacts into engagement only when the voltages across the armatures of any one set of motors are unequal, a circuit controlled by said contacts, and an indicator in said circuit.

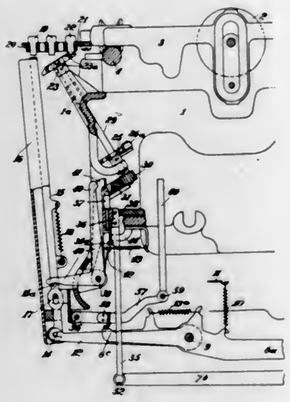
1,508,157. SPRING SUSPENSION FOR VEHICLES. JAMES SCRIPPS BOOTH, Detroit, Mich. Filed May 18, 1923. Serial No. 639,934. 13 Claims. (Cl. 267—41.)

1. In a spring suspension for vehicles, the combination of a chassis frame, the combination of an axle housing, a V type of spring rotatably supported at its apex by the chassis frame and having its upper leg secured to the chassis frame and having its lower leg secured to the axle housing in advance thereof, whereby torsion on the axle housing tends also to rotate the spring at its apex.



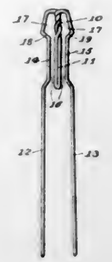
1,508,158. COUPLING FOR INSULATORS. GEORGE W. BOWER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 16, 1921. Serial No. 501,051. 4 Claims. (Cl. 173—318.)

1. A coupling for the U-shaped supporting links for insulators, said coupling comprising flat top and bottom walls and arched side walls, said top and bottom walls being provided at their ends with openings spaced to receive the two ends of supporting links, and said coupling being split in a longitudinal, vertical plane through the centers of said openings, and a bolt which passes transversely through the arched side walls to hold the parts of the coupling together.



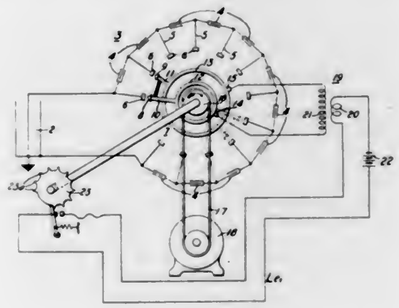
1,508,159. INSULATOR. JAMES M. BROWN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,704. 6 Claims. (Cl. 173—313.)

1. A bus-bar insulator comprising a tubular insulating member having an inwardly-projecting annular flange adjacent to the outer open end thereof; a centrally-apertured annular metal member and a discoidal metal member disposed on the outside and on the inside, respectively, of said flange, a bus-bar supporting member longitudinally adjustably mounted on said annular member in the aperture thereof, and a plurality of bolts equally



spaced about said supporting member extending through the open end of the insulating member for connecting said metal members and clamping the same uniformly against said flange around said bus-bar supporting member.

1,508,160. TABULATOR FOR TYPEWRITERS. THEODOR EUGEN BUSCHMANN, Chemnitz-Kappel, Germany, assignor to Wanderer-Werke vorm. Winklhofer & Jaenicke Aktiengesellschaft, Schonau, Chemnitz, Germany. Filed Mar. 23, 1921. Serial No. 454,947. 2 Claims. (Cl. 197—177.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



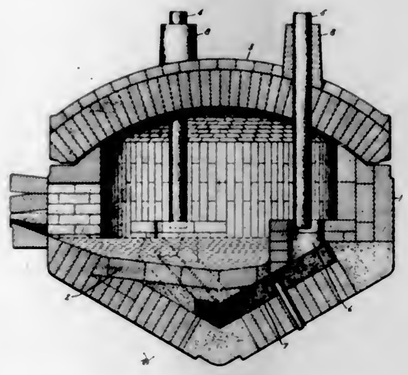
1. In a typewriting machine, a carriage, denominational selecting mechanism including denominational stops, controlling means for preventing the denominational stops from coming into action whilst the carriage moves through a predetermined distance including members for latching the denominational stops, column selecting means for setting the controlling means including a plurality of column selecting keys, a plurality of locking bolts actuable by the column selecting keys and operatively coacting with the latching members for holding the denominational stops against movement, resiliently controlled means for automatically latching the said bolts upon the raising of one of the bolts, and means actuable by the carriage for effecting the release of the locking bolts and thereby the denominational stops at the moment when the carriage has reached the end of the said distance substantially as and for the purposes set forth.

1,508,161. HAIRPIN. PHILIP CHRISTIAN, Bridgeport, Conn. Filed Nov. 7, 1925. Serial No. 673,267. 1 Claim. (Cl. 132—52.)

A hair pin formed from a single piece of wire and including a closed end portion, a central relatively short leg portion extending downwardly from said end portion and formed by doubling the wire centrally and twisting the same adjacent said end portion, the side edges of said leg portion being straight and parallel with each other, side legs bent downwardly at each side of said end portion and in spaced relation to said central leg portion, said side portions being bent inwardly at each side of said central leg portion and parallel thereto and in spaced relation to said closed end portion, and forming shoulders in spaced relation to said closed end portion to produce relatively large hair receiving spaces in the closed end of said pin at each side of said central leg portion, said inwardly bent portions forming relatively long restricted passages below said shoulders at each side of said central leg portion to said relatively large hair receiving spaces, whereby the side legs are spread and contracted as the hair is passed through said passages into said relatively large hair receiving spaces.

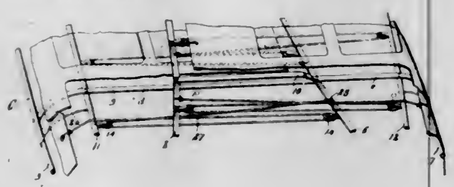
1,508,162. MEANS FOR PRODUCING HIGH VOLTAGE. LEWIS WARRINGTON CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 16, 1919. Serial No. 297,474. 14 Claims. (Cl. 171—97.)

1. The combination with a source of energy adapted to be intermittently active, and a unidirectional consumption device, of a plurality of energy-storing and restoring units connected in series, terminal members connected between said units, a contact device connected to said source and adapted to bridge two of said terminals at one time, means for rotating said contact device to connect said energy-storing and restoring units to said source, means associated with said rotative means for making said source active only during the time that two of said terminals are bridged, and means for connecting said consumption device in series with said plurality of units whereby it is continuously supplied with unidirectional energy.



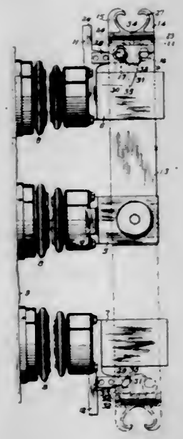
1,508,163. NEEDLE FOR TALKING MACHINES AND LIKE APPARATUS. WILLIAM ERNEST CLIFTON, Nottingham, England, assignor to Cliftophone Limited, London, England, a British Limited Liability Company. Filed Jan. 3, 1923. Serial No. 610,425. 6 Claims. (Cl. 274—38.)

1. A needle for gramophone and like sound reproducing machines formed from a single length of wire doubled on itself to provide two adjacent prongs whereof one is longer than the other and is pointed at the end.



6. A needle for gramophone and like sound reproducing machines formed from a length of wire doubled back on itself for the purpose described, with a pointed end extending clear of and beyond the extremity of the doubled portion and the non-pointed end of the doubled portion bent outwardly and wrapped round the adjacent limb to afford a stop, substantially as described.

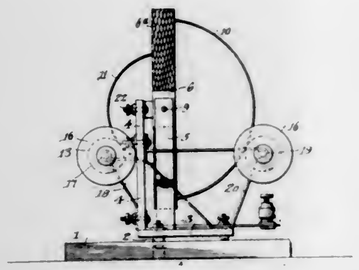
1,508,164. ELECTRIC FURNACE. EDGAR F. COLLINS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1921. Serial No. 470,624. 4 Claims. (Cl. 204—64.)



1. An electric furnace comprising a housing, an electrode projecting through said housing, and means for dissipating heat from the portion of said electrode external to said housing including a sleeve made of refractory material having a relatively high heat conductivity surrounding said electrode.

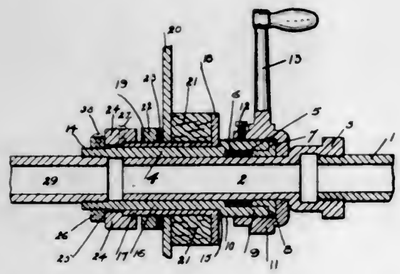
1,508,165. CURTAIN FOR AUTOMOBILE TOPS AND THE LIKE. BENJAMIN H. COZINE, Louisville, Ky. Filed Aug. 19, 1921. Serial No. 493,510. 5 Claims. (Cl. 296—140.)

1. A unitary curtain-supporting frame adapted to be connected to the underside of a vehicle top composed of a pair of complementary frame sections fastened together, the inner portions of the sections extending beyond the medial line of the frame and overlapping each other throughout the length of the frame, and being offset and spaced away from each other.



1,508,166. SWITCH. HERBERT J. CRABBS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1920. Serial No. 383,348. Renewed Jan. 31, 1924. 4 Claims. (Cl. 200—169.)

1. A switch comprising a pivot jaw member, two pairs of spaced contact jaws, a switch blade pivoted to the pivot jaw member and adapted to separately engage the said contact jaws, a pair of latch levers pivoted to the free end of the switch blade and on opposite sides thereof, a latch member adjacent each pair of contact jaws and adapted to engage one of the said levers to move it into latching position when the blade is moved into operative relation with the jaws, and a spring connecting the latch levers and adapted to maintain them in yielding operative relation with respect to the latch members, the said levers being so formed as to provide a protecting housing for the spring.

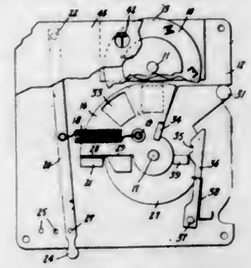


1,508,167. MOUNTING FOR TUNING RADIOCIRCUITS. JAMES W. CUSHING, Ionia, Mich. Filed Mar. 27, 1923. Serial No. 628,005. 7 Claims. (Cl. 171—119.)

1. A variocoupler unit comprising a plurality of nested coils, means for pivotally supporting the inner one of said coils, a semi-circular track fixed to said inner coil, and means engaging said track for shifting the same

thereby positioning said inner coil in angular relation with respect to an adjacent coil.

1,508,168. UNION COUPLING FOR REVOLUBLE PIPES. ERIC MICHAEL DE SHERBININ, Toronto, Ontario, Canada, assignor, by mesne assignments, to Paragon Dishwasher Syndicate Incorporated, a Company of New York. Filed June 25, 1923. Serial No. 647,706. 3 Claims. (Cl. 185—30.)

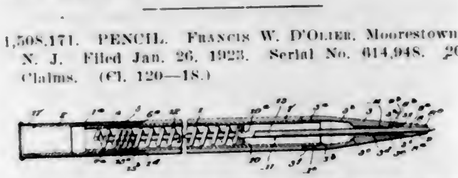


1. In an union coupling, the combination with a tubular male coupling member, a tubular female coupling member rotatable on, and having a sliding contact with, the male coupling member, a gland inserted in one end of the female coupling member and a packing nut threaded on the same end of the female coupling member and pressing against the gland, means for rotating one of the coupling members, an exteriorly threaded tubular bearing for the female coupling member, a packing nut at the inner end of the bearing having a flange at one end, a packing nut on the inner end of the bearing and a clamping nut on the bearing opposed to the flange.

1,508,169. ILLUMINATION INDICATOR. SAMUEL EVERETT DOANE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1920. Serial No. 368,720. 3 Claims. (Cl. 88—14.)

1. In an illumination indicator, the combination of a rotatable disc, a contrasting design on said disc, a shutter normally coverins said design and having an aperture therein, a sector for engaging said shutter to bring it into a cocked position and having a slot therein normally

registering with said design, a segment on said sector normally registering with said aperture, means for



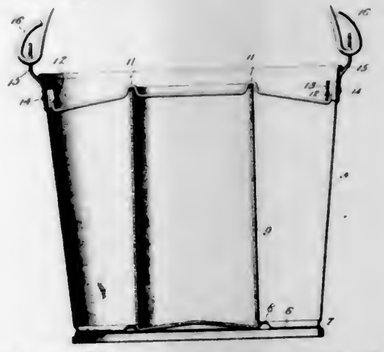
locking said shutter in a cocked position and means for releasing said shutter to expose said design through said aperture for a substantially short time.

1,508,170. PENCIL. FRANCIS W. D'OLIER, Moorestown, N. J. Filed Sept. 12, 1922. Serial No. 587,708. 5 Claims. (Cl. 40—19.)

2. In a writing implement, a central transparent sleeve, separate end members abutting the opposite ends of said sleeve, and barrel means separable from each of said end members holding said end members in position at the ends of said sleeve.

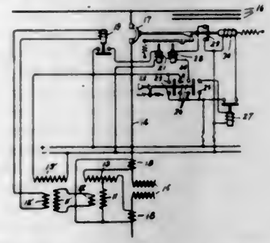
1,508,171. PENCIL. FRANCIS W. D'OLIER, Moorestown, N. J. Filed Jan. 26, 1923. Serial No. 614,948. 20 Claims. (Cl. 120—18.)

9. In a pencil, a barrel having an end portion, an actuating end piece having a telescopic and rotatable connection with the inner wall of said barrel end portion, said inner wall having a first bearing surface adjacent the end thereof next to the extreme end of said end portion and a second bearing surface spaced from said first surface and inwardly therefrom, said actuating end piece having a first annular shoulder adapted to rotate within said first bearing surface and a second annular shoulder adapted to rotate within said second bearing surface, said first and said second annular shoulder being of the same diameter and spaced apart, and the outer surface of said actuating piece between said shoulders being tapered gradually smaller from said first shoulder toward the base of said second shoulder, and a detent member carried by said barrel end portion and normally yieldably extending lengthwise of said barrel and wholly within the outer contour thereof and alongside of said tapered wall and toward said second shoulder.



1,508,172. WIRE-STRETCHER EXTENSION. RALPH W. DONNELL, Nevada, Mo. Filed Dec. 31, 1923. Serial No. 683,690. 2 Claims. (Cl. 254—162.)

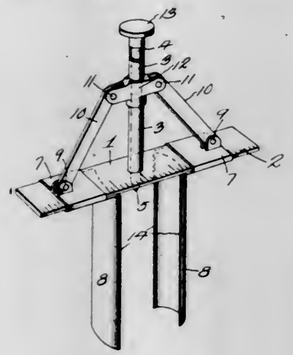
1. A combined wire stretcher extension brace and suspension device, formed of a pair of rigid leg members each having one end sharpened for engagement with a fence post, a combined hook and eye member including a shank connectnig the hook with the eye, the said shank extending through and pivotally connecting one end of said members together, a flexible coupling element connected at one end to said eye, and adapted to engage the fence post for securing the said device in a lateral posi-



tion with respect to the post, and said hook adapted to be connected to a wire stretcher upon the side of the leg members opposite to that occupied by said flexible coupling element.

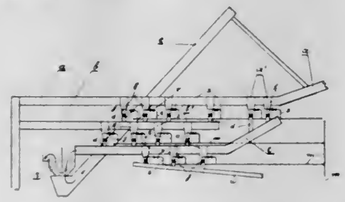
1,508,173. PAIL EXTINGUISHER. ORLANDO R. ERWIN, Forest Hills, N. Y., assignor to Fommite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1920. Serial No. 429,659. 6 Claims. (Cl. 169—34.)

1. A fire extinguisher pail comprising inner and outer open top receptacles defining a central compartment and an annular compartment surrounding the central compartment for holding separate chemical component solutions which upon commixture produce a fire extinguishing agent, and means for supporting the inner receptacle in said outer receptacle comprising provisions having attachment to said outer receptacle and having means for engaging the rim of the inner receptacle, the construction of the receptacles being such that the component solutions may be simultaneously projected from the pail by a manual dashing or dumping action whereby to cause said components to intermix after leaving the pail and produce the fire extinguishing agent.



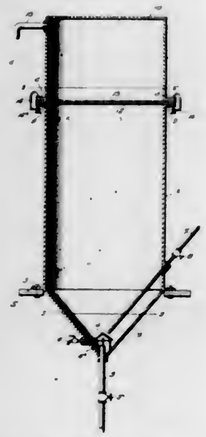
1,508,174. CONTROL OF ELECTRIC SWITCHES. ALAN STEWART FITZ GERALD, Finchley, England, assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1923. Serial No. 659,765. 8 Claims. (Cl. 175—294.)

1. The method of controlling the operation of a protective system of the class described wherein electroresponsive protective apparatus is arranged to control a line switch with a discriminating differential action,



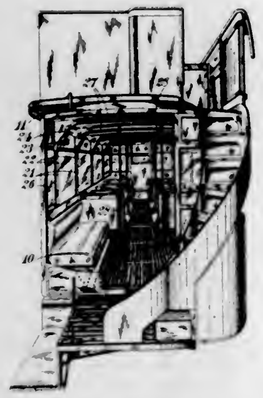
which comprises impressing an auxiliary electromotive force upon the protective apparatus during the closing and opening periods of said switch to render the responsiveness of the protective apparatus less sensitive during such periods.

1,508,175. SHAFT-CENTER-FINDING DEVICE. PHILIZA H. FONTAINE, Petersburg, N. Dak. Filed May 24, 1923, Serial No. 641,158. Renewed July 9, 1924. 1 Claim. (Cl. 33—191.)



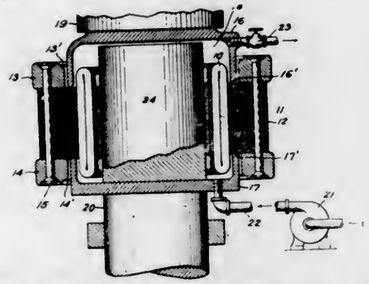
A center locating and marking device for shafts comprising a bar, sleeves slidably mounted on the bar at opposite ends thereof, shaft engaging arms carried by said sleeves and disposed at a right angle to the bar and in parallel relation to each other, a right angularly disposed sleeve carried by the bar at the opposite sides to the shaft engaging arms, a member slidably mounted on said right angularly disposed sleeve, link connections between said member and the sleeves on the bar, and a center marking member extending through the right angularly disposed sleeve in the bar and forming means whereby the center of the shaft may be marked when the shaft engaging arms are in engagement with opposite sides of the shaft.

1,508,176. COAL OR OTHER MINERAL WASHING APPARATUS. ANTOINE FRANCE, Liege, Belgium. Filed Jan. 2, 1920. Serial No. 349,119. 3 Claims. (Cl. 83—89.)



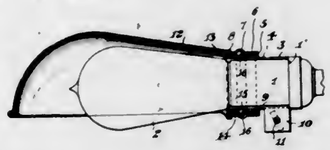
1. In plant for washing and separating minerals, the combination of: a plurality of sloping troughs for the separation of the minerals according to specific gravity by means of a conveying water current, arranged below one another; a plurality of separators extending downwardly from and arranged in series at intervals along the bottom of each trough, and each, except those of the lowest trough, delivering into a lower trough; a communication between said separators and aforesaid troughs; controllable means for supplying water to said separators in upward streams for the treatment of the materials sinking from the lower portion of the troughs into such separators through the aforesaid communication; an adjustable discharge opening in the base of each separator; means for evacuating the materials discharged through such opening by the separators of the lowermost trough; means for collecting the materials delivered at the end of such lowermost trough; and mechanical means for removing the last-named materials from such point of collection and returning them to the top end of one of the uppermost troughs; all substantially as described.

1,508,177. APPARATUS FOR WASHING MILK OF MAGNESIA. FLOYD E. FRAZIER, Iowa City, Iowa. Filed Jan. 8, 1921. Serial No. 435,877. 9 Claims. (Cl. 210—185.)



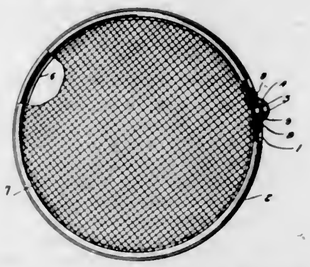
1. An apparatus for washing milk of magnesia, comprising a cylindrical container having an inverted cone-shaped bottom, a water inlet pipe extending through the apex of and opening into said bottom in proximity to the apex, a spreader supported by the bottom and arranged over and in proximity to the inner end of said pipe, and a compressed air pipe discharging on the upper face of the sprender.

1,508,178. VEHICLE. SAMUEL GAGE, Holloway, London, England, assignor to The London General Omnibus Company Limited, Broadway, Westminster, England. Filed Dec. 27, 1920. Serial No. 433,093. 1 Claim. (Cl. 296—28.)



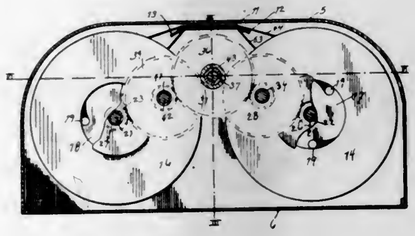
A vehicle body comprising a plurality of transversely arranged reinforcing hoops, said hoops being rigidly secured to said body so as to be incapable of independent movement, each of said hoops completely encircling said body and comprising an endless web of metal interposed between covering strips of wood and lying flatwise in the plane of the hoop, said web being composed of top and bottom and side members and corner gussets all riveted together to form a rigid member, and lamp-supporting means carried by the upper gussets of each hoop, substantially as described.

1,508,179. MEANS FOR IMPREGNATING COILS. ROBERT W. GOFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1922. Serial No. 586,874. 5 Claims. (Cl. 91—46.)



1. Means for impregnating coils mounted on a magnet frame comprising enclosing members placed over the protruding portions of said coils into engagement with said magnet frame on opposite sides thereof so as to form with said magnet frame a chamber for said coils, and means for supplying the impregnated material to said chamber under pressure.

1,508,180. LIGHT SHADE. ROBERT GOODEN, Oelwein, Iowa. Filed Oct. 27, 1923. Serial No. 671,160. 4 Claims. (Cl. 240—110.)



1. In a lamp shade, a split collar adapted to be positioned about a lamp socket, means carried by said collar for tightening the same about the lamp socket, a light deflecting element having means for connection with said clamp, and a ball bearing coupling said clamp and said connecting means.

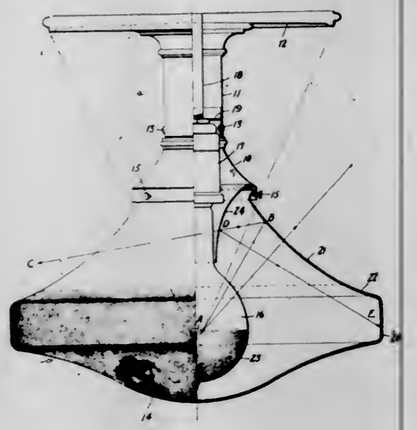
1,508,181. SAND RIDDLE. JUDGE GREEN, Chattanooga, Tenn. Filed Aug. 2, 1923. Serial No. 655,295. 1 Claim. (Cl. 83—51.)

A riddle comprising a band having terminal offstanding portions, means coacting with the offstanding terminal portions of the band whereby to contract the latter, a hoop within the band, a screen having an edge portion bent about the hoop and adapted to be clamped between the latter and the band, means on the interior of the band to support the hoop and screen above the base of the band, a strap covering the offstanding terminal portions of the band and means securing said strap, band, hoop and screen together.

1,508,182. REELING AND UNREELING DEVICE. EDWIN P. GUTHRIE, San Francisco, Calif. Filed Apr. 7, 1923. Serial No. 630,573. 3 Claims. (Cl. 40—95.)

1. In a device of the character described, a casing, a plurality of spools mounted within said casing, two of said spools being adapted to reel and unreel a web therebetween, two other of said spools being adapted to reel and unreel a web therebetween, said first mentioned web being of greater width than said second mentioned web, means for rotating said webs simultaneously, one of said webs traveling at a high rate of speed, the other of said webs traveling at a lower rate of speed, and intermittently, and means for imparting slow movement to said high speed web after said high speed web has been brought to a point of rest.

1,508,183. LIFT-TRUCK PLATFORM. HOWARD T. HALLOWELL, Jenkintown, Pa. Filed Sept. 15, 1921. Serial No. 500,988. 7 Claims. (Cl. 248—41.)

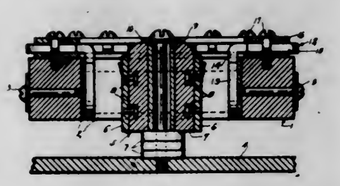


1. The combination in a lift truck platform of two substantially parallel angle sections, a transverse top section connecting said angle sections and constituting the load support, socket members secured to the said angle sections, wooden blocks constituting feet adapted for attachment within said sockets, and transverse bolts passing through said blocks and socket members for detachably securing the blocks within the sockets.

1,508,184. LIGHTING FIXTURE. WARD HARRISON, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Jan. 8, 1921. Serial No. 435,924. 1 Claim. (Cl. 240—78.)

In a lighting unit, the combination with an incandescent lamp and a support therefor, of a globe totally inclosing said lamp and comprising a substantially disc-shaped lower non-transparent bowl portion and a substantially conical upper transparent neck portion, and a deflecting shield interposed between the neck portions of

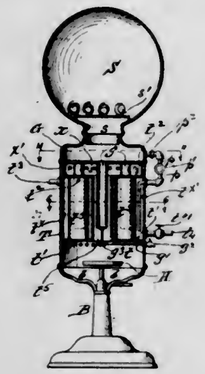
said lamp and of said globe, said parts being so proportioned and arranged that substantially all light rays re-



flected from one side of the neck portion of the globe toward the opposite side will encounter said shield and be deflected into the bowl portion of said globe.

1,508,185. COMPOSITION OF MATTER COMPRISING A LIQUEFIED GAS. PIERRE E. HAYNES, Buffalo, N. Y., assignor to The Linde Air Products Company, a Corporation of Ohio. Filed July 23, 1920. Serial No. 398,491. 21 Claims. (Cl. 52—1.)

1. An explosive mixture comprising an oxidizing agent, and a combustible liquid boiling below the centigrade zero.



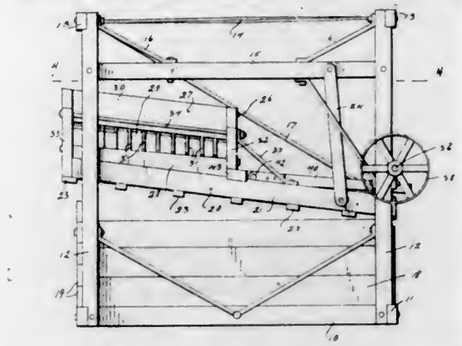
1,508,186. TILE-DIE MOUTHPIECE. HARRY T. HEALEY, Arnold, Pa. Filed Sept. 13, 1923. Serial No. 662,516. 10 Claims. (Cl. 25—17.)

1. In a tile die mouth piece, a frame, a core positioned centrally of the frame, corrugating members each including two heads disposed at right angles to each other, the inner heads of said members extending across the inner faces of the walls of the frame, and means for releasably securing the outer heads of the corrugating members to the frame.

1,508,187. STERILIZING AND WATER-HEATING DEVICE. EDWARD KRONMAN, New York, N. Y. Filed Apr. 4, 1923. Serial No. 629,804. 3 Claims. (Cl. 167—3.)

1. In sterilizing and water heating apparatus of the character designated, the combination of a water tank, means thereunder for heating same, said tank being formed with a flue for the passage of the hot air, etc., and a steam generator superposed on said water tank and formed with a drop tube extending into said flue in the water tank, said drop tube being closed except at the top and the latter opening into said generator, to-

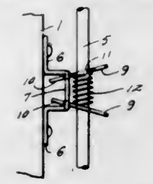
gether with a sterilizing chamber mounted on said steam generator, substantially in the manner and for the purpose described.



1,508,188. SAFETY DEVICE FOR SWITCH ENGINES. WILLIAM J. LAFFEY, Memphis, Tenn. Filed Mar. 8, 1922. Serial No. 542,040. 1 Claim. (Cl. 240—7.)

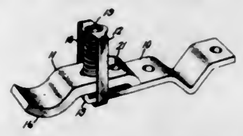
In a switch engine having a bumper and a foot board, a pair of signal boxes mounted beneath the bumper, each of said signal boxes containing a lamp and having an aperture for transmitting light in the direction of movement of the engine whereby the outer extremities of the bumper are indicated, each box also having an aperture beneath the lamp for transmitting light to the foot board whereby the outer extremities of the foot board are indicated, substantially as set forth.

1,508,189. GRAVEL SHAKER. FRANK LAUSCHER, Powers, Mich. Filed Nov. 26, 1923. Serial No. 677,034. 2 Claims. (Cl. 83—56.)



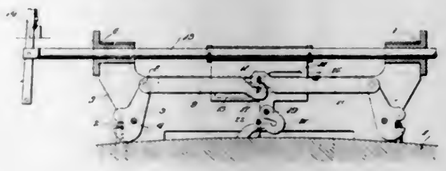
1. A shaking machine of the character described comprising a stationary supporting frame including corner uprights and cross bars connecting the same, longitudinal bars connecting said uprights, a side wall secured to the uprights at one side, an end wall secured to the uprights at one end to define an accumulation bin, an inclined frame having its bottom slatted and covered with wire screen, hangers pivotally suspended from said longitudinal bars and pivotally connected with said inclined frame for permitting longitudinal oscillatory

movement thereof, a crank shaft journaled on the uprights at one end, a pitman pivotally connected with



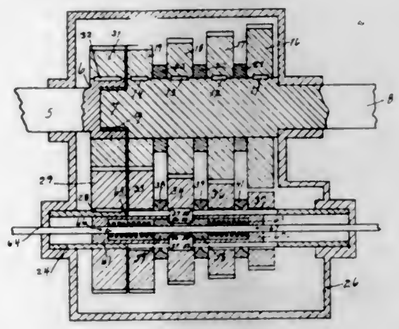
said inclined frame and connected with the crank shaft, and a hopper mounted on the inclined frame and having a grate-like bottom.

1,508,190. SASH HOLDER OR FASTENER. WILEY C. LEDBETTER, Obion, Tenn. Filed Mar. 26, 1921. Serial No. 455,311. 1 Claim. (Cl. 292—306.)



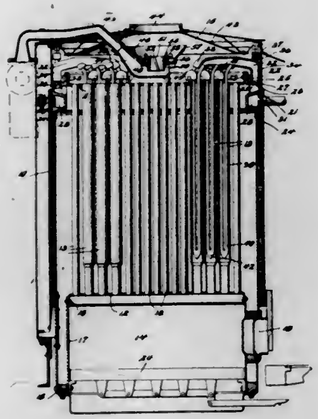
A window fastener comprising a substantially U-shaped bracket having its ends bent at right angles to the arm portions and in opposite directions to each other and adapted to be secured to a frame, said brackets having relatively narrow slots formed at the juncture of the arm portions and the bight portion, elongated finger pieces extending through the slots in the bracket and having lateral projections on their side edges at their inner ends to prevent withdrawal of the finger pieces from the brackets, said finger pieces having openings arranged exterior of the bight portion of the bracket, a rod extending through the openings, and secured to the window sash, a spring on said rod and bearing against said finger pieces and normally maintaining them in rod gripping position, and the edges of said relatively narrow slots forming fulcrums for said finger pieces when the finger pieces are moved toward each other to compress the spring and release the rod.

1,508,191. SWITCH-CONTACT FINGER. GEORGE LEDDICK, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,090. 3 Claims. (Cl. 200—170.)



3. A contact finger for electric switches comprising a support, a contact pivotally mounted with respect to the support, a coiled spring for holding the contact and the support in yielding engagement, and a strap embracing the support, the contact member and the spring for placing the spring under strain, the said strap consisting of a narrow strip of material having a punched in portion midway of its ends which is inserted in one end of the spring for holding the spring in position and having integral kicked up ends which substantially meet on the side of the support which is opposite to the side on which the said contact and spring are carried and which are adapted to enter an aperture on the said opposite side of the support for positioning the strap with respect to the support.

1,508,192. BOMB SHACKLE. EDWIN Z. LESH, Dayton, Ohio. Filed Apr. 11, 1923. Serial No. 631,344. 6 Claims. (Cl. 244—5.)

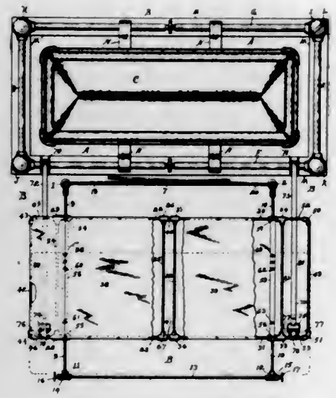


1. In a load release device, a plurality of hooks for supporting a load, a plurality of members connected to said hooks and adapted to be engaged with each other to resist operation of said hooks due to the weight of the load, and means for positively disengaging said members.

1,508,193. GEAR-SHIFTING DEVICE. JAMES H. LORD, Oakland, Calif. Filed Nov. 30, 1923. Serial No. 677,765. 1 Claim. (Cl. 74—59.)

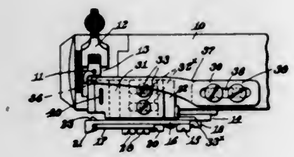
In a device of the character described a propeller shaft, a plurality of gears mounted thereon, a tubular auxiliary shaft positioned parallel to said propeller shaft, a gear keyed to said auxiliary shaft, means for rotating said gear, a plurality of gears freely rotatable on said auxiliary shaft and in constant mesh with the gears keyed to said propeller shaft, spacers positioned between said freely rotatable gears, said spacers having their inner periphery champered, a control rod movable within said auxiliary shaft, cages pinned to said rod and slidable in said tubular auxiliary shaft, a spring pressed cone slidably mounted within each of said cages, keyways formed in each of said freely rotatable gears, and a plurality of keys radially positioned with respect to said control rod and adapted to be projected and retracted to a point on the outside of the periphery of said auxiliary shaft, the inward movement of said keys being controlled by contact with the champered surface of said spacers and the outward movement of said keys being controlled by said spring pressed cones.

1,508,194. BOILER. ROBERT N. MILLER, Altoona, Pa. Original application filed Dec. 22, 1920, Serial No. 432,474. Divided and this application filed Aug. 17, 1921. Serial No. 492,999. 3 Claims. (Cl. 162—4.)



1. In a vertical boiler having lower and upper tube sheets and tubes and flues connecting said sheets, the combination with a top extension from said boiler and a cover plate forming a chamber or smoke box for the gases of combustion with an outlet in the cover plate, of a conical baffle in said box surrounding said outlet and extending downwardly, an exhaust pipe in said chamber having a nozzle directed towards said outlet and having a plurality of depending lugs resting on said upper tube sheet, and an oppositely turned conical baffle secured to said nozzle over said exhaust pipe.

1,508,195. VEHICLE BRAKE MECHANISM. ROY SELDEN SANFORD, Los Angeles, Calif. Filed May 11, 1921. Serial No. 468,524. 4 Claims. (Cl. 188—10.)



1. In a fore-wheel brake for automobiles, the combination of a steering knuckle carrying a front wheel, an axle upon which the knuckle is mounted to rock on a substantial vertical axis, a frame supported by the axle, brake mechanism carried by the knuckle, means for normally holding the brake released, brake operating mechanism carried by the frame for applying the brake at will, and means connected with the brake operating mechanism, including a flexible conduit having one end attached to the knuckle in a position substantially parallel with the axis of rotation of the knuckle and having a pull wire extending from said end and connected with the brake mechanism, so that it extends and exerts its pull in a direction substantially parallel with the axis of rotation of the knuckle, said conduit being also supported on the frame and disposed in a loop in a substantially vertical plane.

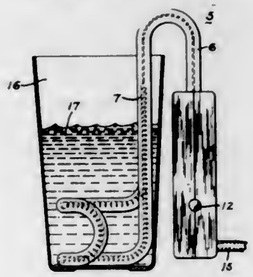
1,508,196. AUTOMATIC GRAVE COVER. ORA E. STEGALL, Richmond, Ind., assignor of one-half to George O. Ballinger, Richmond, Ind. Filed Oct. 11, 1923. Serial No. 667,785. 6 Claims. (Cl. 27—30.)

1. An automatic grave covering comprising in combination with a grave, a casket and a casket lowering device: a horizontal table located at one side of the grave, and means whereby as the casket is lowered into the grave said table will move horizontally and cover the grave opening.

1,508,197. DEVICE FOR SECURING CORDED TAPE TO EDGES OF SHOE UPPERS. ALFRED J. THOMAS, Braintree, Mass. Filed Aug. 20, 1923. Serial No. 658,320. 10 Claims. (Cl. 112—139.)

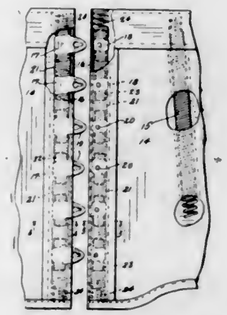
1. In a device of the class described, a support having a transverse slot therein; a guide at one side of the entrance to the slot of said support having a tape-receiving opening therethrough normally in alinement with said slot, adapted to fold an edge of the tape while being fed therethrough into said slot, and a passage for a cord in said guide inclined toward said tape-receiving opening.

1,508,198. SHOE UPPER. ALFRED J. THOMAS, Braintree, Mass. Original application filed Aug. 29, 1923, Serial No. 660,044. Divided and this application filed Feb. 12, 1924. Serial No. 692,423. 5 Claims. (Cl. 36—57.)



1. A shoe upper having secured to the edge of its outer face two thicknesses of the folded edge of a tape with a cord in its fold, said tape having a single thickness

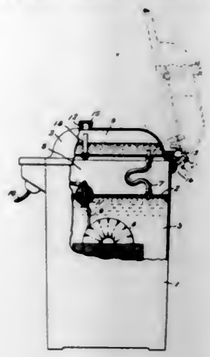
which, with a portion of the upper outside said row of stitches, is turned inwardly onto the inner face of said



upper, and a lining superimposed upon the inner face of the upper and secured thereto and to said tape by another row of stitches.

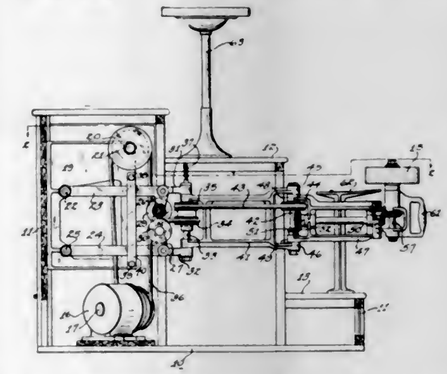
1,508,199. IMMERSION WATER HEATER. FRANK THORNTON, Jr., Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Sept. 23, 1921. Serial No. 502,643. 3 Claims. (Cl. 219—41.)

1. In an electric fluid heater, the combination with a return-bent tubular heating element, of an elongated switch casing clamped over the ends of said element and effective to support said heating element upon a supporting surface with the casing only in contact therewith.



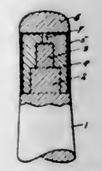
1,508,200. CORSET CLASP STAY. RIVEN TOVE, South Norwalk, Conn. Filed Oct. 14, 1922. Serial No. 594,503. 6 Claims. (Cl. 2—264.)

1. A clasp stay for corsets including spaced securing elements, and flat coils of wire connecting said elements and arranged with their axes extending longitudinally of the stay, said coils being substantially non-compressible longitudinally of the stay but yieldable laterally in all directions.



1,508,201. TRANSFORMER CASING. EDWARD D. TREANOR, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 22, 1922. Serial No. 576,665. 5 Claims. (Cl. 220—85.)

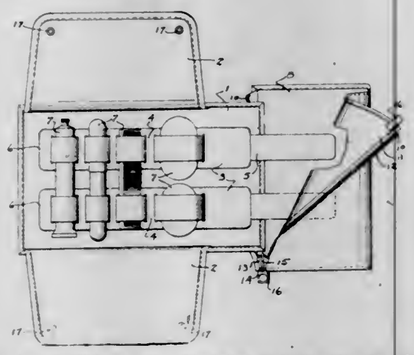
1. A transformer casing including a body portion having a transformer compartment, an expansion compartment spaced above said transformer compartment, a flexible pipe connecting said compartments, and insulating fluid



within said transformer compartment and extending through the pipe into the expansion compartment.

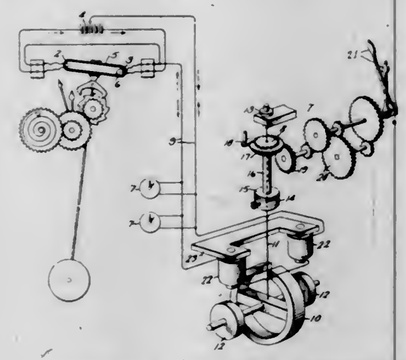
1,508,202. SHOE-POLISHING MACHINE. GEORGE T. TRUNDLE, Jr., Cleveland, Ohio, assignor, by mesne assignments, to The Automatic Electric Shoe Polishing Machine Company, Bryan, Tex., a Corporation of Texas. Filed Apr. 13, 1921. Serial No. 460,965. 16 Claims. (Cl. 15—36.)

4. In a shoe polishing machine the combination with a stand; of a pair of shoe supports, a brush positioned beneath the stand and arranged for universal movement with relation to the supports, a source of power for rotating the brush, the source of power being positioned within the stand, and an operator's handle connected with the brush on the side thereof opposite the support therefor.



1,508,203. CUE TIP. MIKE VARGO, Yukon, Pa., assignor of one-half to Jack F. Yannacci, Yukon, Pa. Filed Feb. 14, 1923. Serial No. 618,948. 1 Claim. (Cl. 46—9.)

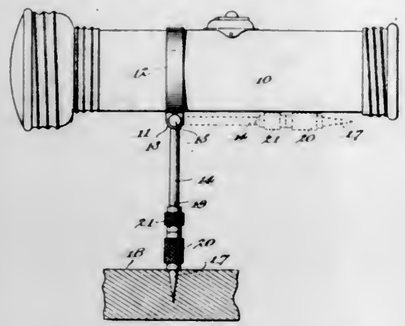
In combination, a cue stick provided at its outer end with two concentric securing elements the inner one of which is of less diameter than the diameter of the stick, the outer one of said elements being of less diameter than



the inner element, a ferrule, an ivory plug secured in said ferrule and fitting snugly about the securing elements, the inner end of the ferrule contacting with the cue stick at the inner end of the inner securing element, and a cue tip secured on the outer end of said plug.

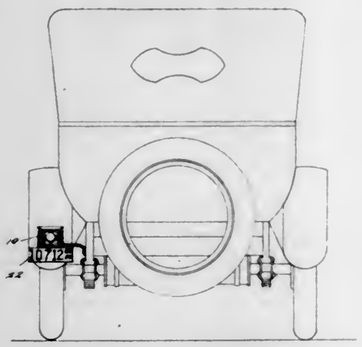
1,508,204. CARRYING CASE. WALLACE D. WALKER, Meadville, Pa. Filed Nov. 21, 1922. Serial No. 602,449. 6 Claims. (Cl. 150—34.)

1. A carrying case comprising a flexible tube slit along one side, an article containing flexible base secured at one end inside said tube with its other end free and capable of being rolled into said tube through the slit, and fastening means for closing said slit with the rolled base therein.



1,508,205. CLOCK MOTOR. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, a Corporation of Maine. Filed Oct. 27, 1922. Serial No. 597,234. 3 Claims. (Cl. 58—26.)

1. In combination a master clock, a secondary clock, a motor for operating said secondary clock comprising, a field magnet having a plurality of cooperating pole pieces, an exciting winding for said magnet, an armature of magnetic material having polar projections equal in number to those of said field magnet rotatively mounted therebetween and resilient means for biasing said armature to a position of maximum reluctance with respect to said field magnets, and an energizing circuit for said field magnets controlled by said master clock.



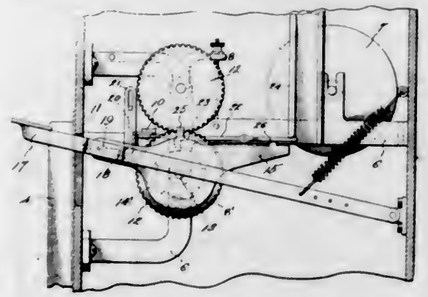
1,508,206. HOLDER FOR FLASHLIGHTS. EDMUND J. WATERS, Asbury Park, N. J. Filed July 28, 1923. Serial No. 654,428. 3 Claims. (Cl. 240—52.)

1. A holder for flash lights comprising a ring, a rod, means for adjusting said ring with relation to said rod, a point formed on the free end of said rod and adapted to be embedded in a base and capable of rotation therein,

threads on said rod above said pointed end and means co-acting with the threads on said rod for concealing said point when the same has been removed from the base.

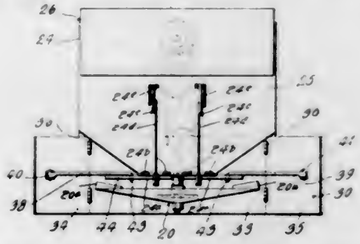
1,508,207. SIGNAL. RANDOLPH T. WINDLE, New York, N. Y. Filed Dec. 1, 1923. Serial No. 678,076. 2 Claims. (Cl. 240—7.1)

1. A signal adapted to be secured to the rear portion of a vehicle comprising a casing having front and rear walls, side walls arranged in converging relation to each other from the rear wall to the front wall, colored glass panels mounted in said side walls, a lamp mounted in said casing, a red bull's eye mounted in the front wall of said casing and adapted to serve as a tail light, a license plate suspended from said casing, and a transparent panel mounted in the bottom wall of said casing for permitting light from said lamp to be reflected on said license plate.



1,508,208. SUPPORTING DEVICE FOR THE HEELS OF FOOTWEAR. MARCEL ACHART, Paris, France. Filed May 25, 1921. Serial No. 472,325. 1 Claim. (Cl. 36—76.)

A supporting device for heels of footwear comprising a metal plate consisting of a shank section and a heel section extending a curvilineal angle, hooks extending from the opposite sides of the free end of said shank section,

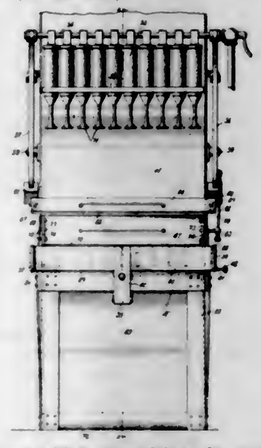


points formed with the free end of said shank section and extending at an angle with respect to said hooks, serrations formed with the opposite end of said shank section, and hooks formed with said heel section substantially as and for the purpose specified.

1,508,209. VENDING MACHINE. JAMES B. ADAMS, Cheat Neck, W. Va. Filed Feb. 2, 1923. Serial No. 616,560. 2 Claims. (Cl. 194—26.)

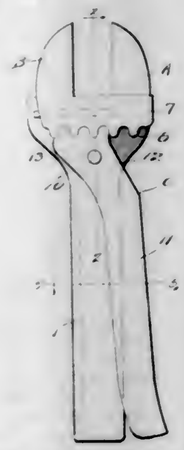
1. A vending machine comprising a carrying reel, feeding rollers for feeding a strip therefrom, intermeshing gears connected with the rollers, a pair of ratchet wheels connected with the shaft of one roller, a rocking member on said shaft, a dog carried thereby engaging one of the ratchet wheels, a pivoted lever having a toothed part engaging the other ratchet wheel, said lever being adapted to be tilted by a coin, a projection on the rocking member for limiting the tilting movement of the lever until said rocking member has been moved to a certain position and a hand lever for rocking said member.

1,508,210. MATERIAL SPREADER. HENRY J. BANGERT, Ferguson, Mo. Filed Nov. 19, 1920, Serial No. 425,177. Renewed Jan. 31, 1924. 2 Claims. (Cl. 275—8.)



1. In a device of the class described, a hopper, a rotary spreading device and mounted in a horizontal plane below the lower end of the hopper, a shield including a plurality of hingedly mounted wing elements, each swinging about a vertical axis, and adjustable bracing devices pivotally connected with said wings, for determining the position of the wings and the width of the stream of the material passing from the spreader.

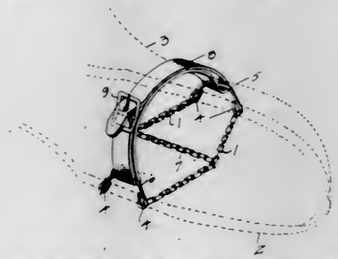
1,508,211. PROCESS OF MAKING RUSTLESS IRON AND SIMILAR ALLOYS. FREDERICK M. BECKET, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Nov. 13, 1922. Serial No. 600,684. 16 Claims. (Cl. 75—1.)



1. The hereindescribed continuous process of preparing rust-resisting chromium alloys comprising reducing an ore of chromium at a high temperature by means of a metallic reducing agent, out of contact with the bulk of the ferrous component of the alloy, thereby producing a metallic product high in chromium and low in carbon; and then diluting the resulting melt by means of an iron-group metal at a substantially lower temperature.

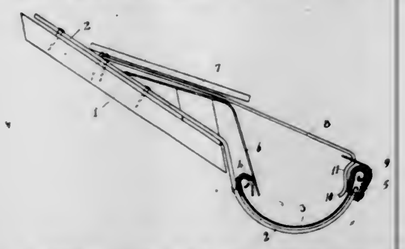
1,508,212. BRICK MACHINE. CLYDE H. BLISS, Atlanta, Ga. Filed Jan. 14, 1924. Serial No. 686,016. 10 Claims. (Cl. 25—41.)

1. A brick machine comprising, in combination, a brick mold, means to supply material thereto, tamping means held normally in inoperative position and manually movable to position to compact material in said mold, and means set into operation by initial movement of said compacting means toward operative position to cause delivery of brick material to said mold.



1,508,213. GRIP WRENCH. JOHN R. BRAZEALE, Ozark, Mo. Filed Feb. 10, 1923. Serial No. 618,350. 1 Claim. (Cl. 81—86.)

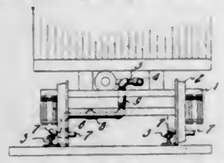
In a wrench of the class described, a fixed jaw, a movable jaw, said fixed jaw consisting of three plates fixed together, the intermediate plate being extended to form a shank, and said shank being extended to form a handle a rib disposed on the shank and extending transversely of the handle; said movable jaw consisting of three plates, the two outer plates being extended to form shanks spaced from each other to receive therebetween the shank of the fixed jaw, one of the shanks of the



movable jaw being provided with a groove for receiving the rib on the shank of the fixed jaw, the edges of the shanks of the movable jaw being provided with teeth; and an operating lever having a pair of spaced extensions pivoted to the handle and terminating in teeth for engagement with the teeth of the shanks of the movable jaw all in the manner and for the purpose specified.

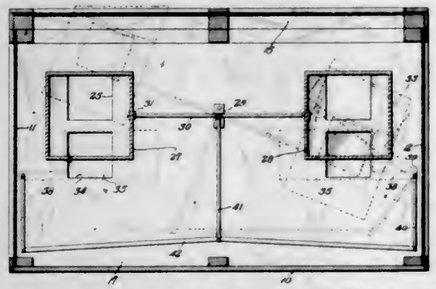
1,508,214. ANTISLIPPING DEVICE. WILSON S. BROWN, Liberty, Wash. Filed Aug. 20, 1920. Serial No. 404,718. 1 Claim. (Cl. 36—63.)

An anti-slipping device for shoes comprising sections of chain adapted to be arranged parallel and extend transversely of a shoe and under the sole thereof, bars having their ends bent to form hooks providing for adjustable connection with the links of the chain sections to maintain the same taut and to adapt them for use on shoes of different width without drawing the chain sections against the uppers of the shoes, means connected to said bars and adapted to extend over the shoe to secure the anti-skid device thereto, and a chain extending transversely of and connected at its ends to said chain sections and of greater length than the distance between the chain sections when they are taut, whereby the chain last mentioned will be slack when in use and operating as an additional anti-slipping device as well as to permit of relative movement of the first mentioned chain sections.



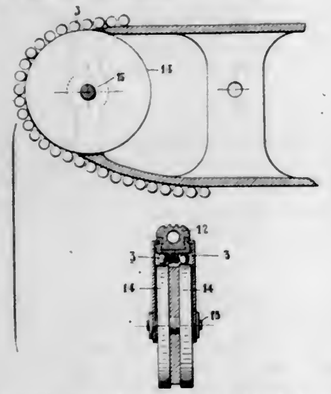
1,508,215. SUPPORT DEVICE FOR SPOUTING. OTTO JOHANNESEN BYDALL, Christiania, Norway. Filed Nov. 6, 1922. Serial No. 599,392. 2 Claims. (Cl. 108—20.)

1. A device of the character described including a trough, a link bent over the outer edge of the trough and having one end portion apertured and extending slightly into the trough and a retaining strap having one end adapted to be secured to a roof and the opposite end bent angularly and engaged through the apertured link and formed between its point of engagement with the link and its free terminal with a retaining hump, substantially as and for the purposes set forth.



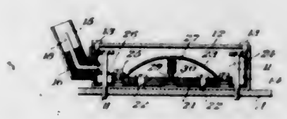
1,508,216. BRAKE. GERALD K. CAMPBELL, Parks, Tex. Filed Feb. 17, 1923. Serial No. 619,747. 1 Claim. (Cl. 246—172.)

In combination with a railroad car, a branch line connected with the brake line thereof, a flexible part in the branch line, a T-coupling connected with the vertical end of the branch line and pipes threaded in the coupling



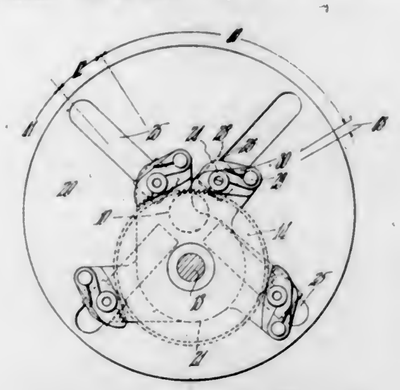
and having their outer ends closed, said pipes being adapted to strike a rail and be broken off if the wheels should leave the rail.

1,508,217. ANIMAL TRAP. JUSTIN E. CHAUVIN, Montegut, La. Filed Aug. 20, 1923. Serial No. 658,392. 6 Claims. (Cl. 43—68.)



1. A trap comprising a pair of pivotally mounted boxes balancing one another and adapted to swing down in opposite directions on the entrance thereto of an animal, a bait chamber normally communicating with the boxes, a cage placed at a lower level for communicating with the boxes on the lowering thereof, a door mounted in conjunction with each box and adapted to normally shut off the communication between the box and the cage but adapted to lift when the cage lowers and shut off the communication between the cage and the bait chamber and means connected between the cage and the doors for lifting one door only when its respective cage is lowered without affecting the movement of the other door.

1,508,218. VEHICLE RUNNER. LUCIEN CONSTANT JULES LOUIS CHEVREAU, Levallois-Perret, France, assignor to La Société Chevreau et Régnier Frères Siège Social, Courbevoie, France. Filed Nov. 28, 1922. Serial No. 603,859. 2 Claims. (Cl. 305—4.)



1. A runner, comprising a body having a peripheral track; an endless belt movably encircling said track and consisting of a series of tread links each provided on its inner face with a pair of inwardly-projecting, spaced lugs, and fastening links having their opposite ends pivotally secured in the spaces between the lugs on adjacent tread links to connect the latter together; two series of anti-friction bearings interposed between said track and the inner faces of the tread links and arranged at opposite sides of said lugs; and means attached to the runner body for preventing displacement of said bearings.

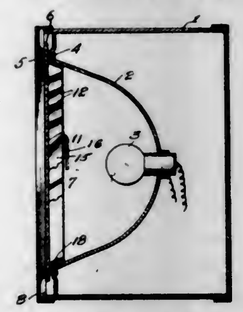
1,508,219. SAFETY DEVICE FOR IRONS. MARK LANE FRANKLIN, Owen Sound, Ontario, Canada. Filed Sept. 8, 1923. Serial No. 661,667. 3 Claims. (Cl. 200—136.)

2. A device of the character described comprising a metallic casing provided with means for attachment upon an electric iron, a base of insulating material within the casing, a bowed strip having its ends anchored upon the base, terminal posts, a conducting strip connected with one post and one end of said strip, a contact located within a recess in the base and connected with the other post, an upstanding threaded post connected with said contact, and a threaded socketed contact on said post normally engaged by said bowed strip.

1,508,220. VARIABLE-SPEED TRANSMISSION. ELLSWORTH FREY, Springfield, Mass., assignor to Frey Variable Speed Gear Company, a Corporation of Massachusetts. Filed Sept. 14, 1922. Serial No. 588,269. 9 Claims. (Cl. 74—54.)

1. A variable speed transmission, comprising, driving and driven elements arranged face to face in adjacent relation, means to move said elements the one relatively to the other in a plane normal to their axes to vary the distance between such axes, a series of carriers between the elements and each mounted for turning movement about the axis of one thereof, gripping means mounted on each carrier and adapted to periodically connect with the driven element, a series of substantially radial slots one for each carrier provided in the driving element, a member slidably mounted in each slot, means connecting each member to its respective carrier so as to permit relative angular movement therebetween, and mechanism to cause said gripping means to be successively connected to and subsequently disconnected from the driven element.

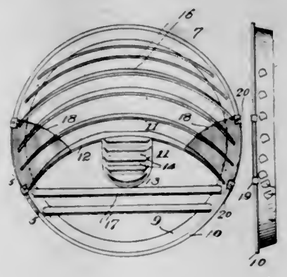
1,508,221. CARPET CUSHION. ALFRED HUGH GALLAGHER, Chicago, Ill., assignor to Tanners Products Company, Chicago, Ill., a Corporation of Delaware. Filed June 26, 1922. Serial No. 571,009. 11 Claims. (Cl. 19—147.)



6. A carpet cushion comprising a loosely felted body consisting principally of animal hair, and an intermediate reinforcing sheet of fabric embedded therein.

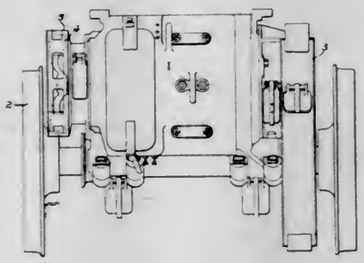
1,508,222. COLLAR BUTTON. WILLIAM H. GODWIN, Sumner, Wash. Filed May 4, 1921. Serial No. 466,678. 1 Claim. (Cl. 24—101.)

A collar button consisting of a blank of sheet material having a substantially flat body portion and an integral tongue rising from the plane of the body portion substantially midway of the length thereof and deflected in the form of a bill which lies in substantial parallelism with the plane of the body portion, the tongue being of a width less than the body portion and being separated at its side edges therefrom by slits forming side ears which extend in the plane of the body portion and in the opposite direction from the tongue, the ears being of a length approximating that portion of the body which is overhung by the tongue to prevent tilting of the button when in use, the said bill being concaved longitudinally and having its free end portion projecting beyond the opposite transverse edge of the body.



1,508,223. HEADLIGHT DEFLECTOR DEVICE. CHARLES A. HARTMANN, San Antonio, Tex., assignor to Hartmann Auto Safety Light Corporation, a Corporation of New Jersey. Filed June 29, 1923. Serial No. 648,507. 1 Claim. (Cl. 240—48.4.)

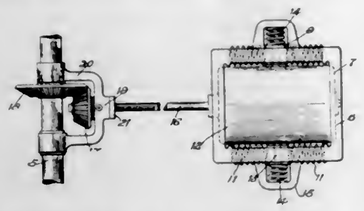
In a device of the class described, an open body, light deflecting strips extending transversely in said body for directing light downwardly and outwardly through the body, said strips being spaced vertically in said body



with one strip positioned a greater distance from the strip below it than it is from the strip above it, and a light concealing element extending downwardly from the intermediate portion of the last-mentioned strip across the relatively wide space and adapted to be positioned in front of a source of light when said body is positioned in operative relation to a lamp body.

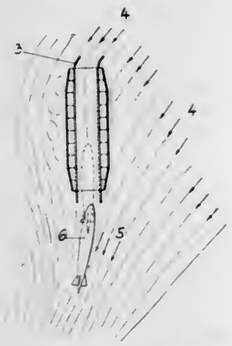
1,508,224. HEADLIGHT DEFLECTOR DEVICE. CHARLES A. HARTMANN, San Antonio, Tex., assignor to Hartmann Auto Safety Light Corporation, a Corporation of New Jersey. Filed Dec. 29, 1923. Serial No. 683,361. 7 Claims. (Cl. 240—484.)

1. In a headlight, the combination of a casing provided with a lamp, of a shutter device carried by said casing in front of said lamp, transparent colored means engaging opposite portions of said shutter device, and fastening means at the edge of said shutter device and holding the transparent colored means against the same.



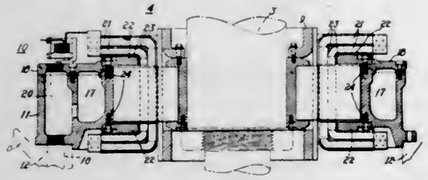
1,508,225. MEANS FOR VENTILATING RAILWAY MOTORS. DAVID C. HERSHBERGER, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 20, 1923. Serial No. 652,687. 16 Claims. (Cl. 105—59.)

1. A bearing housing comprising a cylindrical bearing member, a flange portion on the rear end of said bearing member and a substantially cylindrical fan housing extending in front of said bearing member.



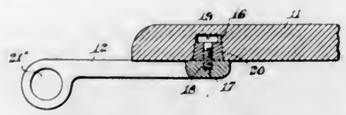
1,508,226. MOTOR SUSPENSION STRUCTURE. GEORGE H. F. HOLY, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 13, 1919. Serial No. 337,848. 6 Claims. (Cl. 105—118.)

1. In combination, a car body mounted on a pair of wheels, a motor-supporting structure fixedly mounted on said car body; journal members mounted on and movable both longitudinally and transversely of the



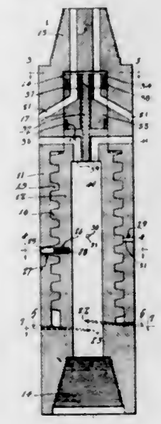
said supporting structure, and a motor operatively connected to said wheels and pivotally mounted on said journal members.

1,508,227. AIRCRAFT SHED. PAUL JARAY, Friedrichshafen, Germany, assignor to the Firm: Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed Oct. 4, 1921. Serial No. 505,321. 7 Claims. (Cl. 189—15.)



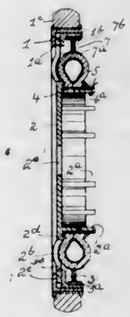
1. A shed for aircraft comprising a tunnel-like structure; openings at both ends of said structure; doors for closing said openings; the doors at one end adapted to force air into the structure in case of the wind blowing at an angle to its axis; the doors at the other end allowing axial escape to the air current flowing through the shed.

1,508,228. SYSTEM OF COOLING DYNAMO-ELECTRIC MACHINES. THOMAS P. KIRKPATRICK, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 17, 1920. Serial No. 381,953. 3 Claims. (Cl. 172—36.



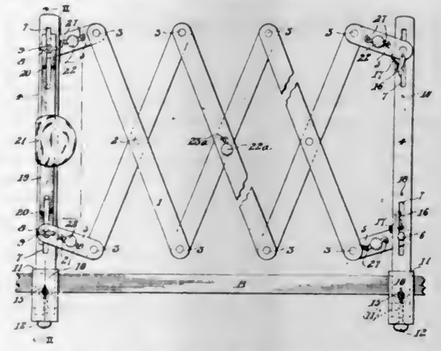
1. In a dynamo-electric machine, the combination with a stator frame having a chamber therein and provided with a winding having end turns provided with insulating means thereon, of end plates of non-magnetic material associated in heat-conducting relation with said frame, said end turns being bent into close proximity to said plates with said insulating means contacting with both said turns and said plates, and means for conducting a cooling fluid through said chamber.

1,508,229. HINGE CONNECTION. FREELAND D. LESLIE, Milton, Mass. Filed Nov. 1, 1923. Serial No. 672,182. 7 Claims. (Cl. 4—236.)



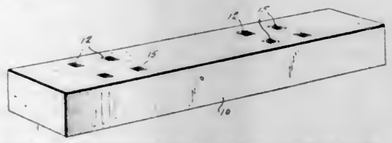
1. In a device of the class described, a member having a recess in one face thereof; a hinge member; a screw secured therein and having a head spaced therefrom; and a tubular member surrounding the shank of said screw between its head and said hinge member adapted to be permanently positioned in said recess.

1,508,230. CIRCULATING TOOL JOINT FOR CORE BARRELS AND THE LIKE. MILES J. LEWIS, Long Beach, Calif. Filed Nov. 27, 1922. Serial No. 603,621. 3 Claims. (Cl. 255—72.)



2. The combination with a core barrel, of means to admit a flushing fluid to the upper end of the core barrel while said barrel is being lowered into contact with the formation at the bottom of the well hole, said means being operable by resistance of the core barrel to rotation to shut off the flow of fluid to the core barrel.

1,508,231. SHOCK-ABSORBING WHEEL FOR VEHICLES. AUSTIN A. MENDENHALL, Duluth, Minn. Filed Oct. 11, 1921. Serial No. 507,075. 6 Claims. (Cl. 152—35.)

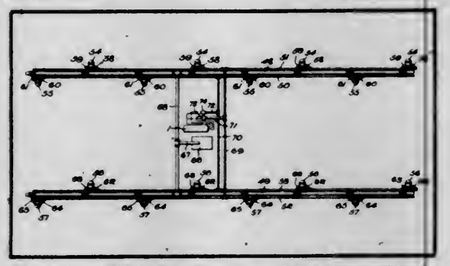


2. In a wheel, the combination of a hub member having a resilient tire mounted thereon, of a concentric felloe spaced from said tire, a plurality of lugs attached to said felloe, said lugs having sockets formed therein, spokes interposed between said tire and said lugs, said spokes being adapted to rock in said sockets and to rest upon the crest of said tire, said lugs being adapted to loosely engage said hub member to limit the rotary movement of said hub member and of said felloe with respect to each other.

1,508,232. REPAIRMAN'S CREEPER. FRANK W. MILOSY, Malba, Long Island, N. Y. Filed Nov. 29, 1922. Serial No. 603,958. 2 Claims. (Cl. 280—61.5.)

1. In a rest of the type described, a lazy tong construction, end bars connected thereto, latch devices carried by said construction, casters detachably mounted on the end bars and lazy tong construction and retained in operative position by the latch devices, said casters including annularly grooved pins projecting upwardly therefrom to be engaged by the latch devices.

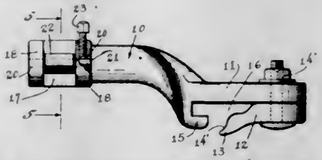
1,508,233. SPIKE SOCKET FOR RAILWAY TIES. CHURCHILL B. MOODY, Minneapolis, Minn. Filed Mar. 22, 1924. Serial No. 701,140. 3 Claims. (Cl. 238—371.)



3. The combination with a cement railroad tie, of a socket embedded therein, the socket consisting of corrugated sheet metal, and a plug of material adapted to receive a spike filling the interior of the socket.

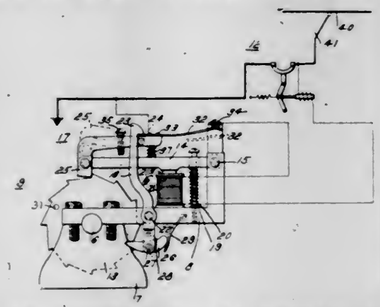
1,508,234. METHOD OF AND APPARATUS FOR EFFECTING HUMIDIFICATION. RALPH D. MORRISON, Mattapan, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed June 22, 1917. Serial No. 176,450. 24 Claims. (Cl. 261—39.)

1. A humidifying system comprising in combination means for supplying or distributing air or like fluid under pressure, means for supplying water, a plurality of water discharge atomizing devices in communication with both of said supplying devices and at which water is adapted to be discharged into the atmosphere through the action of said air, means acting automatically to effect discharge from a part of said devices, and also automatically to increase the total discharge.



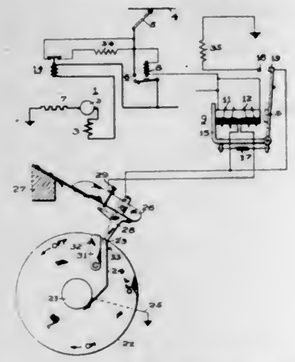
7. A humidifying system for a room or other enclosed space comprising in combination, means for supplying or distributing air or like fluid under pressure, means for supplying water, a series of spraying nozzles with which the air and water both communicate, electrically controlled valves governing the flow of the air at said nozzles, and means whereby the existence of a predetermined degree of humidification in the room effects the substan-

tially instantaneous and full opening of one of said valves, and the subsequent opening of another of said valves.



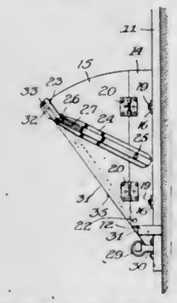
24. A humidifying system comprising in combination, means for supplying or distributing air or like fluid under pressure, means for supplying water, and a plurality of water discharge atomizing devices having provision for the formation by capillarity of a water film, said devices being in communication with both of said supplying means and at which said film is ruptured and discharged in finely atomized condition into the atmosphere, through the action of said air, and means governed by the humidity to effect discharge of water and air or like fluid from a part of said devices and also automatically to increase the total discharge from among said devices if insufficient humidification is effected by the said first discharge.

1,508,235. DRIVING-ROD ARM. ELZIE V. MOSLEY, Caroleen, N. C., assignor to Newton J. James, Caroleen, N. C. Filed Jan. 16, 1924. Serial No. 686,558. 5 Claims. (Cl. 139—190.)



5. In a loom, the combination with a driving rod and a lay sword; of an arm adjustably and removably secured at one end to said sword, a pair of spaced integral ears formed on the opposite end of said arm, a pintle removably secured to said ears, a bushing rotatably mounted on said pintle, and a collar carried on one end of said rod encircling the aforesaid bushing between said ears.

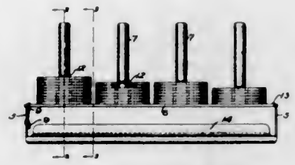
1,508,236. CONTROL APPARATUS AND SYSTEM. HENRY D. MURDOCK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1921. Serial No. 446,367. 14 Claims. (Cl. 172—179.)



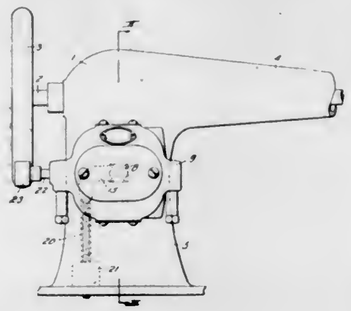
4. The combination with an electrically operated switching device having an actuating coil, of means comprising a contact member for governing the energization of said coil, magnetic means for maintaining said contact member in its closed position for energizing said coil, and a movable member for actuating said governing means to deenergize said coil.

1,508,237. CONTROL APPARATUS AND SYSTEM. HENRY D. MURDOCK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1921. Serial No. 505,995. 11 Claims. (Cl. 172—179.)

5. In a control system, the combination with a translating device and a switch having an actuating coil for governing the energization of said device, of a relay device having a plurality of actuating coils for governing the energization of the coil of said switch, and means comprising a controller for selectively energizing the coils of said relay device.



1,508,238. WINDOW VENTILATOR. DANIEL J. MURNANE, Chicago Heights, Ill. Filed Jan. 5, 1921. Serial No. 435,134. 7 Claims. (Cl. 98—31.)

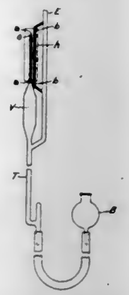


1. The combination with a window frame, of members located at opposite sides of the window opening therein adjacent the lower portion of the latter, said members being pivotally supported to adapt them to be swung outwardly and backwardly in a substantially horizontal plane toward the window frame, an air-deflecting member extending across the space between said pivoted members at the inner edges thereof, and means for holding said first-referred-to members in a position in which they extend substantially at a right angle to the plane of the window opening in all of the different adjustments of said air-deflecting member relative thereto.

1,508,239. CHIP HOLDER. HERBERT J. O'BRIEN, San Francisco, Calif., assignor to Lung Chan Co., Inc., San Francisco, Calif., a Corporation of California. Filed Jan. 30, 1924. Serial No. 689,509. 5 Claims. (Cl. 46—55.)

2. Chip holder comprising a base, side walls extending upwardly from said base, a holder comprising a plate and a plurality of pegs secured thereto, said holder being pivoted to the side walls and being movable to simultaneously move all of the pegs from horizontal to vertical position and vice versa, each peg being adapted to hold a plurality of chips and means on the base for holding the chips on the pegs when the pegs are in horizontal position.

1,508,240. MOUNTING FOR SEWING-MACHINE MOTORS. LEWIS C. PACKER, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 19, 1921. Serial No. 446,365. 7 Claims. (Cl. 74—26.)

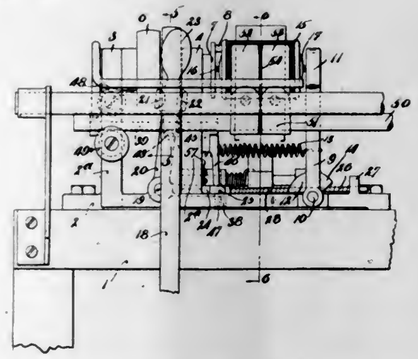


1. In combination, a sewing machine comprising a head having a hand wheel mounted thereon, an electric motor provided with a driving pinion disposed in engagement with said hand wheel, means for mounting said motor on said head comprising a stub shaft projecting into said head, said shaft being pivotally mounted in said head.

1,508,241. METAL AND ITS MANUFACTURE. ALADAR PACZ, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Original application filed Feb. 20, 1917, Serial No. 149,915. Divided and this application filed Feb. 15, 1922. Serial No. 536,815. 3 Claims. (Cl. 176—132.)

1. The method of producing substantially non-sagging and non-offsetting tungsten filaments which includes producing an intimate mixture of finely divided tungsten and a compound or compounds containing oxide of tantalum or niobium or both and thereafter sintering a compacted body of said mixture.

1,508,242. VACUUM GAUGE. ARTHUR PARTZSCH, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 24, 1923. Serial No. 627,488. 3 Claims. (Cl. 73—31.)

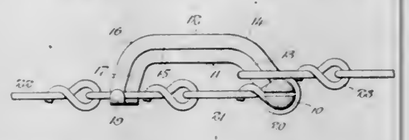


1. A vacuum gauge comprising an upright metal conduit provided with an opening at an intermediate point therein, a closed glass vessel communicating with and extending above said opening, said glass vessel comprising a volume bulb, a capillary measuring tube extending upwardly from the bulb and a capillary comparing tube communicating with said vessel below said volume bulb and extending above said capillary measuring tube.

1,508,243. TREATMENT OF REFINED COPPER FROM COPPER OXIDE. WALTER GEORGE PERKINS and WALTER HENRY BEASLEY, London, England, assignors to Metals Production Company of North America, Incorporated, New York, N. Y. Filed Mar. 27, 1923. Serial No. 628,033. 5 Claims. (Cl. 75—62.)

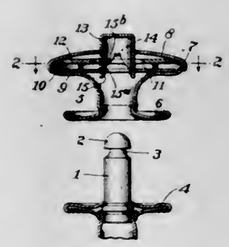
1. In a process for the treatment of finely divided oxidized copper-containing material, the steps comprising first heating the material in a reducing atmosphere so as to produce subdivided metallic copper, then cooling the copper in a reducing atmosphere and subsequently minimizing the exposed surface by pressing the material into blocks.

1,508,244. SPINDLE DRIVE FOR WINDING MACHINES. ANKER PETERSEN, Winthrop, Mass. Filed Sept. 8, 1923. Serial No. 661,714. 18 Claims. (Cl. 242—36.)



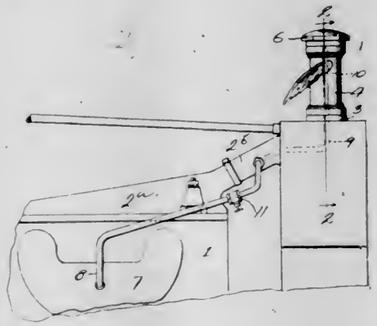
1. Winding mechanism comprising a rotary spindle, spindle driving means including a power transmission element movable to and from operative position, a toggle device controlling the position of the transmission element, and detector means determining the operation of the toggle device.

1,508,245. LATCH DEVICE. EMIL PETRACEK, Omaha, Nebr. Filed Mar. 3, 1924. Serial No. 696,630. 2 Claims. (Cl. 24—69.)



1. A latch device for securing chain ends together formed from a single bar of material bent upon itself to provide a pair of contiguous arms and an eye at one end of said arms adapted to have a terminal link of a chain

secured thereto, and a hook on the free end of each of said arms engageable with a link of a chain to lock the latch in engagement therewith, one of said arms being

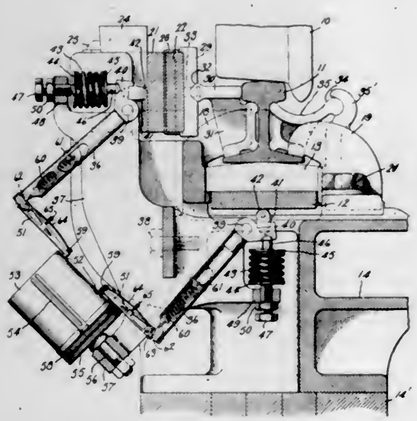


longer than the other whereby their hooked ends may be moved across one another to permit of their engagement with and disengagement from a chain.

1,508,246. SEPARABLE BUTTON. JOHN V. PILCHER and JOHN F. BABBITT, Louisville, Ky.; said John F. Babbitt assignor to said Pilcher. Filed Nov. 23, 1923. Serial No. 676,574. 11 Claims. (Cl. 24—110.)

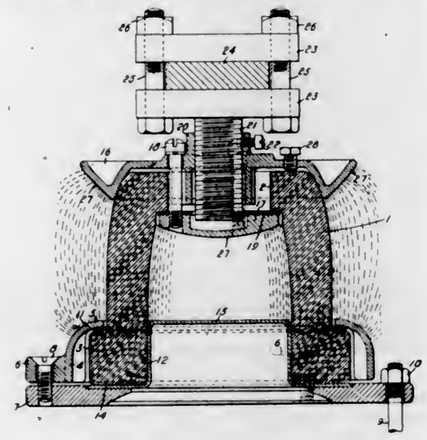
5. A button of the separable type, comprising a stud member, a socket member having means therein to grip the stud member, and means to release the stud from the gripping means, including a push element having a curved surface intermediate its ends.

1,508,247. VOLATILIZING DEVICE. FRANK POLASKI, Granite, Okla. Filed July 24, 1923. Serial No. 653,527. 1 Claim. (Cl. 123—25.)



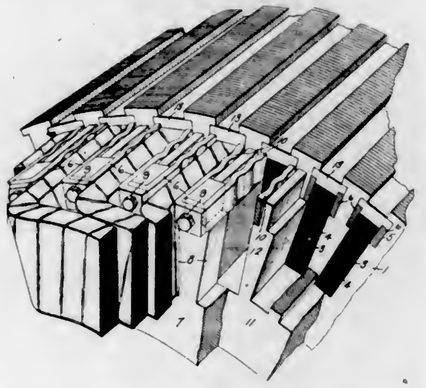
In combination with an internal combustion engine cooling radiator together with the upper flexible water connection thereof and the engine intake manifold, a valve controlled pipe line connecting the upper vapor space of said radiator and said intake manifold, the said pipe extending from said radiator vapor space through the upper portion of the radiator and through said flexible water connection, to a point adjacent the water jacket of the engine, thence through said flexible connection to the intake manifold.

1,508,248. RING SPINNING AND DOUBLING FRAME. THOMAS POTTER, Jr., FRED FIELDING, JAMES THOMAS FIELDING, and THOMAS POTTER, Oldham, England. Filed July 5, 1923. Serial No. 649,602. 7 Claims. (Cl. 118—50.)



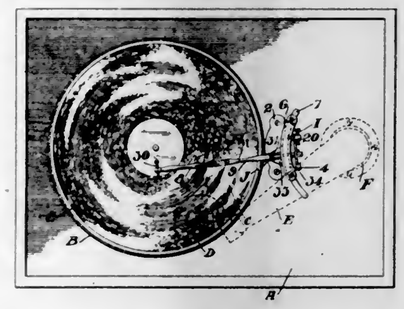
1. In a ring spinning and doubling frame, the combination of draw rollers driven at a constant speed; ring travellers of the usual bow construction; control rings lifting and falling with the said rail controlling the yarn and reducing friction between the ring and traveller; a ring rail lifting cam the centre of which is set back and which operates to lift the said rail at an increasing speed and lower the said rail at a higher speed which diminishes after the rail has fallen a short distance but remains at all times higher than the speed of lifting; and inclined spinning spindles mounted on the frame; with a guide member mounted behind the spindles on the ring rail and arranged higher than the control rings to prevent the yarn coils from leaving the tops of the spindles.

1,508,249. TEST TIE. WILLIAM B. POTTER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 24, 1920. Serial No. 391,461. 9 Claims. (Cl. 265—2.)



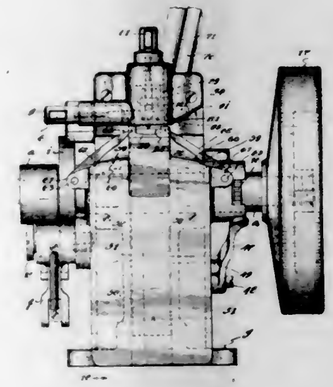
1. In an instrument for measuring the forces upon rails, a resilient support for the rail arranged to be deflected in response to loads on the rail, a resilient member arranged to be deflected in response to sidewise forces on the rail, a pair of indicating means operated respectively by the deflections of said resilient members, and means for simultaneously recording the deflections of said indicating means on a common record sheet.

1,508,250. INSULATOR. KARL C. RANDALL, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1918. Serial No. 266,720. 6 Claims. (Cl. 173—318.)



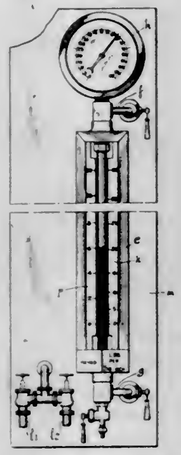
1. An insulator comprising a hollow insulating member having a perimetral transverse end flange, a metal terminal member having a portion disposed inside the insulating member and a metal terminal member disposed outside the insulating member, said terminal member being constructed to co-operatively clamp said flange between them and to co-operatively distribute the electrostatic field of the insulator.

1,508,251. DYNAMO-ELECTRIC MACHINE. HENRY G. REIST and EARLE S. HENNINGSEN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Oct. 30, 1922. Serial No. 597,719. 9 Claims. (Cl. 171—206.)



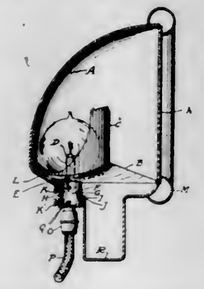
1. In a dynamo electric machine, a core member having slots therein, a plurality of windings having conductors in each of said slots, each of said slots having a reduced section throughout a portion of its depth, one of said windings comprising conductors disposed in the reduced section of said slots, and the other of said windings comprising conductors disposed only in the other portion of the slots and at the sides of the first mentioned conductors, said conductors in the reduced section of said slots being removable without interference with the conductors of said other windings.

1,508,252. AUTOMATIC STOP FOR PHONOGRAPHS. PAUL RICHTER, Daly City, Calif. Filed Mar. 26, 1924. Serial No. 702,017. 11 Claims. (Cl. 192—122.)



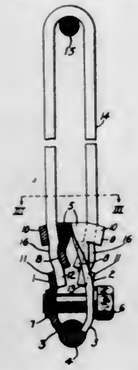
1. The combination with the turntable of a phonograph and a record supported thereby, of a tone arm movable across the face of the record, a manually adjustable member also movable across the face of the record, a brake mechanism engageable with the turntable to stop the same, and means carried by the adjustable member adapted to release the brake mechanism.

1,508,253. BUTTON-ATTACHING MACHINE. FREDERICK N. ROSS, Pontiac, Mich., assignor to Button Attaching Machine Co., Pontiac, Mich., a Corporation of Michigan. Filed Apr. 16, 1923. Serial No. 632,310. 17 Claims. (Cl. 218—4.)



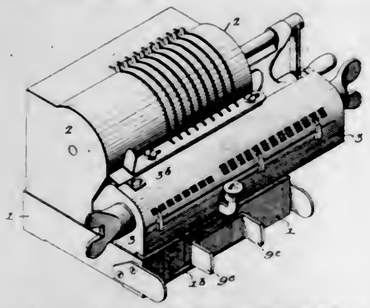
5. In a button attaching machine, the combination of a table for supporting the fabric, a button feeding chute discharging below the table, a ring forming means including a die located above the table, a vertically reciprocating plunger provided with a button receiving seat, and means for operating the plunger so that it receives the button from the chute below the table presents the button at the level of the table in idling position of the machine and raises the button into the ring forming mechanism when the machine begins to operate.

1,508,254. APPARATUS FOR AND METHOD OF CONTROLLING THE WATER LEVEL IN STEAM ACCUMULATORS. JOHANNES KARL RUTHS, Djursholm, Sweden, assignor to Aktiebolaget Vaporackumulator, Stockholm, Sweden, a Corporation. Filed Dec. 4, 1919. Serial No. 342,472. 5 Claims. (Cl. 73—54.)



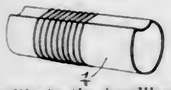
1. In a steam accumulator wherein the pressure varies between wide limits and in which there is a different water level corresponding to each pressure, the combination of a pressure operated gauge adapted to indicate the momentary pressure in the accumulator, a water column showing the water level in the accumulator, a scale for said water column having pressure graduations thereon, said pressure graduations indicating the pressure normally corresponding to each water level, so that by comparing the momentary reading of the pressure operated gauge and the graduation on the scale opposite the momentary water level, the deviation from normal relativity of pressure and water level may be obtained.

1,508,255. AUTOMOBILE LAMP. LEWIS E. SANDSTROM, Rexburg, Idaho, assignor of one-fourth to William H. L. Howard, Washington, D. C. Filed Sept. 2, 1920. Serial No. 407,601. 2 Claims. (Cl. 240—41.)



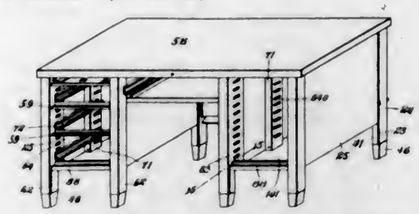
1. In a headlight, a main reflector the upper portion thereof being constructed on a semi-parabolic curve and the lower portion on a horizontal plane below the focal axis of the main reflector, a second curved reflector mounted at the front and upon the horizontal portion of the main reflector, a source of light mounted in a vertical position between the main reflector and the second curved reflector, and means for adjusting the source of light vertically to raise and lower it and on a horizontal axis to arrange the source of light either in a vertical or in an inclined position.

1,508,256. TROLLEY-CONDUCTOR HANGER. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,416. 11 Claims. (Cl. 191—40.)



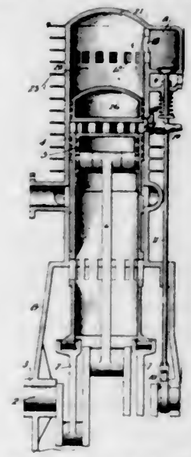
1. A conductor hanger device comprising a hanger rod of substantially uniform cross-sectional area throughout its length and a trolley-conductor clamp having a rod-receiving portion, said rod and said rod-receiving portion being held together by pressing the same after assembly.

1,508,257. CALCULATING MACHINE. OTTO P. SCHUMAN, Philadelphia, Pa., assignor to The Rapid Calculator Company, a Partnership composed of Richard C. Rosenthal and Otto P. Schuman, both of Philadelphia, Pa. Filed Nov. 8, 1919. Serial No. 336,595. 20 Claims. (Cl. 235—63.)



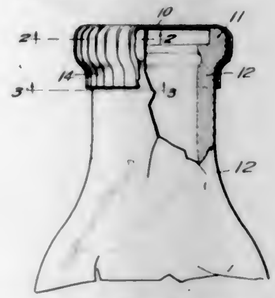
4. In a calculating machine the combination with a movable carriage, of a carriage engaging member normally disengaged from the carriage and having two distinct movements respectively for engaging and shifting the carriage, and an actuating member operatively associated with said engaging member and adapted by simple movement in a single straight line to give the engaging member successively the movements first to engage and then to shift the carriage.

1,508,258. BUNDLING DEVICE. WILLIAM H. SIKMA, Oakglen, Ill. Filed Oct. 12, 1921. Serial No. 507,292. 5 Claims. (Cl. 100—31.)



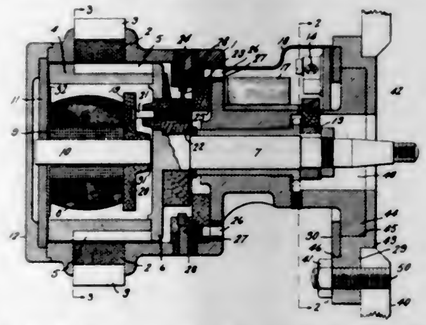
1. A device to facilitate the bundling of stalked vegetables, including a tube having an open end, said tube being mounted upon a support including a block, the cross sectional configuration of which is similar to that of the tube.

1,508,259. METAL DESK. ION A. STAFFORD, Jamestown, N. Y. Filed Oct. 27, 1919. Serial No. 333,705. 10 Claims. (Cl. 45—6.)



1. A metal desk, comprising a desk-top, a hollow supporting leg for the top, longitudinal and transverse panels joined to said leg by interlocking flanges on the vertical edges of said parts, a rectangular cleat secured at its ends to the underside of the desk-top and having its intermediate portion depressed and seated in the top of said leg and bearing at two sides against said flanges to hold them in locked position, and means for securing said cleat in said leg.

1,508,260. INTERNAL-COMBUSTION ENGINE. FRANK M. SUTTON, Modesto, Calif. Filed June 29, 1921. Serial No. 481,237. 1 Claim. (Cl. 123—50.)

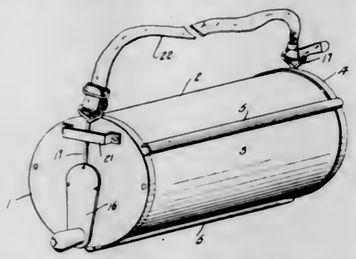


A two-cycle engine comprising a cylinder, a normally closed intake chamber partially surrounding the upper end thereof and having aligned openings forming communication between the chamber and cylinder, one of said openings being elongated to extend upwardly to the cylinder head, a valve for admitting fuel to the intake chamber, a hollow piston reciprocally mounted in the cylinder and forming a combined suction and compression chamber between the piston and cylinder head, the said piston having ports at the upper end thereof, a second piston reciprocally mounted therein to form a combustion chamber between the two pistons, a crank shaft, and links connecting the said shaft and pistons in opposed relation to each other, the upward stroke of the hollow piston adapted to compress the fuel charge in the combined suction and pressure chamber, by-passing the same initially through the aligned openings and finally through the elongated opening to the intake chamber and thence through the ports in the hollow piston to the combustion chamber, and an ignition device in the cylinder wall for firing the charge therein and an exhaust chamber having ports between it and the chamber, said hollow piston having ports adjacent its lower end for registration with the ports of the exhaust chamber to effect discharge of burnt gases, the lower ports of the hollow piston registering with said ports of the exhaust chamber simultaneously with registration of the upper ports of the hollow piston with the ports of the intake chamber so that upon recharging of the combustion chamber the incoming gases assist in removal of the burnt gases into the exhaust chamber.

1,508,261. CLOSURE FOR BOTTLES. CHARLES W. TOOKE, Syracuse, N. Y., and FREDERICK B. LA FORGE, Washington, D. C. Filed MAR. 22, 1923. Serial No. 626,911. 9 Claims. (Cl. 215—38.)

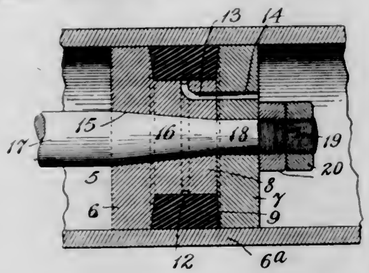
1. A closure adapted for use by closing over the bead of a bottle neck and composed of a material adapted to be softened by heat to facilitate fitting over the bead of the bottle and rigidified by cold and incapable of being again softened by heat after such rigidification.

1,508,262. IGNITION GENERATOR. ARTHUR PRIMROSE YOUNG, Kenilworth, England, assignor to General Electric Company, a Corporation of New York. Filed July 26, 1920. Serial No. 399,034. 6 Claims. (Cl. 125—49.)



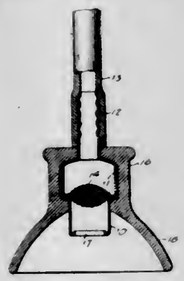
1. An ignition generator unit comprising in combination, a stator, a rotor, cooperating ignition breaker elements mounted one on said stator and one on said rotor, a supporting plate for said stator adapted to be secured in face to face contact with an engine casing, said rotor having a driving shaft extending through an opening in said plate, said stator having a circular flange fitting in a corresponding cylindrical recess in said plate, and a retaining ring secured to said support for preventing separation of said stator from said recess.

1,508,263. CLOTHESLINE REEL. WILLIAM T. YOUNGER, St. Louis, Mo. Filed July 12, 1923. Serial No. 651,156. 4 Claims. (Cl. 242—101.)



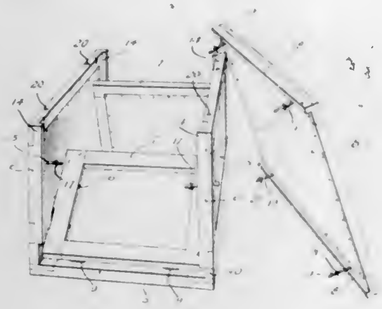
1. In a device of the character specified, a casing including circular heads having inwardly disposed flanges at their outer edges, a circular wall attached to the heads

and spaced inwardly from the flanges thereof a short distance, a cover for closing an opening in a side of the casing and having its edges mounted in the spaces formed



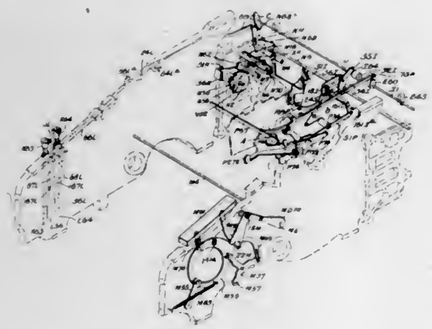
between the inner flanges of the heads and the said circular wall, and the edges of said cover rolled back on themselves and provided with notches to receive the flanges on the casing heads.

1,508,264. PISTON STRUCTURE. ARTHUR LEON ARMENTROUT, Whittier, Calif., assignor of one-half to The Gulberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed July 2, 1923. Serial No. 649,133. 3 Claims. (Cl. 74—109.)



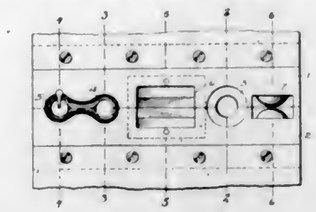
1. A piston structure comprising a head having a flared annular groove, and a flared elastic sleeve fitting said groove and coacting with the walls thereof so that the ring normally tends to move circumferentially beyond the walls of the head and into effective sealed engagement with the walls of a cylinder, the maximum width of the sleeve being contained in that portion of minimum width of said groove.

1,508,265. WASHING APPLIANCE. HUBERT BAILEY, New York, N. Y. Filed May 19, 1923. Serial No. 640,147. 2 Claims. (Cl. 15—127.)



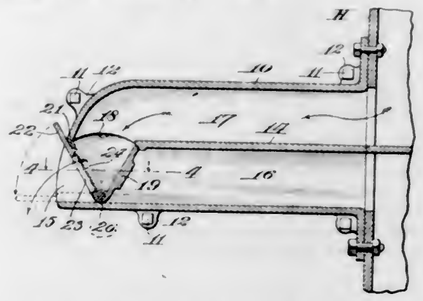
1. A washing tool, comprising a nozzle having an annularly enlarged portion back of its outlet end, a double convex screen in said enlarged portion, and a flexible rubbing member surrounding the outlet end of the nozzle and having an internal recess receiving the enlarged portion of the nozzle.

1,508,266. SHIPPING CASE. CHARLES ERNEST BARBIE, Brattleboro, Vt. Filed Aug. 31, 1923. Serial No. 660,379. 1 Claim. (Cl. 217—15.)



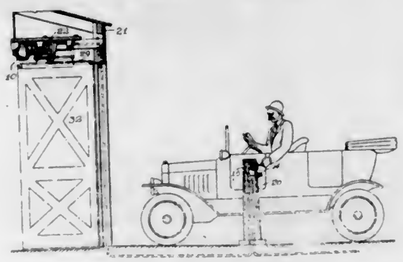
In a shipping case, a bottom section, spacing strips of different depths secured along longitudinal edges of said bottom section, end sections pivotally connected to said bottom section and being of a thickness substantially equal to one of said spacing strips, side sections having flanges at the ends thereof adjacent which said end sections nbut to limit the outward movement of said end sections, the combined thicknesses of one of said end sections and one of said side sections bejng substantially equal to the depth of the other spacing strip, bolts extending through said adjacent members of said side and end sections, nuts on said bolts engageable with edges of said members to secure said sections together, a top section having flanges along longitudinal edges thereof for receiving therebetween said side sections, bolts extending through said members of said top and side sections, and nuts on the last-named bolts engageable with edges of the latter members to secure said top in closing position.

1,508,267. OVERDRAFT KEY-LOCKING AND INDICATING MECHANISM FOR CALCULATING MACHINES. FREDERICK W. BERNAU, Hillside, N. J., assignor to Ellis Adding Typewriter Company, Newark, N. J., a Corporation of New Jersey. Original application filed Oct. 31, 1922, Serial No. 598,155. Divided and this application filed June 4, 1924. Serial No. 717,782. 23 Claims. (Cl. 235—130.)



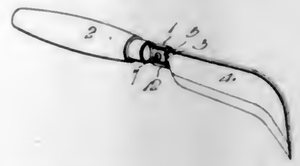
1. In a calculator, the combination with an accumulator, of a key for controlling the printing of the condition of the accumulator, and means adapted to automatically, and invariably, lock said key each time an "overdraft" occurs in the accumulator.

1,508,268. METHOD FOR FORMING DRILL BITS. JAMES J. BROSSOIT, Salt Lake City, Utah. Filed Apr. 2, 1923. Serial No. 629,530. 4 Claims. (Cl. 76—108.)



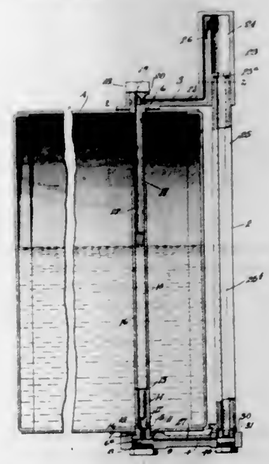
1. A method of forming and assembling drill bits, which comprises subjecting one end of a bit to two pressure operations to form a circular taper thereon, and then subjecting it to a pressure operation to form a longitudinally tapered groove in said end.

1,508,269. PUMP SPOUT. CLARENCE C. CHRISMAN, Martinsburg, Mo. Filed June 12, 1923. Serial No. 644,878. 7 Claims. (Cl. 103—217.)



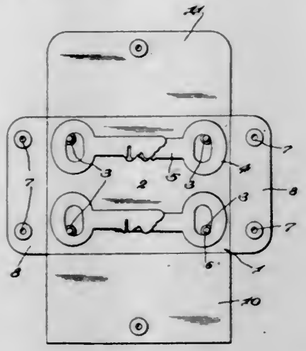
1. The combination with a pump spout, of adjustable means associated with the discharge end of the spout for causing the pumped water to pass throughout and discharge from said spout or for causing said pumped water to return through said spout to the well or receptacle with which the pump and its spout are associated.

1,508,270. DOOR-OPERATING DEVICE. CLYDE A. CONNELLY, Shelby, Ohio. Filed Feb. 18, 1921. Serial No. 446,012. 4 Claims. (Cl. 268—9.)



1. A closure operating device, including in combination with swinging doors, of pivotally mounted levers having one of their ends slidably secured to said doors, said levers extending beyond the points of pivotal mounting, and being formed with longitudinally extending slots, a slidably mounted traveler, means extending through said slots and being connected to said traveler, a motor, an endless member operated by said motor, and means engaging said traveler to said endless member.

1,508,271. TOOL HANDLE. JOSEPH COSTELLO, New York, N. Y. Filed Apr. 9, 1923. Serial No. 630,887. 1 Claim. (Cl. 279—86.)

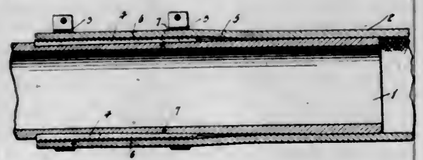


A tool holder comprising a handle, a T-shaped piece of metal whose shank is secured to said handle and whose head extends unequal distances beyond opposite edges of said shank, both end portions of said head being bent laterally to engage the edges of a tool shank, the longer end of the head being then bent inwardly in parallel relation with the portion of the head between the first named bends, providing a rectangular receiving socket for the tool shank and a flexible side wall for said socket, and a fastener passing transversely across the socket and extending through said flexible side wall for the purpose of drawing said wall inwardly toward the other side to frictionally clamp the tool shank in place.

1,508,272. LIQUID-LEVEL GAUGE. JAMES S. CUFF, Vallejo, Calif. Filed Mar. 30, 1921. Serial No. 457,125. 14 Claims. (Cl. 73—34.)

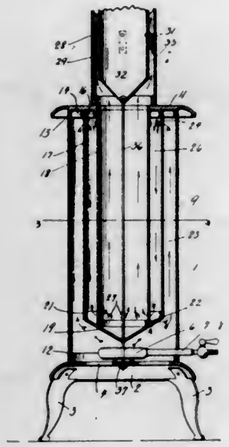
1. The combination of a tank having a pair of aligned perforations formed therein, one in the top and the other in the bottom of the tank, upper and lower head members having their inner ends registering with the respective perforations in the tank and having their outer ends extending outwardly beyond the side of the tank, said heads having passages formed therein and communicating with the tank through said perforations, a tubular gauge between the outer ends of said head members, means whereby to connect the gauge to said head members, the gauge having communication with the passages of the head members so as to indicate on the gauge the level of the liquid in the tank, connecting means extending through the head members and through the tank for drawing the head members tightly against the tank and provided with means interior of the tank to provide for the passage of liquid from the tank through the passages of said head members, and a safety valve disposed within said connecting means to prevent flow of liquid from the tank in event of breakage of the gauge glass.

1,508,273. KEY HOLDER. CLARENCE B. DAVIDSON, Unionville, Mo. Filed Jan. 15, 1923. Serial No. 612,693. 2 Claims. (Cl. 150—40.)



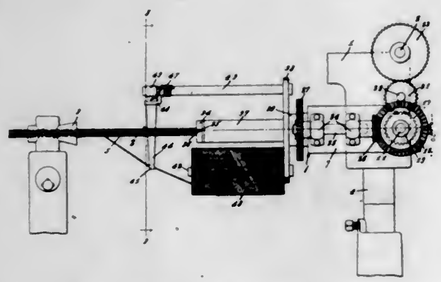
1. In a key holder, a case, post members carried by said case at each end thereof, end flaps on said case, male snap fastener sections carried by said end flaps to permit connection of the end flaps and posts for holding keys upon the post.

1,508,274. SWIMMING SUIT. BARTHOLD DE MATTIA, Clifton, N. J. Filed June 21, 1923. Serial No. 646,892. 3 Claims. (Cl. 9—20.)



1. A swimming suit comprising a pair of structures carrying buoyant means, said structures being flexibly joined to provide a head opening therebetween and including auxiliary flexible elements whereby the suit may be secured to a person to dispose one structure in front of and the other structure over the back of the body; said structures being so shaped and arranged that the buoyant means of the first mentioned structure is of such shape and size as to be limited to a position between the chin and a point below the chin such as to localize, above the merging line of breast and abdomen, the point of buoyant suspension of the person when the body of the latter responds to an upward pull exerted by the buoyancy of the second mentioned structure.

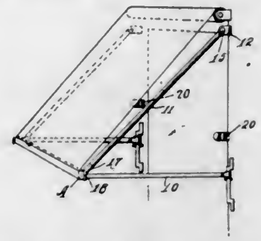
1,508,275. HOSE CONNECTION. RILEY M. DODD, Torrance, Calif. Filed Apr. 3, 1924. Serial No. 704,031. 6 Claims. (Cl. 285—84.)



1. A hollow member provided with a sloping surface, a toothed slip slidably positioned on said surface, and means for limiting the movement of the slip with respect to the member.

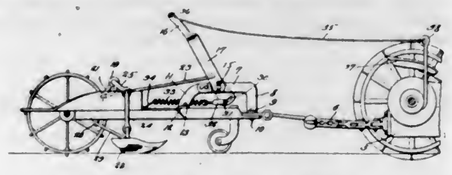
1,508,276. RADIATOR. ARTHUR W. EDWARDS, Sacramento, Calif. Filed Apr. 22, 1922. Serial No. 556,053. 2 Claims. (Cl. 126—85.)

2. In a heat radiator of the character described, a base plate, a shell mounted thereon, a top plate supported on the shell, a chimney pipe resting on the top plate and having an inner tube mounted therein with a deflecting bottom adapted to deflect the products of combustion toward the chimney pipe, and means for vertically binding the various members comprising a rod extending through the deflecting bottom of the chimney tube and the base plate and having means at either end for holding the same against removal.



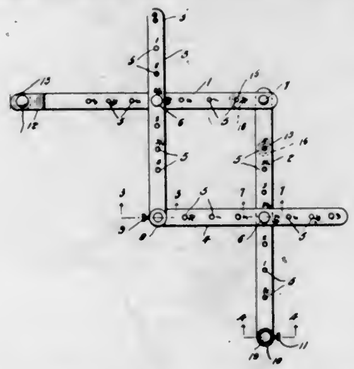
1,508,277. WRAPPING MACHINE. EDWARD W. EDWARDS, Rock Hill, S. C. Filed Aug. 20, 1923. Serial No. 658,337. 3 Claims. (Cl. 28—24.)

1. In a device of the class described, a bracket having angularly disposed flanges, a guide, means for mounting the guide on one flange for movement in an orbit and means for operating the guide, said means comprising gearing located on both flanges of the bracket.



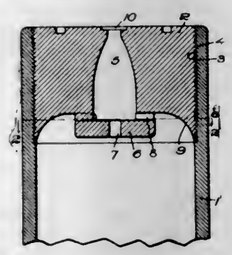
1,508,278. AWNING DEVICE. WILLIAM E. FARMER, Lake Andes, S. Dak. Filed Dec. 17, 1921. Serial No. 523,145. 2 Claims. (Cl. 156—15.)

2. The combination with an awning including a frame, of a pair of rods having their upper ends pivoted upon the support for said frame, and normally arranged in parallelism with said support, resilient clamps arranged on the support and adapted to embrace said rods for holding the latter in their normal positions, a sleeve fitted on the free end of each rod, and each sleeve including an enlarged portion having a notch adapted to receive



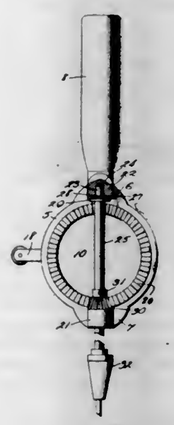
the adjacent members of the awning frame, when said rods are arranged obliquely to the said support in position for use.

1,508,279. ONE-MAN MOWER CONTROL. DANIEL JORDAN, Harrison, Nebr. Filed July 2, 1923. Serial No. 649,066. 1 Claim. (Cl. 56—25.)



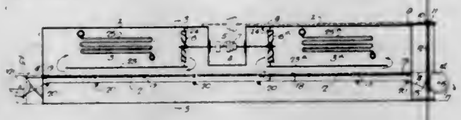
A cutter bar operating device for mowers, including a supporting member, an arm pivotally mounted on the supporting member, a rod associated with the supporting member and disposed at the rear thereof, said rod having right angled ends, pivoted means for connecting one of the right angled ends to a cutter bar, a connecting rod for connecting the opposite right angled end of the rod to the operating arm, said arm having a slot formed therein, a coiled spring having one end anchored remote from the arm, means disposed in the slot and having connection with the spring to expand the spring when the arm is moved to lower the cutter bar, and said spring being adapted to assist in returning the arm to its normal position.

1,508,280. PANTOGRAPH. HUGO C. KAY, Cincinnati, Ohio. Filed May 8, 1923. Serial No. 637,557. 2 Claims. (Cl. 33—25.)



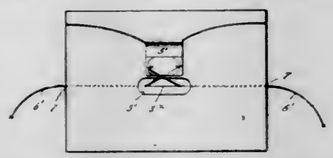
1. A pantograph comprising bars pivoted together to form a jointed parallelogram, the said bars extending beyond one pair of diametrically opposite pivots, a tube at the outer free end of one of the bars to receive a stylus, and a tube pivotally connecting two of the remaining bars and adapted to receive a stylus, flanged nuts adapted to be fitted in opposite ends of either one of said tubes, and a threaded stylus coacting with the flanged nuts to secure the same to the tube.

1,508,281. SPRAY NOZZLE. CHARLES KELLY, Boston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1920. Serial No. 372,991. 7 Claims. (Cl. 299—115.)



2. A spray nozzle comprising a shell or casing 1, a unitary terminal member inserted in the shell or casing, said terminal member having formed therein a mixing chamber having outwardly converging side walls, said chamber being provided near one end with a series of circumferential inlets for the liquid and at its opposite end with a single outlet, said terminal member being shaped at its inner end to direct the liquid to said circumferential inlets.

1,508,282. DRILLING MACHINE. EDWIN A. KENYON, Hamilton, Ontario, Canada. Filed Mar. 13, 1920. Serial No. 365,683. 2 Claims. (Cl. 145—66.)



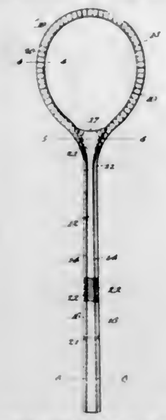
1. In a hand drill, the combination of an annular frame, a rib dividing the inner circumference of the frame into sections, a drive wheel mounted to revolve within the frame having a pair of annular grooves which coact with said sections forming a pair of ball races, an annular ring secured to said wheel and over-lapping the edge of said frame, diametrically opposed bearings formed integral with said frame, a spindle mounted to revolve in said bearings, a bevel gear fixed to said spindle, gear teeth formed around the peripheral edge of the drive wheel and meshing with said bevel gear, and means for imparting movement to said drive wheel.

1,508,283. DRIER. EDGAR B. KERST, Providence, R. I., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 15, 1923. Serial No. 657,578. 4 Claims. (Cl. 34—12.)

2. The combination in a drier, of a horizontal partition extending the full length of the drier; an endless conveyer, the carrying run of the conveyer being located above the partition; two circulating chambers spaced apart and located above the carrying run of the conveyer; a circulating fan in each chamber; and means for driving the fans so that the air in one chamber is circulated in a direction opposite to the circulation of air in the other chamber.

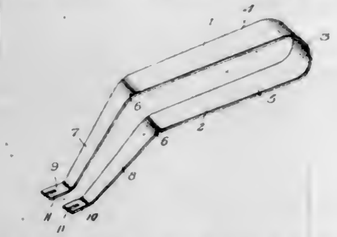
1,508,284. SAFETY ENVELOPE. JOSEPH KOVACS and SANDOR MESZAROS, Denbo, Pa. Filed Jan. 7, 1922. Serial No. 527,690. 2 Claims. (Cl. 225—84.)

1. In an envelope of the class described having a T-shaped tongue on its closing flap and a slot in its rear side for receiving the tongue, the arms of the T being folded to permit them to pass through the slot, means for unfolding the arms after they pass through the slot, such means including threads connected with the ends of the arms and acting as opening means for the envelope.



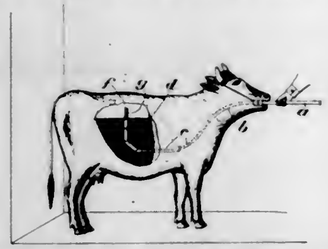
1,508,285. MANHOLE COVER. CLOYD E. LEECH, Lima, Ohio. Filed June 8, 1922. Serial No. 566,818. 1 Claim. (Cl. 137—13.)

In combination, a manhole casing, a flange extending inwardly and inclined upwardly of said casing, a manhole cover for said casing, a collar extending from the under face of said cover adjacent one end having a slot formed therein, a bolt having an opening therein rotatably mounted on said collar and having one of its ends extending through said slot to engage said inclined flange and means cooperating with the opening of said bolt to rotate said bolt and adapted to raise said cover.



1,508,286. RACKET. ROBERT MOORE, Montclair, N. J. Filed Aug. 12, 1922. Serial No. 581,469. 1 Claim. (Cl. 46—24.)

A racket of the character described comprising a handle having its upper end widened and said widened end being provided with grooves formed in its side walls, a piece having a portion formed concavo-convex in cross section and rounded upon itself to provide a head rim having a portion thereof received in the grooves, said piece from the head rim being flat in cross section to provide handle parts secured to the sides of the handle, a substantially semi-circular in cross section piece surrounding the concavo-convex portion and secured in the concavity thereof, handle strips formed on the substantially semi-circular piece and being secured to the handle parts, said concavo-convex portion being provided with



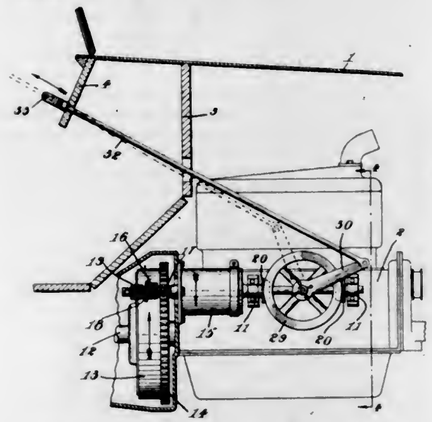
openings aligned with openings of smaller diameter in the semi-circular piece and said handle parts having openings as and for the purpose specified.

1,508,287. LACE-CURTAIN-STRETCHING TOOL. HUGH F. MORAN, Chicago, Ill. Filed Mar. 6, 1922. Serial No. 541,410. 2 Claims. (Cl. 294—99.)

1. As a new article of manufacture, a curtain stretching tool formed of a single piece of metal bent to provide substantially parallel lengths having its intermediate portion forming a resilient connection between said lengths, the major portion of said lengths providing hand grips, engaging jaws curved transversely, and angularly disposed portions connecting said jaws and hand grips, said angularly disposed portions being disposed in an inclined plane.

1,508,288. DEFLATING PIPE FOR THE STOMACHS OF RUMINANTS. ARNOLD NÜESCH, Basel, Switzerland. Filed July 8, 1921. Serial No. 483,282. 1 Claim. (Cl. 128—336.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A deflating tube for the stomachs of ruminants, consisting of a rigid section, a flexible section secured thereto, and a third section secured to said flexible section,

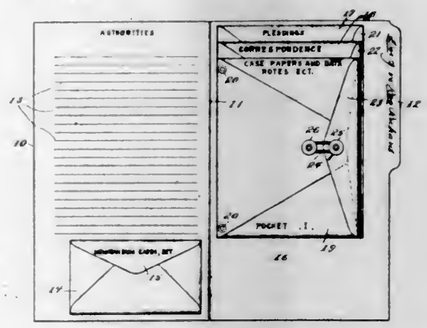


consisting of a plurality of portions pivoted to each other in such manner as to permit pivotal movement of said portions in only one direction with respect to the common longitudinal axis of the three sections.

1,508,289. ACCELERATOR FOOT REST. JOEL E. OLIVER, Santa Barbara, Calif. Filed Sept. 4, 1923. Serial No. 660,899. 1 Claim. (Cl. 74—81.)

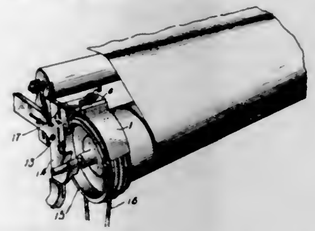
A foot rest of the character described comprising a top plate having a knurled upper surface, a pair of apertured ears each depending from the side edges of the top plate and being arranged slightly beyond its central portion, a base plate provided with end openings, screws countersunk in said openings for securing said base plate in fixed position, apertured ears rising from the ears of said base plate and being associated with apertured ends of the top plate in a manner whereby the apertures register, a headed pin passing through the registered apertures for pivotally mounting said plates, a spring having one end riveted to the base plate midway its ends and from its connection said spring curves upwardly to engage the top plate adjacent their end remote from its pivot point and said last mentioned end of said top plate being adapted to engage an accelerator pedal as and for the purpose specified.

1,508,290. COMBINATION STARTER FOR AUTOMOBILES. OSBORNE H. PARSONS, Halifax, Nova Scotia, Canada. Filed Jan. 8, 1924. Serial No. 685,072. 5 Claims. (Cl. 74—7.)



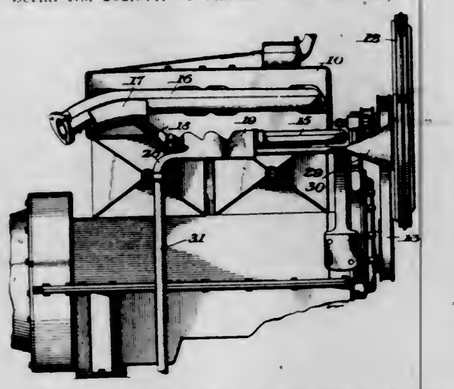
1. In combination with the drive shaft of an electric starter for automobiles, a pair of pinions carried by said shaft, clutch connections between the shaft and the pinions whereby the latter are adapted to turn the shaft in one direction and to rotate idly in the opposite direction, and a gear meshing with said pinions for turning the same.

1,508,291. DISPENSING FAUCET. WILLIAM S. PENFIELD, San Francisco, Calif., assignor of one-half to Chadwick Thompson, San Francisco County, Calif. Filed Jan. 12, 1924. Serial No. 685,879. 1 Claim. (Cl. 251—167.)



A dispensing faucet comprising a substantially cylindrical housing having an annular valve seat formed concentric therewith, a cage disposed concentric with the housing extending through and beyond the valve seat to form a second valve seat, a valve stem slidable in said sleeve and extending through the cage into the valve head, and a spring bearing on a seat in the cage and acting on the stem and tending to seat the valve head, the closed end of the sleeve bearing on the valve stem for opening the valve when the sleeve is advanced.

1,508,292. FILE. CLARENCE E. PILE, Parsons, Kans. Filed May 20, 1922. Serial No. 562,375. 2 Claims. (Cl. 129—1.)



1. A file including a sheet of stiff material creased longitudinally to form complementary sections, a plurality of superimposed envelopes each of which being slightly smaller than the other so that their upper ends project one above the other, and a common fastening passing through the envelopes to one of the sections.

1,508,293. ROPE FRICTION SEPARATOR DEVICE. CHARLES A. PILGER, Scranton, Pa. Filed Apr. 7, 1923. Serial No. 630,601. 4 Claims. (Cl. 188—77.)

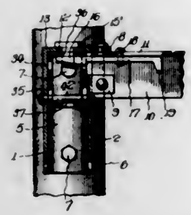
2. A device as specified in claim 1 with means for adjustably securing the same to the frame of a loom.

1,508,294. HYDROCARBON MOTOR. DONALD H. REEVES, Detroit, Mich., assignor, by mesne assignments, to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 17, 1917. Serial No. 202,677. 4 Claims. (Cl. 183—38.)

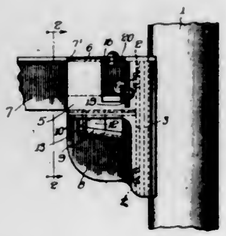
1. In a hydrocarbon motor, in combination, a means providing an air intake for a carbureter, an air chamber connected to said intake, a fan driven by the motor, a conduit leading from a point adjacent said fan to said chamber, and baffles in said chamber so arranged as to separate the dust from the air passing to the carbureter intake.

1,508,295. RAZOR-BLADE HOLDER. EUGENE RENAUD, Montreal, Quebec, Canada. Filed Oct. 1, 1923. Serial No. 665,935. 2 Claims. (Cl. 30—25.)

1. A razor blade holder comprising a pair of strips, each of said strips having a pair of perforations therein, teeth projecting from each of said perforations, the teeth on one of the strips pointing oppositely to the teeth of the remaining strip, one of said strips having a tongue at one end, an inclined portion formed at the corresponding end of the other strip, said portion having an aperture cut therethrough adapted to receive said tongue.



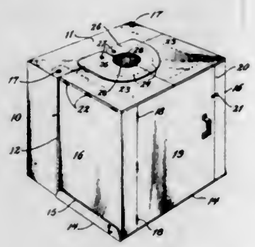
1,508,296. COLLAR BUTTON. EUGENE RENAUD, Montreal, Quebec, Canada. Filed Nov. 12, 1923. Serial No. 674,821. 1 Claim. (Cl. 24—101.)



A collar button comprising a back, a pair of stems formed thereon and lying in a plane substantially perpendicular to that of the back, heads extending from said stems and lying in a plane substantially parallel to that of the back, said heads pointing in opposite directions, the side edges of said heads being rounded.

1,508,297. CORNER LOCK FOR BEDSTEADS. HENRY RICHARDSON, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 519,870. 18 Claims. (Cl. 5—290.)

1. In a corner lock for bedsteads, the combination with a box bracket and a side rail having an end portion adapted to engage a locking member on said bracket under a vertical sliding movement, of means for locking said end portion to a horizontal plate of said bracket, and interfitting means on a side wall of said bracket and a vertical limb of said end portion, brought into engagement under said vertical sliding movement co-operating with said first-named locking means to oppose relative angular movement in a vertical plane of said bracket and side rail.

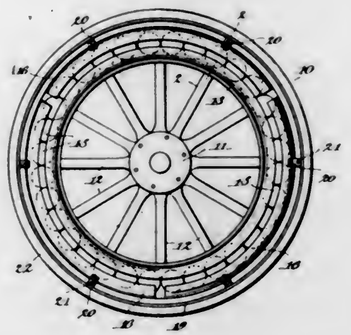


1,508,298. CORNER LOCK FOR BEDSTEADS. HENRY RICHARDSON, Chicago, Ill. Filed Dec. 5, 1921. Serial No. 519,872. 10 Claims. (Cl. 5—290.)

1. In a corner lock for bedsteads, the combination of a bracket a side rail end portion engaged with the said bracket, a wedge-shaped member supported by the said bracket and having its wider end facing the inner end of the latter, said wedge-shaped member serving to clamp the said rail end portion to the said bracket by means of an inclined sliding movement outwardly of the said bracket.

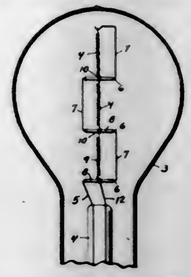
1,508,299. CABINET. SEM ROSENTHAL, New York, N. Y. Filed Apr. 29, 1924. Serial No. 709,871. 2 Claims. (Cl. 4—164.)

1. A cabinet comprising a housing open at one side, a bottom hingedly connected to said housing, side walls hingedly connected to said housing, a door hingedly connected to one of said side walls, cover sections hingedly connected to the tops of said side walls and being cutaway to define an opening when in co-acting position for



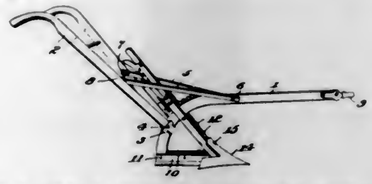
permitting the head of a person to be inserted therethrough, and a pair of pivoted plates carried by said housing for completely closing the opening after the head has been inserted therethrough.

1,508,300. TASSEL. ABRAHAM SACKS, Brooklyn, N. Y. Filed Dec. 3, 1921. Serial No. 519,644. 1 Claim. (Cl. 2—278.)



In a tassel, a mold provided with a longitudinal passage, an attaching cord passing through said longitudinal passage and secured therein, a tassel bunch carried by the mold and having its upper end contracted around the cord passed through the tassel mold and a finish in the form of a coiled resilient member adapted to be passed over the mold and into engagement with the tassel bunch to cause the same to frictionally engage the tassel mold, said finish being bodily removable from the mold.

1,508,301. VEHICLE WHEEL. JOHN SCHLATTER, Rochelle Park, N. J. Filed Feb. 26, 1923. Serial No. 621,313. 2 Claims. (Cl. 152—36.)



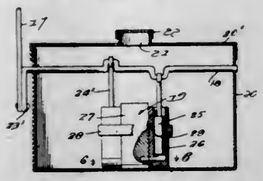
1. In a vehicle wheel, the combination with a felly having a continuous semi-circular groove therein, a rim, a tread surface formed on said rim, a plurality of segmental sections each having a semi-circular groove therein extending the length of the same, spherical cushioning members interposed between said felly and said segmental sections and seated in the semi-circular grooves of the same, and means for removably securing said segmental sections to said rim.

1,508,302. INCANDESCENT LAMP. CYRIL COLEMAN SCHNEE, Toronto, Ontario, Canada. Filed Sept. 22, 1922. Serial No. 589,894. 12 Claims. (Cl. 176—39.)

4. In an incandescent lamp, a flexible unit support including a leading-in wire having supporting portions, fused silica sleeves mounted on said portions, and a filament having portions wound about said sleeves.

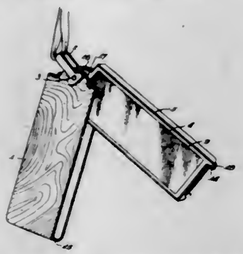
1,508,303. PLOW. HERMAN A. SMITH, Florence, S. C. Filed Apr. 19, 1923. Serial No. 633,101. 2 Claims. (Cl. 27—102.)

1. In a plow, a beam, one end of said beam being curved, slide rests attached to the curved end of said beam, standards pivotally attached to said slide rests, said standards being placed on either side of said beam to act as a brace therefor, said standards being connected together above and below said beam to act as a brace therefor, a sweep attached to said standards, and means on said standards co-operating with means on said beam to set said standards at different angles to said beam.



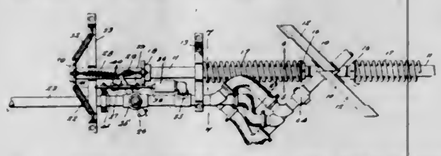
1,508,304. BOILER. JOHN PENDREIGH STODDART, Arica, Chile. Filed Oct. 9, 1922. Serial No. 593,380. 4 Claims. (Cl. 126—20.)

1. In a cooking apparatus, a casing having superimposed compartments therein, the lowermost compartments providing an oven, the next compartment providing a water tank, and the remaining compartments providing cooking compartments, means admitting water into the water compartments, a heater in the oven directly below



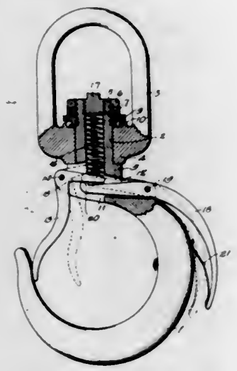
the water compartment, means delivering steam generated in the water compartment below and around the cooking compartments, and means also delivering steam from the water compartment to the rear and below the oven compartment.

1,508,305. OIL PUMP. DAVID STONG, Devils Lake, and OLEN J. ROCK, Cando, N. Dak. Filed July 9, 1921. Serial No. 483,436. 1 Claim. (Cl. 184—34.)



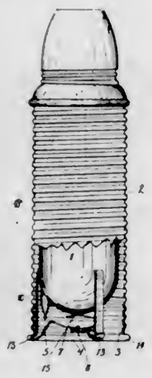
A lubricating device comprising a tank having a block located therein and mounted upon the bottom thereof, said block being provided with oil ducts, tubes passing through the side of the tank and connected with the block at the oil ducts, cylinders mounted at the opposite sides of the block and having passageways which communicate with the oil ducts in the block, a yoke mounted upon the side of the tank and having pivots which engage the cylinders, said yoke holding the cylinders against the block, pistons loosely mounted in the cylinders, a crank shaft journaled in the tank, and means operatively connecting the crank shaft with the pistons.

1,508,306. FOLDING COMB AND MIRROR. DAVID STRULSON, Bronx, N. Y. Filed June 3, 1924. Serial No. 717,615. 5 Claims. (Cl. 132—79.)



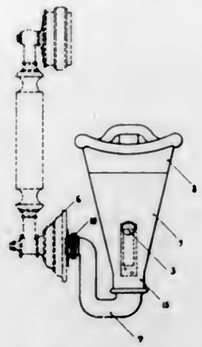
1. A folding mirror and comb comprising a substantially U-shaped frame, a mirror, a casing carrying said mirror pivotally connected with said frame so as to swing into and out of the frame, a comb, and means for retaining the comb in said casing when not in use, said means holding the comb in the casing in such a manner that the camb is adapted to swing into and out of said frame with the mirror.

1,508,307. HOSE COUPLING. CARL E. TALLY, Crawford, Tex., assignor of one-half to Uberto D. Ezell, Cleburne, Tex. Filed July 11, 1923. Serial No. 650,952. 4 Claims. (Cl. 285—24.)



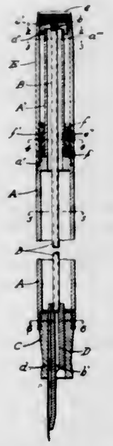
1. An automatic coupler of the class described comprising a coupling head, a shaft supporting said head and mounted for sliding movement, an expansion spring surrounding said shaft, a plurality of pipes terminally connected with said head, valves in said pipes, means for automatically opening and closing said valves upon movement of said shaft in opposite directions, a lever included in said means, and opposed springs having their adjacent extremities connected with said lever as and for the purpose specified.

1,508,308. SAFETY HOOK. FRANK CLYDE THOMPSON, Shreveport, La. Filed Jan. 8, 1924. Serial No. 685,022. 4 Claims. (Cl. 24—241.)



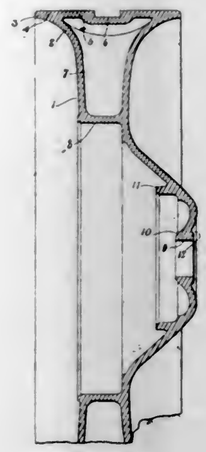
1. A device of the character described, comprising a hook, a keeper normally in position across the entrance of the hook, and a hand lever independent of the keeper pivotally connected to the hook and adapted to move the keeper to its releasing position.

1,508,309. MEANS FOR SUPPORTING VACUUM-JACKETED BOTTLES OR OTHER RECEPTACLES WITHIN INCLOSING CASINGS THEREFOR. EUGEN URBAHN, Berlin, Germany. Filed Feb. 14, 1924. Serial No. 692,877. 4 Claims. (Cl. 215—13.)



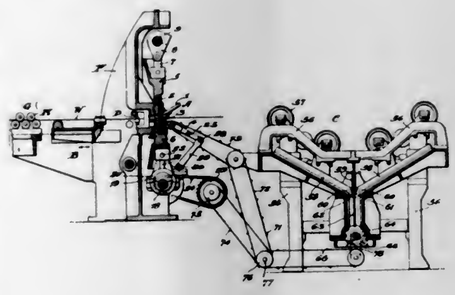
1. A device of the type described for resiliently supporting a vacuum-jacketed bottle or receptacle within an inclosing casing, comprising a number of radially arranged metallic strips firmly interconnected at their meeting point, feet (13), formed in said strips by bending, upstanding resilient arms (10, 11, 12) projecting from said feet, and a means over and above the said meeting point and spaced therefrom for yieldingly supporting the bottom of the bottle or receptacle, substantially as described.

1,508,310. TELEPHONE MOUTHPIECE. FREDERIK LEENDERT VAN HOUTE, The Hague, Netherlands. Filed Aug. 28, 1923. Serial No. 659,795. 3 Claims. (Cl. 179—188.)



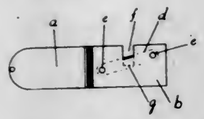
1. A mouthpiece for telephone transmitters, dictaphones and the like adapted to make the conversation inaudible to persons near the instrument, comprising a relatively rigid funnel-shaped horn, a second funnel-shaped horn in the larger end of the first named horn and forming an extension thereof, said second named horn being relatively flexible and being provided with a perforated bottom and being further provided at its open end, which is arranged to bear against the face, with a flexible edge of soft material.

1,508,311. FOUNTAIN PEN. FRANCIS W. VAUGHN, Medford, Mass., assignor to Vaughn-Upton Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1922. Serial No. 580,324. 4 Claims. (Cl. 120—47.)



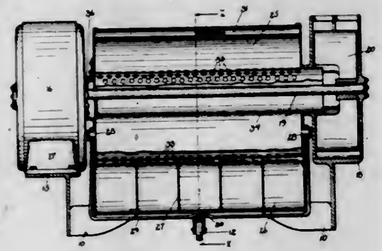
1. In a fountain pen, a barrel, having at its rear end an air aperture and having also a second aperture at its rear end; a pen section seated in the front end of the barrel and having separate ink and air apertures therethrough; a pipe within the barrel, connecting the pen section air aperture with a rear aperture to form an air passage through the barrel; a sleeve closed at its rear end and fitting air-tight and slidable upon, the rear end of the barrel, to withdraw air from the barrel through the second rear air aperture into the sleeve upon the rearward stroke and expel it through the pipe on the forward stroke.

1,508,312. WHEEL. GEORGE WALTHER, Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed May 31, 1922. Serial No. 564,773. 6 Claims. (Cl. 301—65.)



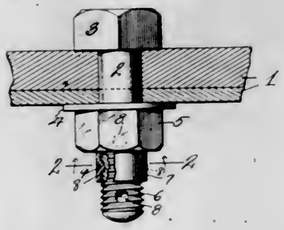
3. A metal wheel consisting of hollow spokes and a concave convex hub having an inwardly projecting flange forming an axle bearing, a self cleaning entrance for said bearing, an annular flange within the concavity of the hub forming a bearing support, an annular flange concentric with the axle bearing extending inwardly adjacent the concavity of said hub and forming one element of the brake mechanism of said wheel, and a rim consisting of a single wall merging into the outwardly flaring arch-shaped spoke ends of the spokes.

1,508,313. MACHINE FOR MAKING WIRE FABRIC. HERBERT E. WHITE and THOMAS H. KANE, Youngstown, Ohio, assignors to The Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed May 11, 1922. Serial No. 560,177. 25 Claims. (Cl. 140—11.)



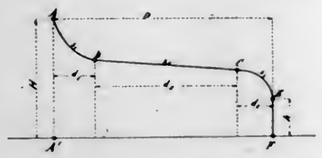
1. A wire fabricating machine, including an anvil die, having means for positioning angularly disposed wires at their point of intersection and means at one of its sides for looping the legs of a staple, and a staple plunger die that has a portion slidable along said side of the anvil die, said portion of the plunger die having an open side for receiving and holding a tie staple in rear of its end and carrying it to a position to cause it to be looped by the anvil die.

1,508,314. SHARPENER FOR SCISSORS AND TOOLS HAVING SIMILAR CUTTING EDGES. ALFRED WILLIAMS, HENRY GRAVILLE BENNETT, and IVO ROWE, Sheffield, England. Filed May 7, 1923. Serial No. 637,082. 4 Claims. (Cl. 76—88.)



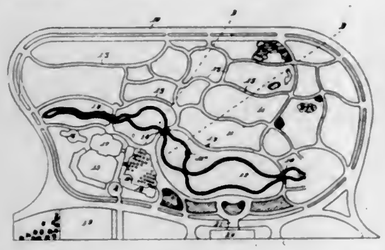
1. A sharpener for scissors and tools having similar cutting edges comprising a holder formed of a plate bent on itself to form a loop at one end and a handle at the other end, pins mounted in the holder transversely of the loop, a plurality of blades mounted on the pins angularly in the loop, and grooves in the sides of the holder transversely to and exposing the blades.

1,508,315. VACUUM CLEANER. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 25, 1920. Serial No. 368,711. 6 Claims. (Cl. 15—16.)



1. In a vacuum cleaner for dust laden air, a wheeled frame, a centrifugal dust collector mounted upon said frame, said collector having a separating chamber of substantially cylindrical form with its axis horizontal, an axially arranged exit pipe extending outwardly from one end of said collector, and an exhaust fan opposite said exit opening adapted to rotate about an axis in common with the axis of the dust collector and means adapted to give centrifugal rotation to the incoming air.

1,508,316. LOCK NUT. LOUIS J. BRUNE, Chicago, Ill. Filed Oct. 25, 1923. Serial No. 670,734. 1 Claim. (Cl. 151—28.)

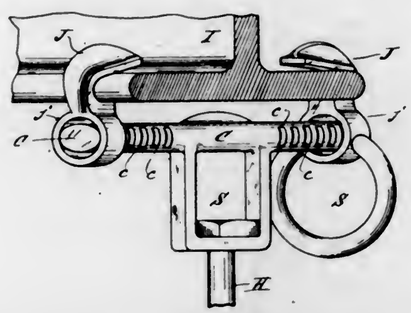


The combination with a nut threaded on a threaded shank of a bolt, of means for preventing retrograde movement of said nut, said means comprising a sleeve extending over the threaded shank of the bolt and formed from pliable material, said shank being provided with a plurality of vertically alined diametrically disposed recesses, and struck in portions carried by the sleeve and extending into any of said recesses.

1,508,317. MOTORLESS AERIAL WINGED TORPEDO. GAETANO ARTURO CROCCO and ALESSANDRO GUIDONI, Rome, Italy. Filed May 20, 1920. Serial No. 382,932. 4 Claims. (Cl. 244—1.)

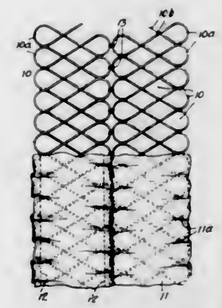
1. An aerial torpedo to be dropped from aircraft upon targets lying distant from the vertical line of said aircraft, upon which targets it shall reach through the sole action of the gravity, comprising bearing surfaces sufficient to support it when in sliding flight, adjustable steering surfaces and means acting in correspondence to the distance traversed, and which control the position of said steering surfaces during the flight so as to steer the torpedo along a predetermined route in a vertical plane, the steering surfaces being successively set in such a manner that, as soon as the torpedo is left to itself, it descend almost vertically in order to acquire a high speed with which to proceed then in a sliding flight until it reaches the vicinity of the target.

1,508,318. ANIMAL INCLOSURE. HEINRICH HAGENBECK, Stellingen, and LORENZ HAGENBECK, Lokstedt, near Hamburg, Germany. Filed Jan. 14, 1924. Serial No. 686,235. 1 Claim. (Cl. 119—20.)



An inclosure for animals, birds, reptiles, and the like comprising a tract of land, walks dividing the tract of land into separate island-like tracts and separating moats extending around each island-like tract between said island-like tracts and walks, said walks being upon a lower plane than the main portions of the island-like tracts whereby the edges of the separating moats will be below the field of vision of persons standing upon the walks and looking across the moats upon said island-like tracts.

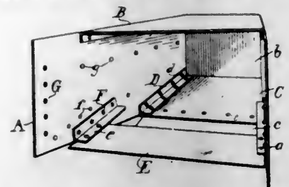
1,508,319. AMUSEMENT DEVICE. REGINALD M. HARRIS, East Orange, N. J. Filed June 6, 1923. Serial No. 643,762. 6 Claims. (Cl. 104—60.)



2. In a pleasure railway, a trackway, a vehicle for travel thereon, friction-producing elements carried by the trackway, and friction-producing elements carried by the vehicles and so arranged with respect to the friction-producing elements of the trackway that the vehicle may be steered through the friction-producing elements of the trackway without engagement therewith of the friction-producing elements of the vehicle.

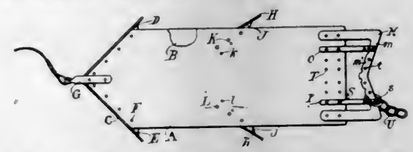
1,508,320. SUSPENDER CLAMP. HENRY HEIDE, New York, N. Y. Filed May 24, 1922. Serial No. 563,239. 1 Claim. (Cl. 248—32.)

The suspender clamp described consisting of a coupling member oval in cross section having peripheral segmental rack teeth and an integral depending stirrup between said teeth, and a pair of clamping jaws having sockets with internal segmental rack teeth for engagement with the teeth of the coupling member, the length of said rack teeth being less than one half the circumference of the member on which they are projected, said coupling member being rotatable for interlocking engagement or disengagement of the teeth of said member and the sockets.



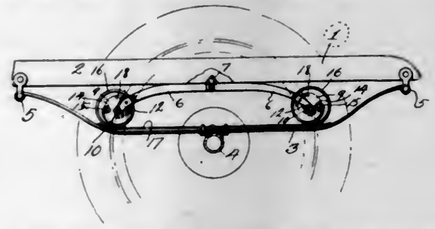
1,508,321. ELASTIC WEBBING. JOSEPH C. HEINTZ, New York, N. Y. Filed Feb. 9, 1920. Serial No. 357,137. 1 Claim. (Cl. 154—48.)

An elastic webbing for garment supporters and the like, comprising a plurality of elastic elements, each element consisting of a single strip of resilient wire bent upon itself to form a flat tension spring having marginal loops at each side, the adjacent marginal loops of each element being secured together, and a tubular non-elastic flexible covering of greater length than that of the elastic elements when they are extended adapted to loosely house the elastic elements and to be drawn into a number of uniform folds corresponding to the marginal loops of the elastic elements by contact therewith when said elastic elements are contracted.



1,508,322. EARTH SCRAPER. RAY J. HELLER, Lansing, Mich. Filed July 6, 1923. Serial No. 649,929. 4 Claims. (Cl. 37—143.)

1. In a scraper, the combination with the sides, of a top plate connecting the sides, a back plate connecting the sides, a downwardly inclined scraper blade secured to the sides adjacent to the back plate, the said top plate extending over the said blade in a forwardly direction for a distance substantially equal to the extent of the

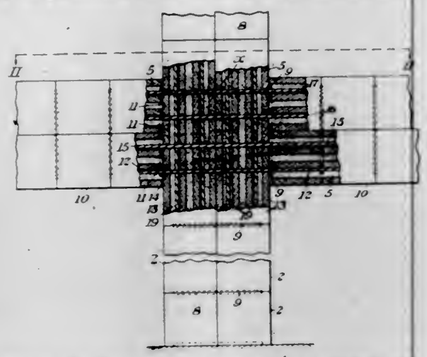


said blade in the same direction, and an auxiliary blade mounted in an inclined position in advance of the first mentioned blade.

1,508,323. INVERTIBLE EARTH SCRAPER. RAY J. HELLER, Lansing, Mich. Filed Sept. 15, 1923. Serial No. 662,856. 9 Claims. (Cl. 37—147.)

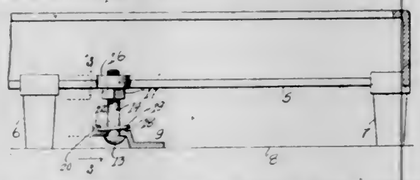
1. In an earth scraper, the combination with side walls, of an end portion connecting the said walls, scraper blades secured to the said walls and projecting beyond the side edges of the said walls on the upper and lower sides of the walls, draught devices located at the front ends of the said walls, and links engaging the said devices, the said devices having members in engagement with the said links whereby when the scraper is inverted the links may slip alternatively towards one or the other of the said side edges of the walls.

1,508,324. VEHICLE SPRING EQUALIZER. WILLIAM R. HELSEL, Huntingdon, Pa. Filed Jan. 8, 1924. Serial No. 685,001. 2 Claims. (Cl. 267—45.)



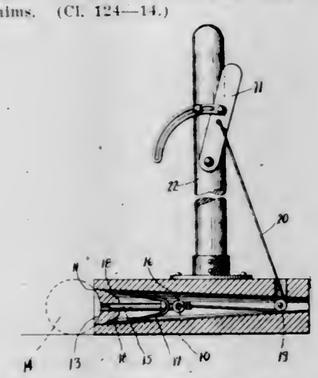
1. The combination with a semielliptic spring having its ends anchored, the side rail of a chassis, an axle carried by said spring, of an equalizing device for said spring, said device comprising a pair of arms extending in opposite directions and pivoted to the chassis rail above the axle, discs disposed in bifurcations in the ends of said arms, means whereby said discs may be rotated to various positions and held against rotation, coiled springs carried by the semielliptic spring intermediate the axle and the ends of the semielliptic spring, the ends of the coiled springs being attached to the discs, said discs being disposed within the convolutions of the coiled springs.

1,508,325. CONCRETE BUILDING CONSTRUCTION. ALBERT HENDERSON, Pittsburgh, Pa., assignor to Henderson Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1923. Serial No. 669,694. 10 Claims. (Cl. 72—15.)



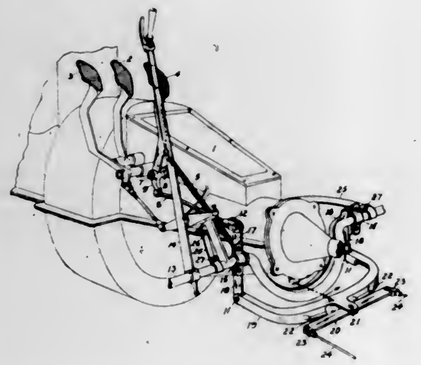
1. Building construction, comprising two members extending at an angle to and intersecting each other and each comprising blocks arranged end to end in series,

one of said members having reinforcing means extending longitudinally of and tying together its series of



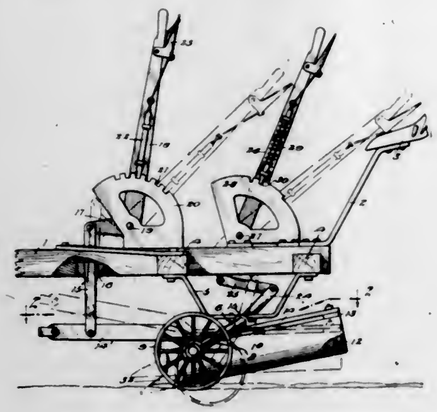
blocks, said reinforcing means extending between meeting end faces of certain of the series of blocks of the other of said members, substantially as described.

1,508,326. TYPEWRITER-SECURING DEVICE. JESSE R. HENSLEY and CHARLES C. LACY, San Francisco, Calif. Filed Aug. 1, 1923. Serial No. 655,138. 2 Claims. (Cl. 45—52.)



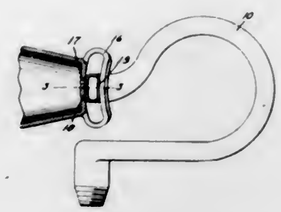
1. In a typewriter securing device, the combination with a typewriter frame and its pendant headed bolt, of a U-shaped base member, an upwardly extending recessed U-shaped collar formed integral therewith and adapted to receive therebeneath the head of the bolt and having formed on its upper surface a spaced extension and a protuberance, and a washer encircling the bolt and adapted to rest upon the protuberance and contact the rear of the extensions, for the purpose specified.

1,508,327. MARBLE SHOOTER. JOSEPH J. HIGGINS, Bronx, N. Y. Filed July 13, 1923. Serial No. 651,329. 2 Claims. (Cl. 124—14.)



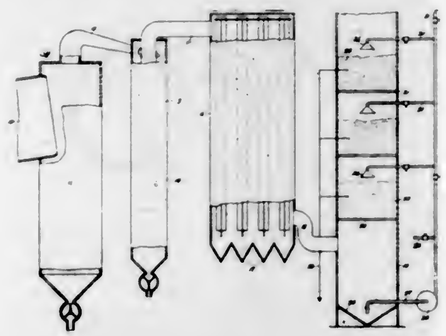
2. A marble shooter comprising a base, a handle rising from said base, a concave recess formed in the front wall of said base, a bore in said base and opening into the axial center of said recess, a plunger slidable in said bore, a head formed on said plunger, an elastic element passing over said head and having its ends secured to said base, a lever pivoted to said handle, and a flexible cable connecting said plunger with said lever, whereby movement of said lever in an upward direction will cause the plunger to be retracted against the tension of the elastic element.

1,508,328. BRAKE EQUALIZER. CHARLES W. HORSTMANN, Oakland, and JOHN C. CREAGMILE, Berkeley, Calif. Filed Feb. 7, 1923. Serial No. 617,466. 6 Claims. (Cl. 74—39.)



1. As an element of a brake equalizer, a yoke provided with a pivotal support for an equalizing bar and a boss on each side of said support for limiting the backward movement of said bar.

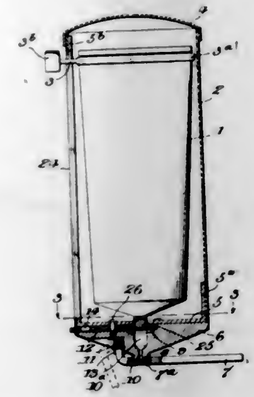
1,508,329. MARKING MACHINE. THOMAS HORTON, Challis, Idaho. Filed Apr. 4, 1922. Serial No. 549,459. 2 Claims. (Cl. 97—35.)



1. In a marking machine, the combination with a wheeled frame including a crank shaft, of a second frame pivotally supported by said shaft and including longitudinal and transverse frame members, marking shoes arranged below said longitudinal frame members and extending longitudinally thereof, means extending upwardly from said shoes and engageable with said longitudinal and transverse frame members for supporting said shoes in position, and means for tilting said second frame to vertically adjust said shoes.

1,508,330. SIREN WHISTLE. FRED B. HOWELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 27, 1921. Serial No. 524,078. 3 Claims. (Cl. 116—147.)

3. A sound producing device comprising a sound amplifier provided with an inlet opening, a flexible pressure responsive device arranged in slidable relation with said amplifier and provided with an exhaust opening normally closed thereby but adapted to register with said inlet opening upon the occurrence of a predetermined pressure, and means for applying a fluid pressure to said device, whereby said device is caused to alternately expand and contract and exhaust said fluid in a succession of sound producing blasts into said amplifier.

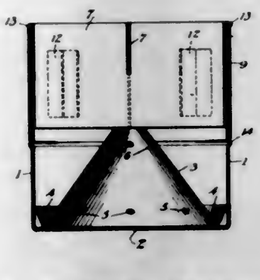


1,508,331. TREATMENT OF GASES CONTAINING DUST AND FUME. FREDERICK W. HUBER, Riverside, Calif., assignor, by mesne assignments, to Western Precipitation Company, a Corporation of California. Filed May 22, 1918. Serial No. 235,945. 6 Claims. (Cl. 183—7.)

1. In the precipitation of fume from cement kiln exit gases by high potential electric discharge, the step of bringing the gases containing potassiferous fume material, after being subjected to such electrical discharge, into interstitial spaces in a mass of substantially dry electrically conductive material having the property of de-electrifying said gases.

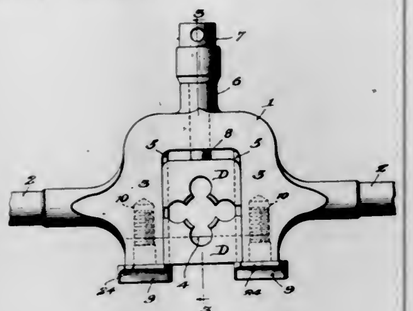
1,508,332. TOOTHPASTE DISPENSER. ALBERT B. HURLEY, Washington, D. C., assignor to Domestic Accessories Corporation, New York, N. Y. Filed Jan. 27, 1923. Serial No. 615,311. 6 Claims. (Cl. 221—60.)

1. A dispensing device for paste in collapsible tubes comprising the following instrumentalities: a supporting base containing a feed openings, means to secure a tube of paste on said base with its nipple in line with said opening for discharge therethrough, means to progressively collapse the tube to force out the paste, a guide for said collapsing means carried on said base, actuating means for said collapsing means, a cover for the paste tube and guide, slotted to permit travel of said actuating



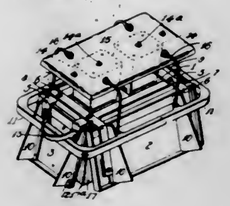
means and a brace arranged on said base opposite the guide rod, extending upwardly to hold the cover in position.

1,508,333. AWNING ATTACHMENT. FREDERICK HUTH, Woodhaven, N. Y. Filed Sept. 13, 1922. Serial No. 587,969. 3 Claims. (Cl. 24—243.)



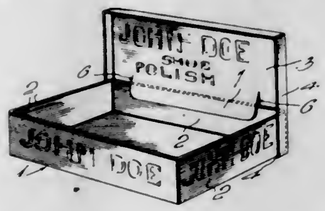
1. A device for securing a hoist rope to an awning weight, said device consisting of a clamp composed of separable jaws adapted to embrace the weight, said jaws having shanks, the one shank having a length extending beyond the end of the other, the longer shank terminating in an eye beyond the shorter shank and said shorter shank abutting said eye, and a ring swingingly held by said eye and adapted to receive the awning rope.

1,508,334. CAMP STOVE. WILBUR ROSMAN INGALLS, Portland, Me. Filed Jan. 29, 1921. Serial No. 689,287. 3 Claims. (Cl. 124—43.)



1. A stove of the character described, comprising a casing, cross partitions in the upper portion of the casing dividing the same into a plurality of compartments, said casing having openings in its wall communicating with said compartments, and a damper movable on the casing and having openings therein registering with the openings in the casing.

1,508,335. DIESTOCK. WILLIAM A. JAMES, Providence, R. I. Filed May 5, 1922. Serial No. 558,566. 5 Claims. (Cl. 10—123.)

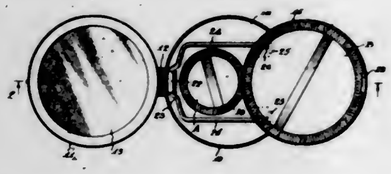


2. A die stock including a yoke having parallel arms, a rigid bridge connecting the outer ends of the arms and disposed slightly below the plane of the lower sides of the arms, guide-ways formed on the inner side faces of the arms and located to one side of the vertical center of the arms so as to prevent misplacement of the dies in the yoke, and turn-buttons having threaded shanks threaded into the outer ends of the arms.

1,508,336. MOLD FOR MAKING CONCRETE ARTICLES. WILLIAM JAMES JAMISON, Seaford, Victoria, Australia. Filed Nov. 27, 1923. Serial No. 677,216. 16 Claims. (Cl. 25—121.)

1. For concrete article making, a mold having a base, movable walls extending from the base, means to draw the walls into closed positions, the said means being capable of retraction, and spring means to locate the walls in divergent positions when such retraction is effected, the spring means comprising strips which cross under the base, cross one another, extend outside the walls, and are connected to the base and walls.

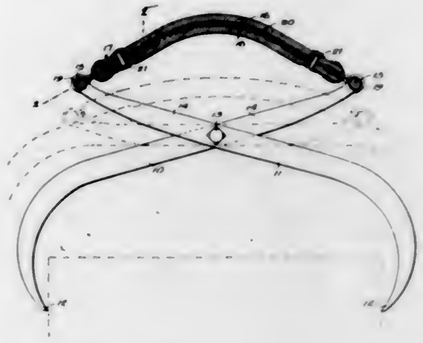
1,508,337. CARTON. MILTON OWEN JENSEN, Kansas City, Mo. Filed Mar. 8, 1923. Serial No. 623,759. 1 Claim. (Cl. 206—44.)



An article of manufacture comprising a box having vertical side walls, and a top having depending flanges to surround said walls, said top having a slit spaced inwardly from one of its flanges and formed with lateral ends extending away from said flange, said lateral ends of the slit terminating a distance from said flange slightly greater than the height of the box walls; whereby the portion of the top within the confines of the slit may be hooked over the edge of one wall of the box and said flange frictionally inserted under the box, when said top is slid from a horizontal to a vertical position and said portion sprung inwardly.

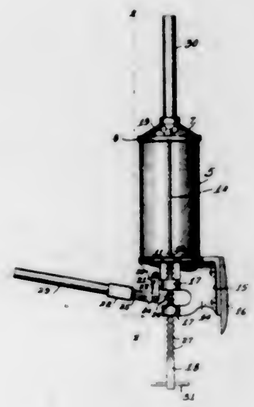
1,508,338. CLASP. RUFUS KING, Plainville, Mass., assignor to Bugbee & Niles Company, North Attleboro, Mass. Filed Jan. 15, 1924. Serial No. 686,257. 5 Claims. (Cl. 24—77.)

1. In a clasp, a male member having a head, a female member having a pair of arms the inner edges of which are spaced and notched to conjointly receive the head, the outer sides of the arms being curved outwardly and towards each other and forming guards disposed on opposite sides of the head and projecting beyond the latter, the female member having slots on the outer sides of the arms, to receive a ribbon therethrough, the part of the ribbon between said slots being engaged over the curved outer sides of the guards to conceal and protect the guards and the head.



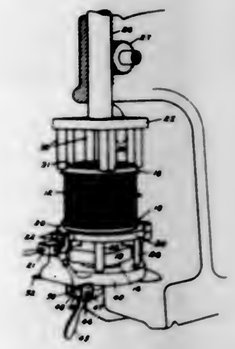
1,508,339. VANITY CASE. MAX KLINE, New York, N. Y. Filed Mar. 22, 1924. Serial No. 701,144. 3 Claims. (Cl. 132—83.)

1. In a vanity case including a body and cover, a stationary compact carrier member secured within the bottom portion of the body, a movable compact carrier member, a means of connection therebetween to permit of relative swinging movement of the movable member to a projected position above the upper open end of the body and sliding movement to uncover the stationary member whereby access may be gained to both of the compacts, the said means of connection consisting of a yoke swingingly connected to the stationary member, and a slidable connection between the yoke and the movable member.



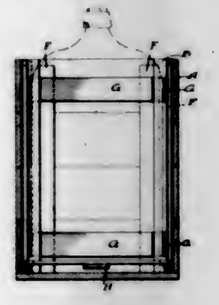
1,508,340. ICE TONGS. CHARLES JOHN KROENING, Evansville, Ind. Filed Nov. 17, 1923. Serial No. 675,398. 1 Claim. (Cl. 294—118.)

In a pair of ice tongs, a pair of tong jaws having hinged connection and formed with shanks extending beyond the hinged connection, laterally projecting trunnions on said shanks, a handle member having laterally spaced knuckles at its opposite ends embracing the trunnions and lying at opposite sides of the ends of the shanks, said knuckles having terminals embedded in and anchored to the opposite ends of the handle member, and a resilient, elastic strip embedded in the handle member and secured at its opposite ends to the handle member adjacent the opposite ends of said handle member, said handle member being of a greater length than the distance between the shank terminals when the tongs are in fully opened position whereby the said strip



effects a bowing of the handle member when the tongs are fully opened to afford a space between the handle and the shanks, as and for the purpose specified.

1,508,341. CHARGING DEVICE FOR GREASE GUNS. JULIUS EDWARD LATHAM, San Francisco, Calif. Filed June 19, 1922. Serial No. 569,226. 2 Claims. (Cl. 221—78.)



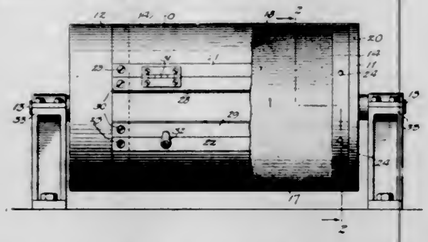
2. In a grease gun filler, a bracket adapted for securing to a support, a cylindrical grease container mounted at one end on the bracket and having a discharge opening at the opposite end, a piston within the cylinder with a rod extending therefrom and past the bracket, a bearing on the bracket slidably supporting the rod, a hand lever suspended on a link pivotally secured to the bracket and adapted to engage the rod adjacent the bearing for forcibly moving the rod and piston in the cylinder, the link permitting the lever to be moved bodily from the rod for disengagement.

1,508,342. APPARATUS FOR MANUFACTURE OF AIR-COOLED CYLINDERS. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 8, 1922. Serial No. 599,731. 8 Claims. (Cl. 29—88.2.)

1. In combination, a cylinder, fins separate from said cylinder applied thereto, and closed retaining rings for holding the fins to the cylinder, said rings encircling the fins and clamping them tightly against the cylinder.

1,508,343. CARBOY. CHARLES LEFKOWITZ, Newark, N. J. Filed July 3, 1923. Serial No. 649,336. 2 Claims. (Cl. 217—54.)

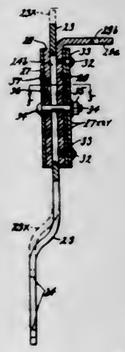
1. In a carboy, a hollow body, corner pieces spaced apart in the body and secured thereto, each corner piece having two recesses, each recess having two walls, one disposed longitudinally of the side of the body and the other at an angle to the first wall and outwardly to the body to form with the body a guideway, guide members disposed in the guideways, and lateral supporting members secured to the inner sides of the guide members and connecting the latter, the lateral supporting members being in this way spaced from the body.



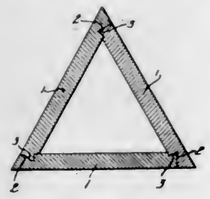
1,508,344. FABRIC. OSCAR LION, New York, N. Y. Filed Mar. 20, 1924. Serial No. 700,633. 4 Claims. (Cl. 28—1.)

1. A strip of fabric formed with a plurality of stiffening sections, and a finishing fluid arranged thereon, said stiffening sections being formed of material capable of absorbing said finishing fluid to a greater extent than the remaining material.

2. A piece of fabric formed with a body of silk and ornamental reinforcing means of material capable of absorbing finishing fluid to a greater extent than silk, and a coating of finishing fluid arranged on the silk body and on the ornamental reinforcement.

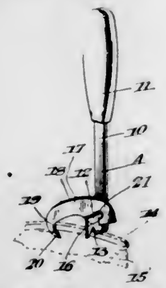


1,508,345. TUMBLING BARREL. JOSEPH LUTO, Jr., New York, N. Y. Filed Oct. 15, 1923. Serial No. 668,772. 2 Claims. (Cl. 51—164.)



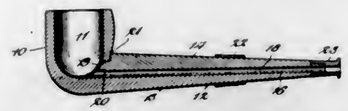
1. A tumbling barrel comprising a split cylindrical body, circular heads received within the opposite ends of the body, an outwardly projecting axial journal on each head adapted to be received in bearings for rotatably mounting the barrel, a lining having an abrasive inner surface, the side edges of said lining being clamped between the periphery of the heads and the side edges of the body with the end edges of the lining turned over the end edges of the body, clamping bars overlying the end edges of the body, and means extending through the clamping bars and body and anchored in the heads for assembling the barrel.

1,508,346. SNUBBER FOR AUTOMOBILES. CLIFTON E. MONTGOMERY, St. Paul, Minn., assignor of one-half to Henry Arndt, St. Paul, Minn. Filed Apr. 19, 1923. Serial No. 633,326. 3 Claims. (Cl. 188—129.)



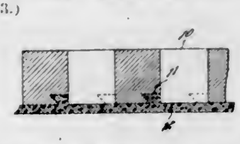
1. A snubber device for automobiles consisting of a vertically disposed square tube, a short flat vertical bar fixed in one side of the tube, a longer bar also secured in the tube and having its top end protruding above the tube and adapted to be secured to the body of the vehicle, a still longer intermediate bar slidable between the two first mentioned bars and having its lower end adapted to be secured to the axle of the vehicle, means for adjusting the side bars against the sliding bar and automatic means for forcing the slidable bar against one of the fixed bars to increase the friction between them, whenever the slidable bar moves downwardly in the tube.

1,508,347. CONDUIT. JOSEPH OVILA MONTREUIL, Quebec, Quebec, Canada. Filed Nov. 15, 1921. Serial No. 515,346. 2 Claims. (Cl. 61—16.)



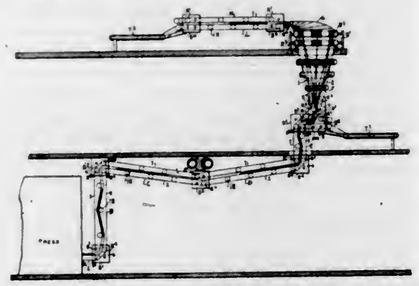
1. In a conduit section of the type including a plurality of identical interlocking wall members wherein each wall member near one side edge has an elongated tongue running parallel to said side edge and has near the opposite side edge a groove running parallel to the last-mentioned side edge, such groove being adapted to take the tongue of a laterally adjoining wall member, the combination of three such wall members for forming a conduit section, each wall member having plane parallel faces and having one of its side edges plane and perpendicular to the faces of said member and having its other side edge plane and at an angle of 60° to said faces; whereby when three of said wall members are assembled with their tongues and grooves interfitting there is provided a conduit section of uniform wall thickness and with an inner perimeter and an outer perimeter both defining a perfect and uninterrupted equilateral triangle, and whereby, for safety and compact arrangement in transportation and storage, a plurality of piles of the wall members may be arranged alongside each other and with the wall members of each pile in face to face contact and with the 60°-inclined side edge of each successive wall member in a pile reversely arranged but vertically aligned and with the last-mentioned side edge of each wall member of a pile and the same side edge of a wall member at the same level in an adjoining pile in face to face contact.

1,508,348. CAN OPENER. GEORGES MORIN, Passburg, and MARC PIARD, Bellevue, Alberta, Canada. Filed Oct. 13, 1923. Serial No. 668,369. 2 Claims. (Cl. 30—3.)



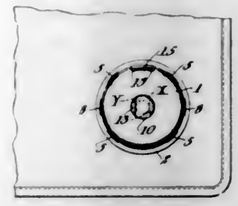
1. A can opener of the character described comprising, a shank member having suitable handling means and provided at one end with an orificed plate extending at right angles thereto and adapted to engage with the ridge or edge of a can, a blade formed with an orifice therein and having a curved cutting edge on the underside terminating in an inwardly extending point, said plate and blade having a pivoted connection at their respective orifices.

1,508,349. TOBACCO PIPE. DAVID NELSON, Brooklyn, N. Y. Filed Mar. 1, 1921. Serial No. 448,841. 1 Claim. (Cl. 131—12.)



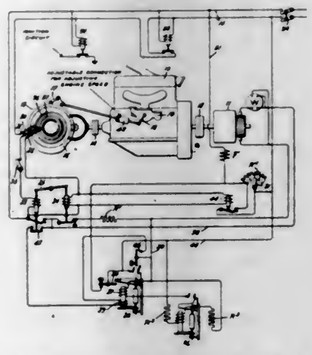
A tobacco-pipe comprising a bowl having an aperture which opens to the interior of the bowl, a stem of longitudinally separable interfitting sections, one of said sections being slidable on the other section and having a reduced extension and a shoulder, the extension fitting in said aperture and the shoulder abutting the wall thereof, said sections forming a draft passage which communicates directly with the interior of said bowl, and a ring member secured to the slidable section and capable of encircling the other section and being in the nature of a grip for the ready separation of said sections.

1,508,350. BLOCK. LUTHER B. O'NEAL, Pensacola, Fla. Filed Mar. 3, 1923. Serial No. 622,597. 2 Claims. (Cl. 94—13.)



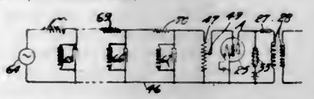
2. A paving block of elongated contour having a semicircular recess formed in the bottom thereof and opening at one longitudinal edge of the block, the curved wall of said recess being inclined to afford the recess a substantially dove-tailed configuration in cross section.

1,508,351. BELT CONVEYER. GUSTAVE B. REISBACH and HARRY A. SEDGWICK, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 2, 1921. Serial No. 465,977. 29 Claims. (Cl. 198—165.)



1. In a conveyer, in combination, a plurality of endless belts, certain of the same being arranged horizontally and others vertically, rollers on which said belts are mounted to provide a plurality of conveyer sections and supporting frames for said rollers, said frames being of like construction and each being adapted to accommodate a plurality of rollers in positions disposed symmetrically about a common axis.

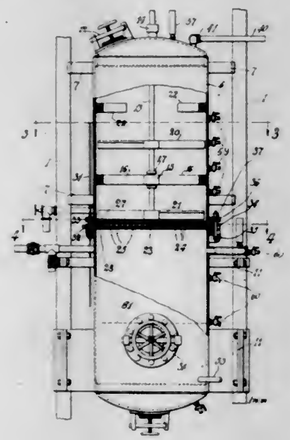
1,508,352. SEPARABLE FASTENER. CHARLES M. ROBINSON, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 19, 1923. Serial No. 613,718. 4 Claims. (Cl. 24—211.)



3. A socket member for separable fasteners, comprising a face plate, a back plate, and a slidable resilient stud-engaging member arranged between said plates, said face plate being formed to provide a cavity to receive said stud-engaging member, and said back plate being formed integrally with means for guiding said stud-engaging member and other means for limiting its sliding and resilient movements.

1,508,353. ENGINE-TESTING DEVICE. CARL F. SCOTT, Yonkers, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 20, 1921. Serial No. 478,931. 11 Claims. (Cl. 175—183.)

11. An engine testing device comprising a dynamo electric machine adapted to be connected to the engine, timing mechanism for varying the engine speed and for controlling said machine, a supply circuit, a dynamic brake circuit, and means controlled by the said timing mechanism whereby the said machine is energized from the said supply circuit as a motor to start the engine and the machine then operates as a generator delivering energy to the supply circuit when the engine speed is one value and the machine is included in the dynamic brake circuit when the engine speed is another value.

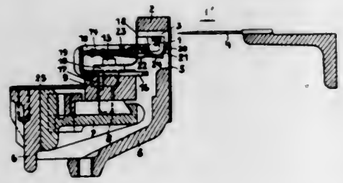


1,508,354. ELECTRIC WAVE FILTER. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed July 14, 1917, Serial No. 180,589. Divided and this application filed May 16, 1921. Serial No. 469,978. 4 Claims. (Cl. 178—44.)

1. A filter section comprising input and output terminals, an impedance path connecting one input terminal and one output terminal, an electric path connecting

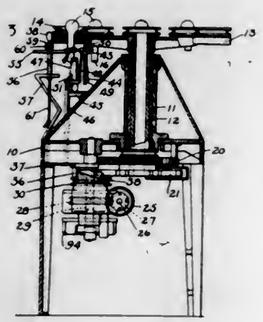
the other input terminal and output terminal, and an impedance path connecting said first two paths, one of said impedance paths consisting of substantially pure resistance, and the other of said impedance paths comprising an inductance and a capacity in parallel.

1,508,355. PROCESS OF AND APPARATUS FOR EXTRACTING SULPHUR FROM ORE. WILLIAM P. THORNTON, Chicago, Ill. Filed Mar. 24, 1919. Serial No. 284,780. 23 Claims. (Cl. 23—10.)



1. The process of extracting sulphur from a mass of sulphur bearing ore, comprising the use of hot water on the entire mass in a manner to melt the sulphur in the ore mass, and to soften any mud or earthy matter contained in the mass, filtering the water and melted sulphur away from the ore by maintaining conditions which cause the melted sulphur to accumulate at the bottom of the mass and flow by gravity from an area under pressure to an area of less pressure and through a filtering medium, and ultimately recovering the sulphur.

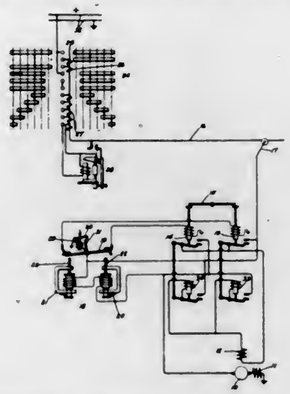
1,508,356. ELECTRON-DISCHARGE DEVICE. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 18, 1920. Serial No. 359,680. 6 Claims. (Cl. 250—27.)



1. An electron discharge apparatus comprising a cathode adapted to emit electrons, a controlling electrode located about said cathode and within electron-receiving relation thereto, a cooperating anode enclosed by said cathode, a source of energy connected between said cathode and said anode, means for charging said controlling electrode to a positive potential with respect to said cathode, means for impressing potential variations upon said controlling electrode, and a source of current connected between said cathode and anode having a voltage sufficiently high to produce saturation current.

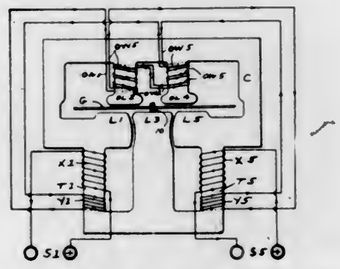
1,508,357. SHUTTLE EMBROIDERY MACHINE. MAX BRETSCHNEIDER, Plauen, Germany, assignor to the Firm: Vogtlandische Maschinenfabrik (vormals J. C. & H. Dietrich) Aktiengesellschaft, Plauen, Germany. Filed Sept. 28, 1923. Serial No. 665,379. 2 Claims. (Cl. 112—95.)

1. A shuttle embroidery machine, comprising, in combination, a plurality of needles, a member forming a shuttle path, a shuttle located below this path, a basket containing the shuttle, and a spring arranged in the basket below the shuttle and pressing this latter against the shuttle path, the front end of said spring being vaulted transversely to the shuttle back, as set forth.



1,508,358. MACHINE FOR CUTTING GLASS. CARL A. BROWN, Toledo, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,720. 4 Claims. (Cl. 49—50.)

1. In a machine for cutting glass, the combination of holders for incandescent lamp bulbs or similar articles, means for rotating said holders, a carrier for said holders, means for advancing said carrier step by step, means for heating a substantially narrow zone of the neck of said lamp bulb or similar article and means for subsequently chilling said zone.

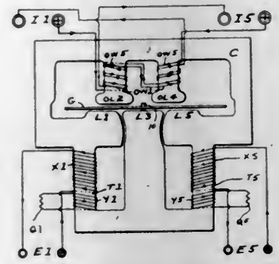


1,508,359. SYSTEM OF SELECTIVE CONTROL. EUGENE R. CARICHOFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 4, 1922. Serial No. 526,885. 6 Claims. (Cl. 104—149.)

5. A reversing control system for electric motors comprising a motor supply conductor, electro-responsive reversing switch mechanism, a selector relay operated responsively to the potential of the supply conductor for controlling the said switch mechanism, a reversing controller for controlling the potential of the supply conductor to control the operation of the said relay, and

an electromagnetic lock for the said relay energized from the said conductor for preventing the unintentional operation of the same.

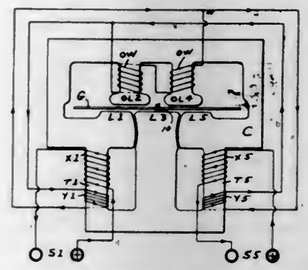
1,508,360. ELECTRICAL METHOD AND APPARATUS. ROLLIN N. CONWELL, Bloomfield, N. J. Filed May 11, 1921. Serial No. 468,585. 20 Claims. (Cl. 175—335.)



1. In apparatus of the class described, in combination, a plurality of magnetically coacting induction devices, primary and secondary windings therefor, said primary windings adapted to be energized from two sources of power, and means cooperating with said secondary windings for producing fluxes coacting with the fluxes of said induction devices to set up traveling magnetic fields.

17. The method of inducing currents in a conductor, which comprises producing magnetically co-acting fluxes from a plurality of sources of power, producing from the respective sources fluxes in quadrature with the first fluxes, and causing said several fluxes to combine to form one or more traveling fields inducing currents in said conductor.

1,508,361. ELECTRICAL METHOD AND APPARATUS. ROLLIN N. CONWELL, Bloomfield, N. J. Filed May 11, 1921. Serial No. 468,586. 12 Claims. (Cl. 175—335.)

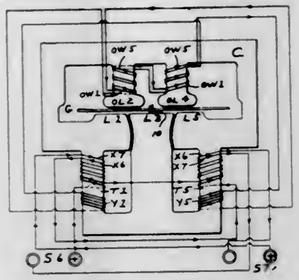


1. In apparatus of the class described, in combination, a first means adapted to be connected to two sources of power, a magnetic circuit in which flux is produced by said first means; a second means adapted to be connected to two additional sources of power, a second magnetic circuit in which flux is produced by said second means; said second flux being substantially in quadrature with said first flux and cooperating with said first flux to produce traveling fields; and means responsive to said traveling fields.

12. The method of producing forces, which comprises producing coacting fluxes from the voltage of each of a plurality of circuits, producing from the current of each circuit coacting fluxes in quadrature with the first fluxes,

and causing said several fluxes to combine to form traveling fields, inducing currents in a movable member, the reactions between fluxes caused thereby and the traveling fields tending to move said member.

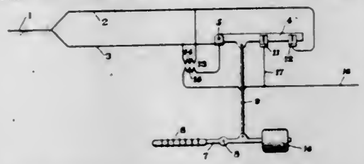
1,508,362. ELECTRICAL METHOD AND APPARATUS. ROLLIN N. CONWELL, Bloomfield, N. J. Filed May 11, 1921, Serial No. 468,587. Renewed Feb. 8, 1923. 25 Claims. (Cl. 175—320.)



1. The method of inducing currents in a conductor, which comprises obtaining fluxes from a plurality of current sources, producing currents by means of said fluxes, of substantially opposite phase to the respective currents of the said current sources, producing a flux from the resultant of said produced currents substantially in quadrature with the said first named fluxes, and combining the several fluxes to produce traveling fields; said traveling fields inducing currents in a conductor.

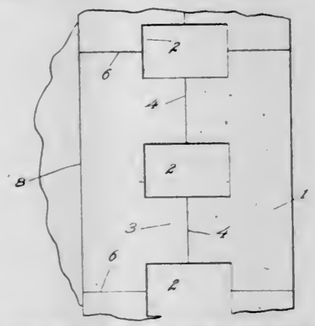
24. In apparatus of the class described, in combination, a magnetic core, transformers each having a primary winding adapted to be connected to a source of power, secondary windings for each of said transformers, a secondary circuit cross-connecting said secondary windings, all of said windings being wound on said core, and an additional winding on said core adapted to be connected to points on said secondary circuit, whereby the resultant flux produced by said transformers is substantially in quadrature with the flux produced by said additional winding, whereby traveling fields are produced; and means responsive to said traveling fields.

1,508,363. ELECTRICAL METHOD AND APPARATUS. ROLLIN N. CONWELL, Bloomfield, N. J. Filed May 11, 1921. Serial No. 468,588. 11 Claims. (Cl. 175—335.)



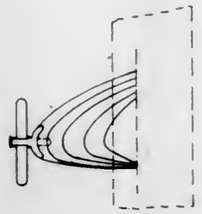
1. In apparatus of the class described, in combination, transformers each having two primary windings adapted to be connected respectively to two sources of power, coacting windings connected to the respective secondaries of the said transformers and adapted to produce fluxes substantially in quadrature with the transformer fluxes, the primary windings on one transformer normally aid-

ing and the primary windings on the other transformer normally opposing one another; and means for combining the several fluxes to form a traveling field.



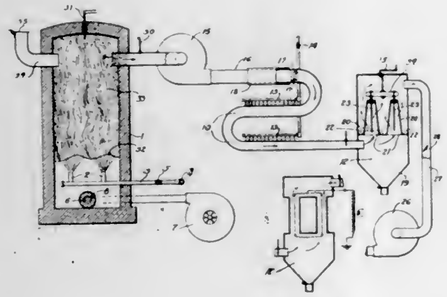
7. The method of inducing currents in a conductor, which comprises producing first fluxes from sources of power normally acting cumulatively, producing second fluxes from said sources normally acting differentially, producing other fluxes respectively in quadrature with either the first or second fluxes, and causing the several fluxes to combine to form traveling fields inducing currents in said conductor.

1,508,364. POWER SYSTEM. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,510. 7 Claims. (Cl. 175—294.)



4. The method of protecting a transmission line from injury due to an accumulation of sleet which comprises sending a heating current therethrough in response to the accumulation of sleet on an object located in proximity to said line.

1,508,365. METHOD OF CUTTING OUT STRIP-SHINGLE UNITS. ALAN R. LUKENS, Jr., and CHARLES L. KELLER, Wyoming, Ohio. Filed July 6, 1920. Serial No. 394,321. 3 Claims. (Cl. 164—17.)

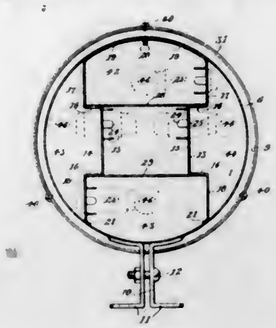


1. A method of cutting out strip shingle units which consists in cutting from a piece of material a series of interspaced cut-outs, same being of a size suitable for commercial use as a roof covering, and dividing the piece into sections or units by means of lines, extensions of which would bisect the cut out spaces both longitudinally and transversely of the piece for the purpose described but which lines terminate at the margin of the cut out portion.

1,508,366. AXLE FOR FLYING MACHINES. HANNS KLEMM, Sindelfingen, Germany, assignor to Daimler-Motoren-Gesellschaft, Unterturkheim, Germany, a Corporation of Germany. Filed June 10, 1924. Serial No. 719,064. 4 Claims. (Cl. 244—2.)

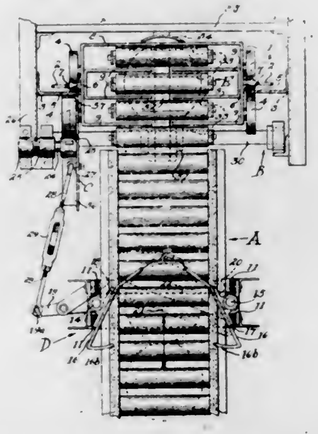
3. In a flying machine, an axle composed of laminated springs, the width of said springs diminishing toward the top thereof, and the lowermost of said springs being of a sufficient width to form an additional supporting plane.

1,508,367. METHOD AND APPARATUS FOR PRODUCING CARBON BLACK. CHAUNCEY MATLOCK, Brooklyn, N. Y., assignor to Monroe-Louisiana Carbon Company, Monroe, La., a Corporation of Delaware. Filed Jan. 5, 1921. Serial No. 435,074. 24 Claims. (Cl. 134—60.)



24. The method of separating and recovering carbon from a hydrocarbon, which consists in partially burning the hydrocarbon in a closed chamber by positively supplying thereto air at regulated pressures and quantities insufficient for complete combustion, rapidly exhausting the products of combustion from the chamber by means of an exhauster disposed at the furnace outlet, passing the resultant products to a collector and rapidly exhausting the products of combustion from the collector by means of an exhauster associated therewith.

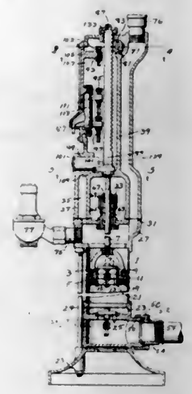
1,508,368. DIRECTION-SIGNAL LAMP FOR AUTOMOBILES. JOHN D. HENDRIX, Seattle, Wash., assignor to Oliver Z. Perry, Los Angeles, Calif. Filed July 18, 1923. Serial No. 652,360. 4 Claims. (Cl. 177—329.)



1. In a signalling apparatus of the class described, a cylindrical casing having open ends, a series of interlocked partitions within said casing dividing the latter into a plurality of compartments, said partitions consisting of side sections for forming side compartments outwardly thereof adapted for bearing against the upper and lower inner faces of said casing and having offset central portions, and a central section interlocking with

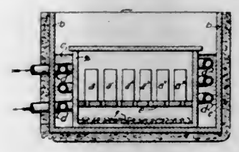
the offset portions of the side sections for forming upper and lower compartments above and below said section, illuminating means in each compartment, sectional lenses

positioned within said open ends, and cover plates secured to the ends of said casing for holding said lenses in place.



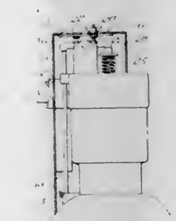
1,508,369. TRANSFER GATE FOR GRAVITY CONVEYERS. ARTHUR J. JOHNSON, St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Mar. 27, 1920. Serial No. 369,184. 10 Claims. (Cl. 198—26.)

1. In a device of the class described, the combination with a gravity conveyer and an elevator having a series of cars, of means for allowing articles to pass singly from said conveyer to the cars of said elevator, said means comprising a gate formed with an arm pivoted for horizontal movement and extending into the path of articles passing over the conveyer toward the elevator and a lever, tiltably mounted on the frame of said elevator, adapted to be moved by the cars of said elevator, to actuate said gate.



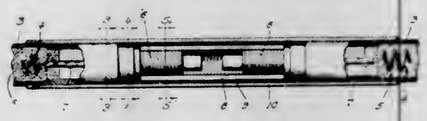
1,508,370. PUMP. SHERWOOD HINDS, Chicago, Ill., assignor to St. Louis Pump & Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 28, 1921. Serial No. 440,797. 4 Claims. (Cl. 103—2.)

2. In a device of the character described, in combination, a pump cylinder having a piston operative therein, a valved discharge outlet communicating with said cylinder at a point above said piston, a rack reciprocative with said piston, a housing mounted on said cylinder having front and rear hollow legs and a transverse connecting arm, said rear leg extending upwardly of said front leg to form a discharge or an expansion chamber,



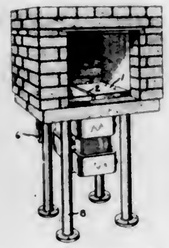
said rear leg having an extension at its upper extremity, said rack and operating means therefor mounted in said extension.

1,508,371. PROCESS OF PRESERVING BATTERIES. LOUIS KRIEGER, Paris, France, assignor to General Electric Company, a Corporation of New York. Filed Feb. 19, 1924. Serial No. 693,881. 5 Claims. (Cl. 204—29.)



3. The method of conserving a battery while not in use which consists in placing the battery in a container having an insulating medium inert with respect to the elements of the battery, which medium evaporates at a point below 25 degrees centigrade and maintaining the temperature of the battery below 10 degrees centigrade.

1,508,372. DUST COVER. WILLIAM L. DAVIS, Petersburg, Va. Filed June 28, 1923. Serial No. 648,376. 7 Claims. (Cl. 123—90.)



1. The combination with an engine having overhead valves, of a cover enclosing said valves to shield same from dirt and grit and extending over the side of the engine bloc and secured thereto between the exhaust manifold and the exhaust port.

1,508,373. CONNECTER. EDWIN N. LIGHTFOOT, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 17, 1921. Serial No. 437,792. 14 Claims. (Cl. 219—63.)

1. Means for connecting two tubular electric heaters having terminals extending from the ends of the jackets thereof, comprising a conducting sleeve for receiving the heater terminals, and a tube surrounding and insulated from the conducting sleeve, the tube being arranged to be rigidly fastened to the heater jackets.

1,508,374. ELECTRIC MUFFLE FURNACE. IRVING R. VALENTINE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1920. Serial No. 416,669. 5 Claims. (Cl. 204—64.)

1. A muffle furnace comprising a heating chamber, a loop shaped casting of iron constituting part of the wall of said chamber, and transformer means connected to said loop for furnishing a heating current thereto.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 326—No. 3. TUESDAY, SEPTEMBER 16, 1924. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Aug. 22, 1924.*

Camthol Company, Portland, Oreg., its assigns or legal representatives, take notice:

A cancellation proceeding has been instituted by this Office upon the application of the Camthol Company (a Corporation of Delaware), 420 Hall Street E., Savannah, Ga., to effect the cancellation of the trade-mark registration of Waugh Medicine Co., of No. 300 A Street, Grangeville, Idaho, No. 97,515, dated June 9, 1914. The records of this Office show that the Camthol Company, Portland, Oreg., is the assignee of said Waugh Medicine Co. The notice of such proceeding sent by registered mail to the respondent, the Camthol Company, Portland, Oreg., having been returned by the post office as undeliverable, notice is hereby given that unless said Camthol Company, Portland, Oreg., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Boston Pneumatic Action Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of the M. S. Wright Company, of Worcester, Mass., to effect the cancellation of the trade-mark registration of the Boston Pneumatic Action Company, of 1075 Washington Street, Boston, Mass., No. 83,132, dated August 22, 1911, and the notice of such proceeding sent by registered mail to the said Boston Pneumatic Action Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Boston Pneumatic Action Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Ohio.) Short patent, No. 933,128, for heater, claim 1 *Held* not infringed. *Monitor Stove Co.* v. *Williamson Heater Co.*, 1.

(C. C. A. Mass.) Libbey patent, No. 968,576, claims 1 and 2, for valve mechanism in open vacuum cash-carrier systems, *Held* valid and infringed. *E. T. Slattery Co.* v. *Lamson Co.*, 285.

(C. C. A. Ohio.) Strong patent, No. 1,002,776, for furnace. *Held* invalid. *Monitor Stove Co.* v. *Williamson Heater Co.*, 1.

(C. C. A. R. I.) Gerosa patent, No. 1,263,879, for lug for power-plant support for motor vehicles, *Held* invalid. *Gerosa* v. *Apco Mfg. Co.*, 19.

(C. C. A. Ohio.) Lattig patent, No. 1,298,519, claims 1 and 2, for improvements in school chairs, *Held* invalid. *Langsloic-Fowler Co.* v. *Cleveland Seating Co.*, 304.

(C. C. A. Calif.) Chapman patent, No. 1,343,709, for chock for automobile wheels, claims 6 and 7 *Held* not infringed. *Supreme Mfg. Corporation* v. *Security Mfg. Co.*, 65.

(C. A. A. Ohio.) Doyle & Wollenhaupt patent, No. 1,346,801, for furnace, claim 2 *Held* invalid. *Monitor Stove Co.* v. *Williamson Heater Co.*, 1.

(C. C. A. Calif.) Ells reissue patent, No. 14,956, for improvement in auto theft signals, *Held* invalid. *Supreme Mfg. Corporation* v. *Security Mfg. Co.*, 65.

Notice—Attorney's Address.

Many letters are being returned to this Office for lack of street address. The attorney's full post-office address should be given in every power of attorney. The prompt delivery of communications will thereby be facilitated.

Condition of Applications Under Examination at Close of Business September 5, 1924.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 60,368; Trade-Mark Division, 1,811. Oldest new case, Jan. 8, 1924; oldest amended, Jan. 9, 1924. The dates given are 1924.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended. DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

DUNLAP & CO. *v.* THE JACKSON & GUTMAN COMPANY.

Decided January 9, 1925.

TRADE-MARKS—NAME OF AN INDIVIDUAL, FIRM, CORPORATION, OR ASSOCIATION.

A mark consisting merely of opposer's name, printed in block type, so that there is a slight reduction in the height of the letters toward the middle of the word, surrounded by an outline with a downwardly-curved top and an upwardly-curved bottom, is not registrable under the law of 1905.

ON PETITION.

TRADE-MARK FOR NEGLIGEE SHIRTS.

Messrs. Briesen & Schrenk for Dunlap & Co.

Mr. A. W. W. Woodcock for The Jackson & Gutman Company.

FENNING, *Assistant Commissioner:*

This is a petition to the Commissioner to employ supervisory authority and consider the action of the Examiner of Interferences in dismissing and denying opposer's motion for judgment on the record.

Applicant applies for registration of a trade-mark consisting of "Dunlap" in block type, printed so that there is a slight reduction in the height of the letters toward the middle of the word, surrounded by an outline of substantially upright ends, a downward-curved top and upward-curved bottom. Thus:

Opposer alleges that this mark is simply its name, whereas applicant insists that the mark is distinctively displayed within the statute. Prior to the act of 1920 a commendable practice of leniency was developed in the Office and some marks involving almost as simple subterfuges as the present were registered. It seems clear that any reasonable interpretation of the language of the 1905 statute would preclude the registration of the present mark. To say that by placing a border of simple lines about a name removes it from being merely a name seems an unreasonable bending of common sense. To be sure, there may be an elaborate border or accompanying devices with the name, which make the mark something more than merely the name, but the present clearly is not such an instance. In *Du Pont* v. *The Ginter Company*, 289 O. G. 411; 1921 C. D. 79, a more elaborate subterfuge was held ineffective to secure registration, and the same conclusion must be reached here. A purpose of the trade-mark laws may be assumed to be to procure in the Patent Office as complete a list of marks actually used in commerce as may be. This may have been one of the underlying purposes of the act of 1920. At all events, such marks as the present may now be registered under the act of 1920. This being so, there seems to be no reason to unduly expand the terminology of the act of 1905 to procure this registration.

The Examiner of Interferences is reversed and the opposition sustained.

Commissioner's Decision.

MARYLAND ASSURANCE CORPORATION *v.* VAN SANT.

Decided February 14, 1924.

1. TRADE-MARKS—"PROTECTION"—MAGAZINE PUBLISHED BY AN INSURANCE COMPANY.

While the main business of a company may be insurance, and policy contracts are not articles of commerce, that does not preclude the company from also having a subsidiary business of publishing and distributing its magazine, and in such capacity it may own and get protection on a trade-mark.

2. SAME—SCOPE OF THE WORD "COMMERCE" IN THE TRADE-MARK STATUTE.

The trade-mark statute provides for the registration of any mark used in "commerce" between the States, etc. This registration statute is based upon the commerce clause of the Constitution and apparently is intended to be as broad in its scope with respect to commerce as is that clause of the Constitution.

3. SAME—SAME—PURCHASE AND SALE NOT ESSENTIAL INCIDENTS OF COMMERCE.

There appears to be no satisfactory authority for holding that purchase and sale are essential incidents of commerce.

4. SAME—HOUSE ORGAN OR ADVERTISING MEDIUM—USE IN COMMERCE.

A house organ or advertising medium which is published monthly by an insurance corporation solely for the benefit of its agents, but which is not sold and has no subscription price, articles of possible interest irrespective of insurance being sometimes inserted, the organ or magazine being distributed by its publishers and moving from city to city, is subject to the regulation of Congress under the commerce clause, and as such if it bears a trade-mark the trade-mark is used in commerce.

5. SAME—TRADE-MARK USE—USE ON MOVABLES WHICH ARE SUSCEPTIBLE OF SALE.

The trade-mark statute apparently implies that the mark must have been used on or applied to goods or merchandise. The usual definition of merchandise is something which is sold; but on occasion the courts include in the terms "goods" and "merchandise" any movable which is susceptible of sale.

6. SAME—ACQUIESCENCE IN USE OF WORD BY OTHERS WITH ADDITIONAL WORD INDICATING ORIGIN OF GOODS WITH THEM.

Where the appellee objected to the word "Protection" as a title for a house organ issued by The Travelers' Insurance Company, but took no steps to

prevent the company from using the title "Travelers' Protection," for the reason that it was not necessary because they had identified their publication as the "Travelers' Protection," *Held* that this transaction did not destroy appellee's right to register its mark "Protection" or permit the appellant to register the word.

7. SAME—CATALOGUES DISTINGUISHED FROM HOUSE ORGANS.

Sporadic gratuitously-distributed catalogues are to be distinguished from house organs which are sent periodically to established mailing lists.

APPEAL from Examiner of Interferences.

TRADE-MARK FOR A MONTHLY PUBLICATION.

Mr. Charles T. Reifsnider for Maryland Assurance Corporation.

Mr. Jesse T. Dowling and *Messrs. Browne & Phelps* for Van Sant.

FENNING, *Assistant Commissioner:*

This is an appeal by Van Sant from the action of the Examiner of Interferences authorizing registration by the Maryland Assurance Corporation of "Protection" as a trade-mark for a monthly magazine or periodical.

The Maryland Assurance Corporation began business in life, accident, and health insurance in January, 1918, taking over the accident and health department and business of the Maryland Casualty Company, together with a fully-organized agency organization of 20 years' development by that company.

Maryland Assurance Corporation first issued in March, 1918, a house organ or advertising medium and gave it the title "Protection," such house organ being defined, as shown by the notice on the title-page of the publication itself, as being solely for the benefit of the agents of Maryland Assurance Corporation, "to aid and equip its agents and to announce insurance achievements," its primary purpose being to give the agents information about the business of the home corporation. From time to time the monthly issues contained articles with reference to insurance business in general and sometimes articles which could possibly be considered to be of interest as reading matter, irrespective of insurance as a basis for such interest. The publication is not sold and has no subscription price.

In September, 1921, Van Sant, operating a publicity service devoted to all kinds of advertising, commenced to publish, without notice of use by Maryland Assurance Corporation, a magazine entitled "Protection." This magazine consisted of matters of interest in connection with insurance and was illustrated with pictures of fires, accidents, and the like, tending to show the necessity for protection by insurance. This magazine is sold by Van Sant under contracts or franchises held by certain customers. The distribution of Van Sant's magazine "Protection" by his customers is in no way controlled by Van Sant, the sale being as complete to such customers as would be the sale of any article over the counter in a store, with resultant profit to the seller.

It is of course obvious that Van Sant's customers are, in the main, insurance agents.

It is admitted that the Maryland Assurance Corporation was the first to adopt the title "Protection." Van Sant urges:

Maryland Assurance Corporation is not a publisher; it is incorporated for a general insurance business; it prints and sends its house organ to its agents with, we are free to admit, an expectation of some sort of profit—if it may be called profit—from such distribution; but this profit is not within the meaning of the trade mark statute, under which it has been held that even a sale with monetary transaction between the Home Company and one of its agents is not the use required by the statute in order to substantiate application for registration. • • • The trade mark statute requires a sale to substantiate use, and there must be a consideration for this sale which has to be a "valuable" one. Gifts are not trade mark uses. Uses which tend to help the applicant by, perhaps, increased business, more pride in its organization, better service from salesmen or agents, are not the uses which the statute requires.

The Maryland Assurance Corporation frankly admits that policy contracts are not articles of commerce in any proper sense of the word. *Paul* v. *Commonwealth of Virginia*, 8 Wall. 168; 19 L. Ed. 357. It cites, however, the case of the *Atlas Assurance Company, Ltd.*, v. *Atlas Insurance Company*, 112 S. W. 232; 15 L. R. A. N. S. 625, as showing that an insurance company may own and get protection on a trade-mark.

[1] It is to be noted, however, that the present case does not involve an application to register a trade-mark for insurance or for insurance policies, but rather for a magazine. The main or general business of the Maryland company may be insurance, but that does not preclude it from having also a subsidiary business of publishing and distributing its magazine.

[2, 3] The trade-mark statute provides for the registration of any mark used in "commerce" between the States, etc. This registration statute is based upon the commerce clause of the Constitution and apparently is intended to be as broad in its scope with respect to commerce as is that clause of the Constitution. I am unable to find satisfactory authority for holding that purchase and sale are essential incidents of commerce. *Bradford Dyers' Association, Limited*, 310 O. G. 3. In *Weber* v. *Freed*, 239 U. S. 325; 36 *Sup. Ct.* 131, the Supreme Court sustained as valid under the commerce clause of the Constitution a statute prohibiting the distribution of motion-picture films of prize fights. There was no showing nor suggestion in that case of a sale. The thing which was prohibited was the importation of the goods.

[4] It seems clear that the magazine published and distributed by the Maryland Assurance Corporation moves from city to city. As such it is subject to the regulation of Congress under the commerce clause. As such if it bears a trade-mark, the trade-mark is used in commerce.

[5] The trade-mark statute apparently implies that the mark must have been used on or applied to goods or merchandise. The usual definition of merchandise, to be sure, is something which is sold, but on occasion the courts include in the terms "goods" and "merchandise" any movable which is susceptible of sale. Clearly, the magazine here under consideration is susceptible of sale. I must therefore reach the conclusion reached by the Commissioner in the *Curtis Publishing Company Case*, 197 O. G. 1000, and hold that the Maryland company has shown trade-mark use.

The Office should be liberal and refrain from refusing to register merely because the right is doubtful, and especially when the matter has never been determined by any court.

Van Sant cites *ex parte Chandlee and Chandlee*, 140 MS. Doc. 433; but no question of public policy is involved in the present case.

[6] In April, 1918, the Travelers' Insurance Company, of Hartford, Conn., commenced to issue a house organ similar in scope, purpose, and contents to the house organ of the Maryland company. "Protection" was used as a title for its publication and was objected to by officials of the Maryland company. In 1920 the Travelers' Company changed its title to "Travelers' Protection," the change being acquiesced in by the Maryland company. Taylor, a witness for the Maryland company, admits that it took no steps to prevent the Travelers' Company from using "Protection," because—

it was not necessary because they had identified their publication as the "Travelers' Protection."

This transaction does not destroy the Maryland company's right to register its mark, nor does it permit Van Sant to register his mark.

[7] This case is to be distinguished from those cases which hold that use of a mark in catalogues and advertisements is not sufficient to warrant registration of the mark for the goods so advertised; also from those cases involving a sporadic or single gift or transaction when there is no business established to be indicated by the mark. Sporadic gratuitously-distributed catalogues are to be distinguished from house organs which are sent periodically to established mailing lists.

The decision of the Examiner of Interferences is affirmed.

U. S. District Court—Northern District of Ohio—Eastern Division.

ALUMINUM GOODS MANUFACTURING COMPANY v. THE BUCKEYE ALUMINUM COMPANY.

Decided May 28, 1923.

1. DESIGNS—INVENTION—SKILL OF A DESIGNER.

It is an erroneous view of what constitutes invention in a design patent that a design made up of a combination of old elements is patentable, even though it required to produce it no skill beyond that of a skilled designer.

2. SAME—SAME—INCREASED SALES—HIGHER PRICE.

Ability to sell ware bearing the patented design side by side with the same ware without the design at a higher price and increased sales since putting it out are not conclusive of patentable novelty.

3. SAME—UNFAIR COMPETITION.

Where plaintiff's design patents were anticipated by the prior art and the design or principles of plaintiff's ware had not acquired a secondary meaning as indicating the origin of the product and plaintiff had not established any trade or goodwill in the form of its ware covered by the design under cover of which defendant or any one else might by fraud or confusion of goods sell its product under favor of any public knowledge or public reputation of plaintiff's product, *Held* that there was no unfair competition.

4. SAME—PRIOR ART—APPLICATION OF DESIGN TO ARTICLES MADE OF DIFFERENT MATERIALS.

In determining the validity of patents for designs for aluminum ware designs applied to materials such as silver, glass, and britannia metal constitute part of the prior art.

Messrs. Brown, Boettcher & Dienner, *Mr. F. O. Richey*, and *Mr. B. D. Watts* for the plaintiff.

Messrs Frease & Bond for the defendant.

WESTENHAVER, *J.:*

This is a patent infringement suit, charging infringement of eight design patents, Nos 48560, 51144, 51145, 53309, 53454, 55187, 55479 and 55480, and also unfair competition by manufacturing and selling imitations of the articles to which the designs are applied. On hearing No. 51145 appeared not to be infringed and was withdrawn. All were applied for and issued to one Walter Luttringhaus. Title is now in plaintiff. No. 48560 is a design for a coffee percolator. No. 51144 is a design for a tea-kettle. No. 53309 is for a Berlin kettle. No. 53454 is also for a Berlin sauce pan. No. 55187 is for a cookery pot. No. 55479 is for a preserving kettle. No. 55480 is also for a Berlin kettle. The body of these articles is made of aluminum. Plaintiff, two years prior to the application dates therefor made these articles with rounded bodies. The design for which the patents were issued, consists merely in imposing a belt of panels around the body of each of them. In manufacturing, the bodies are first drawn from aluminum metal, and the paneling is then stamped thereon.

Defendant urges as a defense to the infringement charge that no novelty, originality, or invention is present in any of these designs such as is required by law to support a design patent. It also urges that No. 48560 is void for double patenting in view of Patent No. 48559, a similar design patent issued to Luttringhaus. It is also urged that all the remaining design patents are likewise void for double patenting, because anticipated by Patents Nos. 48559 and 48560. In addition thereto, defendant cites and has proved an immense volume of prior art, some of which, it is asserted, fully anticipates, and that, in view of this entire prior art, none of the designs is patentable. Defendant has introduced 185 exhibits. Most of these exhibits are specimens of prior art: They consist of earlier design patents, catalogues, and other publications and physical specimens; in fact, they include nearly every article of kitchen or table ware in common use, including aluminum as well as glass, silver, and britannia-metal ware.

The defense of double patenting will not be considered or decided. I am content to dispose of the infringement charge on the ground that there is no novelty, originality, or invention within the meaning of the law pertaining to design patents present in any one of these several design patents. On June 27, 1913, a design patent No. 44210 was issued to Luttringhaus for a coffee or tea pot, which, excepting the paneling, is precisely the same as the percolator design No. 48560. Furthermore, as already stated, plaintiff was making and selling the other

articles more than two years prior to Luttringhaus's application dates, in the round form. The question of patentability then comes down solely to the feature of paneling. In the prior art, instances of similar paneling applied to the same or similar articles are numerous. They are too numerous to review or examine in detail. It will be sufficient to draw attention to some of them by exhibit numbers, namely: 11, 12, 13, 14, 17, 18, 20, 21, 22, 29, 30, 31, 47, 53, 68, 80, 81 to 85 inclusive, 91 to 113 inclusive, 180, 181, and 182. Indeed, it is not too much to say that if applying panels to rounded bodies could involve originality or invention, Exhibits 81 to 85 inclusive, catalogue and physical specimens of Wagner aluminum ware would, in my opinion, constitute a complete anticipation. The differences between Wagner and plaintiff's ware are slight and not sufficient to distinguish them in a patentable sense.

[1, 2] The authorities cited by counsel have been duly considered. If there is any conflict in the law, the principles which, in my opinion are correct and should be followed, will be found in the following cases: *Gorham* v. *White*, 14 Wall. 511; *Smith* v. *Whitman Saddle Co.*, 148 U. S. 674; 63 O. G. 912; *Chas. Boldt Co.* v. *Nivison-Weiskopf* (6 C. C. A.) 194 Fed. 871; *Westinghouse, Etc. Co.* v. *Triumph Elec. Co.* (6 C. C. A.) 97 Fed. 99; 90 O. G. 603; *Steffens* v. *Steiner* (2 C. C. A.) 232 Fed. 862; *Northrup* v. *Adams*, Fed. Cas. 10328; 12 O. G. 430; *Foster* v. *Crossin*, 44 Fed. 62; 54 O. G. 1115. *Steffens* v. *Steiner* is important because of its relation to earlier decisions of the court of appeals, second circuit, specially relied on by plaintiff's counsel. Those decisions were of such a nature as to mislead the district judge into an erroneous view of what constitutes invention in a design patent, who held that the test proper to be applied is that a design made up of a combination of old elements is patentable, even though it required to produce it no skill beyond that of a skilled designer. It is pointed out that this is an erroneous statement of the law and of the purport and effect of the earlier decisions of that circuit court of appeals, and that the standard of novelty, originality, and invention as declared and established by the authorities above cited, is the true one. *Foster* v. *Crossin*, a decision by Mr. Justice Gray, and *Northrup* v. *Adams*, are important because they have been so universally approved and followed, particularly in *Smith* v. *Whitman Saddle Co.* The consistency with which the courts have followed the principles of these cases is evidenced by Rose's notes to *Smith* v *Whitman Saddle Co.*, from which it appears that in 27 cases in which it has been cited, all the design patents were declared invalid for want of novelty, originality, and invention, with the exception only of three. Due consideration has been given to plaintiff's contention that its ability to sell the paneled ware side by side with the round ware at a higher price, and that its sales of both lines of ware have increased since putting out the paneled ware, is evidence of invention. *In Chas. Boldt Co.* v. *Nivison-Weiskopf*, similar arguments were urged upon the circuit court of appeals of this circuit, without success, and are not entitled in this case to any greater weight or consideration.

Plaintiff's charge of unfair competition is not sustained. Defendant, it is true, is making and selling articles of paneled aluminum ware substantially if not exactly similar. Plaintiff's complaint is that when its ware was first placed on the market, it commanded a price of $1.20 a dozen more than similar round ware, but that as a result of competition it has since been obliged to reduce the differential to sixty cents a dozen. This reduction and the competition of other paneled ware which produced it, took place before defendant began to make and sell its paneled aluminum ware. Hence the charge of unfair competition rests solely upon the fact that plaintiff first began to make and sell paneled aluminum ware. If plaintiff has not a valid patent the public is entitled to the benefit of this reduction in price. As was said by Mr. Justice Brown in *Pope Mfg. Co.* v. *Gormully*, 144 U. S. 224, 234; 59 O .G. 464:

> It is as important to the public that competition should not be repressed by worthless patents, as that the patentee of a really valuable invention should be protected in his monopoly.

[3] The Wagner aluminum ware was being made and marketed before plaintiff began to make and sell. No evidence is offered tending to show that the design or principles of plaintiff's ware has acquired a secondary meaning as indicating the origin of the product. No evidence is offered tending to show that plaintiff had established any trade or goodwill in the present form of its aluminum ware under cover of which defendant or any one else might by fraud or confusion of goods, sell its product under favor of any public knowledge or public reputation of plaintiff's product and thereby appropriate to itself some part of plaintiff's goodwill or business. These are elements essential to the support of a charge of unfair competition.

The cases in which unnecessary imitation of nonfunctional parts has been considered as an important or a vital factor in sustaining a charge of unfair competition, even if correctly decided have no application in this situation. This case falls clearly within the following decisions of the circuit court of appeals of this circuit: *Computing Scale Co.* v. *Standard Computing Scale Co.*, 118 Fed. 965, 971; *Globe-Wernicke* v. *Macey Co.*, 119 Fed. 696; *Rathbone-Sard & Co.* v. *Champion Steel Range Co.*, 189 Fed. 26; *Detroit Show Case Co.* v. *Kaiser Mfg. Co.*, 250 Fed. 234; 254 O. G. 655. The decision in *Howard Dustless Duster Co.* v. *Carleton* (D. C.) 185 Fed. 979, cited by plaintiff, was recalled and disapproved by the judge who delivered it, in 187 Fed. 472. The principles of *Rathbone, Sard & Co.* v. *Champion Steel Range Co.*, requiring priority of appropriation and establishment of a trade name or appearance as essential to the law of unfair competition, are supported by *Theo. Rectanus* v. *United Drug Co.* (6 C. C. A.) 226 Fed. 545; *Hanover Star Milling Co.* v. *Metcalf*, 240 U. S. 403; 224 O. G. 1407; *United Drug* v. *Rectanus*, 248 U. S. 90; 257 O. G. 1082.

[4] In my consideration of the prior art, I have accorded a place therein to designs applied to material other than aluminum such as silver, glass, and britannia metal. This is undoubtedly the correct rule. *1st Robinson on Patents*, sec. 206; *Tyler* v. *St. Amand* (D. of C. App.) 94 O. G. 10069; *Foster* v. *Crossin*, 44 Fed. 62.

Plaintiff's bill will be dismissed at its cost.

Court of Appeals of the District of Columbia.

BILLINGSLEY *v.* MELBA MFG. CO.

No. 1,629. Decided March 3, 1924.

1. TRADE-MARKS — OPPOSITION — ESTOPPEL — SEVERAL MARKS APPLIED BY OPPOSER TO CLASS OF GOODS FOR WHICH APPLICANT SEEKS TO REGISTER HIS MARK—"ADOREE," "ADORME," "ADORABLE."
Where the opposer has long applied its two marks "Adoree" and "Adorme" to the same class of goods for which applicant seeks to register the word "Adorable" and applicant urges that opposer is estopped to contend that it would be injured by the registration because its marks differ as much from each other as from applicant's mark, *Held* that the two words employed by opposer mean the same to the public, and consequently are not calculated to cause confusion.

2. SAME—SAME—SAME—PURELY TECHNICAL DEFECTS NOT CALCULATED TO CONFUSE OR DECEIVE THE PUBLIC.
The defects of one party do not offer a very broad ground for allowing another to take advantage of him, and where the defect is of a purely technical character and not calculated to confuse or deceive the public the relief afforded by opposition proceedings should not be withheld.

Mattie D. Billingsley pro se.

Mr. E. S. Rogers for Melba Mfg. Co.

Before ROBB and VAN ORSDEL, Justices, and SMITH, Judge U. S. Court of Customs Appeals.

ROBB, *J.*:

The appellant seeks registration of "Adorable" for the same class of goods to which the opposer long has applied its marks, "Adoree" and "Adorme." The concurrent decisions of the Patent Office tribunals sustained the opposition and refused registration.

[1, 2] Appellant contends that, under the opinion of this court in *Alaska Packer Association* v. *Admiralty Trading Co.*, 43 App. D. C. 198, 214 O. G. 1025, appellee is estopped to contend that it would be injured by the registration. In that case the opposer had used several marks consisting of flags of different colors and markings, each of which differed as much from the others as from applicant's flag. The opposition was dismissed in the Patent Office and we sustained the dismissal, with the suggestion that it still would be a question for the Office as to whether it would register the mark. Here opposer's marks are substantially the same both in appearance and signification. We ruled in *Nestle & A. S. C. Milk Co.* v. *Walter Baker & Co.*, 37 App. D. C. 148, 167 O. G. 765, where we were speaking of the word Milkmaid and the figure of a milkmaid beneath, that the word and the pictorial representation meant the same to the public, that is, "the right to employ one necessarily includes the right to employ both." So, here, the two words employed by opposer mean the same to the public and, consequently, are not calculated to cause confusion. As was suggested in *Coca-Cola Co.* v. *Coke Co.*, 254 U. S. 143, 145, the defects of one party do not offer a very broad ground for allowing another to take advantage of him; and where, as here, the defect is of a purely technical character and not calculated to confuse or deceive the public, the relief afforded by opposition proceedings should not be withheld.

The decision is affirmed.

Affirmed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

841,844, J. Bernet, Key-operated locking switch, decree for defendants dismissing bill July 1, 1924, D. C., E. D. Wis., Doc. 1353 C. D., *W. R. Cox* v. *Clum Mfg. Co. et al.*

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 19, 1924.*

Alexander Rechnitzer, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of William S. Gubelmann, 773 Richmond Avenue, Buffalo, N. Y., and patent granted March 14, 1922, No. 1,409,575, to Alexander Rechnitzer, 140 St. Botolph Street, Boston, Mass., and a notice of such declaration sent by registered mail to said Rechnitzer at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Rechnitzer, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 25, 1924.*

The Royal Manufacturing Co., its assigns or legal representatives, take notice:

An interference has been declared by this Office between Remy E. Stoffel, 2868 Lemp Avenue, St. Louis, Mo., for registration of a trade-mark and trade-mark registered September 4, 1894, No. 25,211, to The Royal Manufacturing Co., 527 North Cherry Street, Lancaster, Pa. The Office having been unable to secure service upon The Royal Manufacturing Co., notice is hereby given that unless The Royal Manufacturing Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Aug. 27, 1924.*

Zucker & Levett & Loeb Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between A. P. Munning & Co., 52 Vesey Street, New York, N. Y., for registration of a trade-mark and trade-mark registered June 23, 1908, No. 69,580, to Zucker & Levett & Loeb Company, New York, N. Y., and a notice of such declaration sent by registered mail to said Zucker & Levett & Loeb Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Zucker & Levett & Loeb Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Sept. 3, 1924.*

Rubber Company of America, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the Continental Tire Corporation, 1508 South Michigan Avenue, Chicago, Ill., for registration of a trade-mark and trade-mark registered June 14, 1910, No. 78,448, to Rubber Company of America, 249–251 Ocean Avenue, Jersey City, N. J., and a notice of such declaration sent by registered mail to said Rubber Company of America at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Rubber Company of America, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 16, 1924.

[VOL. 326, No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 88,374. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TOLERTON & WARFIELD CO., Sioux City, Iowa. Filed Aug. 2, 1915.

SUPERB

Particular description of goods.—Sliced Beef, Mincemeat, Canned Soups, Raw Pop Corn, Tapioca, Dried Fruits, Food-Flavoring Extracts, Peanut Butter, Spices, Fruit Preserves, Jellies, Marmalades, Mustard, Olives, Cornstarch, Honey, Sugar, Seeded Raisins, Jelly Powder.
Claims use since Jan. 1, 1911.

Ser. No. 158,874. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KASCO MILLS, INC., Waverly, N. Y. Filed Feb. 4, 1922.

Particular description of goods.—Poultry Feed.
Claims use since February, 1918.

Ser. No. 163,869. (CLASS 39. CLOTHING.) GRAM HEADWEAR MFG. CO., St. Louis, Mo. Filed May 15, 1922.

RAINRSHINE

Particular description of goods.—Hats for Women and Children.
Claims use since Apr. 1, 1922.

Ser. No. 166,838. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MOORE BROTHERS, St. Thomas, Ontario, Canada. Filed July 13, 1922.

No claim is made to the words "Antiseptic Dressing for Cancer, Running Sores, Poisonous Bites, Etc."
Particular description of goods.—Antiseptic Dressing.
Claims use since June 7, 1922.

Ser. No. 167,813. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) HERCULES POWDER COMPANY, Wilmington, Del. Filed Aug. 4, 1922.

HERCULES

Particular description of goods.—Turpentine and Pine Oil.
Claims use since Jan. 1, 1922.

Ser. No. 167,814. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) HERCULES POWDER COMPANY, Wilmington, Del. Filed Aug. 4, 1922.

Particular description of goods.—Turpentine and Pine Oil.
Claims use since Jan. 1, 1922.

Ser. No. 170,369. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE COLSON COMPANY, Elyria, Ohio. Filed Oct. 6, 1922.

DISCOOTER

Particular description of goods.—Child's Two-Wheeled Vehicle in the Nature of a Scooter or Coaster.
Claims use since September, 1922.

Ser. No. 170,370. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE COLSON COMPANY, Elyria, Ohio. Filed Oct. 6, 1922.

BI-PLANE

Particular description of goods.—Child's Two-Wheeled Vehicle Known as a Scooter or Coaster.
Claims use since Jan. 1, 1914.

Ser. No. 171,047. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DIXIE CHEMICAL COMPANY, Inman, S. C. Filed Oct. 21, 1922.

DIXIE

Particular description of goods.—Preparation for Beautifying and Promoting the Growth of Healthy Hair.
Claims use since Feb. 1, 1922.

Ser. No. 174,019. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LOOMIS & WILLSON CO., Hartford, Conn. Filed Dec. 30, 1922.

WHITE SWAN

Particular description of goods.—Table and Dairy Salt.
Claims use since July 1, 1882.

Ser. No. 176,478. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KAY-WHITE PRODUCTS, INC., New York, N. Y. Filed Feb. 23, 1923.

Particular description of goods.—Boys' Suits and Caps.
Claims use since Apr. 1, 1923.

189,492. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE AUTO TIPPER CO., INC., St. Louis, Mo. Filed June 7, 1924. Serial No. 198,221.

Auto Tipper

Particular description of goods.—A Device for Tipping Automobiles.
Claims use since July 1, 1923.

189,493. (CLASS 39. CLOTHING.) BARBOUR WELTING COMPANY, Montello Station, Brockton, Mass. Filed June 14, 1924. Serial No. 198,555.

BARBOUR

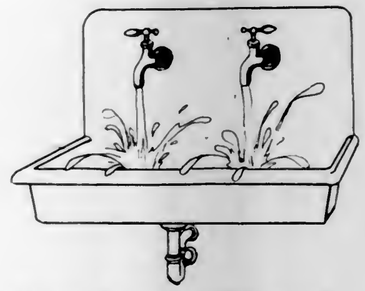
Particular description of goods.—Welting for Boots and Shoes.
Claims use since Apr. 26, 1919.

189,494. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COTY, INC., Wilmington, Del., and New York, N. Y. Filed June 20, 1924. Serial No. 198,844.

COTY

Particular description of goods.—Perfume, Toilet Water, Face Powder, Compact Powder, Sachet Powder, Talcum Powder, Brilliantine, Eau de Cologne, Lotion for the Hair, Rouge, and Lip Stick.
Claims use since 1905.

189,495. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SUGAR CONE MFG. CO., Brooklyn, N. Y. Filed June 20, 1924. Serial No. 198,889.



Particular description of goods.—Ice-Cream Cones.
Claims use since January, 1918.

189,496. (CLASS 39. CLOTHING.) M. HENRY LAMBERT, New York, N. Y. Filed June 26, 1924. Serial No. 199,170.

Pixley
Summer Tweeds

Particular description of goods.—Men's Overcoats, Coats, Vests, and Trousers.
Claims use since April, 1923.

189,497. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AUGUST W. ANNERT, Jersey City, N. J. Filed July 3, 1924. Serial No. 199,516.

Water Pressure Restored

Particular description of goods.—Apparatus for Cleaning Water Mains and Pipes.
Claims use since 1921.

189,498. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) EARL JAMES BENTON, doing business as Alger Chemical Company, Muskegon, Mich. Filed July 9, 1924. Serial No. 199,772.

ALGER

Particular description of goods.—Composition for Cleaning Rugs, Carpets, Autos, and Household Tapestry.
Claims use since Dec. 1, 1920.

189,499. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ADOLPH BENZ, Jr., doing business as Benz Sanitary Bakery, Peoria, Ill. Filed July 26, 1924. Serial No. 200,538.

Benz

Particular description of goods.—Bread.
Claims use since June 23, 1922.

189,500. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE BARKER, MOORE & MEIN MEDICINE COMPANY, Philadelphia, Pa. Filed July 30, 1924. Serial No. 200,705.

BARKER'S

Particular description of goods.—Poultry Mash Feeds and Scratch Feeds.
Claims use since March, 1920.

189,501. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) THE T. H. SYMINGTON COMPANY, New York and Rochester, N. Y. Filed July 31, 1924. Serial No. 200,789.

SYMINGTON

Particular description of goods.—Journal Boxes.
Claims use since October, 1908.

189,502. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) M. ASCHER SILK CORPORATION, New York, N. Y. Filed Aug. 2, 1924. Serial No. 200,839.

FAILLE SATIN

Particular description of goods.—Goods in the Piece of Silk, Artificial Silk, Wool, Cotton, and Combinations Thereof.
Claims use since June, 1923.

LABELS

REGISTERED SEPTEMBER 16, 1924.

27,840.—*Title:* AER CEL. For Towel Sets. CAPITAL KNITTING CO., Waterford, N. Y. Published June 1, 1924.

27,841.—*Title:* EAU DE QUININE FINE AUX FLEURS DE FRANCE. For Quinine Water. GEORGES L. COURTOIS, New York, N. Y. Published August 1, 1924.

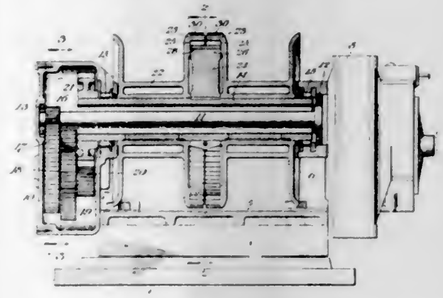
REISSUES

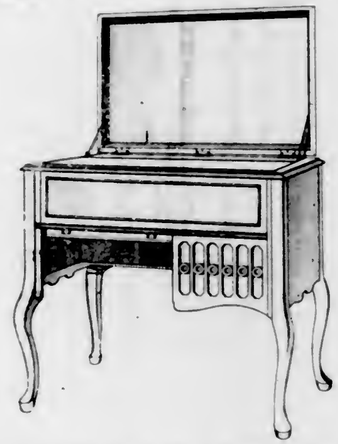


SEPTEMBER 16, 1924.

15,916. CYLINDER-REBORING MACHINE. FREDERICK T. FLINCHBAUGH, York, Pa., assignor to Wayne Tool Manufacturing Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 12, 1924. Serial No. 712,886. Original No. 1,483,061, dated Feb. 5, 1924, Serial No. 430,640, filed Dec. 14, 1920. 5 Claims. (Cl. 77—2)

1. In a cylinder reboring machine, the combination with a gear case carrying a boring head and having an annular shoulder concentric with said head; of a base having a bore coincident with said annular shoulder and adapted to be attached to an engine cylinder, ears on said gear case and bolts engaging with said ears and threaded in said base for securing the gear case and base together; and a second base having a bore of larger diameter than said first base, an adapter intended to be inserted between said second base and said gear case and having a bore of the same diameter as said first base and a seat of the same diameter as the second base adapted to fit the bore thereof; means for rigidly securing said adapter to said second base, and tapped apertures provided in said adapter for said bolts, whereby the gear case may be shifted from said first base to said second base and attached to said adapter, substantially as set forth.

15,917. REVERSIBLE DRUMS. ARTHUR H. SKAER, THEODORE E. BARKER, and OMAR E. CLARK, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed July 29, 1924. Serial No. 728,989. Original No. 1,458,554, dated June 12, 1923, Serial No. 587,893, filed Sept. 12, 1922. 10 Claims. (Cl. 254—185.)

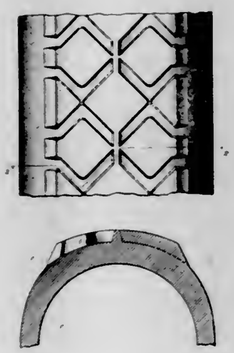


1. The combination with a pair of oppositely rotatable driven members having internal inset oppositely disposed ratchet teeth, of a driving member common to the driven members and rotatable in opposite directions, and a pawl member rotatable with the driving member and pivoted thereon on an axis substantially parallel to the axis of rotation of the driving member, said pawl member having oppositely disposed teeth that respectively engage the internal ratchet teeth of the driven members accordingly as the driving member is rotated in one direction or the other, and said pawl member having a pivotal movement beyond the limits defined by the ratchet teeth to secure a toggle or wedging action.

DESIGNS

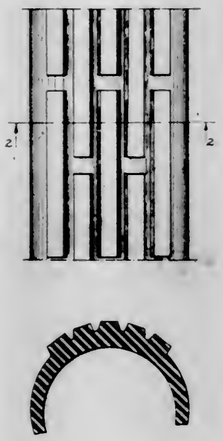
SEPTEMBER 16, 1924.

65,598. RADIODESK. JOHN L. ANEN, Chicago, Ill. Filed May 28, 1924. Serial No. 9,723. Term of patent 3½ years.



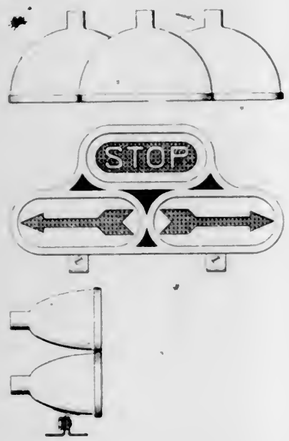
The ornamental design for a radiodesk, as shown.

65,599. TRADING STAMP. RAYMOND BARRIER, Lubbock, Tex. Filed Mar. 20, 1924. Serial No. 9,004. Term of patent 7 years.



The ornamental design for a trading stamp, as shown.

65,600. RUBBER TIRE. ARTHUR REID COLVIN, Bloomfield, N. J., assignor to The Combination Rubber Mfg. Co., Bloomfield, N. J., a Corporation of New Jersey. Filed Mar. 8, 1924. Serial No. 8,869. Term of patent 14 years.



The ornamental design for a rubber tire, as shown.

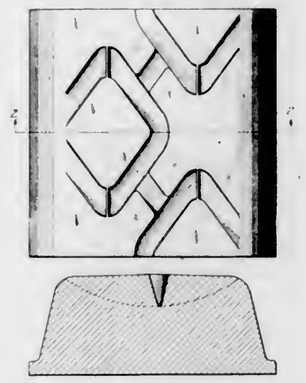
65,601. TIRE. FRANK J. DOUGHERTY, Milwaukee, Wis., assignor to the Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1922. Serial No. 3,800. Term of patent 14 years.

The ornamental design for a tire substantially as shown.

65,602. DIRECTION-SIGNAL-LAMP CASING. EARL C. GIRE, Whittier, Calif. Filed Oct. 18, 1922. Serial No. 4,018. Term of patent 3½ years.

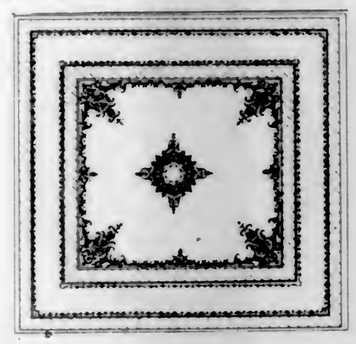
The ornamental design for a direction signal lamp casing, as showu.

65,603. LIGHTING FIXTURE. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 10, 1924. Serial No. 10,109. Term of patent 14 years.



The ornamental design for a lighting fixture as shown.

65,604. LIGHTING UNIT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 10, 1924. Serial No. 10,110. Term of patent 14 years.



The ornamental design for a lighting unit as shown.

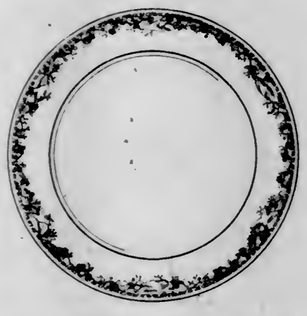
65,605. TIRE TREAD. ALBERT HABGRAVES, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 10, 1924. Serial No. 10,115. Term of patent 14 years.

The ornamental design for a tire tread, as shown.

65,606. BOX-COVER PAPER. WILLIAM PARKE JOHNSON, Lincoln Park, N. J., assignor to The Fiberloid Corporation, Springfield, Mass., a Corporation of Massachusetts. Filed May 21, 1924. Serial No. 9,691. Term of patent 3½ years.

The ornamental design for box cover paper as shown and described.

65,607. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,242. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

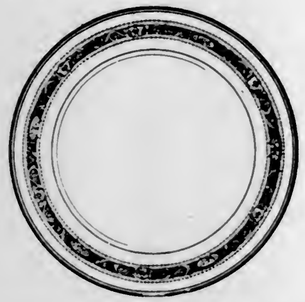
65,608. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,243. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

65,609. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,244. Term of patent 7 years.

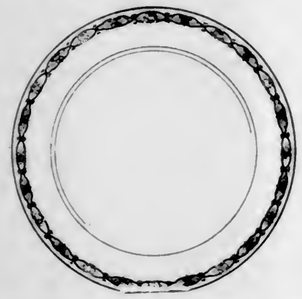
The ornamental design for a plate or similar article, as shown.

65,610. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,245. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

65,611. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,247. Term of patent 7 years.

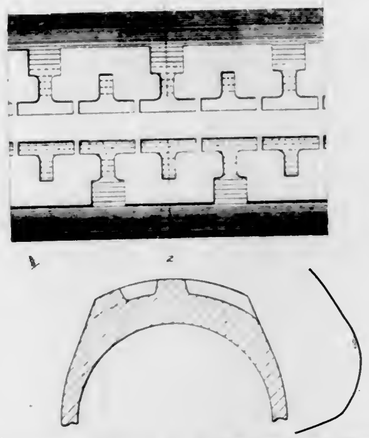


The ornamental design for a plate or similar article, as shown.

65,612. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,248. Term of patent 7 years.

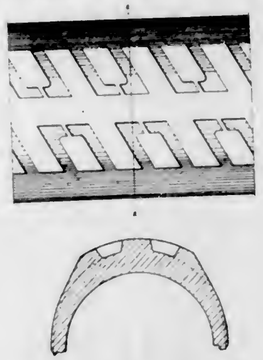
The ornamental design for a plate or similar article, as shown.

65,613. PLATE OR SIMILAR ARTICLE. HENRI LEYMARIE, Limoges, France, assignor to Herman C. Kupper, New York, N. Y. Filed Mar. 18, 1922. Serial No. 1,249. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

65,614. BATH HOOD. WILBERT B. MCCOY, Cleveland, Ohio. Filed Aug. 7, 1922. Serial No. 3,304. Term of patent 3½ years.

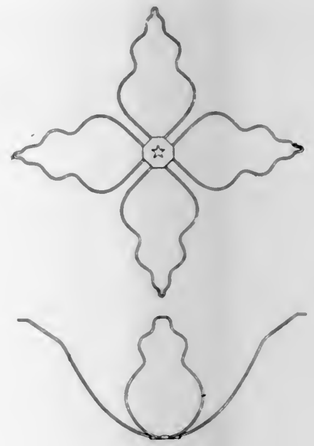


The ornamental design for a bath hood, as shown.

65,615. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed May 18, 1923. Serial No. 6,181. Term of patent 14 years.

The ornamental design for a tire tread, as shown.

65,616. TIRE TREAD. HAROLD D. REICHARD, Akron, Ohio. Filed May 18, 1923. Serial No. 6,196. Term of patent 14 years.



The ornamental design for a tire tread, as shown.

65,617. ARTIFICIAL PLANT. CHARLES SCHUSTER, New York, N. Y. Filed Mar. 7, 1922. Serial No. 1,070. Term of patent 3½ years.

The ornamental design for an artificial plant, as shown.

65,618. GUARD FOR ELECTRIC HEATERS. ALVA THOMAS SMITH, Winsted, Conn. Filed Aug. 14, 1923. Serial No. 7,004. Term of patent 3½ years.

The ornamental design for a guard for electric heaters, as shown.

65,619. HOSIERY EXHIBITOR. FRED J. STEIGER, Tulsa, Okla. Filed Nov. 22, 1923. Serial No. 7,850. Term of patent 3½ years.

The ornamental design for a hosiery exhibitor, as shown.

65,620. METAL STRIP OR SIMILAR ARTICLE OF MANUFACTURE. DAVID STOLL, New York, N. Y. Filed Apr. 6, 1925. Serial No. 5,709. Term of patent 3½ years.

The ornamental design for a metal strip or similar article of manufacture as shown and described.

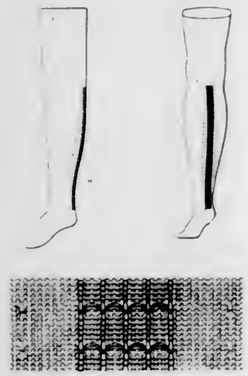
65,621. WRIST WATCHCASE. LEOPOLD STRASSER, New York, N. Y. Filed May 2, 1924. Serial No. 9,463. Term of patent 3½ years.

The ornamental design for a wrist watchcase as shown.

65,622. WRIST WATCHCASE. LEOPOLD STRASSER, New York, N. Y. Filed May 2, 1924. Serial No. 9,464. Term of patent 3½ years.

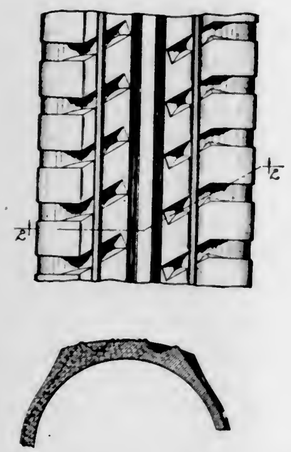
The ornamental design for a wrist watchcase as shown.

65,623. WRIST WATCHCASE. LEOPOLD STRASSER, New York, N. Y. Filed July 10, 1924. Serial No. 10,104. Term of patent 3½ years.



The ornamental design for a wrist watchcase as shown.

65,624. WRIST WATCHCASE. LEOPOLD STRASSER, New York, N. Y. Filed July 10, 1924. Serial No. 10,105. Term of patent 3½ years.

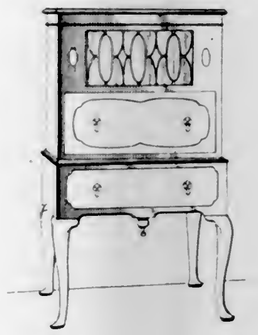


The ornamental design for a wrist watchcase as shown.

65,625. STOCKING. EDWARD C. TAUBEL, Norristown, Pa. Filed Aug. 28, 1922. Serial No. 3,587. Term of patent 3½ years.

The ornamental design for a stocking, as shown.

65,626. TIRE TREAD. CHARLES J. VENN, Chicago, Ill., assignor to Century Rubber Works, Cicero, Ill., a Corporation of Illinois. Filed June 16, 1924. Serial No. 9,878. Term of patent 14 years.



The ornamental design for a tire tread, substantially as shown.

65,627. RUG. ALGERMONT H. WALDO, St. Paul, Minn., assignor to Crex Carpet Company, New York, N. Y., a Corporation of New York. Filed June 14, 1924. Serial No. 9,869. Term of patent 3½ years.

The ornamental design for a rug, as shown.

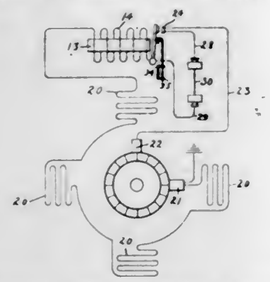
65,628. CABINET FOR A RADIO SET. WILLIAM ZAISER, Brooklyn, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed May 21, 1924. Serial No. 9,668. Term of patent 7 years.

The ornamental design for a cabinet for a radioset substantially as shown.

PATENTS

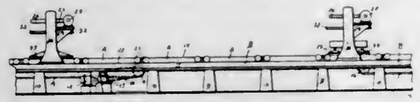
GRANTED SEPTEMBER 16, 1924.

1,508,375. MAGAZINE PENCIL. MAURICE ALLAND, Atlantic City, N. J. Filed Dec. 6, 1923. Serial No. 678,854. 4 Claims. (Cl. 120—21.)



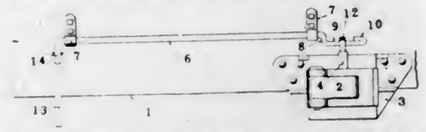
1. In a pencil, the combination of a casing having an outlet, a removable channelled magazine member within said casing providing a shoulder in the neighborhood of said outlet, a plurality of radially yielding fingers comprising a unitary part of said casing and adapted to surround a lead extending from said member and through said outlet, said fingers jointly having an enlarged bore terminating in a circumferential shoulder in one direction, a sleeve frictionally carried by a lead and movable within said bore between the limits set by said shoulders, to automatically predetermine the extent that the lead shall extend from said casing, an auxiliary member having an aperture through which the lead projects and provided with inner converging walls, and threaded means to removably secure said last-named member upon and as a continuation of said casing, said fingers being contracted upon and operative to normally prevent the inward movement of the lead as said last-named member is screwed upon said casing.

1,508,376. FUSIBLE LINK. CHARLES ADAMS, Jr., Weehawken, N. J., assignor of one-half to Sydney F. Weston, New York, N. Y. Filed Mar. 15, 1920. Serial No. 365,843. 7 Claims. (Cl. 169—42.)



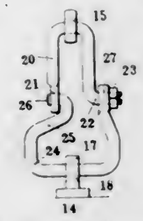
1. In a fusible-link, a pair of plates, each plate being provided with a lug member and with an aperture therethrough near the lug member; the lug member being open at its base and end and having outwardly converging sides; the plates being arranged in face to face relation to form the link, the lug member of one plate engaging in the aperture of the other plate and tending to press the plates apart; and a rivet of fusible solder passing through the lug member of each plate and the aperture of each plate and having heads formed over the base and over the end of the lug member for retaining the plates in assembled relation.

1,508,377. COMBINED REGULATOR AND FUSE FOR GENERATORS. FRED ALLISON, Highland Park, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Filed May 19, 1921. Serial No. 470,960½. 3 Claims. (Cl. 171—229.)



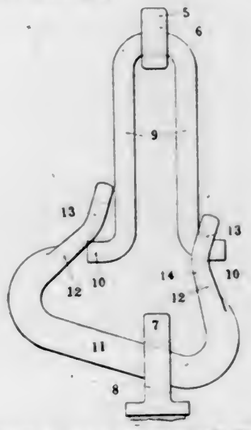
1. A regulating device comprising in combination, a fusible resistance element adapted to be connected in the field circuit of a generator, and means operated in accordance with a characteristic of the generator for varying the effective value of said resistance element.

1,508,378. GLASS-GRINDING MACHINERY. EDWARD T. BROWN, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Michigan. Original application filed Feb. 16, 1920, Serial No. 358,979. Divided and this application filed May 16, 1921. Serial No. 470,093. 5 Claims. (Cl. 51—120.)



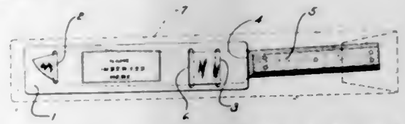
1. In the art of surfacing glass, and wherein the glass sheet is moved in a definite horizontal path beneath a fixedly-positioned instrumentality; a carrier for the glass-sheet and tracks on and between which it moves; a frame supported outside the tracks and extending over the carrier travel path; a surfacing unit mounted in the frame within spaced-apart upper and lower bearings, said unit including a surfacing element operating within the space below the lower bearing, and a shaft for rotating the surfacing element with the shaft mounted in the bearings; means for rotating the shaft and including a motor supported on the frame and having operating connections with the shaft within the space between said bearings; and unit-supporting and surfacing element positioning means operative to produce controllable gravity-pressure of the surfacing element on the sheet, said latter means including a rotatable adjusting element concentric with the shaft and positioned between the motor-operating connections and the lower bearing.

1,508,379. COUPLER-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Sept. 23, 1922. Serial No. 590,062. 3 Claims. (Cl. 213—168.)



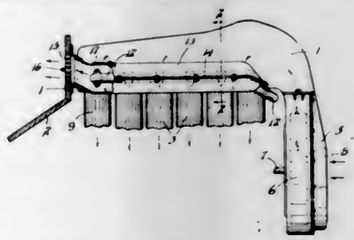
1. In a device of the class described, the combination with a coupler head having a lock pin of an actuating rod rotatably mounted, an operating arm carried by said rod, said arm and lock pin operatively connected to have relative movement both longitudinally and laterally in a horizontal plane, but to move in unison vertically and a handle for said actuating rod having movement relative thereto, whereby said handle may return to normal position when the lock pin is in raised position.

1,508,380. COUPLER-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed June 22, 1923. Serial No. 646,994. 6 Claims. (Cl. 213—166.)



1. In a device of the class described, the combination with a coupler lock-pin, of an actuating arm therefor, and a connector extending between said pin and arm and comprising two parts pivoted together to move in a vertical longitudinal plane, the lower part of said connector being supported at both ends at a point between the pin and arm.

1,508,381. COUPLER-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo., assignor to Railway Devices Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 15, 1923. Serial No. 668,501. 9 Claims. (Cl. 213—170.)

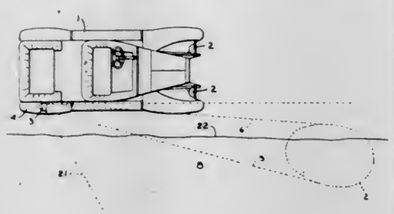


5. In a device of the class described, the combination with an operating arm, of a lock pin, and a two-part connector extending between the said arm and pin, the upper part of said connector comprising a loop with outwardly projecting trunnions, and the lower part comprising an elongated loop having bearings adapted to be sprung into engagement with said trunnions.

1,508,382. KNIFE PROTECTOR. GEORGE E. CHATILLON, New York, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Mar. 13, 1923. Serial No. 624,728. 1 Claim. (Cl. 206—46.)

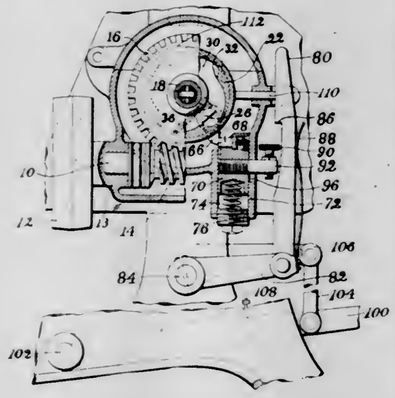
A knife blade protector comprising a flexible flat body of a width greater than the knife blade, having spaced transverse slots therein through which said blade may be inserted by flexing the body to hold the blade at spaced portions adjacent the handle and the tip respectively, the end of said body adjacent the handle being shaped to abut against the same as a stop, and the other end of said body extending beyond the point of said blade.

1,508,383. AUTOMOBILE HEATER. JOHN DENSLEY, Minneapolis, Minn. Filed Jan. 10, 1923. Serial No. 611,761. 5 Claims. (Cl. 237—123.)



5. The combination with an automobile having a lower casing disposed about the cylinders of the engine thereof, of an auxiliary casing surrounding the manifold and the exhaust pipes which connect the cylinders with the manifold, having communication with the blower casing through apertures therein about said exhaust pipes, and an air delivery means extending into the body of the automobile whereby air heated within the blower casing by the cylinders will pass for further heating over the several exhaust pipes and the manifold.

1,508,384. HASP. SYLVESTER A. IDRAKE, Jamestown, N. Y. Filed Aug. 6, 1921. Serial No. 490,262. 1 Claim. (Cl. 292—285.)



A hasp comprising a body portion, a tongue hingedly secured thereto and provided with a staple receiving slot, an attaching plate, a centrally located outwardly offset beveled portion provided in the attaching plate and defining a journal, a similarly shaped portion extending outwardly from the body portion of the hasp and defining a bearing socket within the inner face of said body portion to receive the journal attaching plate and a pivot extending concentrically through the journal and bearing.

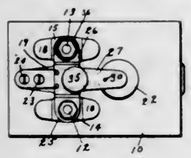
1,508,385. AUTOMOBILE LIGHTING SYSTEM. HENRY P. J. EARNSHAW, Northboro, Mass., assignor to George F. Earnshaw, Glencoe, Ill. Filed Dec. 11, 1920. Serial No. 430,024. 1 Claim. (Cl. 240—7.1)

The combination with an automobile having the usual front and rear fenders, of a projecting lamp mounted on the right rear fender and situated in the rear of the driver, said lamp operating to throw a beam of light from behind the driver and across the right front fender, said beam of light being entirely on the right of the driver, and in a vertical plane substantially parallel to the direction of movement of the automobile thereby to produce a brightly illuminated area in front of and directly outside the line of travel of the automobile, the shadow of the right front fender forming the left side of said brightly illuminated area, said lamp being so situated with reference to the automobile body that the road area directly in front of the automobile will be in the shadow thereof whereby said lamp is not visible to anyone directly in front of the automobile.

1,508,386. DRIVING MECHANISM FOR POWER-OPERATED MACHINES. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Apr. 15, 1918, Serial No. 228,544. Divided and this application filed Feb. 26, 1919. Serial No. 279,351. 10 Claims. (Cl. 192—29.)

5. The combination with a driving member and a driven member, of a clutch comprising cooperating parts, one part of which is a running fit on one of said members and may be connected to rotate therewith or may be disconnected to rotate thereon, the other part of which is secured to the other member, one of said parts being provided with a shoulder, a rotatable key carried by the other part, and means for rotating said key into engagement with said shoulder, whereby the parts of said clutch are rigidly connected.

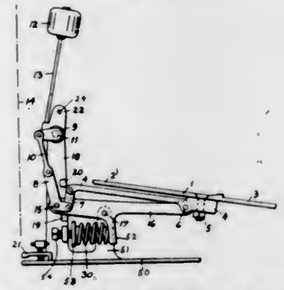
1,508,387. METHOD OF FORMING RING GEARS. JOHN J. FINDLATER, Highland Park, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 19, 1923. Serial No. 675,652. 1 Claim. (Cl. 29—159.)



The method of forming ring gears consisting of cutting strip stock to lengths, then forming the lengths to approximately the desired shape, then welding the ends of the lengths together to form a continuous ring, then shearing the flash from the weld, and then generating the teeth in the blank so formed, the teeth being generated in the blank in such position that the wearing surface of the teeth will not be formed by the welded portion of the length of stock.

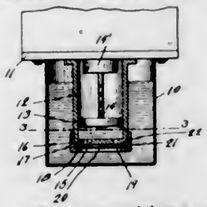
1,508,388. CHAIR. EMORY FINDLEY, Peoria, Ill. Filed Apr. 5, 1923. Serial No. 630,027. 4 Claims. (Cl. 155—144.)

1. In a chair the combination of a pair of main frame members, a pair of leg members pivotally mounted thereon, a back pivotally mounted to the frame members and to a seat, a seat, links connecting the seat with the main frame members; and second links connecting the first links with the main frame members.



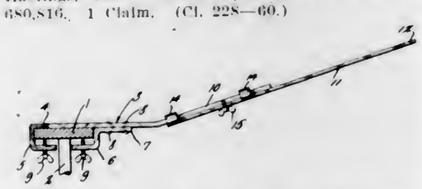
1,508,389. VIBRATOR ASSEMBLY FOR ELECTRICAL CIRCUITS. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Jan. 3, 1921. Serial No. 434,630. 4 Claims. (Cl. 200—66.)

1. In a device of the character described, a support, a base member having an arched portion, a bridge member secured to the base and insulated therefrom, said bridge having an arched portion, a reed mounted on the arched portion of the base, and contact devices mounted on portions of the bridge whereby the bridge and base may be primarily formed and assembled together to properly position the reed and contact devices relative to the support and the final adjustment after the assembly has been secured to the support, by slight flexing of the bridge and base members to the necessary positions.



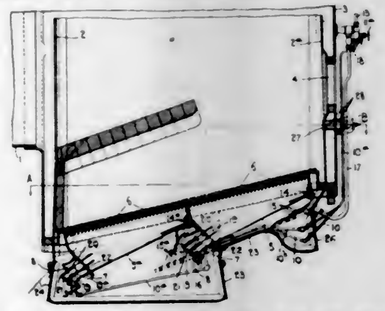
4. In a device of the class described, a support, spaced rods extending therefrom, a base member having ears with openings therein to receive said rods, said base member having rearward extensions therefrom, a bridge member having ears with openings therein to receive said rods, said bridge member having a forward extension, a contact secured to said forward extension, and a reed member mounted on the rearward extension of the base and extending to position below the end of said forward extension on the bridge, and a contact on said reed in position to co-act with the contact on said bridge member.

1,508,390. DOUBLE-ACTION BASS-DRUM PEDAL. WILLIAM DAVID GLADSTONE, New York, and EMIL KEN, Springfield Gardens, N. Y. Filed June 28, 1922. Serial No. 571,429. 22 Claims. (Cl. 84—422.)



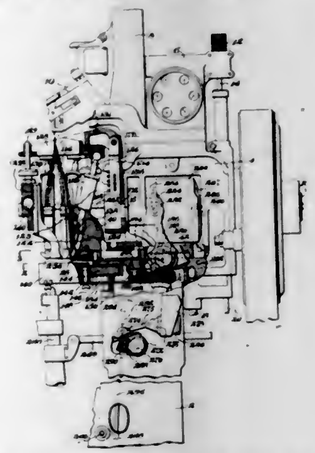
1. A foot operated bass drum beating apparatus comprising a foot pedal pivotally mounted intermediate its ends upon a horizontal axis, a beater, means for swinging said beater into contact with the drum head when said pedal is oscillated in either direction upon its horizontal axis, by the pressure of either the toe or the heel of the performer.

1,508,391. RETARDATION DEVICE. TALMA T. GREENWOOD, Templeton, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Company, a Corporation of Massachusetts. Filed May 5, 1920. Serial No. 379,158. 6 Claims. (188—94.)



1. A retardation device comprising a cylinder, a piston operable therein, and a valve governing the fluid communication with said cylinder, said valve normally biased toward open position and constructed and arranged to be actuated by an unbalanced fluid pressure acting on it to reduce the flow of fluid through it as a function of the unbalanced fluid pressure.

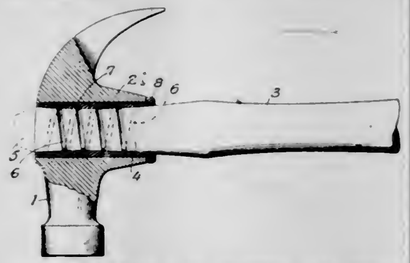
1,508,392. LADDER BRACKET. WILLIAM MATT HEUN, Hastings, Nebr. Filed Sept. 4, 1923. Serial No. 660,816. 1 Claim. (Cl. 228—60.)



A ladder prop comprising a main member, provided at its inner end with an extension disposed at right angles to said member, the extension being provided with an inwardly extended jaw adapted to engage one edge of a ladder stile, and a second inwardly projecting jaw, adapted to engage the opposite edge of a ladder stile, the second jaw being mounted on the main member, the jaws being spaced apart transversely to cause them to engage the respective edges of a ladder stile at different elevations, the inner ends of the jaws being spaced apart in the direction of the length of the jaws, to clear a ladder rung when the device is adjusted longitudinally of a ladder stile.

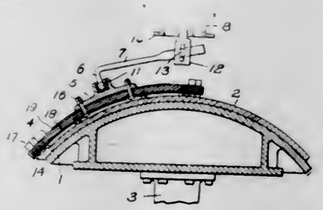
1,508,393. METHOD OF AND APPARATUS FOR FIRING THE FURNACES OF STEAM GENERATORS AND OTHER FURNACES. JOSEPH ALBERT HILL, deceased, late of Darley Dale, England, by Mrs. Sarah Ann Hill, executrix. Filed Jan. 3, 1923. Serial No. 610,541. 6 Claims. (Cl. 110—22.)

6. In a furnace, the combination, with the parts set forth in claim 1, of bell-mouthed fittings secured around the openings at the rear ends of the conduits, and the said means for forcing steam and air into the conduits comprising tubular injectors arranged in the bell-mouthed fittings and having central air passages.



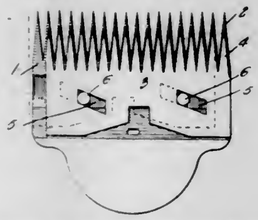
1,508,394. FASTENING-INSERTING MACHINE. CHARLES H. HOYT, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 28, 1920. Serial No. 354,726. 56 Claims. (Cl. 12—17.)

34. In a machine of the class described, the combination with means for supporting a last and shoe materials including an outsole, of a plurality of fastening inserting mechanisms arranged for inserting fastenings along the margin of the heel seat end of the outsole and relatively movable to position the fastenings, each of said fastening inserting mechanisms having means



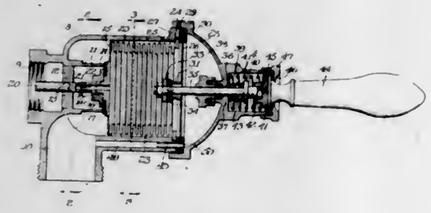
thereon for engaging the margin of the outsole and applying thereto conforming pressure over the heel seat face of the last, and means for effecting relative movement between said mechanisms and the shoe in the direction of the height of the shoe for subjecting the sole to such pressure.

1,508,395. IMPLEMENT HANDLE AND INSERT THIMBLE. HARRY S. ISHAM, Belmar, N. J., assignor, by direct and mesne assignments, to Heller Brothers Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 14, 1923. Serial No. 657,404. 3 Claims. (Cl. 306—20.)



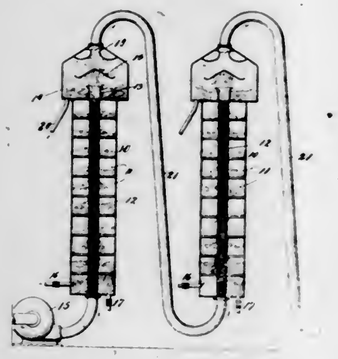
1. The combination of an implement head member provided with an eye, and a handle member having an end smaller than said eye and inserted therein, of an elastic cushion between said handle end member and said implement head member, said handle member having undercut grooves about its surface, portions of said elastic cushion extending into said undercut grooves.

1,508,396. RUNNER FOR GRINDING CURVED-GLASS SURFACES. ALBERT F. JOHNSTON, Ford City, Pa., assignor to Pittsburgh Plate Glass Company, Ford City, Pa., a Corporation. Filed Dec. 13, 1920. Serial No. 430,141. Renewed Feb. 6, 1924. 7 Claims. (Cl. 51—195.)



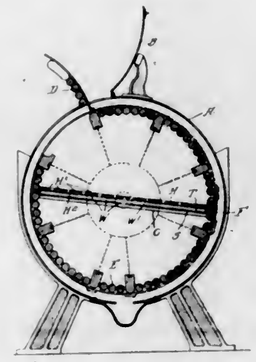
1. In combination, a runner for use upon a curved surface, comprising a spindle, and a weighted flexible member carried thereby adapted to conform itself to the curved surface.

1,508,397. HAIR CLIPPERS. WINFIELD LINCOLN JORDAN, Chicago, Ill. Filed Oct. 16, 1923. Serial No. 668,883. 4 Claims. (Cl. 30—1.)



1. In a clipper of the class described superposed blades having cooperating saw teeth, one of said blades having diagonally disposed slots and the other studs extending into said slots whereby on the reciprocation of the movable blade a continuous straight draw cut of the teeth will be effected throughout the entire stroke of the blade.

1,508,398. FLUSH VALVE. JAMES W. KELLY, Chicago, Ill. Filed Sept. 25, 1922. Serial No. 590,343. 1 Claim. (Cl. 137—93.)

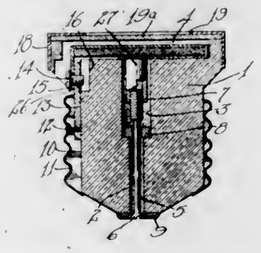


A flush-valve comprising a casing containing an inlet and an outlet, a bellows-chamber having end walls located between, and in spaced relation to, the end walls of the casing, one of said end walls of said bellows-chamber being movable and the other containing an outlet for said chamber communicating with the space between said last referred to end wall and the adjacent end wall of said casing, a valve operatively connected with said movable wall and controlling communication between the inlet and outlet of said casing, said bellows-chamber containing an inlet in communication with said casing inlet, a valve controlling the outlet of said bellows-chamber, said casing containing a housing at one end thereof into which the stem of said last named valve extends, a stuffing-box located in said space in said casing and in which said stem is reciprocable, a spring in said housing yieldingly pressing said last named valve to its seat, and means for actuating said last named valve extending into said housing.

1,508,399. APPARATUS FOR PRODUCING GAS FROM LIQUID IN A COLD STATE. JOHN KOHUT, Boonton, N. J. Filed Feb. 20, 1924. Serial No. 693,958. 5 Claims. (Cl. 183—24.)

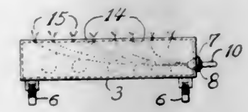
1. An apparatus for producing gas from liquid comprising a comparatively long tank containing liquid in cold state, a finely perforated tube extending throughout and communicating through its perforations with said tank and means for forcing a current of air through said tube, whereby small particles of liquid are drawn gradually fom said tank into and along with the current of air and become evaporated therein.

1,508,400. WASHING MACHINE. CARL G. KRONMILLER, Chicago, Ill., assignor to Troy Laundry Machinery Co. Ltd., Chicago, Ill., a Corporation of New York. Filed Jan. 17, 1921. Serial No. 437,695. 7 Claims. (Cl. 8—8.)



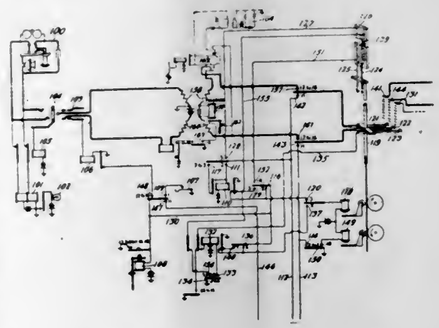
6. A washing machine comprising a cylinder, a removable unloading shelf within said cylinder, static discharge wiring incorporated with said shelf, a door for said cylinder, means for holding said shelf in position regardless of the position of said door and means for grounding said wiring upon said machine when said shelf is in position in said machine.

1,508,401. PHARMACEUTICAL PRODUCT. WALTER KROPP and LUDWIG TAUB, Elberfeld, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed Oct. 15, 1923. Serial No. 668,738. 1 Claim. (Cl. 260—33.)



The herein described compound consisting of phenylethylbarbituric acid and 4-dimethylamino-1-phenyl-2,3-dimethyl-5-pyrazolon, the compound having a whitish coloration, soluble in alcohol, melting at 132° C. having strong analgetic and soporific properties, substantially as described.

1,508,402. RENEWABLE FUSE PLUG. SYLVESTER KUNJAK, Chicago, Ill. Filed Oct. 23, 1922. Serial No. 596,363. 2 Claims. (Cl. 200—130.)

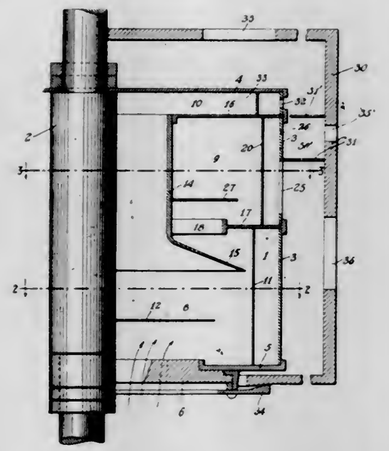


1. A device of the character described comprising a body member having a cavity in the top wall thereof, a bore extending vertically through said body member and communicating at its upper end with said cavity, a pair of fuse terminals, one of said terminals being disposed within said bore, but not exposed in said cavity, and a fusible element, one terminal of which is adapted to be connected to the terminal in said body member that is disposed within the bore, and the other terminal of which is connected to the remaining terminal on said body member.

1,508,403. COAL IGNITER. JOHN T. C. LOMBARDI, Brooklyn, N. Y., assignor to Hansen & Lombardi, a Partnership composed of Edward J. Hansen and John T. C. Lombardi, both of Brooklyn, N. Y. Filed Jan. 30, 1924. Serial No. 689,432. 3 Claims. (Cl. 158—10.)

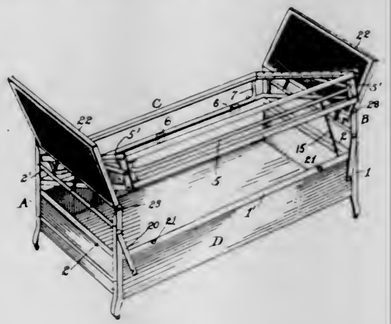
1. A long and straight mixing chamber for illuminating gas and air having a triangular cross section, an end inlet through which the gas escapes directly into said mixing chamber in a longitudinal direction at a high velocity dragging the air with it through passages in direct communication with the atmosphere, the gas mixture being free to expand unobstructed longitudinally in said chamber causing whirls to be set up in the entire length of said elongated mixing chamber prior to the discharge through flame holes provided at the apex of the triangular cross section.

1,508,404. TELEPHONE EXCHANGE SYSTEM. ALBEN E. LUNDELL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1917. Serial No. 180,595. 8 Claims. (Cl. 179—27.)



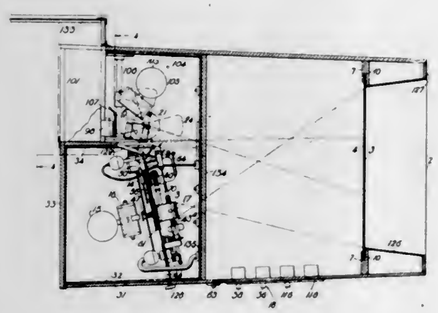
1. In a telephone system, an originating office, a terminating office, a trunk line extending between said offices, an impulse transmitting device, switching means controlled by said impulse transmitting device for connecting the device to said line, a variably operable indicating device operable in response to impulses over two sides of said line in series, means for disabling said impulse transmitting device until said indicating device is in condition to operate, and manually operable means for conditioning said indicating device to respond to said impulse transmitting device.

1,508,405. METHOD AND MEANS FOR SEPARATING GASES OR THE LIKE. EDOARDO NATALE MAZZA, Turin, Italy, assignor, by mesne assignments, to The A. F. Syndicate, New York, N. Y. Filed July 9, 1920. Serial No. 395,029. Renewed July 19, 1924. 12 Claims. (Cl. 183—77.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



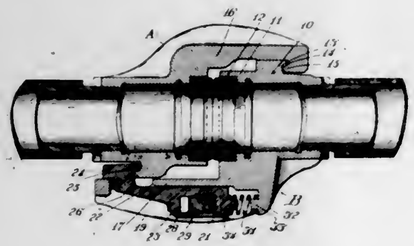
2. The process of separating constituents of a mixture of gases or of gas with other substances which comprises subjecting the mixture to centrifugal force by rotating the same to separate it into portions having different specific gravities, leading off one of said portions to separate it from another of said portions which has a differ-

ent specific gravity, subjecting said last named portion to further centrifugal force by maintaining the same in rotation and simultaneously causing it to flow at a high velocity in a sharply curved path to separate the same



into portions having different specific gravities, and subjecting the one of the last named portions which has the greatest specific gravity to further centrifugal action to separate portions thereof of different specific gravities.

1,508,406. CONVERTIBLE BED. SALVATORE NICOLOSI, New York, N. Y. Filed June 17, 1920. Serial No. 389,600. 1 Claim. (Cl. 5—29.)

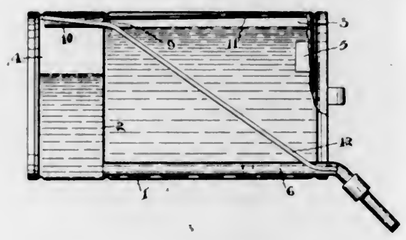


A convertible bed structure comprising framework consisting of a pair of connected end frames, a receptacle supported thereby, a pair of swinging main spring mattress sections normally superimposed one above the other to form a single bed and forming a closure for the receptacle, the lower of said sections having a hinged connection along one side edge thereof with said framework, an intermediate spring mattress section spacing and hinge-connecting the two main mattress sections along the opposite side edge of the lower section, whereby all of said sections may be swung in one direction to permit access to the receptacle and the top main section swung in the opposite direction and reversed to form with the lower main section and intermediate section a double bed, a pair of pivotally supported adjustable head rests shiftable away from each other on the swinging of the mattress sections, and springs for returning said head rests to their normal position.

1,508,407. TYPEWRITER STROKE AND WORD COUNTING AND SIGNALING DEVICE AND SPEED INDICATOR. ALFRED E. OSWALD, Bogota, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 28, 1919. Serial No. 333,989. 32 Claims. (Cl. 88—24.)

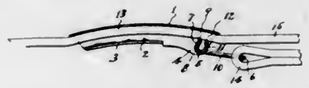
1. The combination with a key-operated machine, of a counter operated thereby, a screen, a timing device including a clock-face and a hand movable with respect thereto to indicate elapsed time, and means for projecting upon the screen images of the clock-face and said hand in such relation as to indicate elapsed time and an image of the counter so that the number registered by the counter and the elapsed time may be observed substantially simultaneously.

1,508,408. COUPLER. EDWARD C. POST, Chicago, Ill., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Filed Mar. 9, 1922. Serial No. 542,297. 10 Claims. (Cl. 285—68.)



3. For use as an element of a hose coupling, a coupler having a member slidable thereon, formed with a slotted portion and adapted to engage the mating couplers, means extending into the slotted portion of said member to hold it in place with capacity for said sliding movement and to force said member in a direction to draw the coupler together, and a spring which is stressed by said movement of said member.

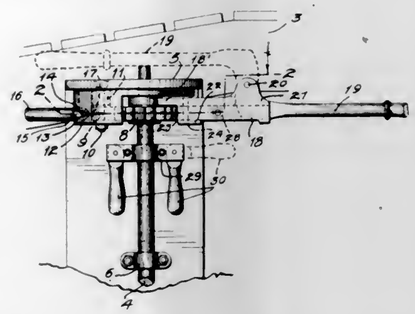
1,508,409. DYESTUFF. HEINRICH FRIEDRICH RAEDER and WALTER MIEG, Vohwinkel, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 28, 1923. Serial No. 642,102. 2 Claims. (Cl. 260—60.)



1. The herein-described new dyestuffs being sulfonic acids of aminodianthraquinonylamines, being after being dried and pulverized dark powders soluble in water generally with a violet to blue to green coloration; being almost insoluble in dilute acids and dyeing wool from acid baths from violet to greyish-blue to bluish-violet shades fast to light, substantially as described.

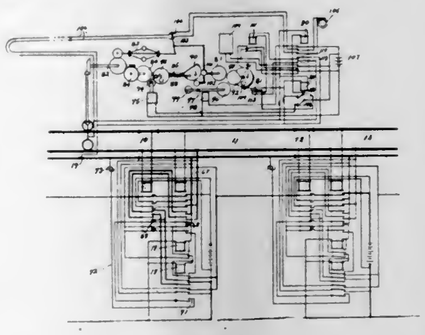
1,508,410. LIQUID-DISPENSING CAN. EDWARD DEVINE RANCK, Toronto, Ontario, Canada, assignor to The Coleman Lamp Co., Wichita, Kans. Filed Oct. 13, 1923. Serial No. 668,421. 5 Claims. (Cl. 221—98.)

3. A dispensing container divided by a transverse partition into an upper and a lower compartment communicating with one another only at a point adjacent the wall of the container by means of a tube extending down to a point adjacent the bottom of the lower compartment; a spout communicating with the lower compartment substantially diametrically opposite the communication aforesaid and extending above the upper end of the container; and an air tube extending from the mouth of the spout to the interior of the tube aforesaid and means for permitting air to enter the upper compartment and to escape from the lower compartment while the latter is filling.



1,508,411. BELT BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Nov. 2, 1922. Serial No. 598,484. 1 Claim. (Cl. 24—191.)

A belt buckle comprising a face plate having longitudinal side flanges, a clamp loop pivoted between said flanges adjacent to one end of said face plate and spaced rearwardly therefrom, said clamp loop having a base portion, a loop portion extending from said base portion beyond the adjacent end of said face plate, an inner clamp-jaw member extending normally toward said face-plate from the inner edge of said base-portion, an outer clamp-jaw member of reduced height extending normally toward said face-plate from the outer edge of said base-portion, and pivotal means for said clamp-loop alined with said inner clamp-jaw member whereby the arc of movement of said inner clamp-jaw member toward said face plate is shorter than the arc of movement of said outer clamp-jaw member toward said face-plate.

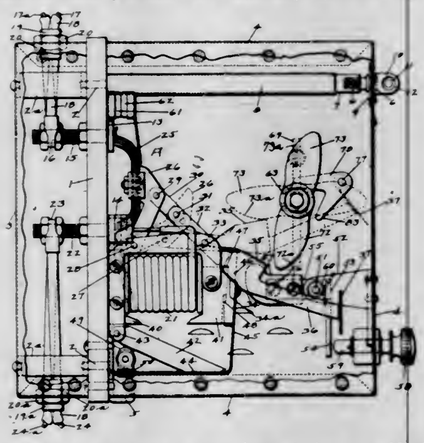


1,508,412. BRAKE-ACTUATING MECHANISM. HENRY M. ROBERTSON, St. Paul, Minn. Filed Aug. 22, 1923. Serial No. 658,716. 5 Claims. (Cl. 74—114.)

1. In a brake actuating mechanism, a brake staff equipped with a ratchet wheel, a lever pivotally associated with said staff and provided with a driving dog normally operative on said ratchet wheel but having an outwardly projecting end exposed along the same where it may be engaged to move said dog into an inoperative position, a cam-acting tripping abutment operative on the inner end of said driving dog to release the same

from said ratchet wheel when said lever is moved to an extreme return position, and a retaining dog operative on said ratchet wheel.

1,508,413. AUTOMATIC TRAIN-CONTROLLING SYSTEM. EDWARD C. SASSETT, Washington, D. C. Filed June 12, 1923. Serial No. 644,867. 36 Claims. (Cl. 246—47.)



26. A train controlling system comprising a track and vehicles travelling thereon, train controlling devices on said vehicles, means for governing said devices automatically in accordance with traffic conditions, and additional means for governing the train controlling devices of a following vehicle in accordance with the speed of the vehicle immediately in advance thereof.

1,508,414. SWITCHING APPARATUS. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, Pa. Filed Jan. 23, 1920. Serial No. 353,475. 20 Claims. (Cl. 200—107.)
